NOTICE OF PREPARATION AND SCOPING MEETING
DRAFT SUBSEQUENT PROGRAM ENVIRONMENTAL IMPACT REPORT
CHINO HILLS GENERAL PLAN UPDATE AND ZONING MAP AMENDMENT PROJECT
SCH No. 2013051082

DATE: October 28, 2022

TO: Responsible Agencies, Trustee Agencies, and Interested Parties

PROJECT NAME: Chino Hills General Plan Update and Zoning Map Amendment Project

LEAD AGENCY: City of Chino Hills
Contact: Michael Hofflinger, Planning Manager
Community Development Department
14000 City Center Drive
Chino Hills, California 91709

PROJECT ADDRESS: City of Chino Hills citywide, and nine specific sites: The Shoppes II (APN 1022-021-30, and -31), Park Overflow (APN 1032-221-05), Los Serranos Golf Course (APN 1028-351-01), Western Hills Golf Course (APN 1031-011-40), Wang (High Density) (APN 1030-041-03, 04 & 1017-251-05), Shoppes (APN 1022-021-49), Commons (APN 1025-471-06, 07 & 1025-461-06), Canyon Estates (APN 1017-251-14), and Wang (Medium Density) (APN 1030-041-03).

PUBLIC COMMENT PERIOD: October 28-November 28, 2022

SCOPING MEETING: November 10, 2022, 6-8 p.m.; at the City of Chino Hills McCoy Equestrian Center, 14280 Peyton Drive, Chino Hills, CA 91709

SUBJECT: Notice of Preparation for Draft Subsequent Environmental Impact Report and Scoping Meeting for the Chino Hills General Plan Update and Zoning Map Amendment Project

The City of Chino Hills (City) is preparing a Subsequent Program Environmental Impact Report (SPEIR) for the proposed Chino Hills General Plan Update Project (Project). Pursuant to Section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the SPEIR will update the information, analysis and findings contained in the City of Chino Hills Final Program EIR General Plan Update (February 24, 2015) (Previous PEIR), which evaluated the potential impacts associated with the City's 2015 General Plan Update. The 2015 PEIR can be accessed at the link below.

https://www.chinohills.org/DocumentCenter/View/11274/Final-Program-EIR---General-Plan-CC-Final-2-24-15-4-22-no-appendices?bidId=

In accordance with CEQA Section 15082, the City has prepared this Notice of Preparation for the SPEIR to provide the public, nearby residents and property owners, responsible agencies, and other interested parties with information regarding the Project and its potential environmental effects. The SPEIR will be prepared by outside consultants under the supervision of the City of Chino Hills Community Development Department.

PROJECT LOCATION: The Project is located in the City of Chino Hills (see Figure 1, Project Location Map). The Project would update General Plan land use and Zoning designations on nine sites (see Figure 2, Proposed General Plan Amendment and Rezone Sites) and update General Plan Elements which affect the entire City. Specific parcels or portions of parcels proposed for either a General Plan amendment, rezoning, or both include: The Shoppes II (APN 1022-021-30, and -31), Park Overflow (APN 1032-221-05), Los Serranos Golf Course (APN 1028-351-01), Western Hills Golf Course (APN 1031-011-40), Wang (High Density) (APN 1030-041-03, 04 & 1017-251-05), Shoppes (APN 1022-021-

49), Commons (APN 1025-471-06, 07 & 1025-461-06), Canyon Estates (APN 1017-251-14), and Wang (Medium Density) (APN 1030-041-03). See Figure 2 for the precise locations of each of the nine sites.

PROJECT DESCRIPTION: The Project in an update of the General Plan to accommodate land use changes promulgated by the Chino Hills 2021-2029 Housing Element, adopted August 16, 2022; to address other changes to the General Plan required by state law; and to incorporate contemporary General Plan information regarding existing conditions and applicable planning documents.

Provisions of the Housing Element require amendments to General Plan land use designations and Zoning maps on the designated Regional Housing Needs Assessment (RHNA) sites, which includes revisions to the Land Use Element and Land Use Map of the City of Chino Hills General Plan, incorporating the land use changes for the nine RHNA sites, shown in Figure 2 below. The Housing Element also necessitates rezoning of the designated RHNA sites; therefore, the Project includes changes to the Zoning Map and Chapter 16.02, General Provisions and Definitions, of the Chino Hills Municipal Code. Table 1, below, lists the existing and proposed General Plan Land Use Map and Zoning Map land use designations for the nine RHNA sites.

Table I-3
Proposed General Plan Amendment and Rezone Sites

Map ID	Name	Site Acreage	Current General Plan	Proposed General Plan	Current Zoning	Proposed Zoning	Realistic Site Density Capacity	Unit Count Based on Site Capacity Density
1	Shoppes II	8.0	High Density Residential	Very High Density Residential Housing Overlay	SP 04-01	SP 04-01/ Very High Density Residential Housing Overlay	93.0	744
2	Park Overflow	1.8	Public Park	Very High Density Residential Housing Overlay	SP 04-01	SP 04-01/ Very High Density Residential Housing Overlay [a]	27.8	50
3	Los Serranos Golf Course: PA IV PA V	12.6 8.6	Commercial Recreation	Very High Density Residential Housing Overlay	CR	Very High Density Residential Housing Overlay	25.0	315 217
4	Western Hills Golf Course	8.3	Commercial Recreation	Very High Density Residential Housing Overlay	CR	Very High Density Residential Housing Overlay	20.0	166
5	Wang	7.3	Rural Residential	Very High Density Residential Housing Overlay	RR	Very High Density Residential Housing Overlay	20.3	148

Table I-3
Proposed General Plan Amendment and Rezone Sites

Map ID	Name	Site Acreage	Current General Plan	Proposed General Plan	Current Zoning	Proposed Zoning	Realistic Site Density Capacity	Unit Count Based on Site Capacity Density
6	The Shoppes	5.7	Commercial	Mixed Use Housing Overlay	SP 04-01	SP 04-01 / Mixed Use Housing Overlay	46.8	267
7	The Commons	9.0	Commercial	Mixed Use Housing Overlay	SP -06-01	SP -06-01/ Mixed Use Housing Overlay	33.3	300
	Subtotal Lower Income Sites Requiring Rezoning							**2,207**
8	Canyon Estates	13.3	Agriculture/Ranches	Medium Density Residential Housing Overlay	PD 19-161	Medium Density Residential Housing Overlay	12.0	160
9	Wang	30.5	Rural Residential	Medium Density Residential Housing Overlay	RR	Very High Density Residential Housing Overlay	9.0	275
	Subtotal Moderate Income Sites Requiring Rezoning							**435**
	Total Units Requiring Rezoning							**2,642**

Notes:

CR = Commercial Recreation
SP-04-01 = The Shoppes at Chino Hills Specific Plan
SP-06-01 = The Commons at Chino Hills Specific Plan
RR = Rural Residential
CR = Commercial Recreation
PD 19-161 = Canyon Estates Planned Development

Source:
City of Chino Hills 2021-2029 Housing Element, Appendix B: Candidate Site Analysis Planning Period 2021-2029, Table B-2 Lower Income Housing Sites by Site No., Name, Units and Acres – 6th Cycle RHNA, Units; Table B-3 Lower Income RHNA Allocation Site Detail; Table B-4 Moderate Income Housing Sites by Site No., Name, Units and Acres – 6th Cycle RHNA; City of Chino Hills General Plan Map and Zoning Map.

In addition to the Housing and Land Use Element updates, the City is required to make other changes to the General Plan in response to recent State legislation. To comply with Senate Bill (SB) 379, Assembly Bill (AB) 2140, and SB 1241, the Project updates the Safety Element to include new goals and policies for wildland and urban fire hazards, flood hazards, and climate change adaptation and resiliency strategies. In 2022, the City recently adopted Transportation Study Guidelines for Vehicle Miles Traveled. These Guidelines would be incorporated into the General Plan Circulation Element as part of the Project. In 2020, the City Parks and Recreation Commission approved a new Parks and Recreation Master Plan that would be incorporated into the Parks, Recreation and Open Space Element.

The Project also includes updates to the remaining General Plan Chapters: Conservation; Noise and Economic Development. Updates of these chapters address changed conditions and updated City plans and policies.

To ensure consistency, the Project also includes a Zoning Map amendment to incorporate the changes promulgated by the proposed General Plan Land Use Map, and, by reference, the Parks and Recreation Master Plan as its recommendations are incorporated in the Parks, Recreation and Open Space Element.

REQUESTED APPROVALS: The list below includes the anticipated requests for approval of the Project.

- Certification of the SEIR;
- Adoption of General Plan and Land Use Map Update (22GPA02)
- Amendment of Zoning Map (22ZC02)
- Adoption of changes to the Definitions sections of Chino Hills Municipal Code Amendment Chapter 16.02 (22MCA03)
- Specific Plan 04-01 6th Amendment to change the land use designations for Sites 1, 2 and 6, listed in Table 1, above
- Specific Plan 06-01 1st Amendment to change the land use designations for Site 7, listed in Table 1, above
- Approval of the Parks and Recreation Master Plan.

SUBSEQUENT EIRS AND NEGATIVE DECLARATIONS: Pursuant to CEQA Section 15162, an SPEIR is being prepared for the Project because the City has determined that the General Plan Update will require substantial changes to the Previous EIR. The SPEIR will follow the format of the Previous EIR, excluding topics related to Agriculture and Minerals for which the City was previously found to have no resources of statewide or regional importance. The SPEIR follows the contemporary CEQA checklist, adding topics related to Energy, Wildfire and Tribal Cultural Resources, which were not included in the Previous PEIR.

POTENTIAL ENVIRONMENTAL EFFECTS OF THE PROJECT: The proposed Project could have potentially significant environmental impacts in the following topic areas, which will to be addressed in the EIR: Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Population and Housing, Public Services, Transportation, Tribal Cultural Resources, Utilities and Service Systems, and Wildfire.

PUBLIC SCOPING MEETING: Public Scoping Meeting will be held in an open house format at the McCoy Barn to share information regarding the Project and the environmental review process and to receive oral and written comments regarding the scope and content of the environmental analysis to be addressed in the SEIR. City staff, and environmental consultants will be available. The City encourages all interested individuals and organizations to attend this meeting. The date, time, and location of the public scoping meeting are:

Date: **November 10, 2022**

Time: **6:00 pm to 8:00 pm**

Location: **City of Chino Hills McCoy Equestrian Center, 14280 Peyton Drive, Chino Hills, CA 91709**

FILE REVIEW AND SUBMITTING COMMENTS: The enclosed materials reflect the scope of the Project. Project information is available for public review at the City of Chino Hills, Community Development Department public

counter, 14000 City Center Drive, Chino Hills, California 91709, during office hours Monday – Thursday, 7: :30 A.M. – 5:00 P.M., and Friday, 7:30 A.M. - 4:00 P.M. A copy of this notice may be viewed at the public counter or online at **https://www.chinohills.org/124/General-Plan** by clicking on the "General Plan Update SPEIR" tab, then "Notice of Preparation & Public Scoping Meeting".

The City will consider all written comments regarding the potential environmental impacts of the Project and issues to be addressed in the EIR. **Written comments must be submitted to this office by November 28, 2022.**

Notice of Preparation of a Draft Subsequent Program Environmental Impact Report for the Chino Hills General Plan Update and Zoning Map Amendment Project

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Draft Subsequent Program Environmental Impact Report (SPEIR). Please send a copy of the Draft SPEIR upon its completion and public release directly to South Coast AQMD as copies of the Draft SPEIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

Sensitive receptors are people that have an increased sensitivity to air pollution or environmental contaminants and include schools, daycare centers, nursing homes, elderly care facilities, hospitals, and residential dwelling units. If the Proposed Project will include residential units which are located in close proximity to freeways or other sources of air pollution like railroad tracks, and to facilitate the purpose of the Draft SPEIR as an informational document, it is recommended that the Lead Agency perform a mobile source health risk assessment[5] to disclose the potential health risks[6].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the Draft SPEIR. The assumptions in the air quality analysis in the Draft SPEIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

The South Coast AQMD's *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*[7] includes suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. It is recommended that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions.

South Coast AQMD staff is concerned about potential public health impacts of siting potential warehouses within close proximity of sensitive land uses, especially in communities that are already heavily affected by the existing warehouse and truck activities. The South Coast AQMD's Multiple Air Toxics Exposure Study (MATES V), completed in August 2021, concluded that the largest contributor to cancer risk from air pollution is diesel particulate matter (DPM) emissions[8]. According to the MATES V Carcinogenic Risk interactive Map, the area surrounding the Proposed Project has an estimated cancer risk over 397 in one million[9]. Operation of warehouses generates and attracts heavy-duty diesel-fueled trucks that emit DPM. When the health impacts from the Proposed Project are added to those existing

[5] South Coast AQMD's guidance for performing a mobile source health risk assessment can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis.
[6] *Ibid.*

impacts, residents living in the communities surrounding the Proposed Project will possibly face an even greater exposure to air pollution and bear a disproportionate burden of increasing health risks.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook,[10] South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2022 Air Quality Management Plan,[11] and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.[12].

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the Draft SPEIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule[13] and the Heavy-Duty Low NOx Omnibus Regulation[14], ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year[15] that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.

[11] South Coast AQMD's 2022 Air Quality Management Plan can be found at: http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan (Chapter 4 - Control Strategy and Implementation).

[12] Southern California Association of Governments' 2020-2045 RTP/SCS can be found at: https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf.

[13] CARB. June 25, 2020. *Advanced Clean Trucks Rule.* Accessed at: https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks.

[14] CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox.

[15] CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.

- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the Draft SPEIR may include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, day care centers, etc.).
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing outside.
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. If the Proposed Project has warehouse element, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project

that may help future warehouse operators meet their compliance obligation[16]. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage[17].

Many strategies are available to reduce exposures, including, but are not limited to, building filtration systems with MERV 13 or better, or in some cases, MERV 15 or better is recommended; building design, orientation, location; vegetation barriers or landscaping screening, etc. Enhanced filtration units are capable of reducing exposures. However, enhanced filtration systems have limitations. For example, in a study that South Coast AQMD conducted to investigate filters[18], a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary and include costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, because the filters would not have any effectiveness unless the HVAC system is running, there may be increased energy consumption that the Lead Agency should evaluate in the Draft SPEIR. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and the environmental analysis does not generally account for the times when the residents have their windows or doors open or are in common space areas of the project. These filters have no ability to filter out any toxic gases. Furthermore, when used filters are replaced, replacement has the potential to result in emissions from the transportation of used filters at disposal sites and generate solid waste that the Lead Agency should evaluate in the Draft SPEIR. Therefore, the presumed effectiveness and feasibility of any filtration units should be carefully evaluated in more detail prior to assuming that they will sufficiently alleviate exposures to diesel particulate matter emissions.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at swang1@aqmd.gov.

Sincerely,

Sam Wang

Subject:	Notice of Preparation and Scoping Meeting
Date:	Thursday, November 3, 2022 10:58:29 AM

Greetings Mr. Hofflinger,

My name is Garrett Covington and I have lived in Chino Hills since 1982.

I received in the mail Oct 31 "Notice of Preparation and Scoping Meeting" dated Oct 28.

I noticed the "Scoping meeting" was to be held 6-8pm on Nov 10th. the day before the Start of a 3 day Weekend. (Veterans Day) Plus, none of my neighbors received anything about this.

I talked to Ryan Gackstetter on Nov. 1st and we both came to the conclusion that there are questions that couldn't be answered at that moment.

Here are some of the questions I have.

1. Map "I.D.3 " Los Serranos Golf Course". I feel the the red highlighted area on the Figure 2 map is not a true representation of PA IV, 315 units,12.6 acres and PA V, 212 units 8.6 acres.
Is this a accurate representation? If not can we see a accurate representation?

2. How is Parking going to be addressed for these 532 units?, I'm under the impression the State/ County/ City is in the process of reducing the # of parking space assigned to each unit. Is this true?

3. Traffic, How is Traffic going to be addressed? Is there a proposed traffic plan by the City, Contractor? If so, can I look at it?

4. My Item #2 and #3, combined with the incomplete figure 2 map, (my item #1), plus all the traffic for Figure 2 map generated by # 8, #5, & #9. is going to be a traffic parking night mare. All the proposed areas dump onto 3 streets.
Do you have a solution?

5. I noticed in the Figure 2 map you didn't address all the new construction. I.E. Lake Los Serranos. Is this true? Are you going to include these areas in the Scoping meeting

6. Could the State requirements been spread out a little more evenly?

I noticed while talking to Ryan a "Planning for our Future Workshop" handout on Nov. 10th at the McCoy center. Same time Same Place. What is GIS mapping?

Unfortunately, I have a "Celebration of Life" for a fellow Veteran planned that weekend and can't make it to the Scoping meeting.

I'm a little disappointed at the date chosen and the short notice given for the meeting.

How can I get my questioned answered feel free to call or can I set up a appointment.to go over these items?

My Phone # is 909-973-2234

Thank You

Garrett C Covington

Subject: Re: Genal Plan/Zoning Map [Sch. No. 2013051082] Public Comment
Date: Monday, November 28, 2022 4:53:44 PM

Hello Michael,

I noticed a misprint within the title of my prior email. For what it's worth, please replace "Genal" with "General".

Respectfully,

Ben Jimenez

Resident, Mountain View Neighborhood

> Good afternoon Michael,
>
> The purpose of this email is to comment on the proposed changes to Chino Hills General Plan/Zoning Map.
>
> The notice received summarizes the proposed amendments within the following table - Table 1, Proposed General Plan Amendment & Rezone Sites. I noticed that Map ID Number 9, Wang, 30.5 acre, is being proposed to be rezoned to a very high density residential overlay. The proposed change to the general plan doesn't correlate with the information that was previously provided in the preliminary planning commission meetings. It was indicated that two areas within the Wang property would be developed to contain very high density residential properties [Map ID No. 5], and medium density residential properties [Map ID No. 9]. Furthermore, the notice received indicates that the realistic site density for such area [Map ID No. 9] is 9.0 du/ac. The City of Chino Hills Final Program EIR - General Plan Update, Table 2-1 – General Plan Land Use Designation Descriptions, Development Standard, defines medium and very high density as the following-
>
> Medium Density Residential: 12 du/ac
>
> Very High Density Residential: 35 du/ac

Therefore, it is respectfully requested, that Map ID No. 9, Proposed Zoning, within Table 1 - Proposed General Plan Amendment & Rezone Sites, be corrected from "very high density residential housing overlay" to "medium density residential housing overlay", and that the changes be incorporated in all documents/exhibits respective to such matter.

Respectfully,

Ben Jimenez

Subject: Park Overflow Zoning Map Amendment
Date: Monday, November 28, 2022 3:59:15 PM

Mr. Hofflinger,

We are opposed to the zone change for the parcel on Eucalyptus and Peyton Dr. from public park to very high density residential. Apartments don't fit the overall plan of the area of single family houses, public park and community center. I am sure the low amount of units can be added to a more suitable alternative in the General Plan Update.

We live directly across from this parcel on Peyton Dr. and it would negatively impact our home of 45 years. This list of concerns are: decreased privacy from a multiple story building, increased traffic to an intersection that is already extremely congested, discharge of water to our property, increased noise, possible exposure to hazard materials from prior owners/tenants (DDT was found in soiling testing for the community park), and a reduction in public parking.

Thank you,

Jim and Lois Moe
14551 Peyton Dr.

Jim

Hello,

My address is 15765 Country Club Dr, Chino Hills. I have tried to look at the PDF's and documents included in the General Plan sent to my property, and I just cannot make it out except on page 274 under https://www.chinohills.org/DocumentCenter/View/11273

Is there better map or can you explain what the impact this will have on our community in Los Serranos....Are you planning on taking the golf course out in back of our property.

I am asking since I may not be able to attend the meeting on November 10th.

Let me know if this is something you can help us with.

Sincerely,

Tori Richardson

APPENDIX C: GENERAL PLAN ELEMENTS

APPENDIX D: ZONING CODE AMENDMENTS

Chapter 16.02 GENERAL PROVISIONS AND DEFINITIONS

16.02.250 ”M” definitions and illustrations.

“Manufactured home” shall have the same meaning as that term is defined in California Health and Safety Code Section 18007.

“Manufacturing” means a facility that engages in the manufacturing of finished products or parts, predominantly from previously prepared materials, including processing, fabrication, assembly, treatment, and packaging of such products, and incidental processing of extracted or raw materials.

“Map Act” means the Subdivision Map Act of the State of California.

“Marijuana” shall have the same meaning as the term “cannabis” as defined in California Health and Safety Code Section 11018.

“Masonry” means construction composed of shaped or molded units, usually small enough to be handled by one (1) person and composed of stone, ceramic brick or tile, concrete, glass, adobe, or the like; sometimes used to designate cast-in-place concrete.

“Massage establishment” means and includes any massage establishment, parlor, or any room, place or institution where massage is given or administered by a massage practitioner or massage therapist for compensation.

“Massage practitioner” means a person who is currently certified as a massage practitioner by the CAMTC and who administers massage for compensation.

“Massage therapist” means a person who is currently certified as a massage therapist by the CAMTC, and who administers massage for compensation.

“Mechanical equipment” means any type of equipment, device or machine located on the exterior of a structure which operates a system or amenity on the property. Examples include but are not limited to heating, cooling, and venting (HVAC), plumbing, pool/spa pumps/filters, whole house fans and energy storage systems. This definition excludes generators and similar equipment.

“Medical clinic” means a health care institution specializing in treating patients with medical conditions that may require twenty-four (24) hour care on an ongoing basis but no longer require intensive care or extensive diagnostic procedures. Can also include a medical walk-in facility, urgent care and outpatient surgical center. These facilities may not include emergency ambulance services as standard business operations.

“Medical laboratory” means an establishment where clinical pathology and diagnostic tests are carried out on clinical specimens to obtain information about the health of a patient to aid in diagnosis, treatment and prevention of disease. These establishments do not include in-patient services.

“Medical laboratory (collection only)” means an establishment that is intended for in-patient services that provides medical or dental laboratory services that includes diagnostic imaging or testing services that are performed on site but require diagnostic evaluations typically at another location.

“Medical laboratory (testing and research)” means a facility where diagnostic testing and research is performed on bio-material, generally blood, body fluids, tissues and cells, to obtain information about the health of a being to aid in diagnosis, treatment, and prevention of disease. May also be referred to as pathology laboratory.

"Medical marijuana collective" means a collective, cooperative, association, dispensary or similar entity that cultivates, distributes, dispenses, stores, exchanges, processes, delivers, makes available or gives away marijuana in the City for medical purposes to qualified patients, or primary caregivers of qualified patients pursuant to Health and Safety Code Section 11362.5 (adopted as Proposition 215, the "Compassionate Use Act of 1996") or any state regulations adopted in furtherance thereof, including Health and Safety Code Section 11362.7 et seq., (adopted as the "Medical Marijuana Program Act"). Medical marijuana collective shall not include the following uses, so long as such uses comply with this Code, the California Health and Safety Code Section 11362.5, et seq., and other applicable law:

a. A clinic licensed pursuant to Chapter 1 of Division 2 of the Health and Safety Code.

b. A health care facility licensed pursuant to Chapter 2 of Division 2 of the Health and Safety Code.

c. A residential care facility for persons with chronic life-threatening illness licensed pursuant to Chapter 3.01 of Division 2 of the Health and Safety Code.

d. A residential care facility for the elderly licensed pursuant to Chapter 3.2 of Division 2 of the Health and Safety Code.

e. A hospice or a home health agency, licensed pursuant to Chapter 8 of Division 2 of the Health and Safety Code.

"Medical marijuana cultivation" shall mean the planting, growing, harvesting, drying, or processing of marijuana plants or any part thereof.

"Medical office" means office space used to provide diagnosis and outpatient treatment for medical, dental, optical, chiropractic, physical therapy, psychiatric care or similar therapeutic services.

"Micro-brewery, distillery, winery" means a business that produces less than fifteen thousand (15,000) barrels (typical industry standard barrel is thirty-one (31) gallons, and approximately seven thousand fifty-six (7,056) cubic inches) per year and may include food sales.

"Mixed use" means the development in a compact urban form of a structure or site with both residential and commercial uses integrated with each other relative to architecture, landscape, common areas, and access.

"Mobilehome" shall have the same meaning as that term is defined in California Health and Safety Code Section 18008.

"Mobilehome park or subdivision" means a parcel (or contiguous parcels) of land divided into two (2) or more mobilehome lots for sale or rent.

"Motel" means an establishment otherwise defined as a hotel with at least twenty-five (25) percent of all rooms having direct access to the parking areas without the necessity of persons passing through the main lobby of the building.

"Motor vehicle" means a machine capable of self-propulsion, with or without human guidance, whether for the performance of work or as a mode of transportation.

"Multifamily," where referenced in this Code to determine applicable development standards and requirements, shall apply to all uses in the ~~RM-1, RM-2, and RM-3~~ zoning districts that permit multifamily dwellings, regardless of the type of housing (i.e., attached or detached), and to similar developments in a PUD, where the PUD does not contain a specific standard.

"Multifamily dwelling" means a building, or portion of a building, used and/or designed as a residence with three (3) or more separate living quarters ~~dwelling units~~ (e.g., apartments, condominiums, or townhomes), or any residential structure located within a tract mapped for condominium purposes.

Chapter 16.04 ZONING DISTRICTS DESIGNATED

16.04.010 Zoning districts established.

The following districts and overlay districts are established to carry out the purposes of this Code:

District	Abbreviation
Agriculture-Ranch	R-A
Rural Residential	R-R
Low Density Residential	R-S
Medium Density Residential	RM-1
High Density Residential	RM-2
Very High Density Residential	RM-3
Medium Density Housing	MDH
Mixed Use Housing	MUH
Urban High Density Housing	UHDH
Very High Density Housing	VHDH
Neighborhood Commercial	C-N
Freeway Commercial	C-F
Mixed Used	MU
Commercial Office	C-O
General Commercial	C-G
Commercial Recreation	C-R
Business Park	BP
Light Industrial	LI
Institutional—Private	I-1
Institutional—Public	I-2
Public Park	PP
Private Open Space	OS-1
State Park[1]	
Public Open Space	OS-2
Planned Development	PD
Fire Safety Overlays	(FR1)&(FR2)
Geologic Hazard Overlay	(GH)
Biotic Resources Overlay	(BR)
Scenic Resources Overlay	(SR)
Small Lot Overlay	(SL)

[1] The California Department of Parks and Recreation controls Chino Hills State Park (State Park), so the City of Chino Hills' Zoning ordinance does not apply to the Chino Hills State Park (see California Public Resources Code Section 51001); this District is shown on the City's Zoning Map for informational purposes only.

(Ord. 68 § 9.05.010, 1995; Ord. No. 383, § 6(Exh. B), 5-25-2022)

16.04.020 Adoption of Zoning Map.

The Zoning Map of the City of Chino Hills, dated November 14, 1995, or as subsequently amended, and on file with the City Clerk, is adopted by reference and shall hereafter exist pursuant to and as an integral part of this Development Code.

(Ord. 68 § 9.05.020, 1995)

16.04.030 Uncertainty of boundaries.

Where uncertainty exists as to zone boundaries of any zone district shown upon the Zoning Map, or any part of such map, the following provisions shall apply:

A. Where zone boundaries are shown as approximately following legal lot lines or the right-of-way lines of highways, streets, or alleys, such lines shall be the zone boundaries. In all other cases where a district abuts a highway, street, or alley, the zone boundaries shall extend to the centerline of the highway, street, or alley.

B. In the case of unsubdivided property where a zone boundary divides a lot, the location of the boundary, unless the boundary is indicated by dimensions or legal description, shall be determined by use of the scale appearing on the Zoning Map.

C. Where a public highway, street, or alley, or any portion of such highway, street or alley is officially vacated or abandoned, the vacated or abandoned highway, street or alley shall acquire the zone classification of the property to which the vacated or abandoned portion reverts.

D. Any submerged lands to be reclaimed by fill for use as a land area shall be prezoned prior to City approval of the fill. The prezone shall be consistent with the General Plan. Permitted fill activities required in an emergency for the protection of public health or safety shall be exempt from this requirement.

(Ord. 68 § 9.05.030, 1995)

Chapter 16.11 MULTI-FAMILY OWNERSHIP HOUSING AND CONVERSION TO CONDOMINIUM

16.11.010 Intent and purpose.

A. To establish standards for the development of multi-family ownership housing and conversion of existing multi-family rental housing to condominiums.

B. To provide high quality urban design through architectural enhancement, high quality landscaping, and high quality construction.

C. To attempt to balance the opportunity for housing ownerships for all types, for all levels of income and in a variety of locations with the need to maintain a supply of rental housing which is adequate to meet the housing needs of the community.

D. To insure that the purchasers of converted housing have been properly informed as to the physical condition of the structure which is offered for sale.

E. To reduce the impact of conversion on residents in rental housing who may be required to relocate due to the conversion of apartments, condominiums, etc. by providing procedures for notification and adequate time for such relocation.

16.11.020 Definitions.

"Condominium" shall have the same meaning as "Common Interest Development" as defined in California Civil Code Section 1351(c).

16.11.030 Permits required.

A. Development of multi-family ownership housing and conversion of existing multi-family rental housing shall be permitted in appropriately zoned districts within the City subject to the approval of a Site Plan Review and a subdivision map.

B. Notice of a public hearing for the development of multi-family ownership housing shall be provided in accordance with Chapter 16.58 of the Chino Hills Development Code.

C. Notice of a public hearing for the proposed conversion of existing multi-family rental housing to a condominium site shall be sent in writing to each tenants in accordance with Government Code Sections 66452.8, 66452.9, and 66427.1, and any other requirements of the applicable laws requiring that the potential tenants receive notice regarding conversion. The applicant shall provide a list of all tenants to the City at the time that the application is made for a condominium conversion.

16.11.040 Development standards.

Construction of any new multi-family ownership units or conversion of existing multi-family rental units subsequent to the adoption of this chapter shall comply with development standards as set forth in Chapter 16.10, 16.13, and 16.15 and standards as follows:

A. Conformance with the Zoning District. All structures and buildings included as part of a multi-family ownership project or condominium project shall conform to the building and zoning requirements applicable to the zone wherein the project is proposed to be located.

B. Unit Size. The enclosed living or habitable area of each unit shall be consistent with Chapter 16.10, 16.13, and 16.15..

C. Parking and Loading. The total number of required spaces, including accessible parking shall be as specified in the applicable zoning district, Chapter 16.15 and Chapter 16.34 of the Development Code. Non-conforming parking, such as the size of the parking spaces and proximity of the parking spaces to the units served, shall be determined to be acceptable by the Director of Community Development.

D. Private Storage Space. A single area having a minimum of one hundred fifty (100) cubic feet of enclosed private and secure storage space outside of the unit with the smallest dimension not less than two feet shall be provided for each unit. Said storage area may be located within the garage, provided it does not interfere with the required garage area for parking as specified in Chapter 16.34. Customary cupboard or cabinet storage areas installed on the wall within the garage area may count provided the storage area is installed with a minimum of 4 feet above garage surface level. Storage areas within the dwelling unit shall not count towards meeting this requirement except for designated accessible units.

E.

F. Private Open Space. An adjoining private patio or deck shall be provided for each unit. A minimum size of the private patio or deck shall comply with the underlying zoning district standards.

G. Common Open Space. A developed common open/recreation space shall be provided per unit in accordance with the underlying zoning district standards.

H. Landscaping. Landscaping shall be provided for the project in accordance with Chapter 16.07.

I. Laundry Facilities. Separate laundry facilities of sufficient size to allow for the installation of a washer and dryer shall be provided for each unit. If provided in the private garage, said facility shall not encroach into the required garage area for parking specified in Chapter 16.34.

J. Utilities. The consumption of gas, water, and electricity within each dwelling unit shall have a separate shutoff device to disconnect each unit's utilities.

K. Sound Transmission. All permanent mechanical equipment, including domestic appliances, which is determined by the Building Official to be a source or potential source of vibration or noise, shall be shock-mounted, isolated from the floor and ceiling, or otherwise installed in a manner approved by the Building Official to lessen the transmission vibration and noise.

L. Maintenance of Fire Protection Systems. The developer and/or owner of the project shall upgrade the project's water delivery system to comply with the City's current fire flow requirements.

M. Smoke Detectors. Smoke detectors shall be provided per the California Building Code.

N. Fire Wall. A fire rated separation wall shall be required between units in accordance with the California Building Code.

O. Wall and Fences. Walls and fences shall be in accordance with Section 16.06.120.

P. Trash Enclosure. Trash enclosure(s) shall be provided within the development. The total number of trash enclosures to be provided shall be adequate for the development. The color and materials for the trash enclosure(s) shall match the colors and materials for the development.

Q. Condition of Equipment and Appliances. The applicant shall provide written certification to the buyer of each unit after conversion that any dishwashers, garbage disposals, stoves, refrigerators, hot water tanks, and air conditioners that are provided are in working condition as of the close of escrow. At such time as the Homeowners Association takes over management of the development, the applicant shall provide written certification to the Association that any pool and pool equipment and any appliances and mechanical equipment to be owned in common by the Association is in working condition.

16.11.050 Plan Review.

All physical changes, alterations, and or improvements to the project site that require issuance of a building permit shall be subject to the provisions of Title 15 of the Chino Hills Municipal Code.

16.11.060 Application procedures—Requirements.

A. Development of New Multi-family Ownership Housing. The Applicant must submit a Site Plan Review and a subdivision map application signed by the property owner(s) or the authorized agent to the City for review and approval.

B. Conversion of the Existing Multi-family Rental Unit to Condominium (multi- family ownership unit). The Applicant must submit a Conversion Plan and a Subdivision Map that includes the following information:

1. A development plan of the project including:

a. The size of each unit and floor plan with interior dimensions for all rooms.

b. Existing and proposed exterior elevations.

c. The layout and location of all storage space outside of each unit.

d. The layout and location of all facilities and amenities provided within the common area for the enjoyment and use of the unit owners.

e. The layout of all parking spaces to be used in conjunction with each condominium unit.

f. The existing and proposed landscaped areas, the type of landscaping, irrigation, maintenance specification for landscaping and irrigation.

g. The location and size of parking facilities to be used in conjunction with each unit.

h. The location, height, and type of all walls and fences.

i. Location and type of surfacing of all driveways, pedestrian walkways, vehicular parking areas and curb cuts.

j. The location of trash enclosure(s) and trash enclosure details.

k. A photometric lighting plan for the project.

l. The location of and provisions of any unique natural and vegetative site features.

2. A physical elements report prepared by licensed professionals which shall include but not limited to the following:

a. A report detailing the condition and estimating the remaining useful life for each element of the project proposed for conversion, including foundations, buildings, roofs, exterior paint, parking facilities, paved surfaces, mechanical systems, electrical systems, plumbing systems, including sewage systems, swimming pools, sprinkler systems for landscaping, central or community heating and air conditioning systems, fire protection systems including automatic sprinkler systems and alarm systems.

b. A building history report including the following:

i. The date of construction of all elements of the project.

ii. A statement of major uses of said project since construction;

iii. The date and description of each major repair or renovation of any structure or structural element since the date of construction. For the purposes of this subsection, a "major repair" shall mean any repair for which an expenditure of more than one thousand dollars ($1,000.00) was made.

iv. Statement regarding current ownership of all improvements and underlying land.

c. Acoustical Report shall include existing sound transmission between units and recommendations for reduction of excessive noise between the units.

d. Pest Control Report for each unit/structure.

e. Soils and Geology Report addressing evidence of soils problems related to the structures.

f. Statement of repairs and improvements to be made to refurbish/restore the project to the appearance and safety consistent with building code and Development Code.

3. Covenant, Conditions, and Restrictions (CC&Rs). CC&Rs must clearly address maintenance responsibilities for exclusive vs. common use areas and parking requirements, such as mandatory garage parking, etc. The CC&Rs shall be submitted to the City for review and approval prior to recordation of the Final Map.

16.11.070 Findings.

The Commission, and Council on appeal, in acting to approve a construction of multi- family ownership housing or conversion to condominium application, may impose conditions as are reasonably necessary to ensure the project is consistent with the General Plan, compatible with surrounding land use, and meets the provisions and intent of the Development Code.

In making such a determination for construction of multi-family ownership units, the hearing body shall find that the proposed project is consistent with the Site Plan Review finding as indicated in Section 16.76.060.

In making such a determination for conversion to condominium, the hearing body shall find that the proposed project is in accordance with the following principles and standards:

A. The proposed conversion is consistent with the City of Chino Hills General Plan.

B. The proposed conversion is consistent with the City of Chino Hills Development Code, except otherwise provided in this chapter.

C. The overall design (including project amenities) and physical condition of the conversion will result in a project, which is aesthetically attractive, safe, and of quality construction.

D. That the owner has made a reasonable effort to assist those tenants wishing to purchase their units for purposes of minimizing the direct effect on rental housing market created by relocating such tenants.

16.11.080 Appeal.

Appeal shall be in accordance with Chapter 16.58 of the Chino Hills Development Code.

16.11.090 General provisions.

A. Payment of required fees as adopted by the City Council. The fees shall be above and beyond the fees required for affordable housing.

B. A proposed condominium or condominium conversion project may be approved, disapproved or conditionally approved by the Planning Commission in accordance with criteria as set forth in Chapter 16.58 of the Development Code.

C. An approval of the Site Plan Review for a multi-family ownership housing or conversion of existing multi-family rental housing to condominium shall expire if the corresponding tentative subdivision map expires.

Chapter 16.15 - HOUSING PRIORITY ZONING DISTRICTS – PRELIMINARY DRAFT

16.15.010 Intent and purpose.

The purpose of the Housing Priority Zoning District is to implement the goals and policies of the General Plan Housing Element by facilitating development of housing at appropriate densities to accommodate extremely low-, very low-, low-, and moderate-income households consistent with Government Code Section 65583.

The Housing Priority Zoning Districts designate certain sites as suitable for very high density and medium density residential development as described in this Chapter and the Housing Element.

16.15.020 Definitions.

"Allocated Units," for the purposes of this chapter, means the number of units designated by the General Plan Housing Element and Land Use Element to a Housing Priority Zoning District site.

"City Manager" as defined in Chapter 2.08 City Manager

"Determined to be Complete" means that the applicant has submitted a complete application, and it has been determined to be complete pursuant to subsection (C) of Section 16.58.020 of this code.

"Director" means the Community Development Director for the City of Chino Hills or designee.

"Discretionary Permit" means a permit which requires the exercise of judgment or deliberation during the decision-making process, as distinguished from situations where the decision-making is limited to a determination of conformity with applicable statues, ordinances, or regulations. Discretionary permits are based on qualitative standards and require judgment or deliberation by decision makers, such as the Planning Commission or City Council.

"Non-Discretionary Permit" means a permit that involves little or no personal judgment by a decision maker as to the wisdom or manner of carrying out the project. The decision maker merely applies the law to the facts as presented but uses no special discretion or judgment in reaching a decision. A non-discretionary permit involves only the application of objective, quantifiable, written development standards, measurements, conditions, and policies, and the decision maker cannot use personal, subjective judgment in deciding whether or how the project should be carried out.

"Substantially Remodeled" means modifications to any building(s) or structure(s), which modification's valuation is more than 50% of the existing valuation of the buildings at the time of application submittal.

16.15.030 Housing Priority Zoning Districts.

The following Housing Priority Zoning Districts are established in Chino Hills:

1) Medium Density Housing (MDH). The MDH zone permits Medium Density housing consistent with this Chapter.
2) Urban High Density Housing (UHDH). The UHDH zone permits Urban High Density housing consistent with this Chapter.
3) Very High Density Housing (VHDH). The VHDH zone permits Very High Density housing consistent with this Chapter.
4) Mixed Use Housing (MUH). The MUH zone permits Very High Density housing mixed with commercial uses, consistent with this Chapter.

16.15.040 Housing Priority Zoning Districts development standards.

A. Medium Density Housing (MDH) Zone.

1. Applicability: The MDH zone is established to facilitate development of the Housing Element designated "moderate income" sites.

2. Permitted Uses: Permissible uses in the MDH zone are the same as those indicated in Chino Hills Municipal Code (CHMC) Appendix A for the RM-1 zone.

3. Standards: All development in the MDH zone are subject to the following development standards:

a) Residential Density: Minimum residential density shall be built at no less than 9 dwelling units per acre (du/ac) and a maximum of 12.5 du/ac.

b) Development Standards: Development standards for the MDH zone are indicated in Table 1.

Table 1: Medium Density Housing (MDH) Zone–Development Standards

Development Standard	**Minimum Required**
A. Minimum Lot Size Development Minimum Project Area	10,000 sf
B. Minimum Lot Width	N/A
C. Minimum Lot Depth	N/A
D. Maximum Building Height	42 ft.
E. Maximum Lot Coverage	55%
F. Minimum Front Yard Setback	25 ft.
G. Minimum Side Yard Setback:	
(1) Street Side	25 ft.
(3) Interior Side	10 ft.
H. Minimum Rear Yard Setback	15 ft.
I. Minimum Usable Private Open Space	70 sf per unit
J. Minimum Common Open Space	Aggregate of 300 sf per unit
(1) Recreational facilities[(a)]	For projects containing 25 or more dwelling units, provide one recreational amenity for each 25 dwelling units.
K. Minimum Building Separation[(b)]	Pursuant to CHMC 16.10.060 Table 20-3
L. Minimum Landscape	At least 15% of the project area (exclusive of areas within a public right-of-way) must be landscaped.
M. Minimum Parking	Pursuant to CHMC 16.34.060
N. Minimum Residential Design Standards	Pursuant to CHMC 16.05 – Objective Design Standards.

(a) Recreational amenities may include the following: picnic/barbeque areas, park benches, cabana or shade trellis areas, passive water features (e.g. fountain), passive recreation areas and/or gardens, dog park, clubhouse, swimming pool either with or without a sauna and/or jacuzzi, tot lots, an exercise structure or complex (e.g. playground, gym), full or ½ scale sports courts (volleyball/tennis/pickleball/basketball/soccer, etc.), and other recreational amenities subject to review and approval.

(b) Minimum building separations for MDH housing developments in the Fire Hazard Overlay District are subject to CHMC Chapter 16.22.030.B provisions and approval by Chino Valley Fire District and the Director.

B. Urban High Density Housing (UHDH) Zone.

1. Applicability: The UHDH zone is established to facilitate development of the Housing Element designated "lower income" sites.

2. Permitted Uses: Permissible uses in the UHDH zone are the same as those indicated in CHMC Appendix A for the RM-2 and RM-3 zones.

3. Standards: All development in the UHDH zone are subject to the following development standards:

    a) Residential Density: Residential density in the UHDH zone shall be built at a minimum of 30 du/ac, with a maximum of 93 du/ac.

    b) Development Standards: Development standards for the UHDH zone are indicated in Table 2.

Table 2: Urban High Density Residential (UHDH) Zone–Development Standards

Development Standard	Minimum Required
A. Minimum Lot Size Development Minimum Project Area	4 acres
B. Minimum Lot Width	N/A
C. Minimum Lot Depth	N/A
D. Maximum Building Height	70 ft. to roofline, 80 ft. to architectural features
E. Maximum FAR	FAR 2.25
F. Setbacks:	
(1) Boys Republic Drive	5 ft.
(2) City Center Drive	5 ft.
(3) Street side	0 ft.
(4) Interior Side	10 ft.
G. Off street parking areas	Off-street parking areas and carports for multifamily residential development shall be located behind the building when viewed from Shoppes Drive and Civic Center Drive and shall conform to the parking area standards listed in CHMC 16.05 – Objective Design Standards.
H. Minimum Usable Private Open Space	NA
I. Minimum Common Open Space	Aggregate of 150 sf per unit
(1) Recreational Facilities[(a)]	For projects containing 25 or more dwelling units, provide one recreational amenity for each 25 dwelling units.
J. Minimum Building Separation[(b)]	10 ft.
K. Minimum Landscape	At least 15% of the project area (exclusive of areas within a public right-of-way) must be landscaped. May include planted areas with enhanced hardscape.
L. Minimum Parking	Aggregate of the following: Studios and 1 bedroom:- 1 space per dwelling unit 2-3 Bedrooms: 2 spaces per dwelling unit Guest parking: 0.25 space per unit or as otherwise determined through a City approved shared parking analysis.
M. Minimum Residential Design Standards	Pursuant to CHMC 16.05 – Objective Design Standards

(a) Recreational amenities may include the following: picnic/barbeque areas, park benches, cabana or shade trellis areas, passive water features (e.g. fountain), passive recreation areas and/or gardens, dog park, clubhouse, swimming pool either with or without a sauna and/or jacuzzi, tot lots, an exercise structure or complex (e.g. playground, gym), full or ½ scale sports courts (volleyball/tennis/pickleball/basketball/soccer, etc.), and other recreational amenities subject to review and approval.

(b) Minimum building separations for UHDH housing developments in the Fire Hazard Overlay District are subject to CHMC Chapter 16.22.030.B provisions and approval by Chino Valley Fire District and the Director.

C. Very High Density Housing (VHDH) Zone.

1. Applicability: The VHDH zone is established to facilitate development of the Housing Element designated "lower income" sites.

2. Permitted Uses: Permissible uses in the VHDH zone are the same as those indicated in CHMC Appendix A for the RM-2 and RM-3 zones.

3. Standards: All development in the VHDH zone shall be subject to the following development standards:

    a) Residential Density: The permitted residential density in the VHDH zone shall be a maximum of 30 du/ac, and all residential developments in the VHDH zone shall be built at no less than 20 du/ac.

    b) Development Standards: Development standards for the VHDH zone are indicated in Table 3.

Table 3: Very High Density Housing (VHDH)– Development Standards

Development Standard	Minimum Required
A. Minimum Lot Size Development Minimum Project Area	20,000 sf
B. Minimum Lot Width	N/A
C. Minimum Lot Depth	N/A
D. Maximum Building Height 1) When adjacent to residential land use zones 2) When adjacent to nonresidential land use zones	 42 ft. 60 ft. (five stories maximum)
E. Maximum Lot Coverage	70%
F. Setback:	
(1) Eucalyptus Avenue	20 ft.
(2) Peyton Drive	25 ft.
(3) Country Club Drive	25 ft.
(4) Interior Side	10 ft.
G. Off street parking areas	Off-street parking areas and carports for multifamily residential development shall be located behind the building when viewed from Eucalyptus Avenue, Peyton Drive, or Country Club Drive, and shall conform to the parking area standards listed in CHMC 16.05 – Objective Design Standards.
H. Minimum Usable Private Open Space	45 sf. per unit
I. Minimum Common Open Space	Aggregate of 200 sf. per unit
(1) Recreational Facilities[a]	For projects containing 25 or more dwelling units, provide one recreational amenity for each 30 dwelling units.
J. Minimum Building Separation[b]	5 ft.
K. Minimum Landscape	At least 5% of the project area (exclusive of areas within a public right-of-way) must be landscaped.
L. Minimum Parking	Aggregate of the following: Studios: 1 space per dwelling unit 1 Bedroom: 1.5 spaces per dwelling unit 2-3 Bedrooms: 2 space per dwelling unit Guest parking: 0.25 space per unit
M. Minimum Residential Design Standards	Pursuant to CHMC 16.05 – Objective Design Standards

(a) Recreational amenities may include the following: picnic/barbeque areas, park benches, cabana or shade trellis areas, passive water features (e.g. fountain), passive recreation areas and/or gardens, dog park, clubhouse, swimming pool either with or without a sauna and/or jacuzzi, tot lots, an exercise structure or complex (e.g. playground, gym), full or ½ scale sports courts (volleyball/tennis/pickleball/basketball/soccer, etc.), and other recreational amenities subject to review and approval.

(b) Minimum building separations for VHDH housing developments in the Fire Hazard District are subject to CHMC Chapter 16.22.030.B provisions and approval by Chino Valley Fire District and the Director.

D. Mixed Use Housing (MUH) Zone.

1. Applicability: The Mixed Use Housing zone is established to facilitate development of the Housing Element designated "lower income" sites within commercial centers.

2. Permitted Uses: Permissible residential uses in the MUH zone are the same as those indicated in Chino Hills Municipal Code (CHMC) Appendix A for the MU zone.

3. Standards: All projects in the MUH zone shall be subject to the following development standards:

    a) Residential Density: Residential densities permitted in the MUH zone range from 30 du/ac to a maximum of 47 du/ac. All residential development in the MUH zone must be built at a density of no less than 20 du/ac.

    b) Residential Development Standards: Development standards for residential uses in the MUH zone are indicated in Table 4.

Table 4: Mixed Use Housing (MUH) Zone– Residential Development Standards

Development Standard	Minimum Required
A. Minimum Lot Size Development Minimum Project Area	1 acre
B. Minimum Lot Width	N/A
C. Minimum Lot Depth	N/A
D. Maximum Building Height	80 ft.
E. Maximum Lot Coverage	N/A
F. Setbacks:	
(1) Shoppes Drive	10 ft.
(2) Boys Republic Drive	5 ft
(3) State Route 71	20 ft.
(4) Chino Hills Parkway	20 ft.
(5) Interior Side	10 ft.
G. Off street parking areas	Off-street parking areas and carports for multifamily residential development shall be located behind the building when viewed from Shoppes Drive or Boys Republic Drive, and shall conform to the parking area standards listed in CHMC 16.05 – Objective Design Standards.
H. Minimum Building Separation[(a)]	0 ft
I. Minimum Landscape	At least 10% of the project area (exclusive of areas within a public right-of-way) must be landscaped.
J. Minimum Parking	Aggregate of the following: Studios (10 units or less): 1 per dwelling unit Studios (for each additional unit above 10 units): 1.25 per dwelling unit 1 Bedroom: 1.5 per dwelling unit 2-3 Bedrooms: 2 per dwelling unit Guest parking: 0.25 per unit or as otherwise determined through a City approved shared parking analysis.
K. Minimum Residential Design Standards	Pursuant to CHMC 16.05 – Objective Design Standards
(a) Minimum building separations for housing developments in the Fire Hazard District are subject to CHMC Chapter 16.22.030.B provisions and approval by Chino Valley Fire District and the Director.	

c) Commercial Development Standards: Development standards for commercial uses in the MUH district are indicated in Table 5.

Table 5: Mixed Use Housing (MUH)– Commercial Development Standards

Development Standard	Minimum Required
A. Minimum Lot Size Development Minimum Project Area	1 acre
B. Minimum Lot Width	N/A
C. Minimum Lot Depth	N/A
D. Maximum Building Height 1) For buildings with more than 50% of its area used for residential 2) For buildings with less than 50% of its area used for residential	 80 ft. 45 ft.
E. Maximum Lot Coverage	N/A
F. Minimum Side Yard Setback:	
(1) Shoppes Dr.	10 ft.
(2) Boys Republic Dr.	5 ft.
(3) State Highway 71	15 ft.
(4) Chino Hills Parkway	20 ft.
(5) Interior Side	10 ft.
G. Minimum Building Separation[(a)]	10 ft.
H. Minimum Landscape	At least 20% of the project area (exclusive of areas within a public right-of-way) must be landscaped.
I. Parking Lot Landscaping	At least 5% of surface parking lot areas (exclusive of loading areas) must be landscaped. This landscaping may be counted toward the total site area landscaping required in item.
J. Minimum Parking	Commercial – Parking requirements are subject to the Commercial Uses listed in Table 65-1, or as otherwise determined through a City approved shared parking analysis.
K. Minimum Design Standards	Pursuant to CHMC 16.05 – Objective Design Standards
(a) Minimum building separations for developments in the Fire Hazard District are subject to CHMC Chapter 16.22.030.B provisions and approval by Chino Valley Fire District and the Director.	

16.15.050 Permit approval required

A. A Site Plan approval is required for all projects in a Housing Priority Zoning District involving the construction of new or substantially remodeled buildings. A Site Plan approval is a Discretionary Permit and is subject to review and approval of the Planning Commission, pursuant to the provisions of CHMC Chapter 16.76.

B. Notwithstanding subsection (A) of this section, projects in a Housing Priority Zoning District involving the construction of new or substantially remodeled buildings, where at least two-thirds of the square footage of the overall development is designated for residential use, and where at least 20 percent of the residential units will be affordable to lower income households subject to Government Code Section 65583.2, are subject to a Housing Plan Approval. A Housing Plan Approval is a Non-Discretionary Permit and is subject to the review and approval of the City Manager as set forth in this chapter.

C. For all projects within a Housing Priority Zoning District, an application is required pursuant to the provisions of Section 16.58.020 of this Development Code. Once a Site Plan application or Housing Plan application is determined to be complete, the Director or designee shall review the application for conformance with the provisions of this Development Code and applicable General Plan provisions.

16.15.060 Housing Plan Approval

A. Applications for a Housing Plan Approval shall be submitted in the form and content as specified by the City of Chino Hills Community Development Department. Where applicable, the Housing Plan Approval application shall be accompanied by a required subdivision map as determined by the Director. Approval of any related subdivision map shall be subject to the requirements of Appendix D of this Development Code and the Subdivision Map Act.

B. Each Housing Plan Approval application shall set forth in text, maps, and diagrams the following, unless determined by the Director to be unnecessary for a particular project:

1. An existing setting description which includes:
    a) A topographic and surveyed map of the site in its existing condition,
    b) A list of all public and utility service providers, as well as a diagram of all public utilities and facilities on or adjacent to the site,
    c) The sizes and capacity of all existing public and/or private utilities on or adjacent to the site, including the sizes and dimensions of all public and/or private streets that provide access to the site, and
    d) A diagram illustrating the existing land use of adjacent properties within a 600-foot radius of the site;
2. The appropriate studies, prepared by a professional engineer or other qualified individual, that show the level of public services and facilities required to serve the proposed development; and the sufficiency of, or required improvements to, public services and facilities necessary to adequately serve the proposed development;
3. Proposed access and circulation, including parking areas, loading areas, and pedestrian walkways. The Housing Plan Approval application shall also detail any improvements to adjacent or off-site roadways required to serve the proposed development;
4. Significant natural features and areas to be retained for common open space, and provisions for preserving, maintaining, and using those areas;
5. Known manmade and natural hazards and the methods for mitigating the hazards;
6. Proposed grading, site development/improvements, and landscaping;
7. Plans showing all proposed structures, including the following:
    a) Footprints of all proposed buildings,
    b) Elevations for all sides of all buildings,
    c) Floor plans for all unit types,
    d) Materials and colors to be used on the exteriors of all proposed buildings, including color and material boards for buildings, and
    e) Colored rendering from each adjacent street or common area visible to the public;
8. Compliance with Objective Design Standards pursuant to CHMC Chapter 16.05.

9. Additional information listed in the Housing Plan Approval Application checklist, if any, issued by the Director and posted on the City's website.

C. Once an application for a Housing Plan Approval has been determined to be complete, the Director shall cause all application materials to be posted to the City's website and made available for public review.

D. The City shall review the application to approve, conditionally approve, or deny the project. The City, in acting to approve a Housing Plan Approval in a Housing Priority Zoning District, may impose conditions as are reasonably necessary to ensure the project is consistent with all applicable objective provisions of the Development Code and objective written policies, administrative regulations, procedures, standards and requirements approved by City Council, to avoid adverse impacts to the public health or safety, and to implement any previously-identified mitigation measures that are applicable to the project. The decision-maker shall approve the Housing Plan application if the following findings can be met:

1. The proposed development complies with all applicable, objective provisions of the General Plan;
2. The proposed development complies with all applicable development standards of the Housing Priority Zoning Districts;
3. The proposed development complies with the Objective Design Standards pursuant to Chapter 16.05;
4. The proposed development complies with all applicable, objective provisions of the CHMC;
5. The proposed development complies with all applicable, objective written policies, administrative regulations, procedures, standards and requirements adopted by the City Council; and
6. The proposed project complies with all applicable previously-identified mitigation measures in any environmental approval adopted under the California Environmental Quality Act for any applicable General Plan, Specific Plan or Planned Unit Development.

E. If a project that is the subject of a Housing Plan application otherwise meets the criteria set forth in subparagraph (D), the City may nevertheless disapprove the project or impose a condition that the project be developed at a lower density if the decision-maker makes written findings supported by a preponderance of the evidence on the record that both of the following conditions exist:

1. That the project would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density. For purposes of this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete.
2. There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified, other than the disapproval of the project or the approval of the project upon the condition that it be developed at a lower density.

F. Within 15 days of determining that an application for a housing development project with 150 or fewer housing units is complete, or within 30 days of determining that a housing development project containing more than 150 units is complete, the Director shall issue a Preliminary Decision and provide notice of same. Said Notice will include a brief description of the project; the Director's determination on the merits of the application made pursuant to this Section (i.e., whether the project will be approved, approved with conditions, or denied); and the date range during which any interested members of the public and the applicant may submit written comments for the City Manager's consideration prior to the issuance of a Final Decision. In addition, the Preliminary Decision shall include instructions on how to view the application materials on the City's website, which instructions may be in the form of a URL. If the Director's Preliminary Decision is to approve the project with conditions, the conditions of approval shall be fully set forth therein.

G. Upon issuance of the Preliminary Decision, a complete draft of the Preliminary Decision shall be posted to the City's website for viewing by any interested member of the public.

H. Notice of the Preliminary Decision shall be provided in accordance with the requirements of Section 16.58.040 of this Code.

I. For a housing development project with 150 or fewer housing units, any member of the public may submit written comments or correspondence to the City Manager within 15 days after notice of the Preliminary Decision is given pursuant to Section 16.58.040. Comments received from the public on such projects after the 15th day will not be considered; the applicant may submit written comments, including comments in response to public comments, within 20 days after notice of the Preliminary Decision is given. Alternatively, for a housing development project with more than 150 housing units, any member of the public may submit written comments or correspondence to the City Manager within 30 days after notice of the Preliminary Decision is given pursuant to Section 16.58.040. Comments received from the public on such projects after the 30th day will not be considered; the applicant may submit written comments, including comments in response to public comments, within 40 days after notice of the Preliminary Decision is given.

J. For a housing development project containing 150 or fewer housing units, the City Manager shall issue a written Final Decision on a Housing Plan application within 15 days after notice of the Preliminary Decision is given. Alternatively, for a housing development project containing more than 150 housing units, the City Manager shall issue a written Final Decision on a Housing Plan application within 30 days after notice of the Preliminary Decision is given. The City Manager may add or modify conditions of approval on the Final Decision. Additionally, the City Manager may change a decision to approve, approve with conditions, or deny a Housing Plan Approval between the Preliminary Decision and Final Decision. Prior to issuing the Final Decision, the City Manager shall obtain the City Attorney's approval as to form.

K. The Final Decision issued by the City Manager shall be the final administrative decision of the City. Notwithstanding section 1.02.010 and any other provision in this code, there is no right to appeal this decision administratively. An aggrieved party may seek judicial review.

L. Any Housing Plan Approval within a Housing Priority Zoning District that is not used within the time specified in the grant of approval or, if no time is specified, within three years of the effective date of such approval, expires at the end of that period. The Director may, for a Housing Plan Approval, extend such approval for a period of time not to exceed two years, provided an application requesting the extension is filed prior to the original expiration date. For purposes of this section "used" means the commencement of construction activity or any development activity authorized by the Housing Plan Approval.

M. The expiration date of a Housing Plan Approval that is approved concurrently (as part of the same project) with a Tentative Tract Map or Tentative Parcel Map shall be tied to the expiration date of the subject Tentative Tract Map or Tentative Parcel Map as set forth in Subsection 16.58.050(G).

N. An approved Housing Plan Approval, which is valid and in effect pursuant to the provisions of this Development Code, shall run with the land and shall continue to be valid upon change of ownership of the land or any lawfully existing building or structure on the land.

O. Policies, administrative regulations, procedures, standards and requirements adopted by City Council that are applicable to Housing Plans shall be posted upon the City's website.

Subsection C. of Section 16.58.020 (Application procedures) is amended to read as follows:

C. Acceptance of Applications by the Community Development Director as Complete. The Community Development Director or his or her designee shall accept applications made by those persons with standing to make such an application upon receipt of fees prescribed by resolution of the City Council. Pursuant to the California Government Code, Section 65943, no later than thirty (30) days after an application has been received for a development project as defined in Government Code, Section 65928, the Director shall determine whether the submitted application materials are complete and shall immediately transmit the determination to the applicant in writing.

1. If the application is determined to be incomplete, the Director shall provide the applicant with an exhaustive list of items that were not complete. That list shall be limited to those items actually required on

the City's submittal requirement checklist. In any subsequent review of the application determined to be incomplete, the City shall not request the applicant to provide any new information that was not stated in the initial list of items that were not complete. If the written determination is not made within 30 days after receipt of the application, and the application includes a statement that it is an application for a development permit, the application shall be deemed complete. Upon receipt of any resubmittal of the application, a new 30-day period shall begin, during which the Director shall determine the completeness of the application. If the application is determined not to be complete, the Director's determination shall specify those parts of the application which are incomplete and shall indicate the manner in which they can be made complete, including a list and thorough description of the specific information needed to complete the application. The applicant shall submit materials to the City in response to the list and description.

2. Not later than 30 calendar days after receipt of the submitted materials described in subdivision (1), the Director shall determine in writing whether the application as supplemented or amended by the submitted materials is complete and shall immediately transmit that determination to the applicant. In making this determination, the Director is limited to determining whether the application as supplemented or amended includes the information required by the list and a thorough description of the specific information needed to complete the application required by subdivision (a). If the written determination is not made within that 30-day period, the application together with the submitted materials shall be deemed complete.

3. If the application together with the submitted materials are determined not to be complete pursuant to subdivision (C)(2) above, the applicant may appeal that decision in writing to the Planning Commission. The Planning Commission shall issue its final written determination on the appeal not later than 60 calendar days after receipt of the applicant's written appeal. Notwithstanding section 1.02.010 and any other provision in this code, there is no right to appeal the Planning Commission's decision administratively. An aggrieved party may seek judicial review. Notwithstanding a decision pursuant to subdivision (C)(2) that the application and submitted materials are not complete, if the final written determination on the appeal is not made within that 60-day period, the application with the submitted materials shall be deemed complete.

4. Nothing in this section precludes an applicant and the Director from mutually agreeing to an extension of any time limit provided by this section.

Chapter 16.34 PARKING AND LOADING

16.34.010 Intent and purpose.

The purpose of the parking and loading regulations is to ensure that a II land uses provide adequate off-street parking facilities and adequate facilities for vehicle movement and loading activities associated with a use. The intent of these regulations is to ensure that the use of land does not negatively interfere with the use of and circulation on public rights-of-way, and that private on-site circulation does not pose a potential safety problem.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.020 Applicability.

A. The minimum standards of this chapter shall apply to all proposed land uses, buildings, and structures.

B. The minimum standards of this chapter shall also apply to all proposed additions, enhancements, and modifications to existing land uses or structures. At the time the building or structure is added onto, enlarged, or the use is intensified so as to cause a need for additional parking, parking and loading spaces shall be provided for both the existing units and the modified or enlarged portions so as to conform to provisions of this chapter, except as indicated in subsection C of this section.

C. Exemption for Existing Single-Family Homes. Structural additions or reconstruction project that is less than the fifty (50) percent of the square footage of the existing on-site buildings is not required to meet the parking requirement as indicated in Table 65-1, provided that the existing single-family home already provides two covered parking spaces.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.030 Site plan and building permit required.

A. A Site Plan shall be required for all required parking facilities. The plan shall consist of a detailed layout of the parking facility, site, and parking lot landscaping. The plan shall be accurately dimensioned, showing all required parking spaces, landscaped areas, driving a isles, ingress/egress points, etc. The Site Plan shall be submitted and reviewed in conjunction with any application for planning, land use, engineering, or building permit.

B. A parking facility or drive way shall have building and engineering permits for the facility or drive way in accordance with applicable provisions contained in the Municipal Code.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.040 Encroachment into right-of-way prohibited.

Land within the right-of-way of a proposed street or highway, or with in the planned ultimate right-of-way on a street or highway proposed to be widened, shall not be used to provide required parking and loading facilities.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.045 Clear corner areas at street intersections and driveways for sight visibility.

See Section 16.06.080 of this Code.

16.34.050 Location of parking and loading facilities.

A. Residential Uses.

1. Required parking facilities for residential zone districts shall be located on the same lot or parcel of land as the use the parking facilities are intended to serve, or within a single development as approved through the applicable entitlement permit granted pursuant to this Municipal Code that includes a requirement that a covenant, approved as to form by the City Attorney, shall be recorded describing the combined parking arrangement and granting reciprocal access rights to the parking facilities. The facilities shall be conveniently and safely located on the site. Required parking facilities provided by a given project shall be used exclusively for parking purposes by that projector residence, and shall not be leased, sold, or utilized by other projects or entities.

2. Per Section 16.34.080 of this chapter, parking on unpaved areas is prohibited in all zoning districts.

3. Within a required front yard area, vehicles may be parked only on a parking space as defined i n Section 16.34.080 of this chapter. Vehicles parked within a front yard area may not extend past the right-of-way line at the front of the lot or into an easement for side walk or access purposes.

4. Vehicles may be parked in a side or rear yard area, or within the buildable area of a lot on a parking space as defined in Section 16.34.080 of this chapter, provided that a minimum of three feet of clearance is provided between the vehicle and the adjacent outside wall of any structure containing windows.

B. Nonresidential Uses. Required parking for nonresidential uses shall be located:

1. On the same lot or parcel of land as the use which the facilities serve; or

2. On an adjoining lot or parcel of land under the same ownership as the lot supporting the use the parking facilities serve, provided that the adjoining lot is merged with the property containing the primary use for which the parking is required; or a covenant of easement is recorded for parking purposes in accordance with Section 16.34.090(A); or

3. On a lot or parcel of land separated only by an alley (twenty (20) feet wide or less) from the lot or parcel supporting the use the parking facilities serve; provided

    a. That such lots or parcels are under the same ownership;

    b. That such lots or parcels would be contiguous if not separated by the alley;

    c. That direct vehicular and pedestrian passage between such lots or parcels would be possible if the alley were vacated;

    d. That the parking and vehicular access on such lots or parcels can be designed to ensure safe pedestrian movement between the parking and the property containing the primary use it is intended to serve; and

    e. That a covenant of easement is recorded for parking purposes in accordance with Section 16.34.090(A).

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.060 Number of parking spaces required.

A. Required Spaces.

1. Table 65-1 specifies the number of off-street parking spaces required for specific uses. The requirement for a use not specifically mentioned shall be the same as for a specified use which has the most similar traffic and/or parking-generating characteristics. The Community Development Director shall determine what constitutes similar traffic-generating characteristics.

2. As provided in Chapter 16.72 (Minor Variances) of this Code, the Director of Community Development may approve up to a thirty (30) percent reduction in the number of required parking spaces. Reductions of more than thirty (30) percent may be approved by the Planning Commission, as provided in Chapter 16.70 (Major Variances).

3. Evaluating parking for new uses within tenant spaces of existing shopping centers shall be calculated at the approved commercial center ratio. Notwithstanding the above, those uses that are identified in Appendix A of this Municipal Code as requiring a use permit may require, as part of its entitlement process, a shared parking study to determine appropriate parking ratios.

B. Fractional Spaces. If the calculation of required parking spaces results in a fractional number, that number shall be rounded up to the next whole number.

C. Total Spaces Required. Accessible and Electric Vehicle Parking spaces may count towards the total parking requirement listed below in Table 65-1 unless otherwise regulated by the California Building Code.

D. For the purposes of this section, parking ratios shall be calculated by total Gross Floor Area (GFA) as defined in Chapter 16.02, or noted otherwise below in Table 65-1.

Table 65-1.
Number of Automobile Parking Spaces Required

Use	Required Number of Spaces
Agricultural/Animal Keeping Uses	
Animal Shelter, Commercial Kennel, Farming/Orchard (Commercial), Horticulture Services	See General Retail
Commercial Uses	
Adult Business	See General Retail
Alcoholic Beverage on-site sales exclusive to persons over legal drinking age (no restaurant component)	See General Retail
Athletic, Fitness or Health Facility, and Live Entertainment 2,000 SF-GFA or less	1 space/100 SF-GFA
Athletic, Fitness or Health Facility, and Live Entertainment 2,000 SF-GFA or more	Subject to parking analysis under Minor Use Permit Pursuant to Appendix A
Automobile Accessory Sales	See General Retail
Automobile Dealer New and Used	1 space/2,000 SF-GLA
Automobile/Truck/Recreational Vehicle Rental—Onsite	1 space/350 SF-GFA, plus 1 space/2,000 SF of outdoor storage or if within existing shopping center, 1 space/per rental vehicle
Automotive Paint/Body/Repair Shop Automotive Tire sales/installation	1 space/250 SF-GFA of office space, plus 3 spaces for each service bay (service bays do not count as spaces)
Boarding House	1 space/per 2 beds
Car Wash	3 space/1,000 SF-GFA
General Retail	1 space/250 SF-GFA

General Retail as part of Shopping Center	1 space/250 SF-GFA, with a minimum of 4 spaces If restaurant space occupies more than 10% of total GFA, the parking for the additional restaurant space beyond the 10% shall be calculated at the restaurant rate.
Home Improvement Center	1 space/250 SF-GFA for indoor sales, plus l space/1,000 SF gross outdoor retail area
Hotels and Motels	1 space/guest room, plus additional spaces for restaurant and public assembly areas as required for those uses
Micro-Brewery/Distillery/Winery	Subject to a parking analysis under Minor Use Permit or Conditional Use Permit Pursuant to Appendix A
Nurseries Retail	1 space/1,000 SF indoor GFA, plus l space/2,000 SF gross outdoor retail area
Residential Sales Office (Temporary)	3 spaces per model home or unit, including at least 1 space designated for vehicles displaying a disabled placard
Temporary Sales (Christmas Tree/Pumpkins)	1 space per each 500 SF of tree/pumpkin display area. Minimum number of spaces is subject to review and approval by the City; at least one space must be designated for vehicles displaying a disabled placard.
Tutoring/Music Instruction 2,000 SF-GFA or less	1 space/200 SF-GFA
Tutoring/Music Instruction 2,001 SF-GFA or more	Subject to parking analysis under Minor Use Permit pursuant to Appendix A
Industrial and Manufacturing Uses	
General Manufacturing, Breweries/Distilleries/Wineries, Recycling Facility Commercial more than 500 SF-GFA (not including buildings used exclusively for warehouse purposes)	1 space/500 SF-GFA of industrial/manufacturing area, plus 1 space/300 SF-GFA of office use, plus 1 space/1,000 SF-GFA of warehouse area
Self-Storage	1 space/2,500 SF-GFA of warehouse area, plus additional spaces as required for any associated residential/office uses
Warehouses	1 space/1,000 SF-GFA of warehouse area, plus 1 space/300 SF of office use
Institutional and Assembly Uses	
Auditoriums, Places of Public Assembly and Religious Institutions	1 space/3 fixed seats(or 54" of bench seating), or 1 space/25 SF-GFA of assembly area where there are no fixed seats
Professional School	1 space/200 SF-GFA
School/Education Institution K-12 grades	1.5 spaces/classroom, plus l space/5 fixed seats in auditorium, gymnasium or similar public assembly facility, or 1 space/35 SF-GFA of assembly area where there are no fixed seats
Medical Uses	
Hospitals	1 space/2 patient beds, plus l space for each employee and staff member
Medical Clinic/Urgent Care	1 space/200 SF-GFA
Medical Laboratories	1 space/300 SF-GFA
Veterinary Hospital	1 space/250 SF-GFA

Office Uses	
General Office	1 space/250 SF-GFA
Medical Offices	1 space/200 SF-GFA, with a minimum of 4 spaces
Recreation and Entertainment Uses	
Entertainment Center (Indoor)	Subject to parking analysis under Conditional Use Permit Pursuant to Appendix A
Entertainment Center (Outdoor)	Subject to parking analysis under Conditional Use Permit Pursuant to Appendix A
Game Courts (Commercial Venture)	Subject to parking analysis under Minor Use Permit Pursuant to Appendix A
Golf Course	Subject to parking analysis under Conditional Use Permit Pursuant to Appendix A
Swimming Pool or similar recreation water facility (Commercial Venture)	Subject to parking analysis under Minor Use Permit Pursuant to Appendix A
Residential Uses	
Apartments in the RM-1, RM-2, and RM-3 zoning districts	2 spaces per unit, with one space required to be covered, plus one guest for every 2 dwelling units, plus the following: 3 spaces for each on-site rental or sales office for developments of 100 units or less, plus l additional space for each additional l00 units or fraction thereof, plus 2 additional spaces dedicated for post office delivery and mail pick-up by residents
Duplex, multifamily condominiums, town houses, and similar developments in the RM-1, RM-2, RM-3 and MDH zoning districts	2-car garage or carport for each unit, plus one guest space for every 2 dwelling units, plus the following: 3 spaces for each on-site rental or sales office for developments of 100 units or less, plus l additional space for each additional l00 units or fraction thereof, plus 2 additional spaces dedicated for post office delivery and mail pick-up by residents
Dwelling units in the UHDH, VHDH, and MUH zones	See Chapter 16.15
Mobilehome Park	2 spaces per unit, plus one guest space per every 2 units, plus 2 spaces for each on-site sales or rental office
Single-family Dwelling Unit in RA, RR, RS, and MU zoning districts	Up to 3,100 SF[1] —4 spaces (2 must be in a garage[2]) 3,101—6,000 SF[1] —5 spaces (3 must be in a garage[2]) 6,001 and above—6 spaces (4 must be in a garage[2]) Note: 1. The square footage excludes the garage space 2. Unless existing as a carport
Restaurants	
Outdoor Dining Areas for restaurants	1 space per 150 SF of outdoor seating area
Restaurants, as defined in Chapter 16.02 of this Code	1 space/75 SF-GFA of serving area, plus 1 space/200 SF-GFA of kitchen area Restaurants with drive-through areas must provide at least 6 on-site queuing spaces for patron vehicles ahead of the menu board; or subject to a queuing

	analysis under a Conditional Use Permit pursuant to Appendix A
Supportive Uses	
Assisted Living/Nursing Facility	1 space for every 4 beds, plus parking for on-site employee housing
Day Care Facility, Commercial	1 space per employee, plus l space/10 children
Emergency Shelter	1 space/per 4 beds
Abbreviations: SF = square feet, GFA = gross floor area, GLA = gross land area	

E. Accessible Parking Spaces. Parking for disabled persons shall be provided pursuant to the provisions of Title 24 of the California Code of Regulations.

F. Compact Parking. Compact parking spaces are not permitted. However, such spaces existing on December 14, 1995 may continue to exist as a legal non-conforming use. Parking lots which contain compact spaces as of December 14,1995 which are restriped to eliminate compact spaces will not be subject to the parking requirements of this chapter, if the elimination of compact spaces results in a deficit of parking (as calculated using the standards in this chapter).

G. Bicycle Parking. Bicycle parking spaces shall comply with the currently adopted California Building Code.

H. Electric Vehicle Parking Spaces (EV parking spaces). EV parking spaces shall meet the minimum parking stall dimension as indicated in Figure 65-1 of this code, and shall comply with the currently adopted California Building Code.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.070 Parking facility layout and dimensions.

Parking facilities shall be designed to conform to the following minimum standards:

A. Access.

1. Off-Street Parking. Fully accessible, adequate and safe ingress and egress shall be provided from and to a street, highway, alley, or driveway, as required by the City.

2. On-Street Parking. On-street parking for public roads shall comply with Title 12 of the Chino Hills Municipal Code (Streets, Sidewalks and Public places standards) and Chapter 8.16 of the Chino Hills Municipal Code (adopting by reference the California Fire Code) standards. On-street parking for private roads shall adhere to City Engineering standards, unless otherwise modified subject to Fire District concurrence and the applicable entitlement permit pursuant to this Municipal Code.

B. Parking Space Dimensions. The minimum size of a non-cove red parking space shall be nine feet wide and nineteen (19) feet long. A 2-foot overhang may count towards the minimum length of nineteen (19) feet provided the overhang does not encroach into a minimum five-foot clear walkway (reference Figure 65-1).The minimum interior clear space for a one-car garage space is ten (10) feet wide by twenty(20) feet long(by example, a two-car garage would be required to be at least twenty (20) feet wide by twenty (20) feet long), free and clear of washer and dryer, water heater, etc. The minimum size of an accessible parking space shall be as directed by Title 24 of the California Code of Regulations.

C. Parking Access. Access leading to parking facilities, including garages for private residences, shall meet the following dimensions:

Single-Family Residential and Duplex:

1. Minimum Residential Driveway Width. The minimum width shall be nineteen (19) feet or equal to the width of the main garage door, whichever is less. For garages located outside the front yard of a property, the driveway leading to the garage shall be a minimum width of twelve (12) feet, provided the width directly in front of the garage is equal to or greater than the main garage door.
2. Minimum Residential Driveway Length. Driveways for single-family or duplex units in any zoning district shall be a minimum of nineteen (19) feet in length.
3. Limit on Residential Driveways. The number of permitted driveways shall be one for a lot with a frontage of fifty (50) feet or less; two driveways are permissible for lots with a frontage greater than fifty (50) feet, provided the re is a minimum separation often (10) feet between the driveways. A curved driveway with two entrances shall count as one driveway and shall have a minimum separation often (10) feet between drive entrances.
4. Shared Driveway. Shared driveways for adjoining residential lots shall be a minimum width of nineteen (19) feet, and subject to Zoning Clearance pursuant to Section 16.79 procedures.

Non-Residential and Multi-Family:

1. Maneuvering Areas. Access facilities shall be arranged so that any vehicle can leave the parking area and enter into an adjoining vehicular right-of-way traveling in a forward direction.
2. The minimum width is twenty-six (26) feet fortwo-way traffic, however, primary drive aisles shall be thirty (30) feet wide. Greater widths may be required at the discretion of the City. Pavement graphics and directional signs and arrows shall be provided.

D. Interior Parking Lot Dimensions. The minimum dimensions and layout of interior circulation drive aisles and other maneuvering areas shall be adequate to provide for safe vehicular movements and to avoid conflicts with pedestrian, subject to the review and approval of the City Traffic Engineer.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.080 Parking facility development standards.

A. Paving Required.

1. All parking spaces and associated driveways shall be entirely paved with concrete or asphalt-type surfacing as per City standards and requirements.
2. All newly constructed driveways and parking areas shall be concrete, asphalt, or as otherwise approved by the City.
3. Parking on areas which do not meet the above standards shall be prohibited.

B. Parking Space Delineation.

1. Each parking space shall be clearly marked and maintained with paint or another easily distinguishable material.

C. Construction.

1. All driveways and parking areas shall be constructed and striped in accordance with road and drainage standards established by the City and the Fire District.
2. Curbs shall be used in conjunction with landscaped areas, as approved by the City.

3. A six-inch concrete step-out shall be provided along the curb (for an aggregate of twelve (12) inches of paved surface) where landscaping is adjacent to parking spaces.

D. Lighting. Outdoor parking areas, in all zones other than single-family residential zones, shall be designed and maintained with a lighting system providing an illumination level of one foot-candle throughout the parking area, while preventing glare or direct illumination from intruding into any areas outside the parking lot.

E. Landscaping and Screening. Parking lot landscaping shall be provided and maintained as required in this Development Code.

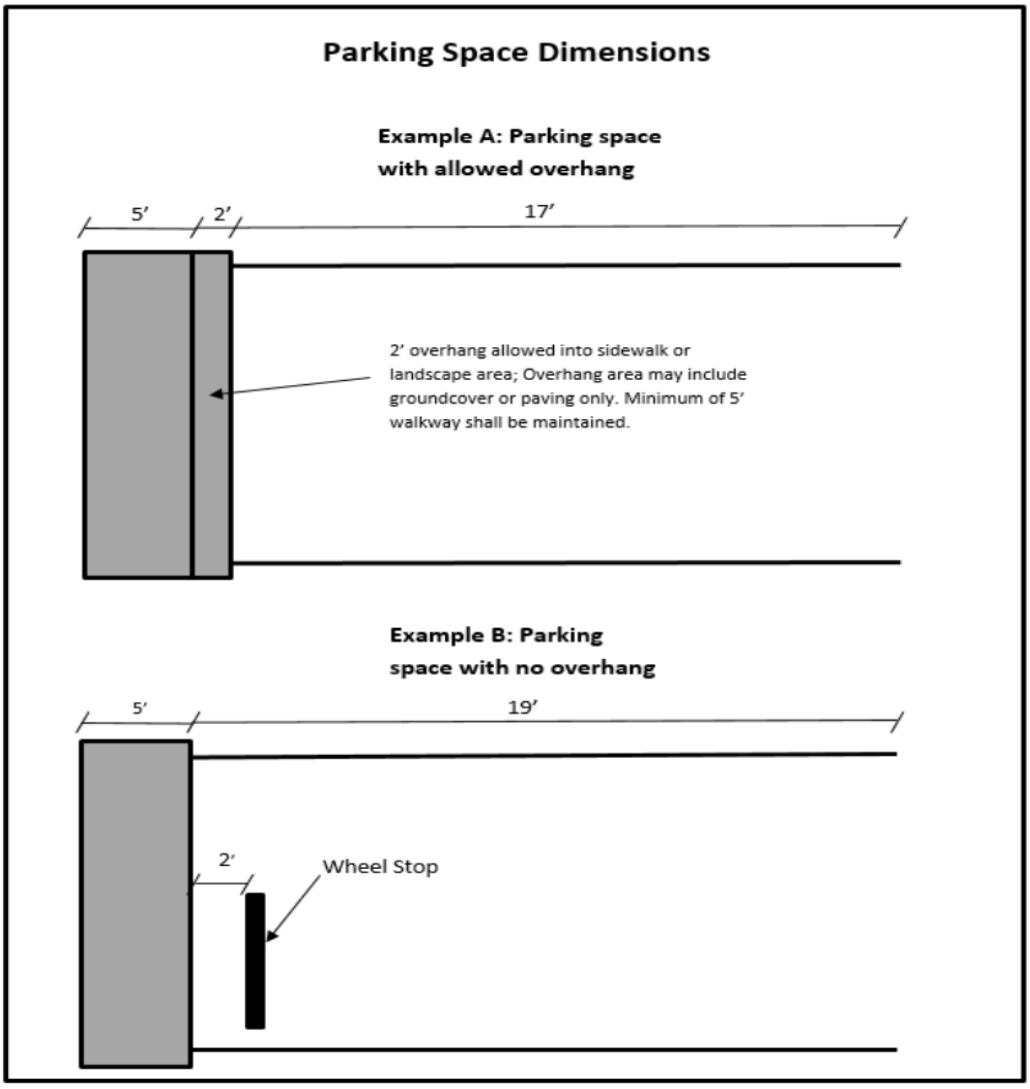

Figure 65-1

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.090 Combined or shared parking facilities.

A. For Uses on Separate Lots or Parcels. Required parking facilities for nonresidential uses may be provided collectively for two or more buildings or uses located on the same or separate contiguous lots or parcels of

land, provided that the total combined parking facilities meet or exceed all other minimum parking capacity requirements for the buildings or uses. A covenant, approved as to form by the City Attorney, shall be recorded describing the combined parking arrangement and granting reciprocal access rights to the parking facilities.

B. Shared Parking For Separate Uses Within the Same Development. Where two or more uses are located on the same parcel, the applicant may propose the use of shared parking, provided that a shared parking analysis is approved by the City, demonstrating that sufficient parking will be provided at all times for all uses. Such shared parking analysis shall be prepared pursuant to guidelines published by the Urban Land Institute or other guidelines as approved by the City. Where separate parcels exist within a single development, a parking agreement shall be required, per subsection A of this section.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.100 Loading space requirements.

A. Number of Spaces Required. Required loading spaces will be determined on a case-by-case basis, depending on the requirements of each project.

B. Dimensions. The dimensions of loading spaces will be determined on a case-by-case basis, depending on the requirements of each project (including the length of trucks to be served and the configuration of buildings on the site).

C. Location. All loading areas shall be located outside of any required aisles or other circulation areas. Adequate turning radii shall be provided to allow a vehicle to maneuver without backing into a street or without backing into the loading space from the street.

(Ord. No. 355, § 5(Exh. A), 3-24-2020)

16.34.110 Religious institution affiliated housing development projects; parking requirements.

A. Notwithstanding any provisions of this title or any adopted specific plan to the contrary, the parking requirements for a religious institution affiliated housing development project are subject to the provisions of Government Code section 65913.6, as amended.

B. "Religious institution affiliated housing development project" is defined as a housing development project that meets all of the following requirements:

   a. The housing development project is located on one (1) or more contiguous parcels that are each owned, entirely, whether directly or through a wholly owned company or corporation, by a religious institution.

   b. The housing development project qualifies as being near collocated religious-use parking by being on or adjacent to a parcel with religious-use parking or by being located within one-tenth of a mile of a parcel that contains religious-use parking.

   c. Qualifies for a density bonus under Government Code section 65915.

C. Allows up to fifty (50) percent elimination of total religious-use parking spaces available for a religious institution affiliated housing development project.

D. No replacement requirement of religious-use parking spaces for a religious institution affiliated housing development project proposes to eliminate, provided the reduction does not exceed fifty (50) percent.

E. Allows the remaining religious-use parking spaces to count toward number of parking spaces required for the religious institution affiliated housing development project.

F. Prohibits the reduction in parking spaces from reducing the minimum parking standards below one (1) space per unit unless the religious institution affiliated housing development project is within one-half (½) mile of a high-quality transit corridor or a major transit stop, or a car share vehicle within one (1) block of parcel.

   a. High-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than fifteen (15) minutes during peak commute hours.

   b. Major transit stop includes existing rail or bus rapid transit station, ferry terminal served by either bus or rail transit service, or the intersection of two (2) or more major bus routes with a frequency of service interval of fifteen (15) minutes or less during the morning and afternoon peak commute periods.

   c. Car sharing means a model of vehicle rental where users can rent vehicles for short periods of time and users are members that have been preapproved to drive.

(Ord. No. 366, § 6(Exh. A), 5-11-2021)

Chapter 16.58 ADMINISTRATIVE PROCEDURES

16.58.010 General procedures.

A. Introduction. This chapter establishes the regulations for the effective and efficient implementation of Title 16 of the Chino Hills Municipal Code (or Development Code). This chapter contains the procedures for discretionary review of development applications, criteria for acceptance of applications for discretionary actions, standards for processing of applications, and requirements for the notice and conduct of public hearings. The provisions of this chapter, used in combination with the provisions of the Development Code, provide for a system of development review that is open to the public and responsive to the needs of the community.

B. Types of Review Procedures in Effect in Chino Hills. Table 100-1 outlines the types of review procedures in effect in Chino Hills.

C. Authorized Decision-Makers. The following are authorized to make decisions pursuant to Title 16 of the Municipal Code as follows:

1. City Council. The City Council shall be responsible for the decisions listed in Table 100-1.

2. Planning Commission. The Planning Commission shall be responsible for the decisions listed in Table 100-1.

3. Community Development Director. The Community Development Director shall be responsible for the decisions listed in Table 100-1.

Notes:

* All land use decisions which require a legislative act as part of any portion of the land use decision prior to their approval or denial shall be automatically referred to the City Council as a whole for final action following a recommendation from the decision-making body with discretionary authority over the non-legislative actions(s).

* The function of the Project Review Committee (PRC) is limited to providing advice to the Community Development Director. PRC members will typically suggest proposed conditions of approval; the PRC does not have approval authority for any type of application.

* All decisions of the Community Development Director may be appealed to the Planning Commission, except for decisions on Housing Plan Approvals.

* All decisions of the Planning Commission may be appealed to the City Council.

* The function of the Project Review Committee (PRC) is limited to providing advice to the Community Development Director. PRC members will typically suggest proposed conditions of approval; the PRC does not have approval authority for any type of application.

16.58.060 Appeals.

A. Authority to Appeal.

1. All actions and decisions of the Community Development Director authorized by this Development Code may be appealed to the Planning Commission. All such appeals shall be filed with the Planning Commission secretary.

2. All actions of the Planning Commission authorized by this Development Code may be appealed to the City Council. All appeals shall be filed in writing with the City Clerk.

3. Any person may appeal a decision of Director of Community Development or Planning Commission in accordance with the terms of this chapter.

4. The City Council shall be the final approval authority for all actions. Applications which are denied by the City Council are not subject to appeal, but may be resubmitted pursuant to Section 16.58.050, above.

B. Time Limit for an Appeal Filing. All appeals must be brought within ten (10) working days of the date of the final action by the Director of Community Development or Planning Commission.

C. Fees. Persons filing appeals shall pay all applicable fees in effect at the time of the appeal as established by resolution of the City Council.

D. The provisions of this section shall not apply to Housing Plan Approvals, which are governed by the provisions of Chapter 16.15 of this Code.

(Ord. 68 § 9.100.060, 1995)

APPENDIX E: OBJECTIVE DESIGN STANDARDS

Chapter 16.05 - Draft Objective Design Standards

1 Introduction

Purpose

Since 2017, the California legislature has adopted and amended several housing and land use laws to address the state's housing crisis. Senate Bill (SB) 35, SB 167, SB 330, SB 423, and Assembly Bill (AB) 168 are aimed at streamlining land use entitlements for housing development projects as defined in §65589.5 (h)(2).

- SB 35 (2017) streamlines housing development approvals on infill sites that comply with "objective standards," meet minimum affordability requirements, are not environmentally sensitive, and if the developer pays prevailing wage and uses a "skilled and trained workforce" for projects over a certain threshold.
- SB 167 (2017) prohibits a local agency from disapproving or conditioning approval in a manner that renders infeasible, a housing development project for very low, low-, or moderate- income households, or an emergency shelter, unless the local agency makes specific written findings based upon substantial evidence in the record.
- SB 330 (2019) establishes a preliminary application process that allows developers to lock in city ordinances, policies, and development fees prior to filing a complete application and requires that project applications are subject to no more than five public hearings if the applicable objective standards are met.
- SB 423 (2023) extends SB 35 until January 1, 2036, and expands upon its applicability including specified hazard zones and some high fire hazard severity zones. It prohibits local governments from requiring, prior to approving a qualifying development, compliance with any standards necessary to receive a post-entitlement permit. This bill also amends the required labor standards for mixed-income projects.
- AB 168 (2020) creates a process for tribal scoping consultation for housing development proposals seeking review under SB 35.

The legislation discussed above is intended to streamline the housing development approval processes in California. State law requires cities to approve certain eligible housing proposals through ministerial processes based on objective standards that "involve no personal or subjective judgement by a public official and are uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant and the public official prior to submittal." The Objective Design Standards (ODS) provide clear expectations on the design of new multi-family residential development within the city, outlining objective design standards that allow for predictable development outcomes.

The purpose of the Objective Design Standards is to give the community, developers, staff, and decision makers more certainty about what future multi-family residential and mixed-use development will look like as the City moves forward with streamlined processes to meet the State's goals in addressing the housing crisis and the objectives of the City's Housing Element. The design standards within this document are minimum standards. The ODS document is organized as a checklist that is to be used by developers, designers, and city staff to review and approve multifamily development. The project must also comply with all applicable building permit requirements, zoning code requirements, and other planning related documents.

Applicability

The ODS document provides guidance and design standards for multifamily residential or mixed-use developments that include multifamily housing in the following zones:

- Medium Density Residential (RM-1)
- High Density Residential (RM-2)
- Very High Density Residential (RM-3)
- Mixed Use (MU)
- Medium Density Housing (MDH)
- Mixed Use Housing (MUH)
- Urban High Density Housing (UHDH)
- Very High Density Housing (VHDH)

Definitions

Alcove. A recess in a wall that is partially enclosed by vertical elements such as walls or pillars.

Architectural Feature. Soffit, column, wing wall, canopy, roof eave, balcony, bell tower, spires, clock tower, cupolas, turrets, and any other similar element that does not create an interior floor space.

Blank Wall. Any wall that is not enhanced by architectural detailing such as artwork, landscaping, windows, doors, balconies, siding, trellis, metal accent panels, or similar features. Solid and mechanical doors and glass with less than 80 percent transparency are considered blank wall areas.

Brackets. A projection from a vertical surface providing structural or visual support under cornices, balconies, windows, or any other overhanging member.

Column. A vertical masonry support.

Complementary Architectural Style. Two structures are complementary in architectural style if they have the same roof form, 75 percent of materials and colors are the same (i.e., uses three of the four same materials and/or colors), and have similar massing.

Courtyard. An open space, usually enclosed by buildings or walls, which is primarily intended for outdoor use within a building or development.

Duplex. A residential building comprised of two separate living units.

Development Code. Title 16 of the Chino Hills Municipal Code, including Appendices A through E.

Entablature. A horizontal structural element frequently supported by columns or pilasters. It consists of three horizontal layers: the architrave, the cornice, and the frieze.

Façade Plane. Any stretch of a building façade existing along the same axis line, regardless of pattern differentiation or change in rhythm.

Fenestration. The stylistic arrangement of windows in a building.

Fourplex. A residential building comprised of four separate living units.

Foot-candle. A unit of illuminance or light intensity. The foot-candle is defined as one lumen per square foot.

Gable roof. A ridge roof that slopes up from only two walls. A gable is the vertical triangular portion of the end of a building from the eaves to the ridge of the roof.

Grade. All related terms shall be defined according to the definition contained in the California Building Code, incorporated by reference and amended in Title 15 of the Chino Hills Municipal Code.

Header. A structural element, typically a beam or lintel, placed horizontally above an opening such as a door or window.

Massing. The overall size, shape, and arrangement of a building or group of buildings.

Mid-rise Multifamily Building. A four to six story building with a maximum building height of 80 feet. Four-story buildings include apartments with surface parking or a wraparound parking structure. Five- and six-story housing products include wrap and wood structure podiums. Mid-rise multifamily buildings are permitted in the MUH, UHDH, and VHDH zones.

Mixed Use Project. As defined in Section 16.02.250 of the Chino Hills Development Code.

Multifamily Dwelling. As defined in Section 16.02.250 of the Chino Hills Development Code.

Open Space, Public. A publicly accessible park, square, plaza, or similar space. Does not include common open spaces shared exclusively by residents of a single development.

Orientation. Building orientation refers to the placement of a building on a site, considering its surroundings and the positioning of windows, rooflines, and other architectural features to optimize and enhance the overall aesthetic of the façade.

Ornamental Feature. A sculpture, fountain, relief, or any other decorative element that does not provide shelter, is non-structural, and is not a sign, and which serves to enhance visual interest.

Parkway. Land area between street curb and sidewalk.

Paseo. A pedestrian pathway or walkway extending from the street into the interior of a block. Paseos may be publicly accessible or limited to private use.

Patio Area. An outdoor space attached to a unit which typically includes concrete or pavers, and used as private yard area.

Podium Configuration. A building design where the construction is built in two different construction methodologies - typically concrete construction on the lower level(s) and wood framing above. Typically, non-residential uses and/or parking garages are included on the lower level and residential units above.

Recreational Amenities. An amenity provided by the building that is communal and available to all occupants for recreational and social purposes. Recreational amenities may include the following: picnic/barbeque areas, park benches, cabana or shade trellis areas, passive water features (e.g. fountain), passive recreation areas and/or gardens, dog park, clubhouse, swimming pool either with or without a sauna and/or jacuzzi, tot lots, an exercise structure or complex (e.g. playground, gym), full or ½ scale sports courts for volleyball/tennis/pickleball/basketball/soccer, etc., and other recreational amenities subject to review and approval.

Sill. The horizontal bottom portion of a window or door frame.

Step back. The vertical or horizontal recess or setback of a building's upper floors from the lower floors.

Stoop. A small staircase ending in a platform leading to the entrance of an apartment building or rowhouse.

Street Wall. The wall of a building facing the street or near the street-abutting property line. The street wall may include arcades, colonnades, recessed pedestrian entrances, decorative stairs, public art, and other features deemed pedestrian-oriented.

Terrace. An elevated outdoor space that is attached to a building, provided either by a purpose-built platform on the ground level or by the parapet roof of the story below.

Townhome. A multistory housing structure that is attached to one or more similar houses by shared walls.

Triplex. A residential building comprised of three separate living units.

Wrap Configuration. A building design where a portion of the building wraps around an interior parking or other structure, thereby screening the interior structure from public view.

2 Standards by Building Type

Low-rise Buildings

Low-rise multifamily buildings are two or three stories with a maximum building height of 42 feet. The housing products include townhomes, duplex, triplex, fourplex, and courtyard. Low-rise multifamily buildings are permitted in the RM-1, RM-2, RM-3, MU, MDH, and VHDH zones. Site design for low-rise multifamily buildings must include the following.

Design Standards	Yes	No	N/A
A. Building Coverage is specified in Chapter 16.10 and 16.15 of the Development Code.			
B. Parking spaces are specified in Chapters 16.15 and 16.34 of the Development Code.			
C. Setbacks facing public streets shall be landscaped with the exception of driveways and walkways leading from the street to the unit or group of units. Landscaping shall comply with Chapter 16.07 of the Development Code and the Water Efficient Landscape Ordinance.			
D. Primary entry is protected with at least one of the following features: overhangs, recesses, porches, trellises, or other weather-protection features covering an area at least three feet in depth and five feet in width. Encroachments of these features into required setbacks must be consistent with the zoning code.			
E. A building or unit entrance must be provided at a frequency of at least one entrance every 50 feet along any street fronting elevation. Shared main entrances must be provided at least every 100 feet along any street frontage.			
F. Rooflines shall be vertically articulated at least every 50 feet along the street frontage, through the use of architectural elements such as parapets of varying height (at least 12 inches), varying cornices, reveals, or varying roof height and/or form.			
G. Buildings longer than 150 feet shall have parking accessible from a rear aisle, alley, or a lot across a drive, aisle, or street.			
H. Buildings longer than 150 feet shall have a vertical massing break of at least four feet across and at least 75 percent of the height of the building façade.			

Mid-rise Buildings

Mid-rise multifamily buildings are four to six stories and a maximum building height of 80 feet. Four-story buildings include apartments with surface parking or a wraparound parking structure. Five- and six-story housing products include wrap and wood structure podiums. Mid-rise multifamily buildings are permitted in the MU, MUH, UHDH, and VHDH zones.

Site design for mid-rise multifamily buildings must include the following.

Design Standards	Yes	No	N/A
A. Building Coverage is specified in Chapter 16.10 and 16.15 of the Development Code.			
B. Parking spaces are specified in Chapter 16.15 and Chapter 16.34 of the Development Code.			
C. For mixed-use, ground-floor shops, or office, each shall have individual entries along the adjacent drive, aisle, or street.			
D. Residential ground-floor uses in multifamily buildings shall be no more than four feet above the public sidewalk grade if setback is 15 feet or less.			
E. The ground-floor elevation shall consist of at least one of the following (note that the ground floor can include a combination of these elements, but each portion of the ground floor must provide at least one of these elements): a. A line of awnings or canopies over ground-floor storefronts b. For ground floor commercial uses, unobstructed transparent glass for at least 65 percent of the elevation area of the ground floor. See Figure 1 c. A different exterior cladding material than the middle/body which is separated from the middle/body above by either an overhang or recess of two feet or more, or a horizontal belt course with a dimension of at least 12 inches, consisting of a different color or material separating the base from the middle section. d. A series of individual residential entries with entryways recessed a minimum of three feet. e. A series of individual residential entries with projections of a minimum of three feet.			
F. If an elevator is required per California Building Code, elevator towers shall utilize the same color, design, and materials as the building.			

Figure 1 Midrise Buildings Commercial Ground Floor

3 Building Orientation

Building Location and Orientation

Building location and orientation standards provide unity and quality development of residential areas. Building location and orientation must include the following.

Design Standards	Yes	No	N/A
A. Setbacks shall be provided in accordance with the underlying zoning district and the regulations provided in Chapter 16.10 and 16.15 of the Development Code.			
B. Buildings shall be oriented toward the public and private streets to define the street edges. Buildings on corner lots shall be oriented toward the primary intersection and shall be designed with dual orientation.			
C. Dense landscaping and/or architectural treatments shall be provided to screen façades facing the freeway.			
D. Primary pedestrian entrances for each residential unit (or the single primary pedestrian entrance if shared) shall face the public or private street, a shared pedestrian walkway, or a common courtyard. Primary pedestrian entries for individual units fronting side property lines shall provide an alcove, recess, overhang, porch, trellis, or other weather-protection feature, or shall be oriented to not face doors and windows of uses on adjacent properties. See Section 5 Architectural Elements for additional requirements for entries and porches.			
E. Multifamily residential buildings shall be arranged to create outdoor spaces such as courtyards, pathways, paseos, and recreational areas, with windows facing the outdoor spaces. See Figure 2.			
F. Buildings incorporating enclosed parking on the ground level shall provide a minimum three-foot setback from adjacent drive aisles.			

Figure 2 Building Location and Orientation Windows Facing Pathway

4 Building Massing and Articulation

Massing Breaks and Articulation Features

Building massing and articulation standards are designed to create massing breaks and articulation features on elevations facing public streets and common open spaces. Massing breaks and articulation features must include the following

Design Standards	Yes	No	N/A
A. Buildings shall have minor massing breaks at least every 50 feet along the street frontage. Minor breaks shall be a minimum of two feet deep and eight feet wide with a vertical length of at least 60 percent of the height of the building.			
B. Buildings over three stories shall have major massing breaks at least every 100 feet along any street frontage, adjacent public park, publicly accessible outdoor space (whether public or private), or designated open space, through the use of varying step backs and/or building entries. a. Major breaks shall be a minimum of five feet deep and 25 feet wide and shall extend at least 75 percent of the height of the building. Exceptions include buildings with upper stories (above first floor) stepped back at least five feet, in which case the major break need only extend 75 percent of the height of the portion of the front façade that is not stepped back. See Figure 3.			
C. Multifamily buildings shall be designed to create varying roof forms and break up the massing of the building by using at least one of the following techniques: a. A change in parapet wall or roof height of at least one foot for a distance of at least 50 feet; or b. A change in roof pitch, form, or direction; or c. Inclusion of dormers, gables, parapets, chimneys, and/or varying cornices; or d. Varying roof height and/or form; or e. Clerestory windows above eye-level to admit light, fresh air, or both. See Figure 4.			
D. Rear and side elevations that are exposed to public view shall be consistent with the same number of architectural treatments as the front elevations.			
E. Untreated blank walls over 15 feet in height and 20 feet in length visible from a public street or a pedestrian-oriented space (such as a park, common open space, or pedestrian pathway) are prohibited. Methods to treat blank walls can include: a. Landscape planting bed at least five feet deep or a raised planter bed at least two feet high and three feet deep in front of the wall with planting materials that are sufficient to obscure or screen at least 60 percent of the wall's surface within three years. b. Installing a vertical trellis in front of the wall with climbing vines or plant materials. c. Special building detailing that adds visual interest. Such detailing must use a variety of surfaces. Examples include mosaics, fountains, ornamental detailing, or inclusion of highly textured surface materials such as natural stone.			
F. Long, unbroken rooflines are to be avoided. Upper and lower stories must be distinguished by incorporating features applied to the transitions between any floors, except where otherwise specified. These features shall be one or more of the following: a. A change in façade materials, along with a change in plane at least one inch in depth at the transition between the two materials; or b. A horizontal design feature, such as a belt course; or c. Brackets; or d. Gable roof; or e. Columns; or f. Variation in the patterns or types of fenestration or details.			

Design Standards	Yes	No	N/A
G. Buildings facing public street corners shall incorporate the same level of articulation on both street-facing elevations and incorporate at least one of the following: a. Wrap–around porches, courtyards, or balconies; or b. Wrap–around window or enhanced window treatments such as trim surrounds, shutters, awnings, and/or bay windows; or c. A Roof plane break of at least one foot on each street facing elevation; or d. Cropped building corner with an entry feature; or e. Other creative elements that meet the intent of this standard and are consistent with the architectural style, subject to review of the Planning Division.			
H. Building façades of four or more units facing internal drive aisles shall incorporate two or more of the following treatments: a. Massing offsets, including layered wall planes, recesses, or cantilevers of at least one foot in depth for second or third story. b. Variety of garage door colors and designs. c. Trellises. d. Balconies.			
I. Buildings facing a common drive aisle shall have a minimum separation of 28 feet at the narrowest point.			
J. Buildings facing common open space shall have a minimum separation of 15 feet at the narrowest point for two-story elevations, 20 feet at the narrowest point for three-story elevations, and 25 feet at the narrowest point for four-story and higher elevations.			

Figure 3 Massing Breaks and Articulation Features

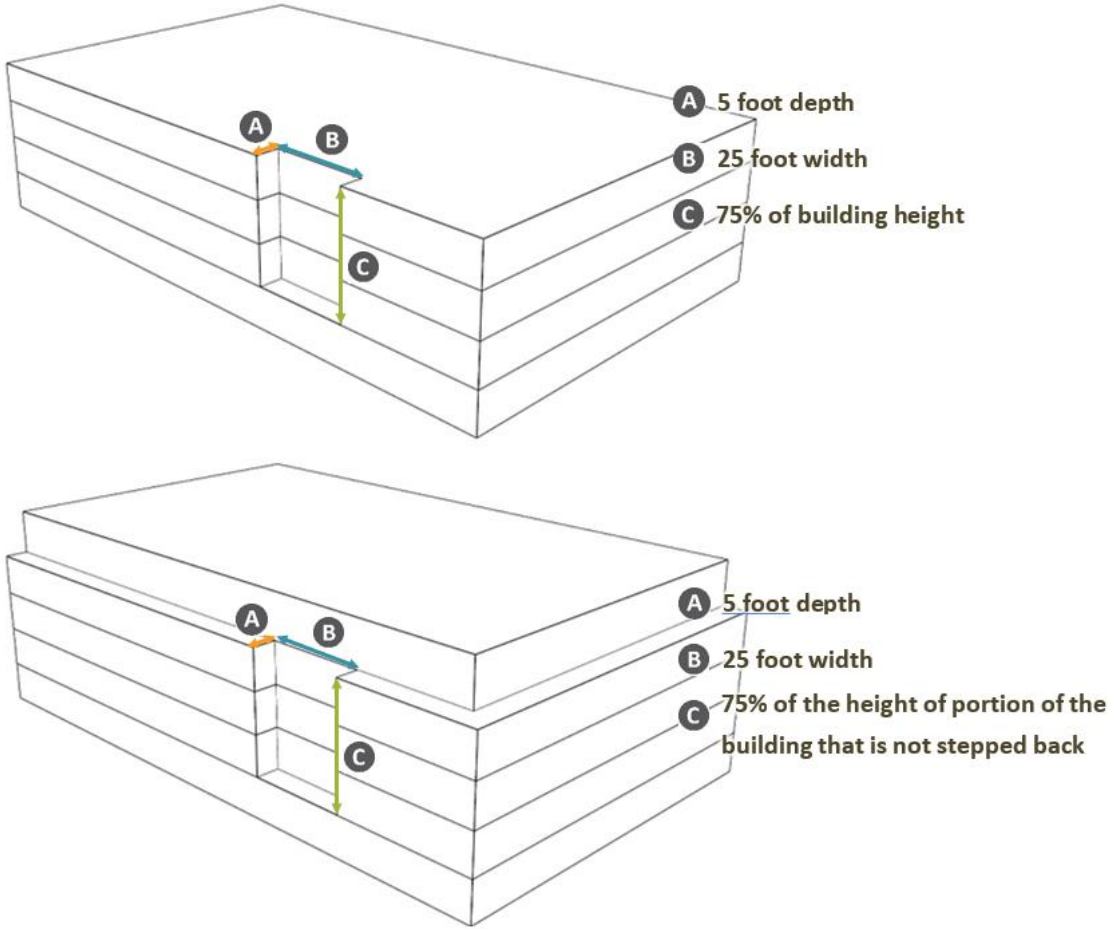

Figure 4 Varying Roof Heights and Pitch

5 Architectural Elements

Architectural standards incorporate elements and details that provide individuality to each project, while also maintaining consistency in overall character. The standards for architectural elements are as follows.

Roofs

Design Standards	Yes	No	N/A
A. Rooflines shall be vertically articulated at least every 50 feet along the street frontage, using architectural elements such as parapets, varying cornices, reveals, clerestory windows, or varying roof height and/or form.			
B. If a building has a pitched roof, an eave overhang of at least 18 inches is required. Rakes at gable ends shall project at least four inches. Buildings for projects located in the Fire Hazard Overlay shall have an eave overhang of at least 8 inches.			
C. Roof materials shall have a matte finish to minimize glare.			

Entries

Design Standards	Yes	No	N/A
A. Each unit or building entry shall be easily identifiable and distinguishable from the street, drive aisle or common open space. Means of distinguishing an entryway include door color, door size and style, recessed entry, step up entry, and the incorporation of awnings, landscaping, and/or contrasting trim.			
B. Exterior building entry doors and entry ways shall be protected with at least one of the following features: overhangs, recesses, porches, trellises, or other weather-protection features. The entry shall have a depth or projection of at least five feet and a width of at least three feet. If Building or Fire code requirements would restrict compliance with the minimum projection, the weather protection feature shall be built to the maximum dimensions allowed, provided the weather feature is no less than 18 inches.			

Porches

Design Standards	Yes	No	N/A
A. Porches, where provided, shall have a minimum depth of six feet, including posts or columns, and a width of four feet. Roof elements, eaves, supports, and railings of the porch shall be consistent with the architectural style.			
B. Where provided, covered porches shall be required to break up volumes between lower and upper floors.			

Patio Walls and Gates

Design Standards	Yes	No	N/A
A. Low walls and gates for patios, where provided, shall use similar or same colors, materials, and/or design elements used for the building architecture.			
B. All patio areas and private open space shall measure a minimum of eight feet by five feet.			
C. Projects with a covered porch that extend from the building greater than four feet shall be supported by columns.			

Balconies

Design Standards	Yes	No	N/A
A. Where provided, a minimum depth of four feet is required for balconies (except for ornamental or Juliet balconies). Scuppers or internal drains are required on all balconies for drainage.			
B. Long balconies that provide access to more than three units shall be prohibited. Balconies shall either be recessed or projecting.			

Fenestration

Design Standards	Yes	No	N/A
A. Windows and doors facing a public street, or a pedestrian-oriented space shall be trimmed, recessed, and/or incorporate enhancement details such as headers/sills, shutters, trellises, awnings, or pop-outs. When trimmed, the trim material shall be a minimum of three inches in width by three-quarter inches in depth when protruding from the wall. When recessed, the minimum depth shall be one-and-a-half inches from the adjacent wall surface. See Figure 5. Elevations with contemporary or modern design may have trims less than three inches wide, windows without trims, or be flush with the adjacent surface, provided that varied window sizes are used, and at least 30 percent of the residential portion of the façade consists of windows.			
B. Windows on the upper floor(s) of a building shall be treated with the same or similar window treatments as those on the ground floor.			
C. Mirrored or highly reflective glass is prohibited.			

Figure 5 Fenestration Trim, Recessed, and Shutters

Colors and Materials

Design Standards	Yes	No	N/A
A. Buildings shall incorporate a maximum of two main body colors, three accent colors, and three different materials, excluding windows, doors, trim, or signs. Exterior elevations shall include at least two colors and at least different materials (in addition to glazing, window trim, doors, railings, , or signs) that can accentuate building masses. The main body color is the predominant color used on the face(s) of the building.			
B. Accessory structures such as garages, carports, and enclosures for mechanical, utility, and service areas shall include no more than two deviations in material or color from the primary structure. Accessory structures not visible from the street or neighboring properties may deviate from this standard.			
C. Reflective surfaces and materials such as mirrored glass and polished aluminum are prohibited.			
D. Material and color changes shall occur at an inside corner, underside of a massing element, or wrapped to an appropriate termination point such as a roof break, half-column, bay window, or enhanced trim element. See Figure 6.			

Figure 6 Material and Color Changes

Accessory Structures

Design Standards	Yes	No	N/A
A. Accessory Dwelling Units, carports, detached garages, and other accessory structures shall coordinate materials, patterns, and colors with the architectural style of the primary buildings.			

Solar Panels

Design Standards	Yes	No	N/A
A. Solar panel frames must be colored to complement the roof. Mill finish aluminum frames are prohibited.			
B. Solar support equipment shall be painted to match the color of the building.			

6 Access and Circulation

Access and circulation standards provide a consistent element of safety and efficient circulation for pedestrians, vehicles, and cyclists. The standards for access and circulation are as follows:

Pedestrian Pathways

Design Standards	Yes	No	N/A
A. Provide a pedestrian pathway from the building entries to a sidewalk, to an alley or a court drive leading to a sidewalk, or to a pathway network within the development site that connects to a public sidewalk.			
B. For development sites with multiple buildings, pedestrian pathways connecting businesses, parking areas, and residential building entries on the same site shall be provided.			
C. Surface parking lots shall be connected to all building entrances by means of internal pedestrian walkways. Parking lot pedestrian walkways shall be not less than six feet wide.			
D. Pedestrian walkways must be provided along the perimeter of all parking areas adjacent to buildings so as to create a buffer between parking areas and the buildings.			
E. Pedestrian walkway lighting mounted to building walls or freestanding poles shall not be placed higher than 12 feet above grade or the walkway surface. These lights shall be fully shielded or set back from the property line a minimum distance equal to the height of the light fixture to confine lighted area to within the property. In no case shall direct light rays trespass onto neighboring properties.			
F. Pedestrian pathways shall be designed to comply with the Americans with Disabilities Act (if required) and Title 24 of the California Code of Regulations.			
G. All utility equipment shall be located outside of the primary pedestrian path of travel. If utility equipment must encroach in the pedestrian path of travel, ensure a minimum paved clearance of three feet for ADA passage around equipment.			

Vehicular and Emergency Access

Design Standards	Yes	No	N/A
A. Parking areas and garages within a development site shall be internally connected via a roadway network that leads to a public street.			
B. Site circulation shall be designed to facilitate emergency access and comply with the Fire Department standards and refuse service provider standards.			
C. Vehicular driveways with access to the public right of way shall have sidewalks or pedestrian connections on at least one side of the driveway.			
D. Vehicular access shall be provided through the alley when present. For lots without an alley, vehicular access shall be provided from the secondary street.			
E. Vehicular access paths shall have a minimum width of 22 feet, or 26 feet where required for emergency access.			

Off-Street Parking Areas

Design Standards	Yes	No	N/A
A. Off-street parking areas and carports for multifamily residential development shall conform with the underlying zoning district and the regulations provided in Chapters 16.15 and 16.34 of the Development Code.			
B. Alley access, when available, shall be utilized when garage parking is proposed. This arrangement is intended to provide maximum landscaping at the street edge, as well as front facades dominated by porches and entries instead of garage doors.			
C. Garage doors shall be set back a minimum of three feet, and a maximum of five feet, from adjacent drive aisles.			
D. Landscaping shall be provided along drive aisles in between individual garage door entrances and/or aprons. See Figure 7.			
E. Building façades of four or more units facing a drive aisle with garage doors shall incorporate at least two of the following elements: a. Garage door recess of at least one foot in depth from façade. b. Trellis or roof overhang above garage door of at least one foot in depth. c. Variety of at least two different garage door designs and colors. d. Trim around garage door of contrasting material, with minimum dimensions of three inches in depth and six inches in width. See Figure 7.			

Figure 7 Garage Door Design Features

7 Landscaping, Walls and Fences, Lighting

Visibility Clearance Areas

Maintaining standard visibility clearance areas ensures that there will be no interference with mobility and visibility within developed areas. Visibility clearance areas must meet the following standard.

Design Standards	Yes	No	N/A
A. A visibility clearance area shall comply with Section 16.06.080 of the Development Code.			

Walls and Fencing

Consistency in walls and fencing provide enhanced privacy and safety, while still maintaining matching architectural styles. Walls and fencing must meet the following standards.

Design Standards	Yes	No	N/A
A. Fence and wall materials, colors and detailing shall match the architectural style of buildings on the site. Permanent chain link fencing, razor wire, and barbed wire are prohibited.			
B. Freestanding solid walls of at least 30 inches in height, if included, shall be setback at least two feet from the sidewalk and incorporate low plantings or vines placed between the sidewalk and the fence or wall to soften the appearance of the wall and preserve the public parkway environment.			
C. All fences and walls required for screening purposes shall be of solid material. Chain link fencing with inserts is prohibited.			

Lighting

Lighting standards provide a desirable level of illumination that increases safety and avoids light pollution. Lighting must meet the following standards.

Design Standards	Yes	No	N/A
A. Lighting shall be shielded and directed downward, and the location of lights coordinated with the approved landscape plan.			
B. Exterior lamps shall be low wattage, LED, and except for outdoor holiday lights, shall not be colored.			
C. Outdoor lighting shall be installed and maintained along all vehicular access ways and major walkways.			
D. Bollard lighting may be used to light walkways and other landscape features but shall cast light downward.			
E. All parking lot lights shall be full-cutoff luminaires, as certified by the manufacturer, with the light source directed downward and away from adjacent residences.			
F. Exterior and parking-lot lighting shall not exceed 0.1 foot-candle at adjacent residential property lines. Exterior and parking lot lighting shall not exceed 0.5 foot-candle at the adjacent rights-of-way or adjacent mixed-use or non-residential properties.			
G. Streetlights shall use decorative lighting poles that use the same colors, materials, designs as other elements used in the community.			
H. Lighting shall be placed so as to minimize its impact on adjacent buildings and properties, especially residential uses. Any lighting source, including illuminated signs, shall be positioned so that light does not shine directly into residential windows.			
I. Building-mounted lighting shall be decorative in nature and shall be a complimentary style to the architectural style of the building.			

Landscape Elements

To achieve a cohesive appearance and compatibility of a new project with its surroundings, landscape elements must meet the following standards.

Design Standards	Yes	No	N/A
A. Proposed projects shall include at least three of the following landscape elements in the landscape plan: a. Pedestrian-scaled lighting (bollards and/or landscape lighting) b. Fountains c. Decorative paving d. Landmark tree (48-inch box minimum) e. Seating opportunities such as raised planters and walls. f. Shade structures such as free-standing trellises and canopies.			
B. Landscaping shall contain a combination of low (3 – 24 inches), medium (2 – 5 feet) and tall (5 + feet) plant materials. For example, low planting may be used in the foreground, proceeding back to the tallest in the background. See Figure 8.			
C. In townhouse or rowhouse type projects, trees and/or planting of at least six square feet shall be provided adjacent to garage doors facing alleys and motor court drives to soften the appearance of the building. Structures consisting of four or more garages that serve rowhouse or stack flat units, shall include a landscape area on each end of the building no less than three feet in depth and shall span the entire length of the side or rear of the building.			
D. A minimum of five-foot-wide landscaping shall be incorporated around the base of buildings (except for walkways and driveways) to soften the edge between parking, drive aisles, and sidewalks.			
E. Projects shall provide required open space consistent with Chapter 16.08 of the Development Code.			
F. Projects shall provide landscape coverage consistent with Chapters 16.10 or 16.15 of the Development Code, dependent on the zoning designation of the site.			

Figure 8 Landscape Elements

8 Utility and Service Areas

Utility and service area standards are in place to minimize visual clutter and maintain efficient service areas.

Refuse and Recycling Material Storage Areas

Refuse and recycling material storage areas must meet the following standards.

Design Standards	Yes	No	N/A
A. Refuse and recycling material containers shared by multiple dwelling units shall be enclosed and screened in accordance with Section 16.10.060 of the Development Code. Sizing of the enclosures shall conform to the requirements of the City's Franchise Waste Hauler.			
B. Refuse enclosures shall incorporate roof structures to help improve stormwater quality in accordance with the National Pollutant Discharge Elimination System (NPDES) requirements and to screen the enclosure from views from above.			

C. Refuse enclosures shall be finished using materials and colors that are consistent with the buildings architectural style. Enclosure gates shall be opaque.			
D. Detached refuse enclosures located within 20 feet from doors or operable windows of adjacent structures shall be fully enclosed on three sides facing the adjacent structure and shall include deodorizer equipment to minimize odor impacts. Refuse enclosures shall not be any closer than 10 feet from any adjacent structure.			
E. Refuse and recycling material containers stored within individual yards shall be screened from street view and from view of adjacent residential portions of the project.			
F. Loading areas and refuse storage facilities shall be as far as possible from residential units and shall be completely screened from view of adjacent residential portions of the project. The location and design of trash enclosures shall account for potential nuisances from odor.			

Loading and Service Areas

Loading and service areas must meet the following standards.

Design Standards	Yes	No	N/A
A. Loading docks and service areas meet the requirements of Chapter 16.34.050 of the Development Code.			
B. One loading space is required in any parking lot with 15 or more spaces serving any nonresidential or mixed use.			

Mechanical and Utility Equipment

Mechanical and utility equipment must meet the following standards.

Design Standards	Yes	No	N/A
A. Mechanical devices such as exhaust fans, vents, and pipes shall be painted to match or complement the adjacent surfaces. Mechanical equipment such as HVAC systems shall be screened from view with landscaping, walls, or a material that complements the building. The materials used for screening shall be painted to match or complement the adjacent surfaces.			
B. With the exception of photovoltaic and solar hot water systems, mechanical and utility equipment shall be screened from view in accordance with Section 16.10.050 of the Development Code and to the extent permitted by the utility and/or service provider. This requirement applies to equipment located on the roof, on the side of a building, and on the ground. The method of screening shall be architecturally integrated with the building design or landscaping.			
C. All electrical utility equipment, electrical meters, and junction boxes shall be placed within a utility room. If a utility room is not feasible, then all utility equipment shall be purposefully designed as an integral part of the building development, placed adjacent to alleyways, within parking areas, or within rear or side yards, and screened from public view.			

Mailboxes

Mailboxes must meet the following standards.

Design Standards	Yes	No	N/A
A. Cluster mailboxes serving 25 or more units shall be located in an enclosure or under a shelter that provides weather protection. See Figure 9.			
B. Cluster mailbox enclosures shall be located to allow for convenient, short-term parking for the mail carriers.			
C. Common mailbox enclosures shall be designed using the same materials and colors as the surrounding residential buildings.			
D. To maintain cleanliness and promote responsible waste disposal, all buildings must provide a trash receptacle in each mailbox area. The trash receptacle must be placed within 5 feet of the mailbox area and must be easily accessible and visible to all users of the mailbox area.			

Figure 9 Cluster Mailboxes

Landscape Elements

To achieve a cohesive appearance and compatibility of a new project with its surroundings, landscape elements must meet the following standards.

Design Standards	Yes	No	N/A
A. Proposed projects shall include at least three of the following landscape elements in the landscape plan: a. Pedestrian-scaled lighting (bollards and/or landscape lighting) b. Fountains c. Decorative paving d. Landmark tree (48-inch box minimum) e. Seating opportunities such as raised planters and walls. f. Shade structures such as free-standing trellises and canopies.			
B. Landscaping shall contain a combination of low (3 – 24 inches), medium (2 – 5 feet) and tall (5 + feet) plant materials. For example, low planting may be used in the foreground, proceeding back to the tallest in the background. See Figure 8.			
C. In townhouse or rowhouse type projects, trees and/or planting of at least six square feet shall be provided adjacent to garage doors facing alleys and motor court drives to soften the appearance of the building.			
D. A minimum of five-foot-wide landscaping shall be incorporated around the base of buildings (except for walkways and driveways) to soften the edge between parking, drive aisles, and sidewalks.			
E. Projects shall provide required open space consistent with Chapter 16.08 of the Development Code.			
F. Projects shall provide landscape coverage consistent with Chapters 16.10 or 16.15 of the Development Code, dependent on the zoning designation of the site.

Mechanical and Utility Equipment

Mechanical and utility equipment must meet the following standards.

Design Standards	Yes	No	N/A
A. Mechanical devices such as exhaust fans, vents, and pipes shall be painted to match or complement the adjacent surfaces. Mechanical equipment such as HVAC systems shall be screened from view with landscaping, walls, or a material that complements the building. The materials used for screening shall be painted to match or complement the adjacent surfaces.			
B. With the exception of photovoltaic and solar hot water systems, mechanical and utility equipment shall be screened from view in accordance with Section 16.10.050 of the Development Code and to the extent permitted by the utility and/or service provider. This requirement applies to equipment located on the roof, on the side of a building, and on the ground. The method of screening shall be architecturally integrated with the building design or landscaping.			
C. All electrical utility equipment, electrical meters, and junction boxes shall be placed within a utility room. If a utility room is not feasible, then all utility equipment shall be purposefully designed as an integral part of the building development, placed adjacent to alleyways, within parking areas, or within rear or side yards, and screened from public view.			

Mailboxes

Commented [MH16]: Include requirement for trash receptacles in all mailbox areas.

Commented [SH17R16]: added

Mailboxes must meet the following standards.

Design Standards	Yes	No	N/A
A. Cluster mailboxes shall be located in enclosure or under a shelter that provides weather protection. See Figure 9.			
B. Cluster mailbox enclosures shall be located to allow for convenient, short-term parking for the mail carriers.			
C. Common mailbox enclosures shall be designed using the same materials and colors as the surrounding residential buildings.			
D. To maintain cleanliness and promote responsible waste disposal, all buildings must provide a trash receptacle in each mailbox area. The trash receptacle must be placed within 5 feet of the mailbox area and must be easily accessible and visible to all users of the mailbox area.			

Figure 9 Cluster Mailboxes

APPENDIX F: SHOPPES SPECIFIC PLAN 04-01 AMENDMENT NO. 6

THE COMMONS SPECIFIC PLAN AMENDMENT (PROPOSED CHANGES)

The Commons Specific Plan includes changes related to the Housing Element. The amendment will incorporate 300 RHNA units and update various sections to add a mixed use component to the commercial center. Like The Shoppes Specific Plan, The Commons Specific Plan is nearly 20 years old (Exhibit "G"), and cannot be produced in a redline version. Therefore, each of the amended sections are detailed below with changes shown in red.

- Page 1 – 1.1 Specific Plan Purpose

  "The Commons at Chino Hills Specific Plan" (Specific Plan) provides a land use plan, development regulations, and design guidelines for a 49.1-acre freeway-visible ~~commercial~~ mixed-use center. The Specific Plan defines the uses that are permitted and their locations, as well as the sizes and designs of buildings and related improvements on each of the sites. The Specific Plan constitutes the zoning for the project site. This Specific Plan will guide the development of The Commons at Chino Hills in a manner consistent with City and State policies and standards and assures that the project is developed in a coordinated manner.

- Page 2 – 1.3 Specific Plan Objective and 1.4 Project Summary

  The Commons at Chino Hills Specific Plan reflects the City's long term objectives that include expansion of the City's revenue and employment base consistent with maintaining and enhancing a high quality of life for all residents. The following objectives, achieved through implementation of the Specific Plan, have been identified for the project:
  - *Create a mixed-use center with high-quality shopping, dining, commercial, office, hotel, motel, high density housing, and other uses;*
  - *Capture an appropriate share of the demand for upscale retail goods and services in the Chino Valley retail market area;*
  - *Create a visually attractive development through consistent application of architectural and landscape standards/guidelines that will encourage commercial sales;*
  - *Create new office space for firms wanting to locate in Chino Hills in close proximity to retail, restaurant and shopping activities;*
  - *Increase sales tax and property tax revenues to the City; and*
  - *Create local jobs.*

  The 49.1-acre Commons at Chino Hills property is located at the easterly boundary of the City of Chino Hills at the southeast corner of Chino Hills Parkway and Ramona Avenue intersection. The Commons at Chino Hills Specific Plan anticipates development of up to 600,000 square feet of building area for offices,

specialty retail shops, major anchor retailers, restaurants, fast food restaurants, health club, personal and financial services, new vehicle sales, 300 high density housing units , and a hotel or motel. The project also includes up to five (5) freeway pylon signs, plus other project identification signage, and ancillary parking, landscaping and lighting. The permitted uses, development standards, and guidelines of the Specific Plan capitalize on the site's frontages on both the Chino Valley Freeway (SR-71) and Chino Hills Parkway.*

** The designated Mixed Use Housing district permits no more than 300 very high density housing on a maximum of 9 acres within the commercial center to meet Housing Element density requirement of 30-47 du/ac.*

	Minor Retail Anchor Stores
	Higher Educational Facility
	Mixed Use Housing[2]

** Permits 300 Very High Density housing units in the Mixed Use Housing district on a maximum of 9 acres within the commercial center to meet Housing Element density requirements of 30-47 du/ac.*

- Page 11 – Development Plan and Table 2-1 Typical Tenant Roster

The Commons at Chino Hills Development Plan accommodates a retail commercial development comprised of a minimum of 300,000 square feet and of up to 600,000 square feet of building area. The total area of the Specific Plan is approximately 49.1 acres. The Commons Specific Plan provides for a variety of major promotional retail tenant(s), office buildings (may include medical), complementary specialty retail goods and services, dining venues, and freeway-dependent uses that may include an automobile dealership and hotel or motel. The plan also accommodates the development of up to 300 units of attached high-density housing, on a maximum of nine acres of the site, within a range of 30-47 dwelling units per acre. It is the intent of this Specific Plan that site development is accomplished in a logical and timely manner. Site development standards in the Specific Plan include those relating to the location and sizes of buildings, architectural design guidelines, and a comprehensive landscape plan. These standards were established after consideration of retail market potential, economic viability, environmental sensitivity, and the importance of enhancing the character of the built environment in the City of Chino Hills.

Tenant	Potential Area/Tenant Category
Retail	Up to 600,000 sq. ft
Auto Dealership'	Up to 300,000 sq. ft.
Entertainment	Up to 200,000 sq. ft.
Restaurant	Up to 100,000 sq. ft.
Office[2]	Up to 80,000 sq. ft.
Specialty Food Retail	Up to 40,000 sq. ft.
Non-Professional Services[3]	Up to 15,000 sq. ft.
Fast Food Restaurant, Drive-Thru	Up to 10,000 sq. ft.
Hotel/Motel	Up to 300 Rooms
Mixed Use Housing	Up to 300 units
Total Commercial Building Area	300,000 to 600,000 sq. ft.
Total Very High Density Housing Units	300 units

- Page 31 – Table 3-1 Permitted Uses (Not full extent of list)

Massage Clinics / Day Spas	CUP
Medical/Dental Offices & Surgery Centers	P
Mixed Use Housing/High Density Housing	P[4]
Motorcycle Sales and Service, New	P
Movie Theaters	P

**Refer to Section 3.3.6 for additional provisions for Mixed Use Housing Development*

- Page 33 – *3.3.6 Mixed Use Housing Development (new section)*

The Commons Specific Plan accommodates the development of up to 300 residential dwelling units on no more than nine acres of land area within the Specific Plan. The units may be built on one site or several sites within the Specific Plan provided the site or sites combined do not exceed nine acres in total. Residential buildings may incorporate commercial uses ("vertical mixed use" format) or can be built separately from commercial ("horizontal mixed use" format). The Specific Plan does not illustrate the potential locations for residential development in the Conceptual Site Plan. As such, any proposed residential development within the Specific Plan shall use the following principals to guide such development:

A. Multifamily residential buildings that are built on vacant pad sites or within existing parking areas shall be located in a manner to easily integrate with existing drive aisles, project entries, and commercial buildings, creating a cohesive design for the center.

B. Pedestrian pathways, including shade components such as trees, trellises, or arcades, shall connect residential buildings to commercial areas in an integrated way.

C. Residential buildings should be located away from State Route 71 in order to avoid the air quality and noise impacts of the freeway.

D. Residential buildings shall have clearly delineated drive aisles and entries to distinguish them from commercial areas.

E. Residential buildings shall comply with the requirements of Chapter 16.05 – Objective Design Standards of the Chino Hills Development Code.

- Page 33-34 – 3.4 Development Standards and Table 3-2

Minimum site development standards for commercial buildings are those of the "C-F, Freeway Commercial District" set forth in Section 16.12 of the City of Chino Hills Development Code except as otherwise indicated herein. Minimum site development standards for residential or mixed-use buildings are those of the "Mixed Use Housing Zone" as set forth in Section 16.15 of the Development Code. Table 3-2 sets forth the site development standards for The Commons at Chino

Hills. Parking for Mixed Use Housing shall refer to Chapter 16.15 Housing Priority Districts for required parking.

Development Standard	MinimumlMaximum Required
A.Minimum Lot Size	2,500 Square Feet
B. Minimum Lot Dimensions Width Depth	 50' feet
C. Maximum Height	
Major Retail'	50' feet to roofline; 60' feet to top of architectural feature
Minor Retail[2]	25' feet to roofline; 35' feet to top of architectural feature
Office	80' feet to roofline; 90' feet to top of architectural feature
Hotel	SO' feet to roofline; 90' feet to top of architectural feature
Mixed Use Housing	80' feet

- Page 38 – 3.4.9 Architecture and Design

  Additional details on the design and architecture of The Commons at Chino Hills can be found in Section 4, Design Guidelines, and Chapter 16.05 Objective Design Standards for Mixed Use Housing.

1. INTRODUCTION

1.1 SPECIFIC PLAN PURPOSE

"The Commons at Chino Hills Specific Plan" (Specific Plan) provides a land use plan, development regulations, and design guidelines for a 49.1-acre freeway-visible commercial center. The Specific Plan defines the uses that are permitted and their locations, as well as the sizes and designs of buildings and related improvements on each of the sites. The Specific Plan constitutes the zoning for the project site. This Specific Plan will guide the development of The Commons at Chino Hills in a manner consistent with City and State policies and standards and assures that the project is developed in a coordinated manner.

Tentative and final parcel map(s) or Development Plans (Site Plans, etc.) may be prepared and submitted to the City pursuant to the applicable provisions of the State of California Subdivision Map Act (Government Code Sections 66410 through 66499), the City of Chino Hills Subdivision Ordinance, the City of Chino Hills Development Code and consistent with the applicable provisions contained within The Commons at Chino Hills Specific Plan. The Development Plans will be submitted for City review prior to development of the project site.

The purpose of the Specific Plan is:

- To implement the goals and policies of the General Plan of the City of Chino Hills through more detailed, site-specific standards that provide direction for development;
- To establish a new zoning designation for the planning area that recognizes its unique place in the Chino Hills community;
- To establish development standards and design principles for the planning area; and
- To serve as a guideline for the amenities provided and the quality of development within the Specific Plan area.

1.2 AUTHORITY FOR THE SPECIFIC PLAN

Section 65450 et seq. of the Government Code sets forth basic requirements and provisions for specific plans. The Government Code specifically states:

> *"After the legislative body has adopted a general plan, the planning agency may, or if so directed by the legislative body, shall prepare specific plans for the systematic implementation of the general plan for all or part of the area covered by the general plan."*

Section 65451 of the Government Code requires that specific plans include text and a diagram or diagrams that specify all of the following:

- The distribution, location and the extent of the uses of land, including open space within the area covered by the plan;

- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable;
- A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the project;
- A statement of the relationship of the specific plan to the general plan.

The Commons at Chino Hills Specific Plan is designed to meet the requirements of the State of California Government Code and the City of Chino Hills General Plan. The Commons at Chino Hills Specific Plan is adopted by ordinance and thereby establishes the zoning regulations for the development of the project site.

1.3 SPECIFIC PLAN OBJECTIVES

The Commons at Chino Hills Specific Plan reflects the City's long term objectives that include expansion of the City's revenue and employment base consistent with maintaining and enhancing a high quality of life for all residents. The following objectives, achieved through implementation of the Specific Plan, have been identified for the project:

- Create a mixed-use center with high-quality shopping, dining, commercial, office, hotel, motel, and other uses;
- Capture an appropriate share of the demand for upscale retail goods and services in the Chino Valley retail market area;
- Create a visually attractive development through consistent application of architectural and landscape standards/guidelines that will encourage commercial sales;
- Create new office space for firms wanting to locate in Chino Hills in close proximity to retail, restaurant and shopping activities;
- Increase sales tax and property tax revenues to the City; and
- Create local jobs.

1.4 PROJECT SUMMARY

The 49.1-acre Commons at Chino Hills property is located at the easterly boundary of the City of Chino Hills at the southeast corner of Chino Hills Parkway and Ramona Avenue intersection. The Commons at Chino Hills Specific Plan anticipates development of up to 600,000 square feet of building area for offices, specialty retail shops, major anchor retailers, restaurants, fast food restaurants, health club, personal and financial services, new vehicle sales, and a hotel or motel. The project also includes up to five (5) freeway pylon signs, plus other project identification signage, and ancillary parking, landscaping and lighting. The permitted uses, development standards, and guidelines of the Specific Plan capitalize on the site's frontages on both the Chino Valley Freeway (SR-71) and Chino Hills Parkway.

The proposed uses for The Commons at Chino Hills will be a positive contribution to the City of Chino Hills through the establishment of a strong design theme that creates a unique project identity and builds community character.

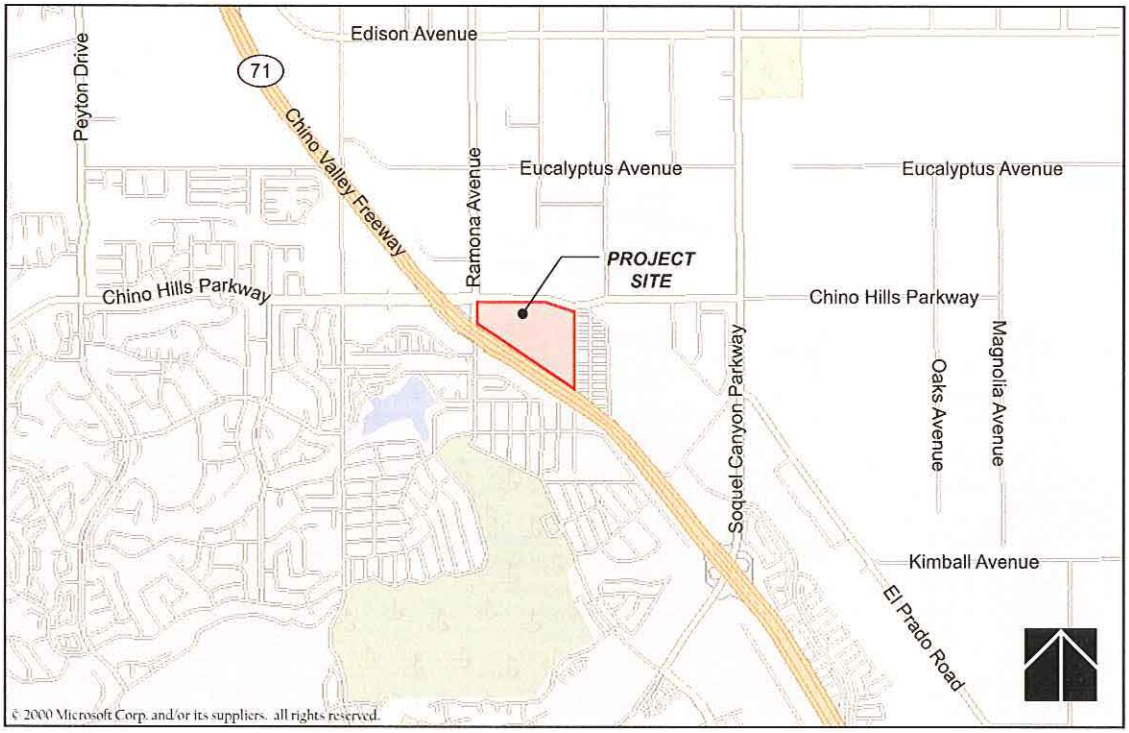
1.5 PROJECT SETTING

1.5.1 Project Location

The City of Chino Hills is located in southwestern San Bernardino County, and is uniquely situated adjacent to the boundaries of Los Angeles, Orange, and Riverside Counties. Exhibit 1.1, Regional/Vicinity Map, provides the location of the Specific Plan area in its regional context.

The Commons at Chino Hills Specific Plan project area is bound by the Chino Valley Freeway (SR-71) on the south and west side, Ramona Avenue to the west, and Chino Hills Parkway to the north. Primary local access to the project site is provided from Chino Hills Parkway. Exhibit 1.2, Aerial Photograph, provides an aerial photograph depicting the existing conditions of the project site.

1.5.2 On-Site Land Uses



Prior to adoption of the Specific Plan, the on-site land uses consisted of agricultural uses, primarily for planting of row crops, most currently wheat. Small ancillary shed structures were located on the northwestern portion of the site and used for miscellaneous storage of farming supplies. Two water wells existed on the western portion of the site, one of which was housed in a corrugated metal shed, and both of which were used to irrigate the agricultural operations on the property prior to development of The Commons. A small fenced enclosure for storing farm equipment was present on the western portion of the site.

1.5.3 Surrounding Land Uses

Uses surrounding The Commons at Chino Hills Specific Plan site include: the Monte Vista Mobile Home Park to the east; vacant land to the west across Ramona Avenue; Chino Valley Freeway (SR-71) to the south and west; an auto dealership, industrial buildings, a business park and office buildings to the northwest across Chino Hills Parkway; and, dairy land planned to be a retail shopping center to the north across Chino Hills Parkway (City of Chino).

Regional Context Map

Vicinity Map

Regional/Vicinity Map 1.1

Aerial Photograph 1.2

1.5.4 General Plan and Zoning Designations

Prior to adoption of the Specific Plan, The Commons at Chino Hills site was designated as "General Commercial" on the General Plan Land Use Map and as "C-F, Freeway Commercial" on the Zoning Map. The General Commercial designation allows uses that include service and repair facilities, small offices, hardware and building materials stores, auto and auto accessories dealers, appliance outlets, theaters, etc. Office uses are also permitted in areas designated for General Commercial.

Adoption of The Commons at Chino Hills Specific Plan effectively changes the zoning of the property from "Freeway Commercial" to "Specific Plan (SP) 06-01." The Commons at Chino Hills Specific Plan provides for uses that are oriented toward the regional needs of the market and/or serving the needs of those who travel the Chino Valley Freeway (SR-71). Permitted land uses will benefit from both freeway visibility and access in maximizing their retail sales tax generation potential. With adoption of this Specific Plan, the project site's zoning will be changed to Specific Plan (SP) 06-01. Development Standards are contained in Section 3 of this Specific Plan document, which provide detailed zoning standards specifically tailored for The Commons at Chino Hills Specific Plan.

Table 1-1 summarizes the General Plan and Zoning Designation for the project site prior to and subsequent to adoption of the Specific Plan. Table 1-2 summarizes the permitted uses for the project site prior to and after adoption of the Specific Plan.

TABLE 1-1: GENERAL PLAN AND ZONING DESIGNATIONS

General Plan Designation		Zoning Designation	
Prior to Adoption of Specific Plan	After Adoption of Specific Plan	Prior to Adoption of Specific Plan	After Adoption of Specific Plan
Commercial	Commercial	C-F Freeway Commercial	Specific Plan 06-01

TABLE 1-2: SUMMARY OF PERMITTED USES

General Commercial Uses / C-F Freeway Commercial Uses	
Prior to Adoption of Specific Plan	**After Adoption of Specific Plan[1]**
Service & Repair Facilities as an Accessory Use to a New Vehicle Dealer	Service & Repair Facilities as an Accessory Use to a New Vehicle Dealer
Small Offices	All Office Uses
Hardware & Building Materials Store	Home Improvement, Hardware & Building Materials Store (with Special Activities, Displays, Etc.[2])
Auto & Auto Accessories Dealers	Vehicle/Vessel Sales & Service, New
Appliance Outlets	Appliance Outlets
Restaurants	Restaurants (Sit-Down, Fast Food, Drive-Thru)
Theaters	Theaters & Entertainment
	Alcoholic Beverage Sales (On- and Off-Site)
	Amusement, Arcade, Billiard Parlor
	Athletic Club
	Garden Equipment and Sales
	Specialty Food Store
	Hotel/Motel
	Major Retail Anchor Stores[3]
	Minor Retail Anchor Stores
	Higher Educational Facility[4]

[1] Detailed permitted uses are provided in Table 3-1, Permitted Uses, on page 30.
[2] Includes promotional items or events.
[3] A major retail store is a minimum 10,000 square feet and above.
[4] Refer to Section 3.3.3 for additional provision to Higher Educational Facilities

2. DEVELOPMENT PLAN

2.1 LAND USE PLAN

The Commons at Chino Hills Development Plan accommodates a retail commercial development comprised of a minimum of 300,000 square feet and of up to 600,000 square feet of building area. The total area of the Specific Plan is approximately 49.1 acres. The Commons Specific Plan provides for a variety of major promotional retail tenant(s), office buildings (may include medical), complementary specialty retail goods and services, dining venues, and freeway-dependent uses that may include an automobile dealership and hotel or motel. It is the intent of this Specific Plan that site development is accomplished in a logical and timely manner. Site development standards in the Specific Plan include those relating to the location and sizes of buildings, architectural design guidelines, and a comprehensive landscape plan. These standards were established after consideration of retail market potential, economic viability, environmental sensitivity, and the importance of enhancing the character of the built environment in the City of Chino Hills.

2.2 CONCEPTUAL SITE PLAN

The Conceptual Site Plan for The Commons at Chino Hills is illustrated in Exhibit 2.1. Review and approval of actual development plans will occur as implementing actions of this Specific Plan. Section 5, "Implementation Plan", sets forth submittal and review requirements for implementing The Commons at Chino Hills Specific Plan.

A typical tenant roster at build-out consistent with the Conceptual Site Plan is summarized in Table 2-1.

TABLE 2-1: TYPICAL TENANT ROSTER

Tenant	Potential Area/Tenant Category
Retail	Up to 600,000 sq. ft
Auto Dealership[1]	Up to 300,000 sq. ft.
Entertainment	Up to 200,000 sq. ft.
Restaurant	Up to 100,000 sq. ft.
Office[2]	Up to 80,000 sq. ft.
Specialty Food Retail	Up to 40,000 sq. ft.
Non-Professional Services[3]	Up to 15,000 sq. ft.
Fast Food Restaurant, Drive-Thru	Up to 10,000 sq. ft.
Hotel/Motel	Up to 300 Rooms
Total Building Area	**300,000 to 600,000 sq. ft.**

[1] Square footage of showroom, offices and service facilities.
[2] Three (3) banks shall be permitted on-site.
[3] May include hair salons, day spas, nail salons, and similar uses.

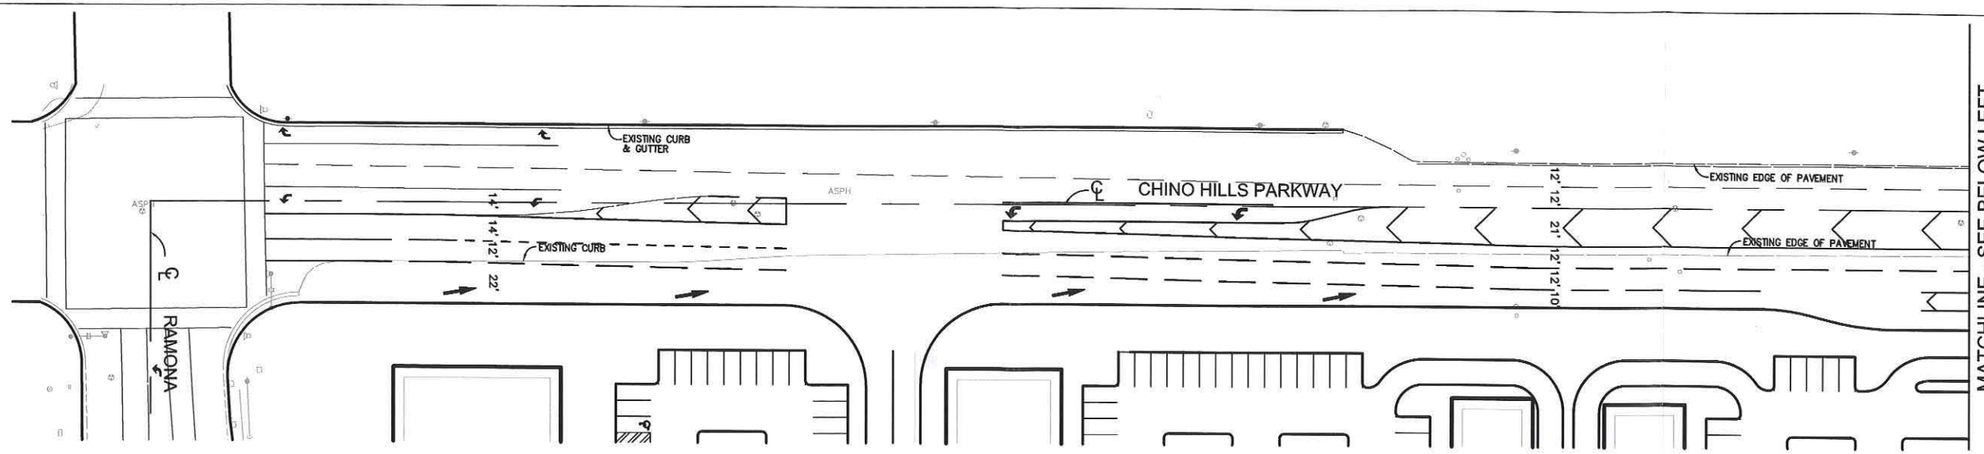
Conceptual Site Plan 2.1

THE COMMONS AT
CHINO HILLS SPECIFIC PLAN

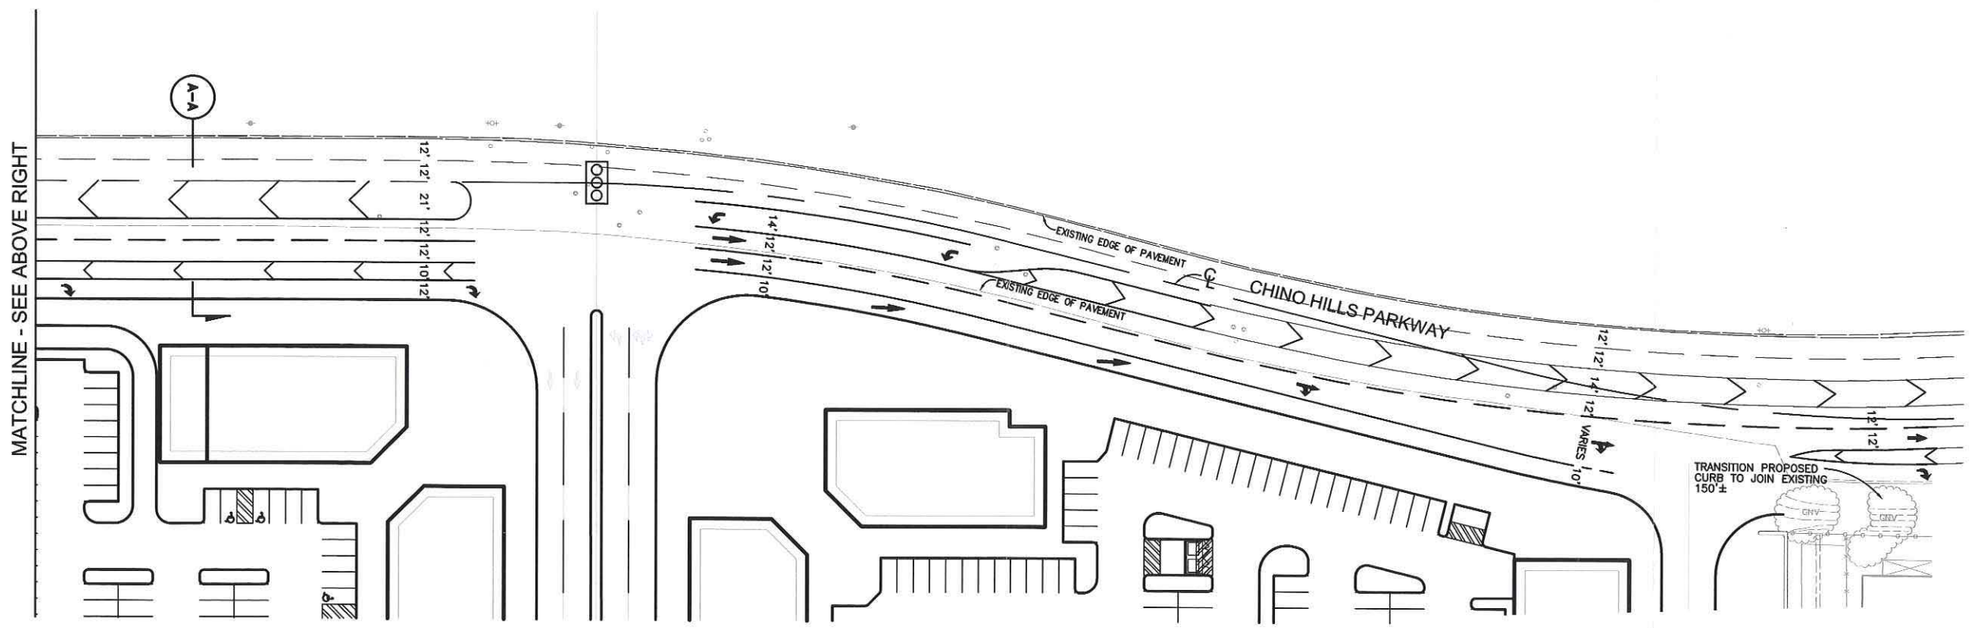
2.3 CIRCULATION PLAN

2.3.1 Vehicular Circulation and Access

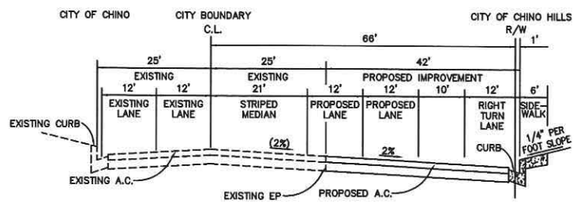
Roadways existing before implementation of the Specific Plan include Chino Hills Parkway serving as the northerly boundary of the project site and Ramona Avenue serving as the westerly boundary of the site. The Conceptual Circulation Plan consists of the existing roadway network, which is consistent with the City of Chino Hills General Plan Circulation Element. Direct access to The Commons at Chino Hills is provided via Chino Hills Parkway.



Chino Hills Parkway – Public, Major Arterial



Defined as a Major Arterial in the City of Chino Hills General Plan Circulation Element, Chino Hills Parkway was a four-lane, divided east-west roadway prior to implementation of the Specific Plan. Improvements in conjunction with development consistent with the Specific Plan include construction of Chino Hills Parkway from Ramona Avenue to the east project boundary at its ultimate half-section width including landscaping and parkway improvements. The conceptual street improvement plan for Chino Hills Parkway is shown in Exhibit 2.2. The street sections for Chino Hills Parkway are illustrated in Exhibit 2.3.



Vehicular access to The Commons is provided from Chino Hills Parkway via a full-signalized main entrance and two right-in/right-out driveways. The traffic signal is included among off-site improvements constructed in conjunction with development of The Commons at Chino Hills. The main entrance includes two inbound and two outbound travel lanes. Each right-in/right-out driveway is comprised of one inbound and one outbound lane.

Ramona Avenue – Public, Collector

Defined as a Collector in the City of Chino Hills Circulation Element, Ramona Avenue is a public, north-south, four-lane divided roadway north of SR-71 and a two-lane undivided roadway south of SR-71. Ramona Avenue does not provide direct access to the project but supplies a connection to Chino Hills Parkway up to the Chino Valley Freeway (SR-71).

2.4 INFRASTRUCTURE PLAN

2.4.1 Water

Potable water for the project is provided by the City of Chino Hills. The Specific Plan site is served by an existing ten inch (10") diameter pipe extending east-west within an easement through the southerly portion of the site and an existing pipe extending north-south through the central portion of the site. These pipes and the on-site water distribution lines are shown in the "Conceptual Water and Sewer Plan" in Exhibit 2.4. Recycled water lines are included within the project site for connection.

2.4.2 Drainage

Stormwater run-off from The Commons site will be collected in a series of catch basins located throughout the parking lot and drive aisles. The catch basins are connected via underground storm drains which converge in a single storm drain pipe extending from the southeasterly corner of the site to the Lake Los Serranos Channel (an improved channel) located approximately 1,600 feet southeast of the site. On-site water retention is not needed. Water flow is treated to comply with the County of San Bernardino's Water Quality Management Permit. Water flow is either treated on-site by man-made clarifiers or other filters. Storm drain lines within The Commons project site shall be owned and maintained by The Commons development. Exhibit 2.5 shows the "Conceptual Grading and Drainage Plan."

2.4.3 Sewer

Sewage generated on-site is collected and flows through a series of sanitary sewer pipes and manholes before being discharged into an eighteen inch (18") sanitary sewer main owned and operated by the City of Chino Hills. The sewer main is located within an easement that crosses the southern portion of the Specific Plan site in an east-west direction. Exhibit 2.4 shows the "Conceptual Water and Sewer Plan."

2.4.4 Grading

The Rough Grading Plan for The Commons at Chino Hills Specific Plan includes the 49.1 acre site and is included in Exhibit 2.5.

2.4.5 Electricity

Southern California Edison provides electricity to the Specific Plan site. All electrical lines shall be provided and designed as required within the Conditions of Approval

2.4.6 Natural Gas

The Southern California Gas Company supplies natural gas to the Specific Plan area. A high-pressure gas line crosses the Specific Plan site in a utility easement that crosses the southerly portion of the site in an east-west direction. Connection to a six inch (6") gas lines occurs in Ramona Avenue.

2.4.7 Telephone, Internet and Cable

Telephone, Internet, and cable television infrastructure and service connections are available at the Specific Plan site.

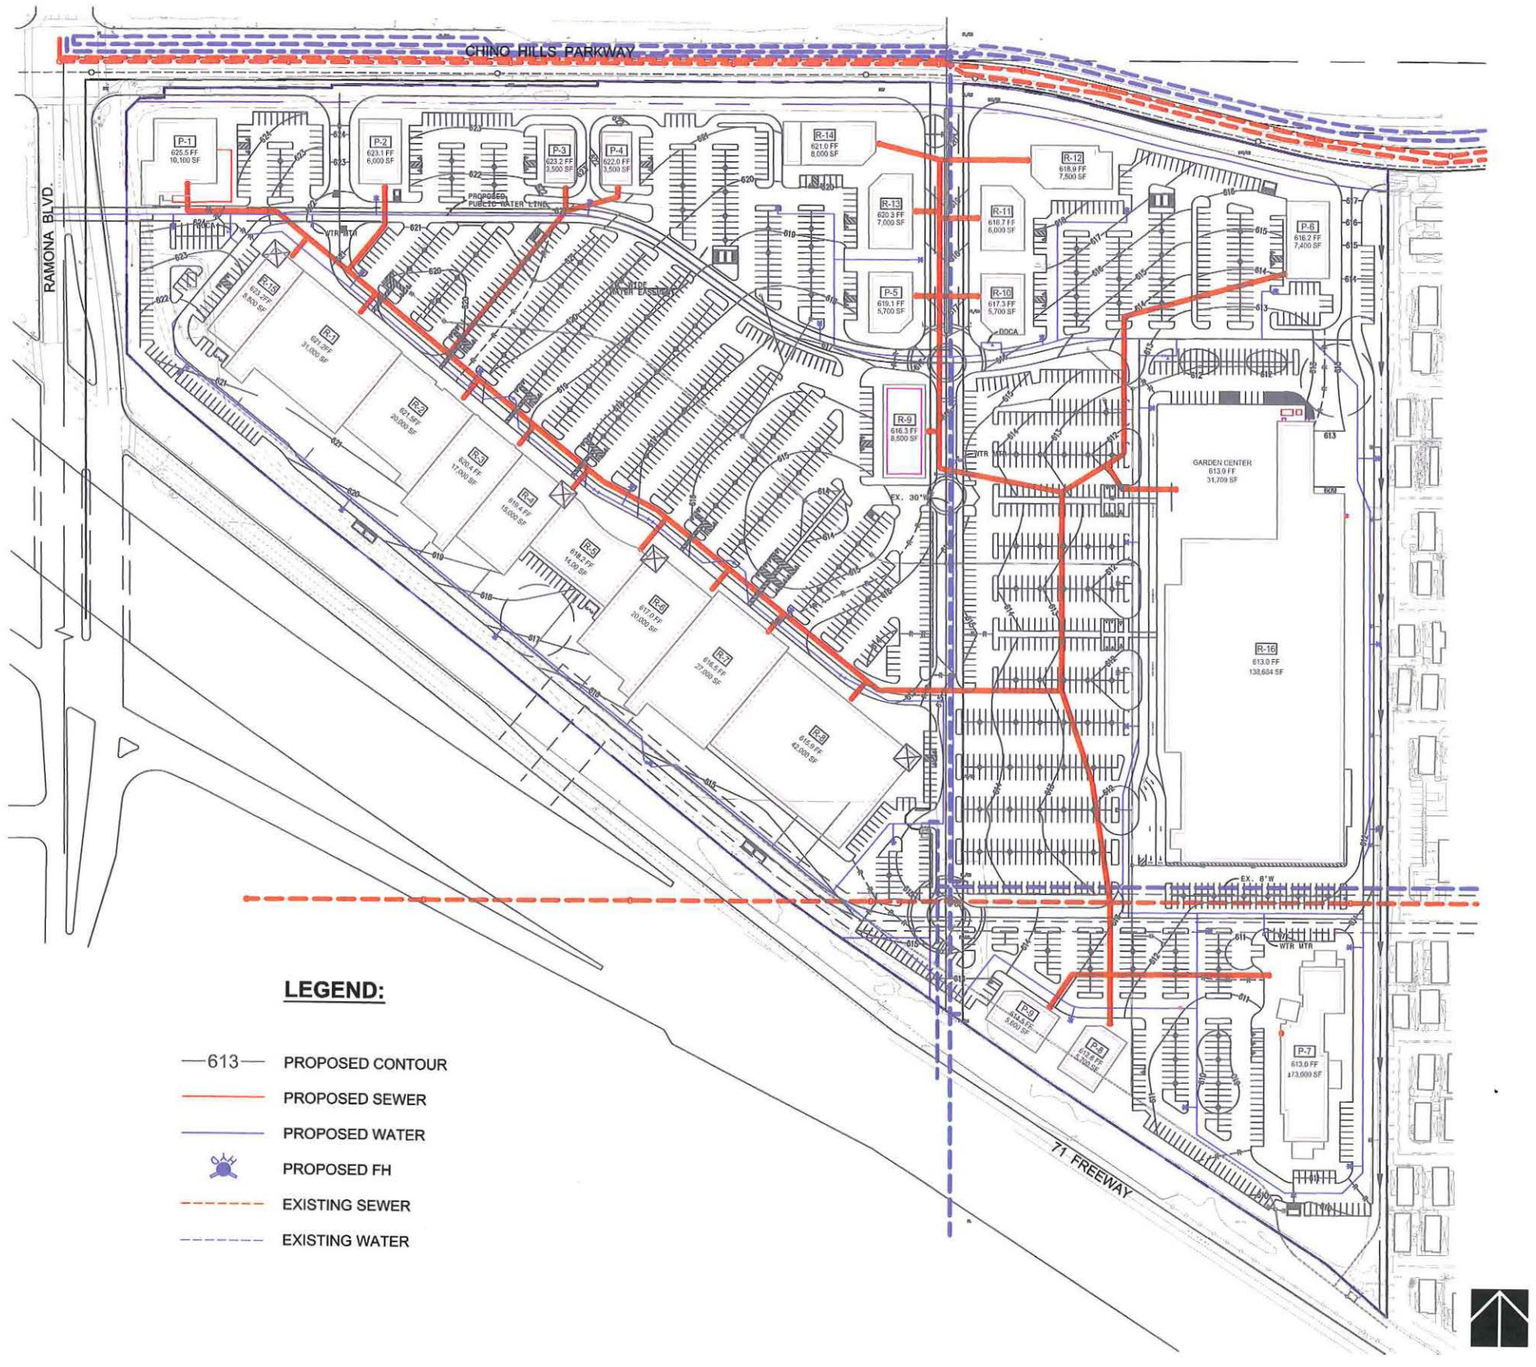
2.4.8 Solid Waste Disposal

Solid waste collection and disposal is provided through Chino Hills Disposal, the exclusive solid waste and recycling service provider for the City. The project is required to comply with applicable State and local regulations.

2.5 PUBLIC FACILITIES AND SERVICES

2.5.1 Public Safety

2.5.1.1 LAW ENFORCEMENT

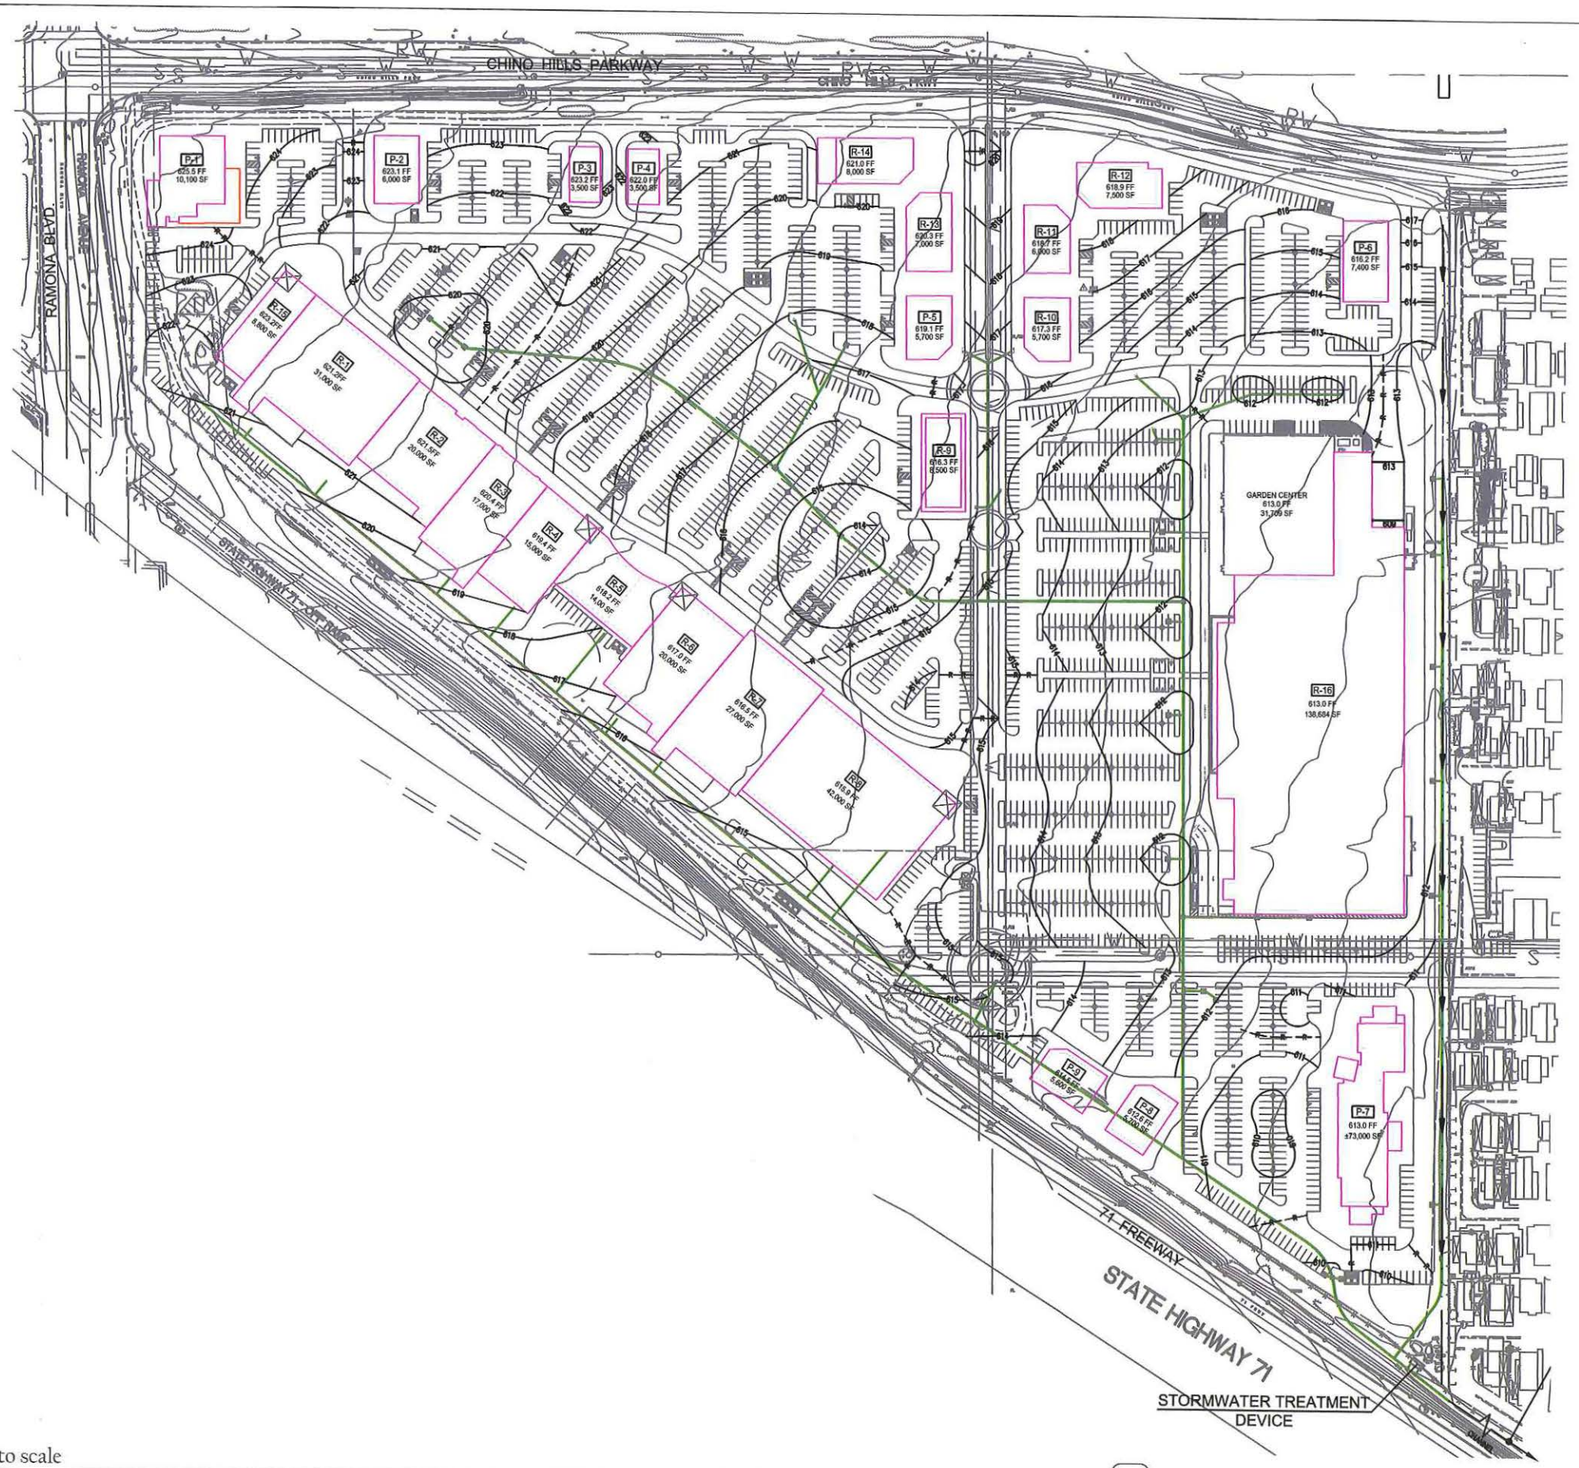


Law enforcement for the Specific Plan area is provided to the City of Chino Hills by contract with the San Bernardino County Sheriff's Department.

2.5.1.2 FIRE PROTECTION

The Chino Valley Independent Fire District (CVIFD) provides fire protection, fire prevention services, emergency medical (first responder) and rescue services, arson investigation, and hazardous material coordination for the Specific Plan area. All development within the project area complies with the requirements of the CVIFD. The water supply system is designed to meet CVIDF requirements.

2.5.2 Public Transportation



Omnitrans provides bus service for the Specific Plan area.

3. DEVELOPMENT STANDARDS

3.1 PURPOSE

The Commons at Chino Hills Specific Plan Development Standards define the permitted uses, sizes, design of buildings and related improvements for the Specific Plan area. The Development Standards implement the Land Use Plan for the project. The Development Standards ensure that development within the Specific Plan area conforms to and contributes to realization of the goals and objectives of the Specific Plan and the City of Chino Hills General Plan. This section has been prepared in accordance with California Government Code 65450 and all applicable development and design standards of the City of Chino Hills Development Code, with some modification to provide flexibility and encourage innovative design within The Commons at Chino Hills Specific Plan area. Exhibits accompanying the Development Standards are guidelines for development, schematic in nature, and not intended as precise plans. The Commons at Chino Hills Specific Plan Development Standards shall be applied only in the Specific Plan area.

3.1.1 References

Any reference to Development Standards shall mean "The Commons at Chino Hills Development Standards." The City of Chino Hills Development Code is referred to as the Development Code.

3.1.2 Resolution of Issues

A. Whenever this Specific Plan contains regulations or standards that differ from or conflict with the regulations and standards contained in the Chino Hills Development Code or any other applicable City regulation, rule or policy, the Specific Plan shall prevail.

B. If an issue, condition or situation arises or occurs that is not sufficiently covered or provided for in these regulations so as to be clearly understandable, those regulations of the Development Code that are applicable for the most similar issue, condition, or situation shall be used and implemented in a manner otherwise consistent with the Specific Plan.

C. Definitions for terminology used in this Section of the Specific Plan, unless otherwise noted, shall comply with the definitions contained in the City of Chino Hills Development Code, Chapter 16.02.

D. All setbacks established by this Section of the Specific plan, unless otherwise noted, shall be measured in accordance with the City of Chino Hills Development Code, Chapter 16.06.050.

E. Building heights established by this Section of the Specific Plan, unless otherwise noted, shall be measured in accordance with The City of Chino Hills Development Code Chapter 16.06.100.

3.2 CONCEPTUAL SITE PLAN

Exhibit 3.1 presents a Conceptual Site Plan for The Commons at Chino Hills promotional retail center. The Conceptual Site Plan illustrates one of the potential scenarios for the locations and orientations of structures upon build-out of The Commons consistent with the objectives and Development Standards established in the Specific Plan.

3.3 PERMITTED USES

Permitted Uses for The Commons are listed in Table 3-1, below. Each use is designated as "Permitted" (P), requiring a "Conditional Use Permit" (CUP), permitted as a "Temporary Use" (T), or permitted as an "Accessory Use" (A) to a permitted use on site.

- A Permitted Use (P) is one that can be established as the primary use of a building without need of a discretionary approval (e.g. Planning Commission review) provided the use complies with applicable Zoning, Building, and Safety, and related State and local ordinances and policies.
- A Conditional Use Permit (CUP) per Chapter 16.68 of the Chino Hills Development Code is required because certain uses, due to the nature of the use, intensity, or size, require special review to determine if the use proposed, or the location of that use is compatible with surrounding uses, or through the imposition of development and use, conditions can be made compatible with surrounding uses. The Conditional Use Permit is provided for this purpose.
- A Temporary Use (T) refers to a use of limited duration that may be permitted as a primary or accessory use of a property.
- An Accessory Use (A) refers to a use customarily incidental and subordinate to the principal use of the land or building and located on the same lot with the principal use or building.

TABLE 3-1: PERMITTED USES

USE	STATUS
Alcoholic Beverage Onsite Sales as part of a family (non-age-restricted) restaurant	P
Alcoholic Beverage Offsite Sales within a specialty food store, or drug store	P
Alcoholic Beverage Offsite Sales in any store other than a specialty food or drug store, ex. Beverages & More	CUP
Amusement, Arcade, Billiard Parlor	CUP
Apparel Store	P
Appliance Sales	P
Art Gallery	P
Art Supply Stores	P
Automobile Accessory Sales and Installation (Limited overnight storage permitted)[1]	A
Automobile Body Repair[1]	A
Automobile Repair & Service[1]	A
Automobile/Truck Sales, New	P
Automobile/Truck Sales, Used[1]	A
Automobile Painting[1]	A
Automobile Service Station (with alcohol sales for off-site consumption)	CUP
Bakery, Retail	P
Barber or Beauty Shop	P

USE	STATUS
Banquet/Reception Facility	A
Bed and Breakfast	P
Bicycle Sales and Service	P
Blueprinting and Photocopying	P
Book Store	P
Bowling Alley	P
Brewery (on-site consumption at restaurant)	A
Building Materials Sales, Retail	P
Butcher Shop, Retail	P
Candy/Confectionery Sales, Retail	P
Cell Phone Antenna Site[2]	P
Cell Phone Retail Sales	P
Chiropractic/Physical Therapy Offices	P
Christmas Tree/Halloween Sales	T
Club - Athletic, Health, or Recreation	P
Coffee Roasting and Packaging, Retail	P
Coins (Collectable), Purchase and Sales	P
Construction Office	T
Consumer Electronics, New	P
Corporate Headquarters	P
Dance Studio	P
Delicatessen	P
Department Store	P
Dry Cleaner, Storefront Type w/on-site equipment	P
Entertainment Uses (see Section 3.3.2)	P
Financial Institutions	P
Floor Covering Sales	P
Florist Shop	P
Furniture Sales and/or Rental	P
Garden Equipment Sales and Service	P
Garden Supply Sales (see Section 3.3.1)	P
General Administrative Office Use	P
General Retail Use	P
Gift Shop	P
Glass Studio (stained and others)	P
Government Offices	P
Hardware Store	P
Health Food Store	P
Higher Educational Facility[3]	P
Hobby Supply Shop	P
Home Improvement Center (see Section 3.3.1)	P
Horticultural Sales (see Section 3.3.1)	P
Hotel/Motel	P
Ice Cream Parlor	P

USE	STATUS
Ice, Retail Sales	P
Interior Decorating Service	P
Jewelry Sales	P
Laboratories, Medical	P
Laboratories, Research	A
Laboratories, Testing	CUP
Locksmith	A
Marine Supply Stores	P
Massage Clinics / Day Spas	CUP
Medical/Dental Offices & Surgery Centers	P
Motorcycle Sales and Service, New	P
Movie Theaters	P
Music/Record Store	P
Newsstand	A
Nurseries, Retail (see Section 3.3.1)	A
Office Equipment/Supplies, Sales of	P
Optical Products Sales	P
Outdoor Display and Sales	A
Outdoor Food Cart Vendors (with Home Improvement Center)	A
Paint and Wallpaper Stores	P
Paper Product Sales, Retail	P
Pet Grooming	A
Pet Shop	P
Pharmacy	P
Photofinishing, Retail	P
Photographic Supplies, Sales	P
Photographic Studio	P
Professional Administrative Office	P
Real Estate Office	P
Recreational Vehicle Sales, New	P
Research and Development	CUP
Restaurant, No Alcohol Sales	P
Restaurant, With Alcohol Sales (see "Alcoholic Beverage Onsite Sales")	P
Restaurant, Drive-Through	P
Medical Supply Sales, New	P
Seasonal Sales	A
Shoe Repair/Sales	P
Specialty Food Store	P
Sporting Goods Sales	P
Stationery Sales	P
Tailor Shop	P
Telecommuting Center	P

USE	STATUS
Tile Sales	P
Toy Stores	P
Veterinarian	P
Watch Repair	P
Outdoor Food/Vending Sales	A

[1] Automobile Accessory Uses - These uses shall be accessory to a new automobile/truck dealer, or large automotive parts store only.
[2] See Section 3.3.4 for additional provisions to cell phone antenna sites.
[3] Refer to Section 3.3.3 for provision to Higher Educational Facilities.
* Interpretation of uses and compatibility of uses if not otherwise listed above is subject to interpretation by the Community Development Director.

3.3.1 Promotional Displays and Activities

Home improvement centers and certain other high-volume, promotional retailers utilize unique product display and presentation formats to remain viable in highly competitive, price-driven retail categories. The Commons Specific Plan accommodates this unique retail format for such promotional retailers and specifically permits, by right without requiring further review or approval, the following uses and activities:

A. Up to six (6) seasonal sales events or commercial activities utilizing outdoor tent structures and signage. Each sales event may continue up to forty-five (45) days.

B. Daily outdoor display and sales at the retail store front and along the front store sidewalk.

C. Outdoor food vending machines and food vendor carts near the retail store front, and/or along the front store sidewalk.

D. Outdoor storage of wood pallets and propane tanks within a walled enclosure at the rear of the store.

E. Outdoor sale of product and merchandise in a garden, including along the front sidewalk of a garden center.

F. Outdoor storage of product and merchandise in a screened enclosure at the rear of the store for temporary staging and outside storage of building products for contractor pick-up.

G. Construction and use of a recessed loading dock to accommodate three (3) semi-tractor trailer trucks at one time and including an enclosed trash compactor; loading dock to be located at the rear of the building and screened to obstruct view and minimize noise impacts on adjacent properties.

H. Conduct business 24-hours per day, 7 days per week.

I. Night time truck loading and unloading, and loading and stocking inside the building 24-hours per day, 7 days per week.

J. Parking of up to six rental trucks (Class C as defined by the Department of Motor Vehicles) and six rental utility trailers shall be limited to a location on the side of the building closest to the SR -71 freeway. (The Tool Rental Center shall be limited to a location within the store).

K. Outdoor pay telephones (Limited to a location at the front of the store).

L. Outdoor, vinyl banner signs for sales events.

M. Temporary staging of delivered product at the rear, sides, and front wall of the store will be allowed for customer pick-up and for delivery of materials to be loaded into the store.

N. Permanent display of fencing product on the outside front wall of the store.

O. Collection, staging, and storage of shopping carts outside the store on the front sidewalk and in cart corrals as needed.

P. Operation and use of a public address system in the garden center area.

Q. Garden Center may be adjacent to the retail store and enclosed in a perimeter fence outside the building envelope.

R. Outside storage of a backup generator, enclosed in a perimeter wall, that will be tested on a weekly basis per Chino Valley Fire Department guidelines and will run for ten to fifteen minutes at such testing.

S. Rental trucks (known as Load "N" Go).

3.3.2 Entertainment Uses

Primary entertainment uses shall be subject to the provisions of Development Code Section 16.12.070, "Entertainment establishments providing dancing, music, and similar activities" require submittal of a security plan to the City for review and approval. For restaurants whose primary use is an eating establishment, no security plan shall be required unless a security plan is a condition of licensing by the Department of Alcoholic Beverage Control.

3.3.3 Higher Educational Uses

Higher educational extension facilities shall be allowed as Higher Educational Uses that are a part of an accredited university or school and shall consist of classroom, meeting rooms and ancillary office space only, and be limited to the 15,000 square feet of office space. A Higher Educational use is subject to the review and approval by the Community Development Director and may require a parking analysis prior to locating within the Commons.

3.3.4 Outdoor Accessory Uses and Events

A. Periodic use of portions of the parking lot in The Commons for civic and promotional events shall be permitted. Those portions of the parking lot may be closed on a temporary basis during such events, without City approval.

   1. Civic and promotional events in the parking lot may include product displays, product promotions, and/or product demonstrations that shall be subject to restrictions imposed by common area property management and shall be exempt from Section 16.12.080, "Outdoor display and storage", of the Development Code provided such uses are consistent with the retail uses within The Commons Retail designation.

   2. Outdoor storage shall not interfere with line of sight standards as outlined in Section 3.4.3 of this Specific Plan.

B. In order to create and enhance the ambiance, an outdoor sound system may be installed to provide background music and to serve as a public address system. Noise standards contained in Table N-1 "Noise/Land Compatibility Matrix" of the City of Chino Hills General Plan Noise Element shall apply and shall be used to define acceptable and unacceptable noise levels.

3.3.5 Cell Phone Antenna Sites

The Commons Specific Plan accommodates a unique retail format and allows the following pertaining to cell phone antenna sites:

A. Cell phone antenna sites within the Commons at Chino Hills may be an antenna mounted on the interior of a freestanding structure that has been built solely for the purpose of supporting the wireless communications facility using camouflage design techniques so that the wireless communications facility is fully enclosed within the structure and the antenna panels are not visible. Typical structures used to enclose the freestanding facilities may include signs, clock towers, water towers, campanile (bell tower), or other suitable vertical structures. Such structure shall serve as a monument for the Commons at Chino Hills and may include the project name, project logo and ground-mounted up lights to illuminate the monument. The exterior color shall compliment the color of buildings within the Commons. Exhibit 3-3 provides examples of cell phone tower facilities.

B. The Commons at Chino Hills shall be granted a minimum of one (1) cell phone antenna site, subject to Site Plan Review.

C. A cell phone antenna site within Commons at Chino Hills Specific Plan area may be located on its own parcel. A ground mounted facility shall not be required to be located in the side or rear yard of a property.

D. The maximum height of a cell phone antenna or structure supporting the communications facility shall not exceed seventy feet (70').

3.4 DEVELOPMENT STANDARDS

Minimum site development standards are those of the "C-F, Freeway Commercial District" set forth in Section 16.12 of the City of Chino Hills Development except as otherwise indicated herein. Table 3-2 sets forth the site development standards for The Commons at Chino Hills.

TABLE 3-2: DEVELOPMENT STANDARDS

Development Standard	Minimum/Maximum Required
A. Minimum Lot Size	2,500 Square Feet
B. Minimum Lot Dimensions Width Depth	 50' feet 50' feet
C. Maximum Height Major Retail[1] Minor Retail[2] Office Hotel	 50' feet to roofline; 60' feet to top of architectural feature 25' feet to roofline; 35' feet to top of architectural feature 80' feet to roofline; 90' feet to top of architectural feature 80' feet to roofline; 90' feet to top of architectural feature

Development Standard	Minimum/Maximum Required
D. Landscaping Required	Minimum 10% must be landscaped (may include planted areas & enhanced hardscape)
E. Parking Lot Landscaping	Minimum 2% of parking areas (exclusive of loading areas) must be landscaped. This landscaping may be counted toward the total site area landscaping required in item D above.
F. Maximum Floor Area Ratio (FAR)[3]	No maximum floor area ratio.
G. Minimum Street-Side Building Setbacks From Chino Hills Parkway From Ramona Avenue From State Highway 71 From Easterly Tract Boundary	 20' Feet 15' Feet 15' Feet The building setback shall be equal to or greater than the total height of the proposed building
H. Minimum Setback at Drive Aisles, Parking Areas, and/or between Buildings	None Required
I. Minimum Open Space[4]	None Required

[1] A major retail store is a minimum 10,000 square feet and above.
[2] A minor retail store is 1,000 – 10,000 square feet.
[3] As outlined in Development Code Section 16.12.040, Table 25-1. No maximum floor-to-area ratio.
[4] As outlined in Development Code Section 16.08.070. No open space dedication required.

3.4.1 Projections into Building Setbacks

All required setback areas shall be open and unobstructed from finished grade to the sky except for landscaping and projections into street-side setback areas as indicated in Table 3-3.

TABLE 3-3: PROJECTIONS INTO BUILDING SETBACKS

Feature	Maximum Projection
Antennas/Satellite Dishes	2'0"
Awnings	3'0"
Architectural Projections: Cornices, Eaves, Roof Overhangs	4'0"
Patios, Open & Enclosed	5'0"
HVAC, Mechanical Equipment[1]	5'0"
Signs	Per the approved sign program
Pad Transformers and Above Ground Utility Cabinets[2]	5'0"

[1] All air conditioning units and mechanical equipment shall be screened from view by solid walls with exterior finishes to match or compliment surrounding buildings and uses.
[2] Shall be screened from view with landscaping.

3.4.2 Clear Area

A clear corner area for sight visibility purposes shall be provided at the intersections of all streets, as provided in Section 16.06.080, Clear areas, in the City of Chino Hills Development Code.

3.4.3 Temporary Structures and Uses

A. Temporary Construction Office ("TCO"): A TCO temporary construction office, used during the construction of the buildings on The Commons site, shall be permitted subject to the following conditions:

1. A TCO temporary construction office may not be used by any general contractors, subcontractors, furniture installation firms or other related firms completing work on The Commons development. There may be storage bins housing material on the site that is not considered a TCO and therefore no permit is required.
2. A TCO may be partially used as a leasing/sales office, where at least 50% of the space in the Temporary Construction Office is for the conduct of onsite construction activities.
3. The TCO temporary office may consist of a manufactured home, commercial coach, self-contained recreational vehicle, mobile office, or modular structure or vehicle erected or installed with Uniform Building Code requirements for temporary construction office.
4. Due to construction phasing, a TCO temporary construction office may remain on-site for a maximum of ninety (90) days after the last Certificate of Occupancy is issued for the project.
5. Issuance of the Temporary Use Permit for the TCO use shall not require a drinking water contract or letter of service.
6. The Temporary Use Permit shall be for a period of no greater than twenty-four (24) months.
7. There may be multiple TCOs on the site.
8. TCOs may be relocated anywhere on site, without approval of the City or the requirement for any additional permit fees.
9. The TCO shall only need to comply with the following and all other terms and conditions and/or requirements (inclusive of the Site Plan Checklist) of the City's Temporary Use Permit Application shall not apply:
    i. Name including addresses and telephone numbers of the owner and lessee's of the TCO.
    ii. Pumping Contract (copy of such contract); one contract can suffice for all TCOs on the entire site that are utilizing the same service.
    iii. Drawing showing the location of the proposed TCO.
    iv. The amount of temporary parking spaces and the location of such spaces on the site servicing the TCO.
    v. Plan showing handicap access to the TCO
    vi. Payment of a Temporary Use Permit and Set-down Building Permit Fee (there shall be no Cash Deposit required)

vii. Seismic tie-down drawing shall be required from the TCO provider. A wet sealed certified engineer of record, stamped drawing from such engineer will not be required.

3.4.4 Trash Enclosures / Refuse Bins

A. Receptacles (bins) for the collection of refuse and recyclable materials generated within The Commons Retail designation shall be generally located as shown on Exhibit 3.1, Commons Retail Conceptual Site Plan.

B. All trash enclosures shall be designed with a walk-in access component.

C. Enclosures shall be provided for bins and shall consist of six (6) foot-high split face block masonry walls, and solid, view-obscuring gates with self-closing devices.

3.4.5 Walls and Fences

A. Walls and/or fences, including retaining walls, may be permitted along the street and within street-side setback areas, provided they are outside of the public right-of-way and do not exceed four feet (4') in height. Location and design of a wall or fence is subject to review and approval by the Community Development Director or designee.

B. All walls shall be made of split-face block masonry walls, concrete tilt panels or of comparable material as approved by the Community Development Director or designee. Walls shall be compatible with the architectural theme.

C. Perimeter walls up to nine feet (9') in height may be permitted along the southern and eastern property lines. This specifically excludes property lines adjacent to Chino Hills Parkway and Ramona Avenue. The Commons

3.4.6 Parking and Loading

A. The Commons integrates a variety of retail goods and services uses with varying parking requirements, peak hour parking demands, and vehicle loading needs. Flexibility in meeting these varying requirements and demands is accommodated through inclusion of on-site parking and loading areas as part of the common area shared by tenants and occupants of The Commons Retail. Access to and use of common area shared parking shall be maintained through real property agreements applicable to all uses in The Commons Retail designation.

B. The location of parking and loading facilities shall be generally as shown on Exhibit 3.1, "Conceptual Site Plan."

C. Parking shall be provided at the rate of four (4) spaces for each one thousand (1,000) square feet of Gross Leasable Area; hotel and motels are excluded from this provision. Gross Leasable Area (GLA) is defined as the total space designed for exclusive use of the tenant and generally excludes common area and space devoted to heating, cooling, and other equipment of the building, including shafts or structural members, electrical rooms, stairwells, elevators and elevator equipment rooms, and emergency fire exits. If the calculation of required parking spaces results in a fractional number (greater than 0.5), that number shall be rounded up to the next whole numbered parking space.

D. Parking for hotels and motels shall be provided at the rate of one (1) space per guest room. Restaurant, meeting rooms, banquet/reception facilities, convention space or any other accessory uses within the hotel/motel shall provide a parking rate of four (4) spaces for each one thousand (1,000) square feet.

E. Restaurants with drive-through areas must provide at least 3 on-site queing spaces for patron vehicles ahead of the menu board or as approved by the Community Development Director.

F. Any restaurant less than 2,500 square feet shall be considered retail for parking purposes.

G. Parking facility development standards:

1. Parking space dimensions - The minimum size of a parking space shall be nine feet (9') wide and nineteen feet (19') long including the two foot (2') curb overhang, if applicable. The minimum size of a handicapped parking space shall be as directed by Title 24 of the California Code of Regulations.

2. Parking access - The minimum width of required fire access parking lot drive aisles shall be twenty-six feet (26').

3. All parking spaces and associated driveways shall be entirely paved with concrete or asphalt-type surfacing per City standards and requirements

4. Pavement graphics, directional signs and arrows shall be provided on parking lot drive aisles.

5. Parking space delineation – All parking spaces shall be clearly marked with paint or another easily distinguishable material and all spaces shall be delineated with double lines.

H. Valet parking – Valet parking shall be permissible within The Commons Specific Plan.

1. Valet parking may be provided anywhere on-site by Commons retail management.

2. The number of proposed parking spaces to be utilized shall be sufficient to ensure that the valet parking operation should not unduly affect the availability of on-site parking spaces.

3. The proposed traffic flow and location of the valet station or stations should not create undue traffic congestion in the area proposed for the valet service

I. Loading Space Requirements:

1. Number of spaces – Loading areas shall be provided within The Commons Specific Plan site.

2. Dimensions – - The minimum size of a loading space shall be at least ten feet wide (10') with a minimum length of 20 feet (20').

J. Bicycle Parking Standards:

1. Five (5) bicycle parking/storage spaces shall be located in one, area/location within The Commons Specific Plan site.

2. The Commons shall be exempt from Section 16.34.110, "Bicycle parking standards", of the Chino Hills Development Code.

3.4.7 Trip Reduction Program

The Commons shall be exempt from Section 16.36, "Trip Reduction Program", of the Chino Hills Development Code.

3.4.8 Signs

Details on The Commons at Chino Hills Specific Plan signage program can be found in the Sign Program.

3.4.9 Architecture and Design

A. Design guidelines for The Commons at Chino Hills recognize the value of brand recognition for retailers with multiple store, restaurant, or hotel locations. A retailer with multiple stores, restaurants or hotels typically employs a format that is common among locations and may include standardized signs, architecture, design, interior and exterior colors, forms, shapes, materials, and the display of standardized logos to promote and enhance the company's image, products or services. Multiple store, restaurant or hotel retailers include those whose market areas may be the local area or regional, national or international markets. Accordingly, each tenant that is part of a multiple location retail, restaurant or hotel/motel organization shall be permitted to construct and improve premises at The Commons that are consistent with that company's prototype format, including but not limited to, standardized signs, architecture, design, interiors, and exterior colors, forms, shapes and materials, and the display of standardized logos, sign text, script, color, outdoor eating & assembly areas, patios, entrances, awnings and text thereon, lighting, and landscaping and shall not be subject to City review and without restriction or condition except as to size, bulk, height or location restrictions applicable throughout The Commons at Chino Hills.

B. Additional details on the design and architecture of The Commons at Chino Hills can be found in Section 4, *Design Guidelines.*

4. DESIGN GUIDELINES

4.1 PURPOSE AND INTENT

The Commons at Chino Hills Design Guidelines provide a general framework for architecture, landscaping, entry monumentation and signage in order to ensure a high-quality development. These guidelines are intended to provide criteria for design, while allowing flexibility for architects, landscape architects, developers, builders and others involved in the development of The Commons at Chino Hills. The Design Guidelines are subject to modification over time so as to allow for response to unanticipated conditions such as changes in taste, community desires and the marketplace.

While encouraging uniqueness among tenants, the Design Guidelines for The Commons recognize the value of brand recognition for retailers with multiple store/restaurant locations. A retailer with multiple stores/restaurants typically employs a retail or restaurant format that is common among locations and may include standardized signs, architecture, design, interior and exterior colors, forms, shapes, materials, and the display of standardized logos to promote and enhance the company's image, products or services. Multiple store retailers include those whose market areas may be the local area or regional, national, or international markets. Accordingly, each tenant that is part of a multiple location retail or restaurant organization shall be permitted to construct and improve premises at The Commons that are consistent with that company's retail or restaurant prototype format including, but not limited to, standardized signs, architecture, design, interior and exterior colors, forms, shapes, and materials, and the display of standardized logos, sign text, script, color, outdoor eating areas and patios, awnings and text thereon, lighting, and landscaping and shall not be subject to City review and without restriction or condition except as to size, bulk, height, or location restrictions applicable throughout The Commons.

The photographs, sketches, and other graphic representations in these Design Guidelines are offered as general visual aids in understanding the basic intent of the design theme and its key implementing elements. The design components described in this document are for informational purposes and are to be used in identifying the desired design compositions for the site. Design components are provided as a palette of character, materials, and colors defining elements that should be reflected in the commercial mixed-use design proposal.

4.2 DESIGN THEME

A Contemporary style is the overall design theme for The Commons at Chino Hills Specific Plan. All buildings in this area, whether in-line or freestanding, will utilize elements complementary to selected style though unique and creative designs are encouraged in order to provide variation and interest in this development. Refer to Exhibit 4-1 for examples of buildings designed with a Contemporary architectural theme.

The primary design characteristics for the Contemporary style may include:

- Simple repeated forms and massing;
- Squared tower elements at entry;
- Enhanced articulation and details of entries, windows, doorways;
- Natural, contemporary appearance with warm, deep colors; enhanced stone and details.

4.3 BUILDING FORM & MASS

The highly-visible location of The Commons adjacent to the Chino Valley Freeway (SR-71) and to Chino Hills Parkway provides a significant opportunity for business development and for making a strong statement about the character of the City of Chino Hills. Therefore the following design considerations should be kept in mind during the site planning and design for commercial centers in this location:

- Project a positive public image, enhancing the function and aesthetics of the center by integrating buildings with landscape and/or structural elements.
- Provide variation in plan, form and function of buildings and resulting adjacent spaces both inside and out with the use of recesses, pop-outs, positioning and relationships of buildings.
- Avoid monotony and repetition in building elevations and street scene by varying building heights, massing, and rooflines, design elements, color, texture and materials, building placement and landscape.
- Avoid long, uninterrupted building planes by designing in smaller components, varying massing and/or treating facades as a series of individual units, providing overhangs or shadow elements for shade and interest.
- Articulate all primary building elevations, providing visual interest in window patterns, size and placement and integrate overhangs and other external elements into the overall building design.
- Design with a level of detail consistent with the scale of the buildings throughout the shopping center.
- Where appropriate, adhere to community design character and style requirements, providing complementary buildings, ancillary structures and landscape elements in conjunction with these standards.
- Rooftop mechanical equipment is screened from view in a manner consistent with the architectural character of the building.

4.4 DETAILS & MATERIALS

Building details indicated below are articulated through the architectural vocabulary of the Contemporary style.

- Articulation of building elements, both vertically and horizontally;
- Accentuated entries;
- Contemporary textured building materials, (stone, etc.);
- Metal grillwork and trellises, though not traditional, should complement the traditional elements of this style;
- Traditional style lighting fixtures;
- Light to dark earth tones color palette;
- Square tower elements at entries and focal points.

4.5 OUTSIDE FURNISHING

Outside furnishing include but are not limited to light fixtures, bollards, benches, trash receptacles, and signage. An appropriate style of furnishing for the theme of the project may be selected and utilized at appropriate locations throughout the development. The Commons includes a variety of uses and tenants. As a destination location, many visitors are on-site for several hours and move between uses on foot. Special care is taken to furnish amenities for these pedestrians such as:

- Bench Seating. Public seating allows the pedestrians to sit down, relax, and people watch.
- Trash and Ash Urns. Trash receptacles and, where possible, recycling containers are provided as well as ash stands for extinguishing smoking materials.
- Seat Walls. Retaining walls in outdoor public spaces may include integrated seating surfaces.
- Bicycle Rack. Bicycle racks are located in well-lighted areas and placed in a location visible from entrances and/or parking areas.
- Drinking Fountains, Planting Pots, Saucers (moveable) and Planting Boxes. These may be placed near public walkways without obstructing them.
- Entry Pylon. Entry pylons provide an "entry experience"

4.6 ENTRYWAYS

Enhanced entry features and landscaping are located at the major corners and entries to The Commons project site. Exhibit 4-2 provides examples of corner and entry features.

4.7 OUTDOOR LIGHTING

The lighting requirements of the City of Chino Hills Landscaping and Lighting Manual, 1992 and the Chino Hills Municipal Code are waived and shall not apply to The Commons. All lighting shall be subject to approval by the Community Development Director or designee. Exterior lighting shall be energy-efficient and shielded or recessed so that direct glare and reflections are contained within the boundaries of The Commons and shall be directed downward and away from adjoining properties and public rights-of-way. No lighting shall blink, flash, or be of unusually high intensity or brightness. All lighting fixtures shall be appropriate in scale, intensity, and height to the use being served and consistent with the following:

Parking lot lights shall not exceed forty (40') in height. Lighting of outdoor areas shall be designed and maintained in a manner to prevent glare or direct illumination from intruding into off-site areas. Illumination patterns overlap, creating an even level of illumination throughout the parking area. Pedestrian level lighting is used along pedestrian walkways. All lighting is located and aimed away from adjacent properties and roadways as consistent with City of Chino Hills lighting guidelines. All lighting fixtures shall be appropriate in scale, intensity, and height to the use it is serving.

Basic lighting types include but are not limited to:

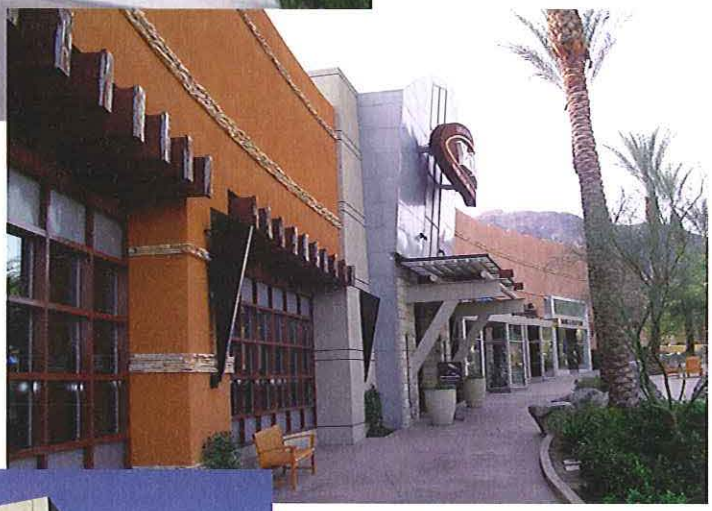
- Street pole lighting along principal circulation paths (sidewalks);
- Ground-mounted bollard lighting along pathways/parking areas;
- Decorative lighting fixtures integrated into/atop entry pylons/gates;

- Elevated pole lighting at parking lots;
- Below-grade uplights;
- Ground-mounted up lights to illuminate landscape, etc;
- Building up-lighting discreetly mounted above human eye points;

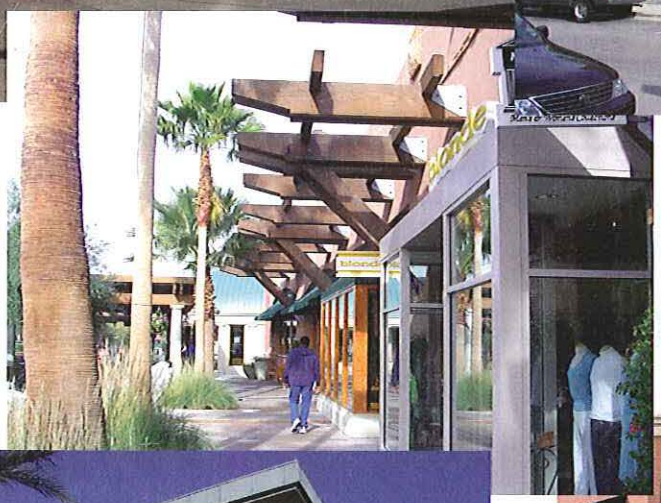
  Strung lighting cross paseos/terrace areas (including seasonal lighting).

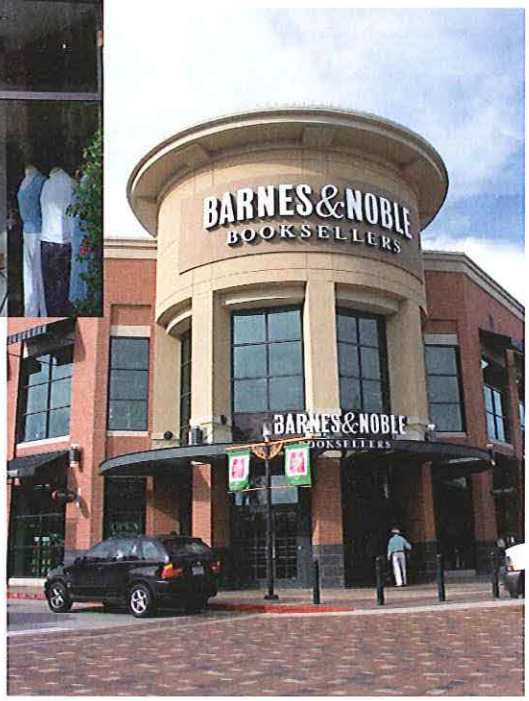
4.8 PAVING

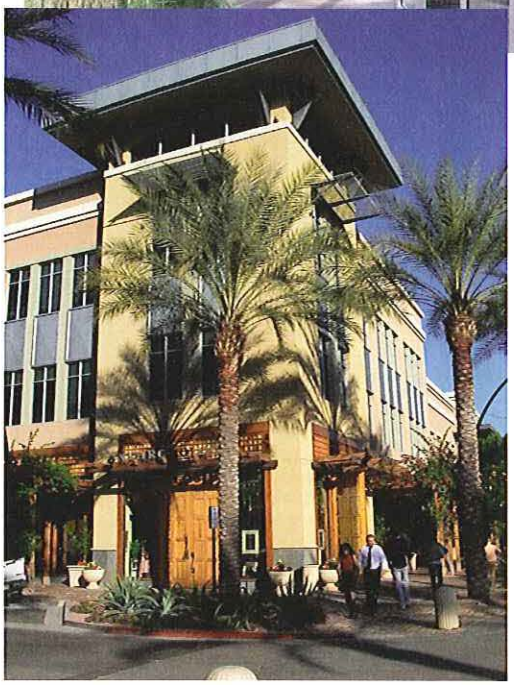
Enhanced paving will generally be located along the storefront walkways, primary pedestrian crosswalks, and at the main entrance to The Commons from Chino Hills Parkway. Enhanced paving may include the following materials:



- Integral colored concrete with saw cut pattern including sandblast or acid wash finish;
- Concrete interlocking paving units with accent bands;
- Natural grey concrete with saw cut pattern including a sandblast or acid wash finish with paver accents or borders;
- Any combination of the above materials, pattern and finishes.







Building Design Examples 4.1

Corner Entry Features 4.2

4.9 SIGN PROGRAM

Signs within The Commons at Chino Hills provide for tenant identification signs and directional signs utilizing colors, materials, finishes, and illumination so as to complement one another and be consistent with the upscale character of the Specific Plan area. The overall character of the signage and graphics for The Commons is one of that reflects the variety and uniqueness of the architecture. Signs are compatible with the pedestrian scale of the environment rather than that of a larger vehicular-scaled venue. In recognition of these distinct characteristics, a Sign Program for the Commons at Chino Hills has been submitted to the City and is summarize in the following subsections. The Commons Sign Program will feature on-site advertising including the names of the businesses operating within the Specific Plan area and the Reader Board can be utilized to advertise special promotional/sale items sold by on-site tenants. The general location of the major signs for The Commons at Chino Hills may be as generally shown on Exhibit 4.3, Conceptual Sign Locations, and described in the following sections.

4.9.1 Media Program

The Commons shall include a Media Program as part of the overall development of the project. The Media Program will consist of various forms of advertising including Freeway Pylon Signs, temporary banners, wall signs, back lit Duratrans, directories, kiosks, static sticker/signs and the use of a Reader Board consisting of an LED, Plasma or tri-vision display. The Commons at Chino Hills' Media Program will feature on-site advertising uses that address the target audience of visitors to The Commons at Chino Hills. Advertising would include, but not be limited to, promoting on-site tenants, restaurants, hotel promotions, sales, dining, specific activities, events or seasons. (See Section 4.9.14 for a list of prohibited advertisers)

The City of Chino Hills would be able to provide content to The Commons at Chino Hills for inclusion on the Reader Board sign, with the use capped at one slide every 5 minutes of broadcast time, and the slotting of such time as determined by The Commons at Chino Hills.

4.9.2 Wayfinding Signs

The wayfinding signs help the visitor navigate through an urban environment. The graphics, like in many similar urban environments, help to create a sense of orientation for the first time visitor, and a sense of comfort for those that return often.

4.9.3 Pylon / Reader Board

Located along the freeway, one(1) Pylon/Reader Board sign may be up to 100' feet tall and three (3) Freeway Pylon signs may be up to 65' feet tall and indicate "The Commons at Chino Hills," a project logo or icon, "City of Chino Hills," and the names of the tenants. Maximum sign area is 2,000 square feet per side. Letter height will be no more than 72" inches. An electronic reader board may be included to identify upcoming on-site cultural events and other on-site events that are in compliance with the approved Sign Program. Exhibit 4.4 illustrates examples of Freeway Pylon/Reader Board Signs and Exhibit 4.5 illustrates examples of the Freeway Pylon Signs.

4.9.4 Major Site Identity Monuments

Located at major corners to the project, the major site identity monuments are of sizes appropriate to be readable from vehicles traveling at speeds of up to 50 miles per hour. Individual dimensional letters and

logo will identify the project. The letters and logo may be internally illuminated. Exhibit 4.6 illustrates examples of Major Site Identity Monuments.

4.9.5 Tenant Monument Signs

The tenant monument signs will be located along Chino Hills Parkway and will be at a scale appropriate to be read from within a vehicle. Illumination of the identity plaques will be from the ground or a wall mounted external source, not internally illuminated. Exhibit 4.7 illustrates examples of Tenant Monument Signs.

4.9.6 Vehicular Scaled Directional Signs

Located at vehicular intersections on-site, these signs guide the visitor to different uses on the site such as to offices, major anchors, and municipal buildings. The project name is located on the sign in a smaller, more understated way so as not to detract from the listings. Exhibit 4.8 illustrates examples of Vehicle Scaled Directional Signs.

4.9.7 Pedestrian Scaled Directional Signs

This sign type is used to direct the pedestrian to various on-site uses and is located along major paths of travel on sidewalks and in gathering areas. Pedestrian-scaled signs also point the way to amenities such as public restrooms, security, information booths, and elevators. The signs are pole or ground-mounted and include appropriate text and arrows. Exhibit 4.8 illustrates examples of Pedestrian Scaled Directional Signs.

4.9.8 Project Directory Signs and Community Board

Project directory signs are located in at least two prominent positions on the Retail Commons Site. The signs include a map of The Commons and indicate all uses/tenants so as to allow visitors to orient themselves and proceed to any destination shown. Exhibit 4.9 illustrates examples of Project Directory Signs and Community Board.

4.9.9 Site Pageantry

Site pageantry consists of fabric or metal banners that are attached to light poles or building facades throughout the project. They are a part of themed graphics of the project and may include the project's name and/or logo, holiday or special event greetings and are not intended for display of tenant graphics. Site Pageantry will be concentrated along the perimeter streets of the project and at major entrances to the site. Exhibit 4.10 illustrates examples of Site Pageantry.

4.9.10 Regulatory Signage

The street and passage name identities will be in the form of traditional street signs that will be freestanding or mounted to a pole light, or mounted on building walls adjacent to street or sidewalks. The design of the signs will be reflective of the theme of the overall project. Other site regulatory signs such as stop signs, parking signs, handicap parking signs, service areas, etc. will incorporate elements of similar to the street identity signs. Exhibit 4.11 illustrates examples of Regulatory Signage.

4.9.11 Tenant Identity Signage

Tenant identity signage mounted to building facades is located throughout The Commons at Chino Hills. Signage is an integral design feature of each tenant's storefront design. Each tenant storefront is designed to complement the design of the overall facade and building design. Individual tenants are encouraged to use a mixture of urban signage techniques to give variety and the appearance of having evolved in a high-end urban setting. An eclectic mix of dimensional signage will be encouraged to create a sense of uniqueness and variety along the streetscape.

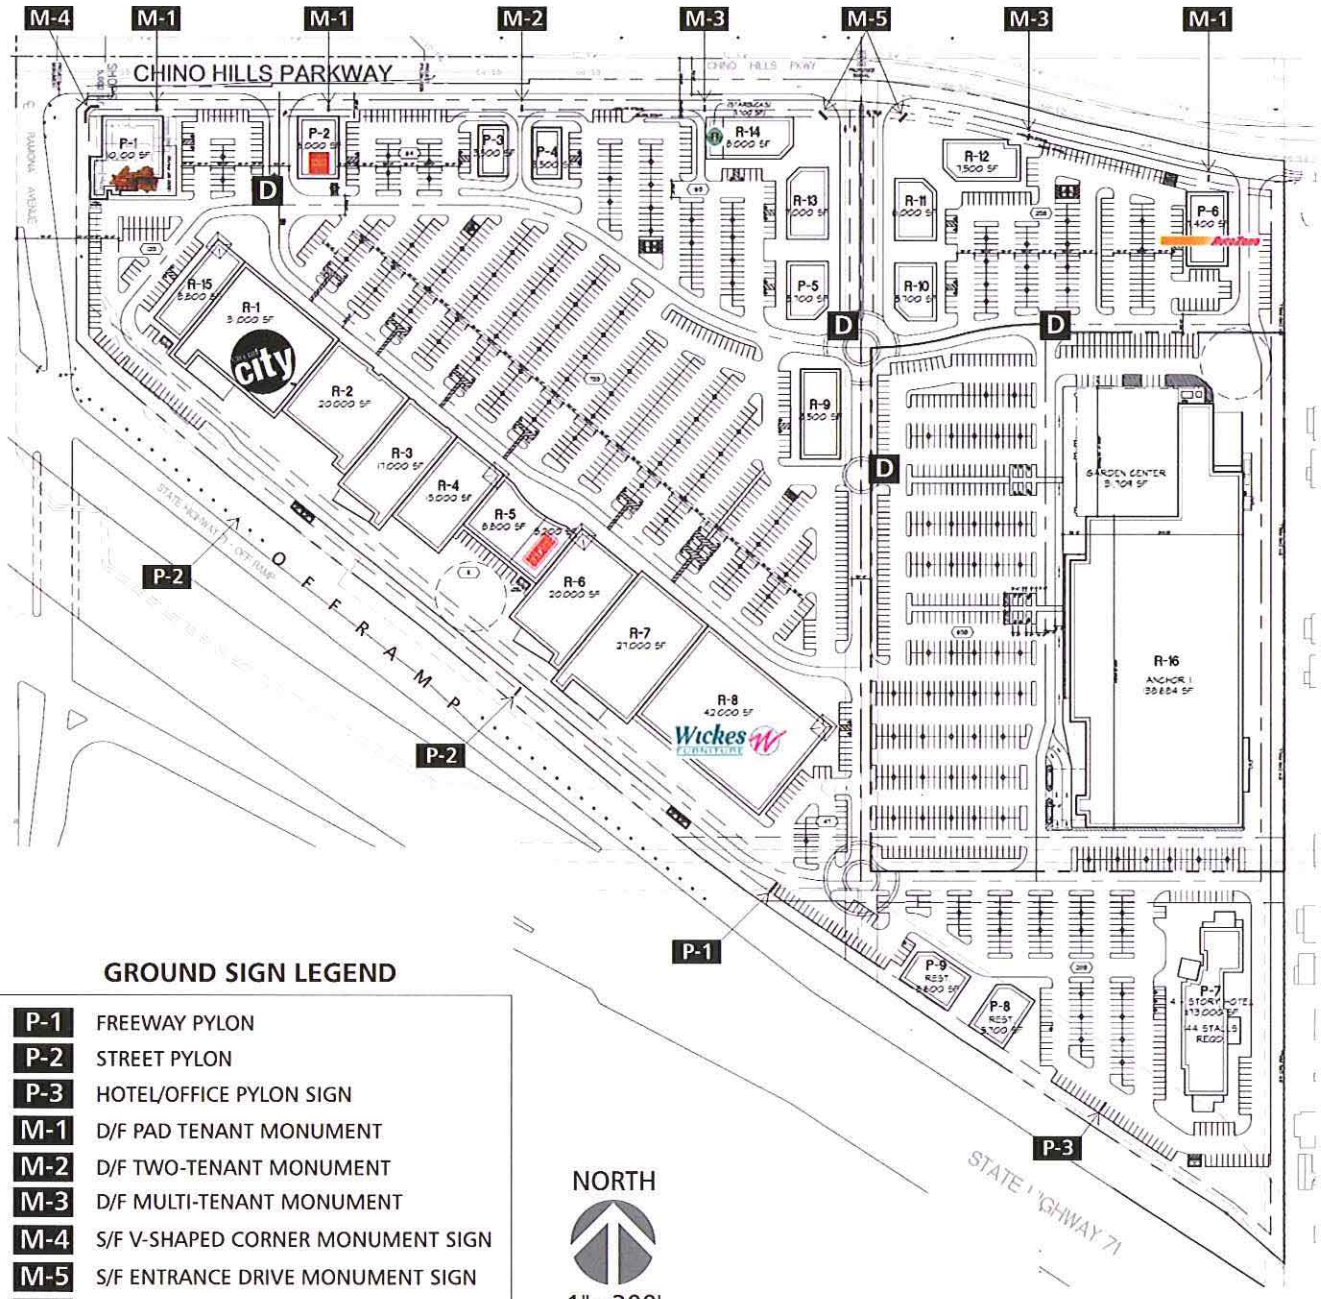
Sign formats for tenant signs may be applied in the following fashion depending on location and storefront design:

- Fascia signs;
- Blade signs;
- Lettering and graphics on valances or awnings;
- Signage applied to the glass show windows, storefronts and entrances;
- Inlaid floor graphics;
- Wall mounted plaques and
- Signage applied to canopies.

Acceptable sign types include:

- Dimensional metal, glass or other material with a permanent appearance indirectly lit;
- Reverse channel letters with halo illumination, with opaque face and sides and non-reflective background;
- Embedded, flush, recessed box signs of an opaque material with push through, translucent copy;
- Incised letters cut into or cast out of an opaque material and indirectly lit;
- Sculptured, iconographic elements contextual to the storefront design;
- Internally illuminated channel letters or logo.

In general, all tenant signage must be proportionate to the storefront and building design as well as the urban nature of the street. Each tenant is allowed primary building fascia signage for each elevation facing the common area, with additional blade, show window, wall plaques, floor, awning, and canopy signs and wall signs for secondary elevations which face the perimeter of the project area in accordance with the City approved sign program for the project. No sign will exceed sixty-six percent (66%) of storefront width. Blade signs will be mounted to allow an eight foot (8') minimum clearance above the walkway. Exhibits 4.12 and 4.13 illustrate examples of Tenant Signage.



4.9.12 Temporary Signs

Temporary signs not visible from the public right-of-way are permitted, subject to Community Development Director or designee review and approval of a sign program. Pending City approval of said sign program, such temporary signs may not be subject to issuance of a temporary sign permit by City and not otherwise subject to restriction unless such signage is declared hazardous or unsafe by the City.

Temporary signs visible from the public right-of-way, other than those indicated in Section 3.3.1 Promotional Displays and Activities, are subject to the City of Chino Hills Development Code.

4.9.13 Prohibited Signage

- No signage or advertising which is prohibited by the approved sign program for the Commons shall be permitted.
- Advertising of businesses and services not located within the Specific Plan area; and advertising products which are not currently a special or promotional sale by an on-site tenant.

4.10 LANDSCAPE GUIDELINES

4.10.1 Introduction

A Landscape Master Plan provides planting materials and locations to complement the building architecture, enhance the parking lot areas, and soften the effect of hardscapes and hard surfaces. Exhibit 4.14 provides the conceptual landscape plan for The Commons. The plant palette includes a variety of plant materials such as:

A. Parking Lot Trees

1. *Cinnamomum Camphora* Camphor Tree
2. *Tristania Conferta* Brisbane Box
3. *Magnolia Grandiflora* Southern Magnolia
4. *Lagerstoemia Indica* Crape Myrtle
5. *Ulmus Parvifolia* Elm Tree

B. Entry/Accent Trees

1. *Phoenix Dactylifera* Date Palm
2. *Washingtonia Filifera* California Fan Palm
3. *Washingtonia Robusta* Mexican Fan Palm

C. Screen Trees

1. *Brachychiton Populneus* Bottle Tree
2. *Cupressus Sempervirens "Glauca"* Glauca Italian Cypress
3. *Cupressus Arizonica* Arizona Cypress

D. Small Accent Trees

1. *Bauhinia Variegata* Orchid Tree
2. *Lagerstroemia Indica* Crape Myrtle
3. *Geijera Parviflora* Australian Willow

Substitution of the aforementioned list may be approved by the Community Development Director or designee.

Enhanced paving will generally be located along the storefront walkways, primary pedestrian crosswalks and at the main vehicular entrance to The Commons from Chino Hills Parkway. Enhanced paving may be any of the following materials, as approved by the Community Development Director or designee:

- Integral colored concrete with saw cut pattern including a sandblast or acid wash finish with a sealant;
- Patterned and colored asphalt like streetprint or equal

- Concrete interlocking paving units with contrasting accent bands with a sealant;
- Natural grey concrete with saw cut pattern including including a sandblast or acid wash finish with paver accents or borders with a sealant;
- Any combination of the above materials, pattern and finishes;

4.10.2 Street Trees

Trees in the public rights-of-way complement the unique character of each street. Street trees include:

A. Street Trees

Chino Hills Parkway

1. *Pyrus Calleryana Bradford* Evergreen Pear or Bradford Pear
2. *Koelreuteria Paniculata* Goldenrain Tree
3. *Platanus Acerifolia* London Plane Tree
4. *Brachychiton Populneus* Bottle Tree

B. Perimeter Trees

1. *Tipuana Tipu* Tipu Tree or Rosewood
2. *Liriodendrom Tulipifera* Yellow Poplar
3. *Brachychiton Populneus* Bottle Tree

Substitution of the aforementioned list may be approved by the Community Development Director or designee.

5. IMPLEMENTATION PLAN

The purpose of this section is to define the implementation measures necessary to carry out The Commons at Chino Hills Specific Plan.

5.1 PHASING

Phasing of the Specific Plan meets the following objectives:

- The orderly build-out of the mixed-use project based upon market and economic conditions.
- The provision of adequate infrastructure and public facilities concurrent with development of each phase.
- The protection of public health, safety and welfare.

It is envisioned that The Commons will be built in one phase with the timing of completion of perimeter restaurant pads dependent upon market activity.

5.2 FINANCING AND FEES

California Government Code Section 65451 sets forth the basic content of specific plans and one of the requirements is to include information relating to project financing and fees. Various techniques are available for financing the required infrastructure and project components and may include Community Facility District funds and Lighting District Funds and the General Fund.

5.2.1 Applicability

The development standards contained herein provide specific standards for land use development within the Specific Plan area. The Specific Plan supersedes the otherwise applicable City of Chino Hills development standards/regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Chino Hills Development Code, the provisions of the Specific Plan shall take precedence. Where the Specific Plan is silent, the City of Chino Hills Development Code shall apply.

5.2.2 Administration

The Commons at Chino Hills Specific Plan serves as the implementation tool for the General Plan as well as the zoning for the project site. The Specific Plan addresses general provisions, permitted uses, development standards and design guidelines.

5.2.3 Interpretation

To the extent there are conflicts between mitigation measures (imposed pursuant to the City's CEQA review), the Specific Plan, Conditions of Approval, or the City of Chino Hills Development Code, the following the order of precedence shall govern:

1. Mitigation Measures;
2. The Commons at Chino Hills Specific Plan;

3. Conditions of Approval; and

4. City of Chino Hills Development Code

5.2.4 Implementation

All development proposals within the Specific Plan are subject to the implementation procedures established herein.

5.2.5 Specific Plan Revisions

Revisions to the Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the State Government Code. Revisions are processed pursuant to the provisions of the Government Code for Specific Plan and the City of Chino Hills Development Code. In the event the proposed revisions require supplemental environmental analysis, pursuant to the California Environmental Quality Act (CEQA), the applicant is responsible for preparing the necessary CEQA documentation.

5.2.6 Minor Modifications

The following constitute Minor Modifications to the Specific Plan. They are subject to review and approval by the Community Development Director or designee. Minor Modifications do not require amendment to the Specific Plan. Minor modifications shall not result in an increase in density, increase in height, reduction in setback, decrease in parking ratios, or change of use in a manner that would be inconsistent with the requirement of the Specific Plan:

- Change in utility and/ public service provider;
- Minor changes to text and maps intended to clarify Specific Plan information, provided such changes do not add density or modify the development policies or standards of the Specific Plan;
- Minor changes to landscape materials, wall materials, entry design, streetscape design and signage which are consistent with the conceptual design set forth in the design guidelines contained with the Specific Plan provided that the substitute materials and designs approved are of the same of better quality;
- Minor changes to the design guidelines including architecture, design, and color palette, provided that the design is of the same or better quality;
- Minor changes to The Commons conceptual site plan, building dimensions, or architectural elevations as depicted in the Specific Plan necessary to accommodate proposed tenant improvements provided that such do not alter the general layout and building configurations of the conceptual site plan are in compliance with all of the restrictions set forth in Table 2-1, "Typical Tenant Roster" and Exhibit 2.1, Conceptual Site Plan;
- Other modifications of a similar nature to those listed above as determined by the Community Development Director or designee.

5.2.7 Appeals

All appeals pertaining to this Specific Plan shall be made to the Planning Commission. The applicant or any other entity shall have the right to appeal the decision of the Planning Commission on any determination by filing an application on forms provided by the City of Chino Hills within ten (10) business days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of the City of Chino Hills Development Code.

5.2.8 Development Permits

All new development within the project site is subject to the Site Plan Review process as established in Section 16.78 of the City of Chino Hills Development Code. Subsequent development after initial approval is subject to a Site Development Permit or as determined by the Community Development Director. Adoption of the Specific Plan includes adoption of the design guidelines contained herein which provide direction for the design of the development projects within the project site.

5.2.9 Maps

Approval of maps may occur with or subsequent to the adoption of the Specific Plan creating parcels for development. The project may include parcel map(s), lot line adjustments and/or other minor subdivision actions.

5.3 GENERAL PLAN CONSISTENCY

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines and programs with the goals and policies set forth in the general plan.

The Commons at Chino Hills Specific Plan has been prepared in conformance with the goals and policies of the City of Chino Hills General Plan.

[This page intentionally left blank]

The Shoppes Specific Plan 6th Amendment (Proposed Changes)

The Shoppes Specific Plan amendment includes modifications to various sections to incorporate the Housing Element changes at the Shoppes retail, Shoppes II site (referenced as Shoppes Mixed Use originally), and the overflow parking for Community Park. As previously mentioned, the three sites will encompass a total of 1,061 multi-family units. Because the specific plan is nearly 20 years old (Exhibit “F”), the document cannot be produced in a redline version. Therefore, the changes to each amended section are detailed below and outlined in red.

- Page 3 – 1.3 Background and History

> *The Shoppes at Chino Hills (referred to herein as the "Shoppes Retail") provides up to 378,230 square feet of retail, office and restaurant space, plus a Mixed Use Housing (MUH) category that allows for up to 267 multifamily housing units in compliance with the City’s adopted 6th Cycle Housing Element (Housing Element).*
>
> *The Shoppes at Chino Hills Mixed Use (referred to herein as the "Shoppes Mixed/Use") establishes an Urban High Density Housing (UHDH) category that allows for an urban density development of up to 744 multifamily units in compliance with the Housing Element. Because of its connection to the Housing Element, the UHDH is the preferred development scenario, and would supersede the "Shoppes Mixed/Use" previous entitlement scenario which allows for up to 40,000 square feet of commercial, retail, restaurant and office space, up to 295 multifamily dwelling units, and up to 300 hotel rooms.*
>
> *The City Community Park (referred to herein as "Community Park") includes up to 43 acres of new park facilities and the Community Center (referred to herein as the "Community Center") includes a recreational community center and a Very High Density Housing (VHDH) category that allows for 50 multifamily senior housing units in compliance with the Housing Element. The five project components are described in detail in Section 2.0, Development Plan.*

- Page 12 – Table 1-1 General Plan and Zoning Designations

- Page 15 – 2.1 Land Use Plan

The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan includes proposed development consisting of up to 550,000 square feet of commercial, retail, office and restaurant development, up to 300 hotel rooms, a ~~new~~ civic center of up to 133,060 square feet, three residential development sites for a total of up to ~~295~~ 1,061 dwelling units, community park facilities and a 19,000 square foot recreational community center. The total area of the Specific Plan is approximately 100 acres.

Shoppes Retail: The Shoppes Retail district implements the Shoppes Retail component of the Specific Plan. This designation allows for a mix of retail, commercial, entertainment, restaurant and office uses that will allow for the creation of a central core with an active street life and a vibrant retail and business center. A mixed use residential component is also allowed. The Shoppes Retail district also includes a freeway pylon sign, to be located along State Route 71 (Chino Valley Freeway) in the City of Chino Hills on Grand Avenue.

Shoppes Mixed-Use: The Shoppes Mixed-Use district provides for an urban high density housing development. ~~mix of uses including higher density residential development in the form of townhomes, apartments and condominiums.~~ Office, commercial, retail, restaurant, hotel, on-site parking and structured parking are also permitted.

Community Park: The Community Park includes public recreational facilities as well as passive open space. A very high density senior housing component is also allowed at the southwest corner of Peyton Drive and Eucalyptus Avenue.

- Page 19 – Table 2-1 Shoppes Retail

Department Store or Major Anchor	100,000 sq. ft. minimum for Department Store; or a minimum of two major retailers, each at a minimum of 20,000 sq. ft. and subject to City Manager or designee approval.	
Retail	40,000 sq. ft. individual retailer maximum per	
Restaurant	Up to 60,000 sq. ft.	
Offices	Up to 65,000 sq. ft.	
Entertainment	Up to 10,000 sq. ft.	
Mixed Use Housing (MUH)	Up to 267 units	
Total Commercial Building Area*		Up to 378,230 sq. ft.
Shoppes Retail Site Area		26.2 Acres
*Building Area calculation is exclusive of residential building area		

- Page 20 – 2.1.3 Shoppes Mixed Use and Table 2-3

The Shoppes Mixed-Use land use designation is part of the Mixed-Use district that allows for an urban high density residential development, or a mixed residential and commercial development. The very high density housing scenario (Urban High Density Housing/UHDH) allows for an urban density of development of up to 744 multifamily units in compliance with the Housing Element of the Chino Hills General Plan. Because of its connection to the Housing Element, the UHDH is the preferred development scenario. The mixed use scenario allows up to 40,000 square feet of commercial, retail, restaurant and office space, and up to 300 hotel rooms. A multi-level parking structure is included to accommodate parking for the residential, retail, office and/or hotel components. ~~and of the Shoppes Mixed Use development and may be for private use only.~~ Other uses consistent with the Shoppes Mixed-Use district may be permitted. Refer to Exhibit 2-2 for a conceptual site plan of Shoppes Mixed-Use. Proposed site, building area and density for the mixed-use component is provided in Table 2- 3.

Urban High Density Housing (UDHD)	Up to 744 units	
Commercial/Retail/Restaurant /Office	Up to 40,000 sq. ft	
~~Multi-Family Residential~~	~~Up to 235 units~~	
Hotel(s)	Up to 300 rooms	
Shoppes Mixed-Use Site Area		8 Acres

- Page 21 – 2.1.4 Community Park

The proposed layout for the Community Park is illustrated in Exhibit 2-3, Community Park Conceptual Site Plan. The recreational facilities at the Community Park site, at a minimum, replace those facilities operating at the Chino Hills Community Park prior to Specific Plan adoption. The relocated park includes a tot lot, picnic areas, fields to handle baseball, softball, soccer and other seasonal recreational activities, along with restroom facilities, a snack bar and associated spectator seating and parking areas. Additional accessory uses for the Community Park may include outdoor basketball courts, a community center building and new multi-purpose trail. Site, building area and a list of possible amenities for Community Park uses are contained in Table 2-4. A Very High Density Housing (VHDH) component, which allows for 50 multifamily senior housing units in compliance with the Housing Element on an approximately 2.4 acre site at the southwest corner of Peyton Drive and Eucalyptus Avenue, is also permitted.

Ball Fields	6	
Soccer Overlays	5	
Restroom/Concession Buildings	1,600 sq. ft.	
Maintenance/Storage Building	1,400 sq. ft.	
Maintenance Building;	+2,500 sq. ft.	
Maintenance Yard	+2,500 sq. ft.	
Tot Lot	2,700 sq. ft.	
Bullpen Areas	12	
Soft Toss Areas	12	
Picnic Tables	12	
Group Picnic Areas	2	
Multi Use Trails	+3,000 linear ft.	
Very High Density Housing (VHDH)	50 units	
Community Park Site Area		43.0 Acres

- Page 52 – *3.2.2 Shoppes Mixed Use Housing: Designation and Purpose (new section)*

The purpose of the Shoppes Mixed Use Housing land use designation is to implement the goals and policies of the General Plan 6th Cycle Housing Element by facilitating development of housing at very high densities to accommodate the City's Regional Housing Needs Allocation (RHNA) allocation of "lower income" households, consistent with Government Code Section 65583.

The Shoppes Mixed Use Housing land use designation creates an area where very high density housing is incorporated in the Shoppes Retail fabric. Very high density residential units may be located above or adjacent to commercial buildings and

uses, but existing commercial area shall be preserved, with a minimal (5% or less) amount of displacement.

- Page 54-55 – 3.2.4 Shoppes Mixed Use Housing: Permitted Uses and Table 3-1 Shoppes Retail/Mixed Use Housing Development Standards

Permitted uses in the Shoppes Mixed Use Housing district include very high density multifamily, consisting of 267 units, and Shoppes Retail permitted uses, as identified in section 3.2, above.

Development Standard	Shoppes Retail
A. Minimum Lot Size, GLA [1]	5,000 sf
B. Minimum Lot Dimensions ♦ Width ♦ Depth	 50' ft 50' ft
C. Maximum Height ♦ Retail ♦ Mixed Use Housing Housing	50' ft. to roofline; 80' ft. to architectural feature. 80 ft.
D. Landscaping Required	Minimum 10% of the Shoppes Retail designation must be landscaped (may include planted areas &: enhanced hardscape)
E. Parking Lot Landscaping	Minimum 2% of parking areas (exclusive of loading areas) must be landscaped. This landscaping may be counted toward the total site area landscaping required in item D above.
F. Maximum Floor Area Ratio (FAR)	No maximum floor area ratio.
G. Minimum Street Side Building Setbacks [2] ♦ Setback from Grand Avenue ♦ Setback from Peyton Road ♦ Setback from Boys Republic Drive ♦ All other setbacks	 15' ft. 15' ft. 5' ft. 0' ft.
H. Minimum Internal Street -Side Building Setbacks[2]	0' ft.

Mixed Use Housing development shall be regulated according to the standards in Section 16.05 – Objective Design Standards and 16.15 – Housing Priority Zoning Districts of the Chino Hills Municipal Code.

- Page 61 – Table 3-3 Shoppes Retail/*Mixed Use Housing* Parking Requirements

- Page 110 – Design Guidelines - Design Goals

The designs of streetscapes, buildings, and landscaping within the Shoppes Retail, Civic Center, and Shoppes Mixed-Use reinforce the traditional downtown atmosphere and provide a vibrant, urban setting for those living, dining, working, relaxing, and shopping at the project. The development is a pedestrian-scaled venue of refined architectural expression rendered in high quality materials and finishes. The design guidelines in this section identify components important to the creation of this environment. In addition, Chapter 16.05 Objective Design Standards shall apply for Mixed Use Housing, Very High Density Housing, and Urban High Density Housing.

1 INTRODUCTION

1.1 SPECIFIC PLAN PURPOSE

"The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan" (Specific Plan) provides a land use plan, design guidelines, and development regulations for a mixed-use project that includes a new commercial Lifestyle Center, civic center campus and multi-family residential units. The Specific Plan also provides for construction of a new community park to replace the existing park which is currently on the site. The Specific Plan defines the uses that are permitted and their locations, as well as the sizes and design of buildings and related improvements on each of the sites. In addition, the Specific Plan sets forth use and building development standards for the project which define and implement the Land Use Districts and Designations and constitutes the zoning for the project site.

Tentative, final and parcel map(s) or Development Plans (Site Plans, etc.) may be prepared and submitted to the City pursuant to the applicable provisions of the State of California Subdivision Map Act (Government Code Sections 66410 through 66499), the City of Chino Hills Subdivision Ordinance, the City of Chino Hills Development Code and consistent with the applicable provisions contained within the Shoppes at Chino Hills Retail/Civic Center/Residential/Community Park Specific Plan. The Development Plans will be submitted for City review prior to development of the project site.

The purpose of the Specific Plan is:

1. To implement the goals and policies of the General Plan of the City of Chino Hills through more detailed, site-specific standards that provide direction for development;

2. To establish new zoning designations for the planning area that recognize its unique place in the Chino Hills community;

3. To establish development standards and design principles for the planning area; and

4. To serve as a guideline for the amenities provided and the quality of development within the Specific Plan area.

1.2 AUTHORITY FOR THE SPECIFIC PLAN

Section 65450 et seq. of the Government Code sets forth basic requirements and provisions for specific plans. The Government Code specifically states:

> *"After the legislative body has adopted a general plan, the planning agency may, or if so directed by the legislative body, shall prepare specific plans for the systematic implementation of the general plan for all or part of the area covered by the general plan."*

Section 65451 of the Government Code requires that specific plans include text and a diagram or diagrams that specify all of the following:

- The distribution, location and the extent of the uses of land, including open space within the area covered by the plan;
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable;
- A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the project;
- A statement of the relationship of the specific plan to the general plan.

The Shoppes at Chino Hills Retail /Civic Center/Mixed-Use/Residential/Community Park Specific Plan is designed to meet the requirements of the State of California Government Code and the City of Chino Hills General Plan. The Specific Plan is adopted by resolution and thereby establishes the zoning regulations for the development of the project site.

1.3 BACKGROUND AND HISTORY

The project is being undertaken as part of an ongoing effort to address the City's long-term objectives, including expanding the City's economic base, establishing a permanent civic center, and meeting current and future public facility and park needs.

The City has been involved in the planning process for the project, including active public involvement, since 1999. The City Council subsequently directed staff to proceed with further refinement of the proposed project concept, formerly referred to as the Chino Hills Town Center project and to develop more precise concept plans for consideration and implementation.

The current project consists of six land use districts: Shoppes Retail, Sheriff/Police, Civic Center, Shoppes Mixed-Use, Community Park and Park Residential. Within these six land use districts, five primary zoning designations are proposed:

- The Shoppes at Chino Hills Lifestyle Center (Shoppes Retail)
- Civic Center (Civic Center)
- The Shoppes at Chino Hills Mixed-Use (Shoppes Mixed-Use)
- City Community Park (Community Park)
- Community Center (Community Center)

The Shoppes at Chino Hills (referred to herein as the "Shoppes Retail") provides up to 378,230 square feet of retail, office and restaurant space. The Civic Center (referred to herein as the "Civic Center") includes up to 133,060 square feet of public institutional uses. The Shoppes at Chino Hills Mixed Use (referred to herein as the "Shoppes Mixed-Use") allows for up to 40,000 square feet of commercial, retail, restaurant and office space, up to 295 multi- family dwelling units and up to 300 hotel rooms. The City Community Park (referred to herein as "Community Park") includes up to 43 acres of new park facilities and the Community Center (referred to herein as the "Community Center") includes a 19,000 square foot recreational community center. The five project components are described in detail in Section 2.0, *Development Plan*.

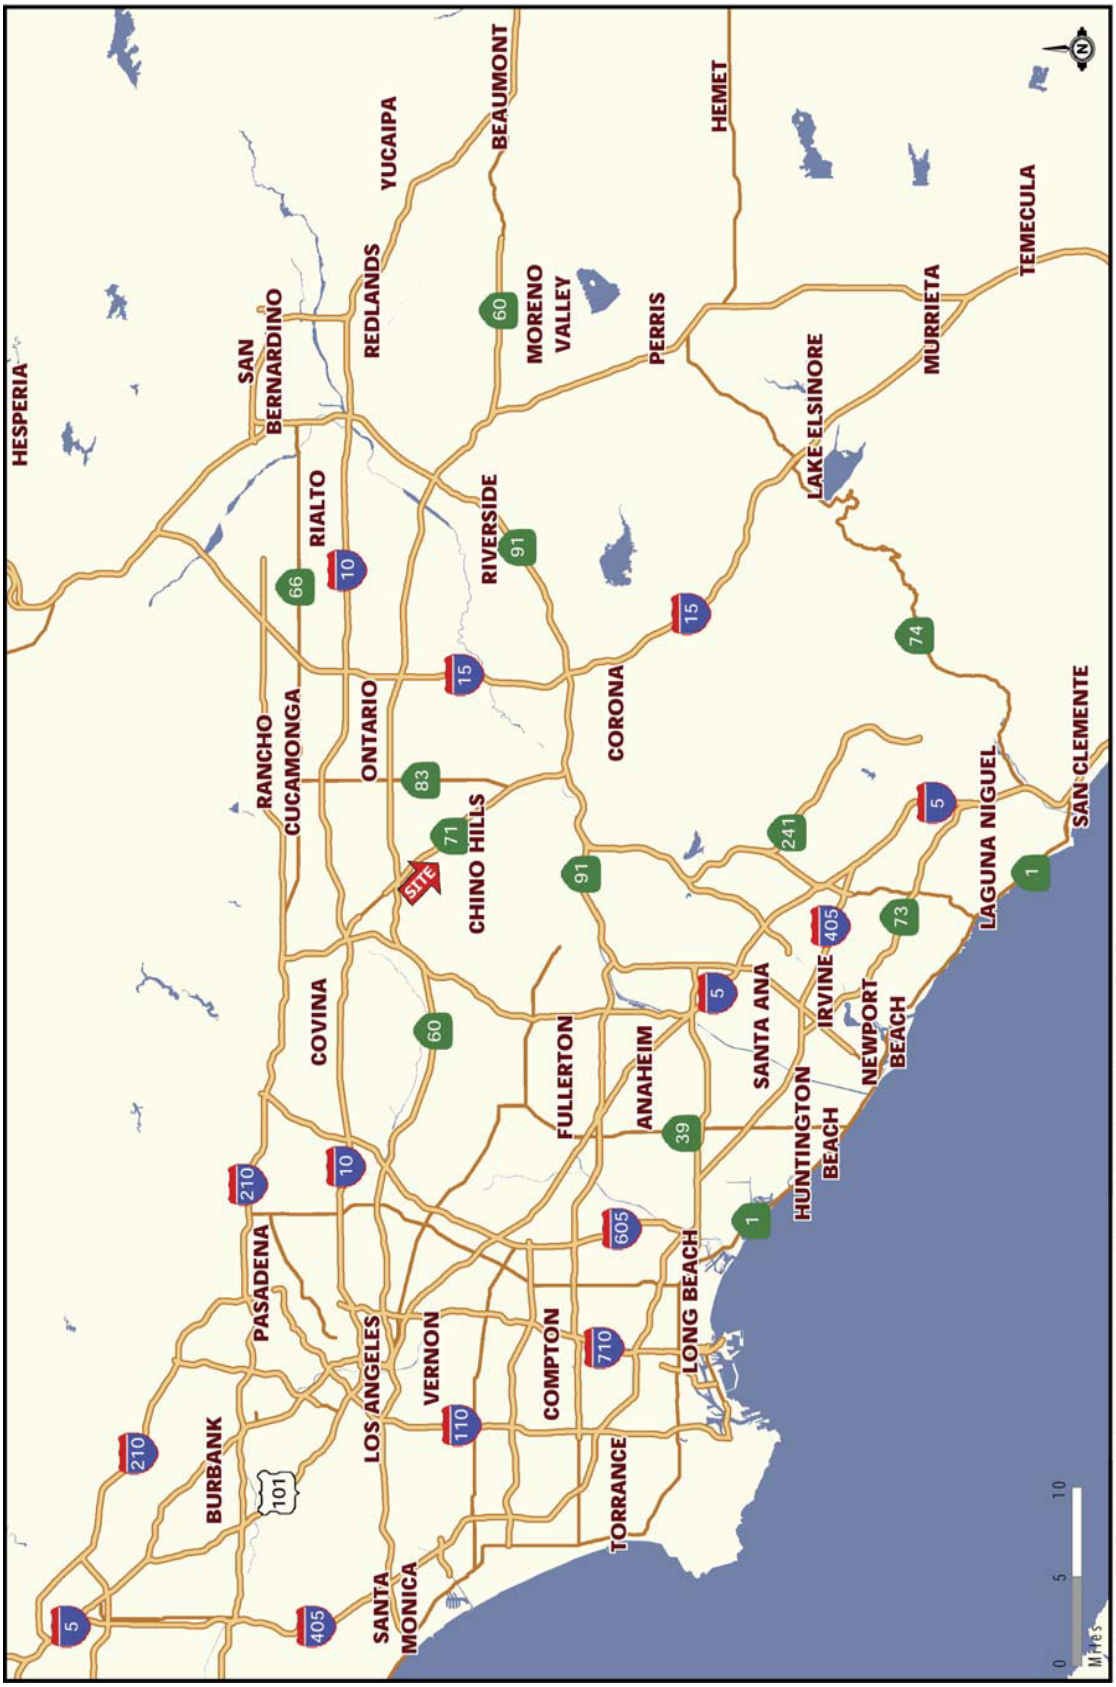
1.4 PROJECT LOCATION

The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan Project Area is located in the City of Chino Hills, California. The City of Chino Hills is located in southwestern San Bernardino County, and is uniquely situated adjacent to the boundaries of Los Angeles, Orange, and Riverside Counties. Exhibit 1-1, Regional Vicinity Map, provides the location of the Specific Plan area in its regional context.

Locations of project component sites are as follows:

- Shoppes Retail Southeast corner of the Peyton Drive/Grand Avenue intersection. The Shoppes Retail component also includes a freeway pylon sign, to be located along the Chino Valley Freeway (SR-71) in the City of Chino Hills either south of Grand Avenue on private property or within the Grand Avenue right-of-way.[1]

- Civic Center: On the east side of Peyton Drive (between Payne Ranch Road and English Springs Road) and south of the Shoppes Retail.



- Shoppes Mixed-Use: East side of Peyton Drive, south of the Shoppes Retail.

- Community Center: Northwestern corner of Peyton Drive and Eucalyptus Avenue intersection and west of Peyton Drive.

- Community Park: West side of Peyton Drive on the northwestern and southwestern corner of the Peyton Drive/Eucalyptus Avenue intersection.

Primary local access to the Shoppes Retail, Civic Center, and Shoppes Mixed-Use site is provided from Grand Avenue and Peyton Drive. Access to the Community Park/Community Center site is provided from Eucalyptus Avenue and Peyton Drive. Exhibit 1-2, Vicinity Map, provides locations of the planning areas and the roadways in the project vicinity. Exhibit 1-3, Aerial Photograph, provides an aerial photograph depicting the existing conditions of the Project Site.

1.5 PROJECT SETTING

1.5.1 On-Site Land Uses

Prior to adoption of the Specific Plan, the on-site land uses were as follows:

- The Shoppes Retail site was occupied by the City of Chino Hills Community Park and a San Bernardino County Sheriff substation.
- The Civic Center site was considered vacant except for a single-family residence.
- Shoppes Mixed-Use site was vacant land.
- The Community Center site consisted of primarily vacant land.
- The Community Park site consisted of primarily vacant land, with two small, vacant and abandoned corral and/or barn-type structures.

1.5.2 Surrounding Land Uses

Uses surrounding the Shoppes Retail, Civic Center and Shoppes Mixed-Use site are the commercial uses across Grand Avenue to the north and residential uses further to the north; St. Paul's Catholic Church directly to the south and Ruben S. Ayala High School further to the south; the Boys' Republic School[2] and Youth Facility to the east; and a United States Post Office to the west with Payne Ranch commercial uses, residential uses and open space further west across Peyton Drive.

Uses surrounding the Community Park and Community Center sites are the McCoy Equestrian Center to the north; the Church of Jesus Christ Latter Day Saints, residential and open space uses to the east; residential uses to the south; and residential and open space uses to the west.

1.5.3 General Plan and Zoning Designations

Table 1-1 summarizes the General Plan and Zoning Designations for the five components prior to and subsequent to adoption of the Specific Plan.

[2] Boys Republic is a private, non-profit, nonsectarian school and treatment community for at-risk youngsters. The Boys Republic was founded in 1907 and its central school and 200-acre farm are located in Chino Hills. Its mission is to give adolescent youth with behavioral, educational, or emotional difficulties an opportunity to achieve their maximum potential for responsible, self-directed life within the community.

Table 1-1: General Plan and Zoning Designations

Project Component	General Plan Designation		Zoning Designation	
	Prior to Adoption of Specific Plan	After Adoption of Specific Plan	Prior to Adoption of Specific Plan	After Adoption of Specific Plan
Shoppes Retail	Institutional Public Open Space	Specific Plan	Institutional-Public (I-2)	Specific Plan 04-01
Civic Center	Rural Residential	Specific Plan	Rural Residential (R-R)	Specific Plan 04-01 / Civic Center
Shoppes Mixed-Use	Rural Residential	Specific Plan	Rural Residential (R-R)	Specific Plan 04-01
Community Park	Public Open Space Agriculture/Ranches Low Density Residential	Specific Plan	Rural Residential (R-R) Low Density Residential (R-S) Planned Development (PD 24-125)	Specific Plan 04-01
Community Center	Agriculture/Ranches	Specific Plan	Rural Residential (R-R)	Specific Plan 04-01

1.6 OBJECTIVES FOR DEVELOPMENT OF THE SPECIFIC PLAN

This Specific Plan represents an effort to address long term objectives, including expanding the City's economic base and planning to meet future civic and residential needs. The following objectives, achieved through implementation of the Specific Plan, have been identified for the project:

- Create the opportunity for development of the highest and best use at one of the most visible intersections in Chino Hills;
- Develop an exciting, multi-dimensional, master planned development that will be engineered and conceptualized with the leadership and senior management of the City to create one of the most dynamic and visible retail developments in all of Southern California;
- Provide a permanent government center, including city administrative offices, a library, fire administrative offices, and a police/ sheriff station;
- Capture an appropriate share of the demand for upscale retail goods and services in the Chino Valley retail market area;

- Create new office space for firms wanting to locate in Chino Hills in close proximity to retail, restaurant and shopping activities;
- Create a focal point of retail and civic uses for the local community as well as for residents, businesses and visitors from throughout the area;
- Create a unique, open-air Lifestyle and cultural center with high-quality shopping, dining, commercial, office, civic, residential and other uses;
- Create an integrated live, work and shop center for the residents of Chino Hills and surrounding communities;
- Provide a central gathering place for the community;
- Provide upscale, multi-family residences close to shopping and cultural activities;
- Maintain and enhance park and recreational facilities within the City;
- Develop a financially feasible shopping destination unique among retail centers in the Chino Valley market;
- Increase sales tax and property tax revenues to the City; and
- Create local jobs.

[This page intentionally left blank]

2 DEVELOPMENT PLAN

The Land Use Plan is conceptual in nature and shows where new development might occur within the Specific Plan area. The exhibits and discussions are intended to provide guidelines for development and are schematic in nature and not meant to be a precise plan.

2.1 LAND USE PLAN

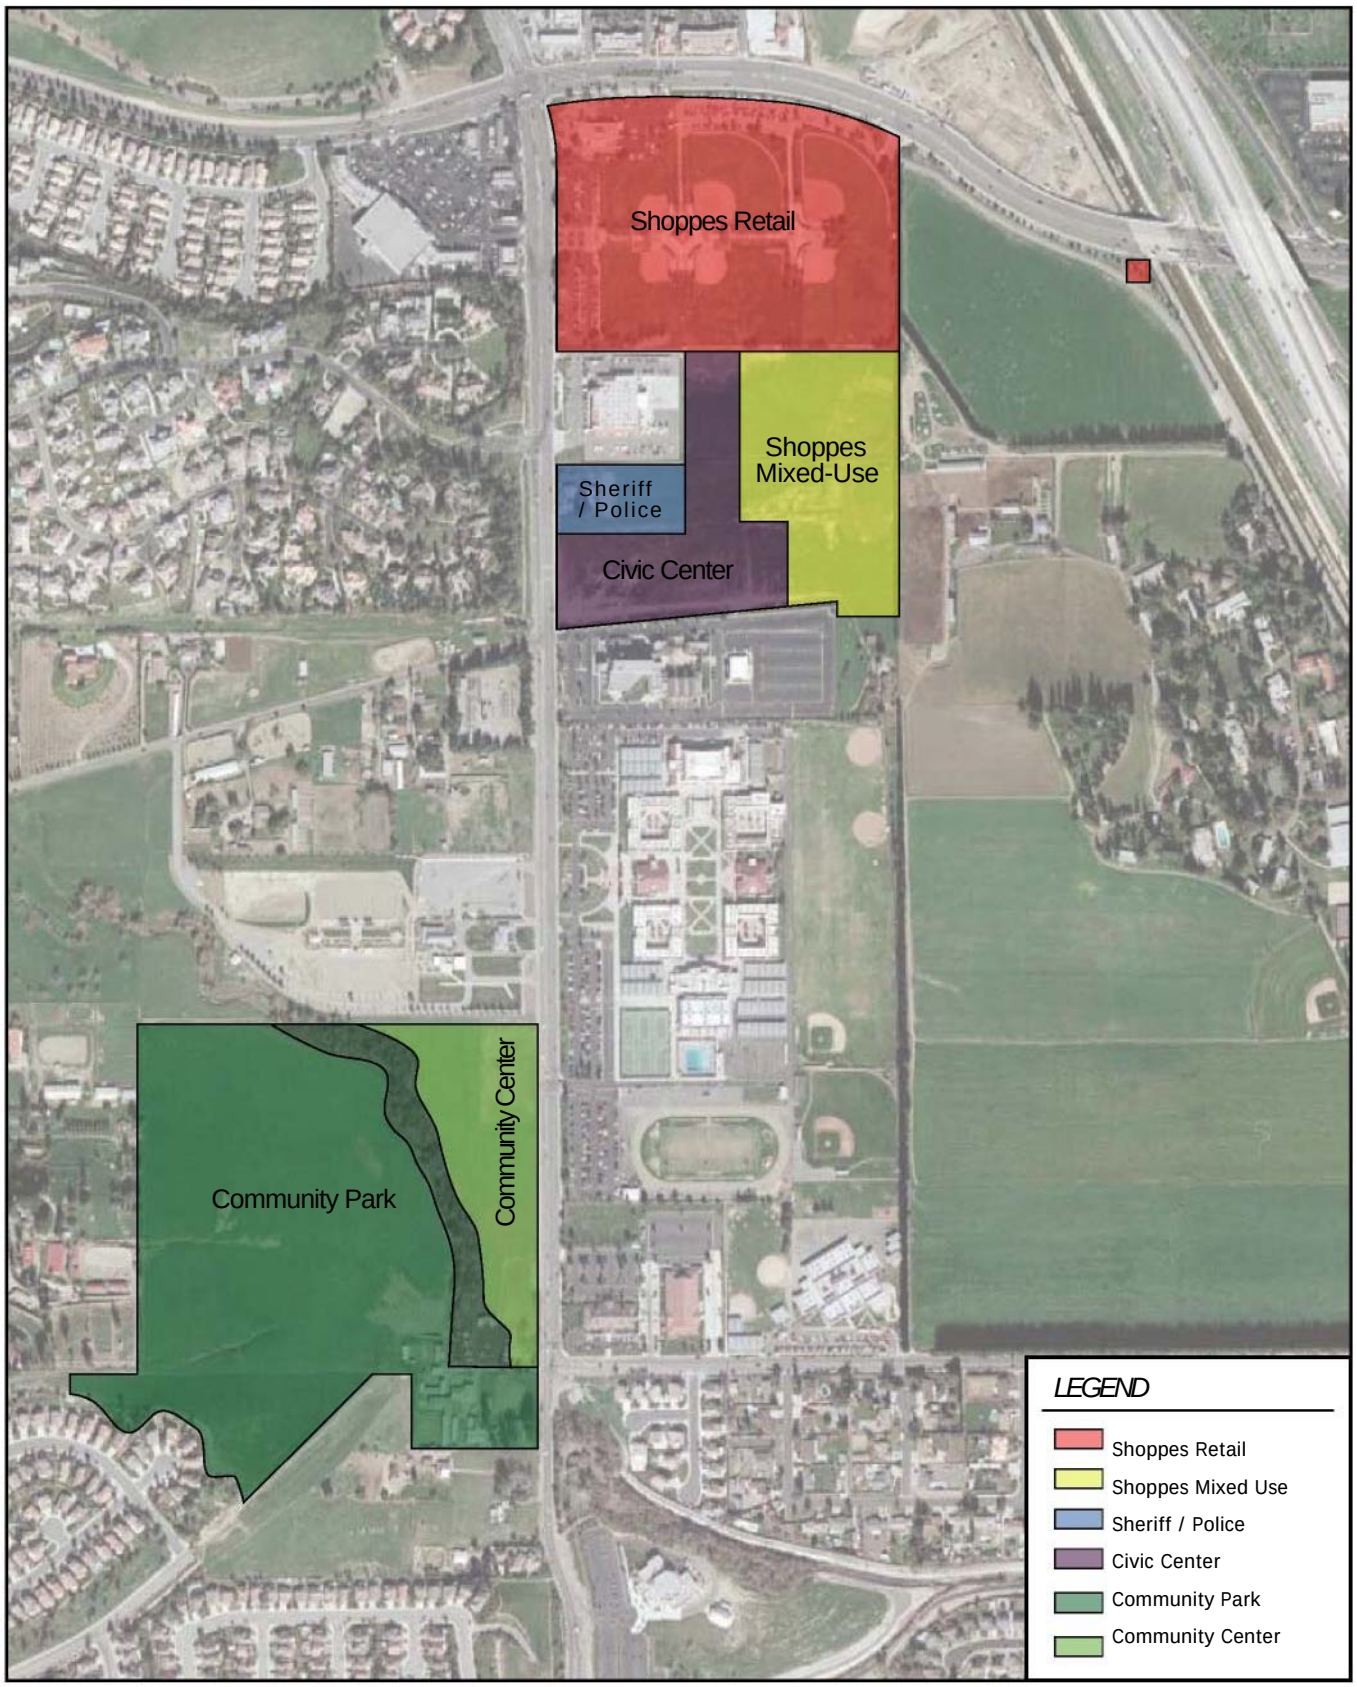
The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan includes proposed development consisting of up to 550,000 square feet of commercial, retail, office and restaurant development, up to 300 hotel rooms, a new civic center of up to 133,060 square feet, residential development of up to 295 dwelling units, community park facilities and a 19,000 square foot recreational community center. The total area of the Specific Plan is approximately 100 acres.

The Specific Plan development provides employment, a Lifestyle retail shopping center (i.e., shopping center projects configured in an open-air format, with quaint storefronts, ornamental streetscapes, and convenient parking, targeting sophisticated customers who appreciate shopping, relaxing, and entertainment in an environment that is designed to integrate shopping with the other activities of daily life in an urban environment), entertainment, dining, governmental services, office space, hotel and lodging, recreation and housing opportunities. The goal is to create a diverse environment catering to the needs of residents with differing lifestyle s. Pedestrian pathways, signage, landscaping and street trees provide a unifying element for the project and work in concert with the adjacent uses to create a new gathering place for the residents of Chino Hills and surrounding communities.

The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan Land Use Districts are illustrated in Exhibit 2-1, *Land Use Districts* and listed below.

- Shoppes Retail: The Shoppes Retail district implements the Shoppes Retail component of the Specific Plan. This designation allows for a mix of retail, commercial, entertainment, restaurant and office uses that will allow for the creation of a central core with an active street life and a vibrant retail and business center. The Shoppes Retail district also includes a freeway pylon sign, to be located along State Route 71 (Chino Valley Freeway) in the City of Chino Hills on the northeast portion of the Boys Republic property.

- Sheriff/Police[3]: The Sheriff/Police district allows for a Sheriff/Police facility. The specific location of this district provides public safety vehicles with direct and efficient access to Peyton Drive.



- Civic Center: The Civic Center district provides for a civic and cultural center for the City of Chino Hills. It allows for a variety of civic and public uses to serve the Chino Hills community such as City Hall, fire district administration facility, County library and civic plaza and associated on-site parking and parking structure.

- Shoppes Mixed-Use: The Shoppes Mixed-Use district provides for a mix of uses including higher density residential development in the form of townhomes, apartments and condominiums, office, commercial, retail, restaurant, hotel, on-site parking and structured parking.

- Community Park: The Community Park includes public recreational facilities as well as passive open space.

- Community Center: The Community Center district accommodates a recreational community center with a passive park component.

[3] The Sheriff/Police facility is included as part of the Civic Center discussion throughout the Specific Plan, yet remains a separate and distinct land use district for purposes of emergency access.

Land Use Districts
Exhibit 2-1

[This page intentionally left blank]

2.1.1 Shoppes Retail

The Shoppes at Chino Hills Retail district and land use designation is a mixed-use, retail, "Lifestyle Center" development totaling approximately 26 acres. Lifestyle Centers are typically characterized as:

> *"In most cases, Lifestyle Centers are open-air, main street-like developments with higher quality architecture that focuses on certain retail sectors and blend mixed-uses typical of a traditional main street. They are pedestrian friendly centers where consumers can gather in public spaces and feel part of a community. The centers are vibrant places where people can work and shop."* [4]

The Shoppes Retail development encompasses no less than 100,000 and up to 378,230 square feet of a Lifestyle Center anchored by a major (national chain) department store or major anchor store. In addition to the department store or major anchor store, the primary retail component of the project includes upscale retailers (including national, regional and local), office space, restaurants, and other commercial uses[5]. The proposed site plan for Shoppes Retail is illustrated in Exhibit 2-2. Proposed site and building area for the retail component is provided in Table 2-1.

Table 2-1: Shoppes Retail

Department Store or Major Anchor[6]	110,000 sq. ft. minimum for Department Store; or a minimum of two major retailers, each at a minimum of 20,000 sq. ft. and subject to City Manager or designee approval.		
Retail	40,000 sq. ft. maximum per individual retailer		
Restaurant	Up to 60,000 sq. ft.		
Offices	Up to 65,000 sq. ft.		
Entertainment	Up to 10,000 sq. ft.		
Total Building Area		Up to 378,230 sq. ft.	
Shoppes Retail Site Area			26.2 Acres

[4] Mattson-Teig, Beth. "Lifestyle Retail", Urban Land, Urban Land Institute, February 2004.

[5] Upscale uses are defined as nationally, regionally or locally recognized, specialty retail and restaurant tenants, with strong brand identities and integrated product lines, of a type and nature typically found in "Lifestyle Centers" throughout the United States.

[6] Anything in this Specific Plan to the contrary notwithstanding, if a minimum 110,000 square foot Department Store is constructed and opened on any individual lot within the Shoppes Retail district, then such lot, following the expiration or termination of any operating covenant applicable to the Department Store located thereon, may be used for any retail purpose permitted Section 3.2.2(A)(2) hereof, and/or any service uses (other than office uses) permitted by Section 3.2.2(A)(5) hereof, in each case, without regard to any maximum square footage limitation set forth therein.

2.1.2 Civic Center

The Civic Center land use designation includes the Civic Center and Sheriff/Police districts. The Civic Center designation occupies approximately 11.7 acres and includes up to 133,060 square feet of civic and public facility uses. Uses planned for the site include a new City of Chino Hills City Hall complex, a branch of the San Bernardino County Public Library, a Chino Valley Fire District administration facility, and a San Bernardino County Sheriff's station/City of Chino Hills Police Department substation. Other uses consistent with the Mixed-Use Specific Plan district may be permitted. Refer to Exhibit 2-2 for a conceptual site plan of the Civic Center. Proposed site and building area for the Civic Center component is provided in Table 2-2.

Table 2-2: Civic Center

City Hall	58,826 sq. ft.		
Library	28,224 sq. ft.		
Fire Department Facility	16,229 sq. ft.		
Sheriff's Substation	29,777 sq. ft.		
Total Building Area		Up to 133,060 sq. ft.	
Civic Center Site Area			11.7 Acres

2.1.3 Shoppes Mixed-Use

The Shoppes Mixed-Use land use designation is part of the Mixed-Use district. The Shoppes Mixed-Use allows up to 40,000 square feet of commercial, retail, restaurant and office space, up to 295 multi-family dwelling units and up to 300 hotel rooms. A multi-level parking structure is included to accommodate parking for the residential, retail, office and hotel components of the Shoppes Mixed Use development and may be for private use only. Other uses consistent with the Shoppes Mixed-Use district may be permitted. Refer to Exhibit 2-2 for a conceptual site plan of Shoppes Mixed-Use. Proposed site, building area and density for the mixed-use component is provided in Table 2-3.

Table 2-3: Shoppes Mixed-Use

Commercial/Retail/Restaurant /Office	Up to 40,000 sq. ft	
Multi-Family Residential	Up to 295 units	
Hotel(s)	Up to 300 rooms	
Shoppes Mixed-Use Site Area		8 Acres

2.1.4 Community Park

The Community Park district and land use designation is located in the rear portion of the Community Park/Park Residential property, furthest from Peyton Drive and directly west of the English Canyon Channel and comprises approximately 43 acres with various recreational uses and includes the relocation and enhancement of the facilities at the existing Chino Hills Community Park.

The proposed layout for the Community Park is illustrated in Exhibit 2-3, *Community Park Conceptual Site Plan.* The recreational facilities at the Community Park site, at a minimum, replace those facilities operating at the Chino Hills Community Park prior to Specific Plan adoption. The relocated park includes a tot lot, picnic areas, fields to handle baseball, softball, soccer and other seasonal recreational activities, along with restroom facilities, a snack bar and associated spectator seating and parking areas. Additional accessory uses for the Community Park may include outdoor basketball courts, a community center building and new multi-purpose trail. Site, building area and a list of possible amenities for Community Park uses are contained in Table 2-4.

The Community Park also includes the extension of Eucalyptus Avenue from its terminus at Galloping Hills Road southwest of the Park/Residential site to the proposed parking areas on the site.

Table 2-4: Community Park Uses & Amenities

Ball Fields	6	
Soccer Overlays	5	
Restroom/Concession Buildings	1,600 sq. ft.	
Maintenance/Storage Building	1,400 sq. ft.	
Maintenance Building	+2,500 sq. ft.	
Maintenance Yard	+2,500 sq. ft.	
Tot Lot	2,700 sq. ft.	
Bullpen Areas	12	
Soft Toss Areas	12	
Picnic Tables	12	
Group Picnic Areas	2	
Multi Use Trails	+3,000 linear ft.	
Community Park Site Area		43.0 Acres

2.1.5 Community Center

The Community Center district and land use designation comprises approximately nine acres of the Community Park/Community Center site. The site allows for a 19,000 square foot recreational community center. The Community Center district is located along Peyton Drive at the northern portion of the property. The proposed layout for the Community Center is illustrated in Exhibit 2-4, *Community Center Conceptual Site Plan.* Site area component is provided in Table 2-5.

2.2 TRAFFIC AND CIRCULATION

2.2.1 Shoppes Retail, Civic Center and Shoppes Mixed-Use Site

The traffic and circulation system for the Shoppes Retail, Civic Center, and Shoppes Mixed-Use complements the land use plan by linking retail, commercial, entertainment, restaurant, office, hotel, civic and residential land uses to each other and to other elements of the development plan. The circulation plan allows for pedestrians, delivery trucks and automobiles to exist harmoniously together. The circulation system consists of roadways and pedestrian walkways designed to facilitate an attractive Lifestyle Center that implements the vision of building a pedestrian-friendly environment. Traffic calming mechanisms such as on-street parking, paving treatments, carefully placed street trees, landscaping and other design techniques are utilized to achieve this vision.

2.2.1.1 Roadway System

Roadways existing before implementation of the Specific Plan include Grand Avenue serving as the northerly boundary of the Shoppes Retail, Civic Center, and Shoppes Mixed-Use site and Peyton Drive serving as the westerly boundary of the site. Consistent with implementation of the Specific Plan, Boys Republic Drive will serve as the easterly and southerly boundary.

On-site circulation within the Shoppes Retail, Civic Center, and Shoppes Mixed-Use site is provided through a system of public and private streets within the project. Private streets do not need to be constructed to City Standards. City Center Drive provides a north/south connection between Grand Avenue and Boys Republic Drive. City Center Drive connects the Shoppes Retail on the northern end of the site with the Shoppes Mixed-Use and Civic Center on the southern end of the site. Main Street runs east-west and terminates at the entrance to a major anchor store. Shoppes Drive provides an east/west traffic flow connection between the Boys Republic Republic Drive and Peyton Drive. The Shoppes Retail, Civic Center, and Shoppes Mixed-Use Conceptual Circulation Plan is shown in Exhibit 2-5. This exhibit shows the adjacent off-site road system as well as the major elements of the road system interior to the site.

<u>Grand Avenue – Public, Divided Major Highway</u>

Defined as a Divided Major Highway in the City of Chino Hills General Plan Circulation Element, Grand Avenue is a public, four-lane, divided roadway with a raised median, oriented in an east/west direction. It is designed to carry local and regional traffic. Grand Avenue has two (2) fully signalized vehicular entry/exit points serving the site: one new signal which serves as a major entry/exit point for the Shoppes Retail and one existing signal that provides direct access or connectivity to the Boys Republic Drive.

Peyton Drive – Public, Major Arterial

Defined as a Major Arterial in the City of Chino Hills Circulation Element, Peyton Drive is a public, north-south, four-lane divided roadway with a painted median, with three northbound lanes and one southbound lane between Grand Avenue and Eucalyptus Avenue, and with one lane in each direction between Eucalyptus Avenue and Chino Hills Parkway. It is designed to carry volumes of local and regional traffic and on-street parking is prohibited. Peyton Drive has bike lanes south of Chino Hills Parkway.

Peyton Drive provides three (3) new right in/out access points: two provide direct access to the Civic Center and one serves as an entry/exit for the Shoppes Retail, Civic Center and Shoppes Mixed-Use site. Peyton Drive will also have two (2) new, fully signalized, vehicular entry/exit points of access serving the Shoppes Retail, Civic Center and Shoppes Mixed-Use Site: one new signal will serve as a major entrance/exit for the Shoppes Retail and the other new signal will provide access to the Boys Republic Drive. Another existing traffic signal on Peyton Drive doesn't serve the project, but provides access to the Post Office and Payne Ranch gated community.

Boys Republic Drive – Public Street, from Grand Avenue to Peyton Drive

Consistent with implementation of the Specific Plan, the public, four-lane, undivided Boys Republic Drive serves the Shoppes Retail, Civic Center and Shoppes Mixed-Use site and acts as the easterly and southerly boundary of the site. The Boys Republic Drive can be accessed from both Grand Avenue and Peyton Drive. The Boys Republic Drive provides approximately ten (10) access points into the Shoppes Retail, Civic Center and Shoppes Mixed-Use. The paving width will consist of approximately fifty-two feet (52') with a minimum six foot (6') landscaped parkway on both sides of the street and a six foot (6') sidewalk on one side of the street. On-street parking is prohibited. The conceptual street cross-section is illustrated in Exhibit 2-6, *Boys Republic Drive Conceptual Street Section.*

City Center Drive –Private Street, from Grand Avenue to Shoppes Drive, Public Driveway from Shoppes Drive to the Boys Republic Drive

Additional interior circulation is provided by City Center Drive which runs north-south from Grand Avenue to the Boys Republic Drive. It connects The Shoppes Retail at the northern end of the site with the Shoppes Mixed-Use towards the southern end. The portion of City Center Drive within the Shoppes Retail property limits, extending south from Grand Avenue to Shoppes Drive, is a private street. This portion of City Center Drive is a two-lane, undivided road consisting of a sixty-two foot (62') paving width with a twenty-six foot (26') driving lane, thirteen feet (13') in each direction, and eighteen foot (18') enhanced, diagonal parking lanes in both directions with a two foot (2') parking overhang. There is a minimum fifteen foot (15') landscaped parkway including a minimum nine foot (9') sidewalk on each side of the street in this portion of City Center Drive. The dimensions of the

parking lane and the landscaped parkways including sidewalks may vary along this portion of City Center.

The portion of City Center Drive, extending south from Shoppes Drive to the Boys Republic Drive, serves as a public driveway, allows for diagonal parking lanes in both directions and is maintained by the City to public standards. The conceptual street cross-section is illustrated in Exhibit 2-7, *City Center Drive Conceptual Street Section.*

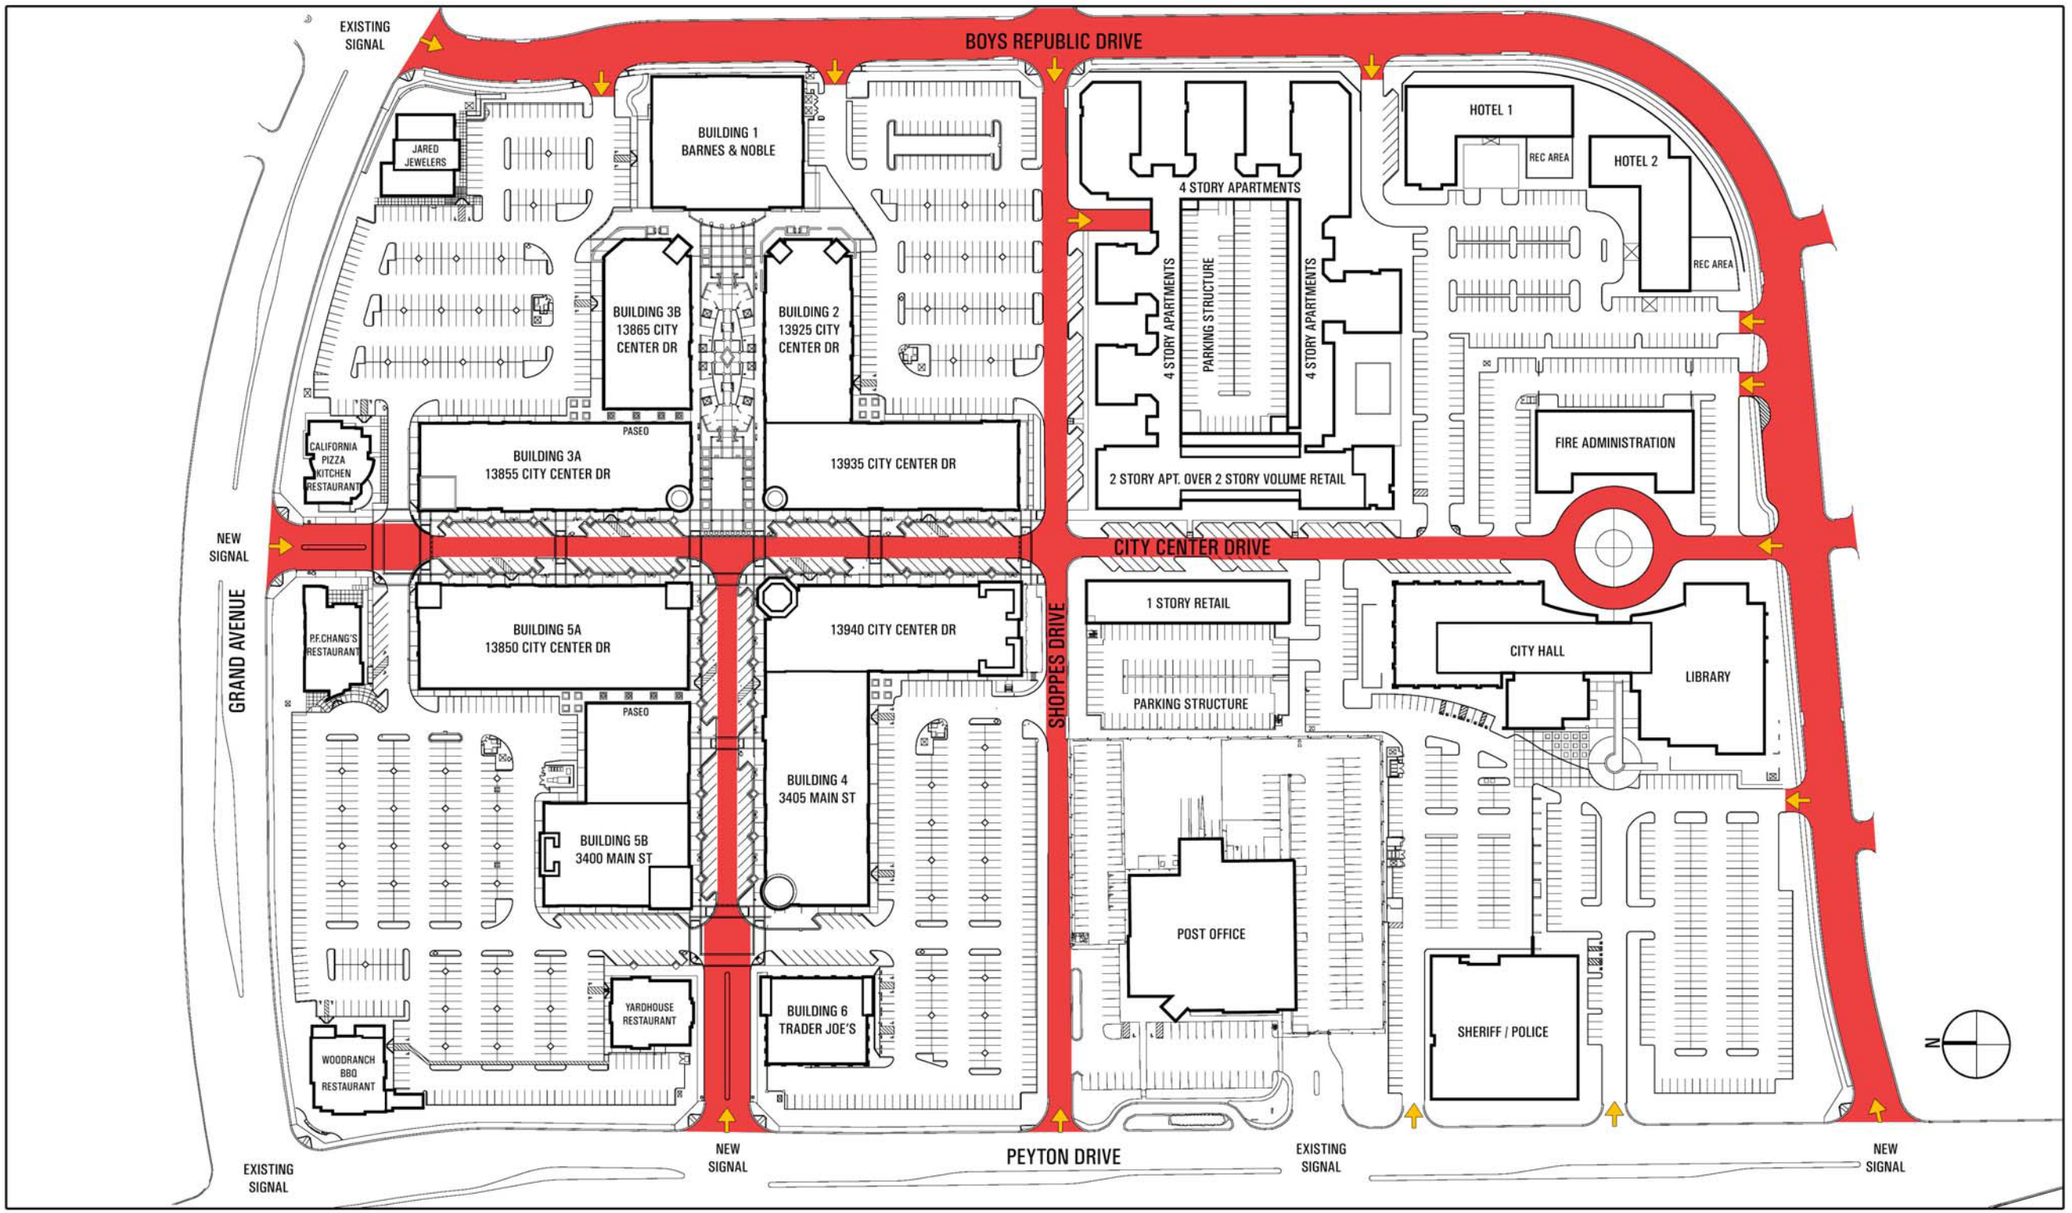
Main Street –Private Street, from Peyton Drive

Main Street runs east-west connecting to Peyton Drive and provides interior circulation to the Shoppes Retail project. The private, roadway terminates in front of the major department store within the Shoppes Retail. At the eastern end of the street, the road consists of two lanes with a sixty-two foot (62') paving width with a thirteen foot (13') driving lane in each direction and eighteen foot (18') enhanced, diagonal parking lanes in both directions. There is a minimum fifteen foot (15') landscaped parkway including a minimum nine foot (9') sidewalk on each side of the street. This portion of the street is broken up into two areas where only the twenty-six foot (26') driving lane exists at pedestrian crossings and/or street intersections. A conceptual street cross-section of Main Street looking east is illustrated in Exhibit 2-8.

As one moves west toward the intersection of Main Street and Peyton Drive, the configuration of the road changes to allow four (4) thirteen foot (13') driving lanes, with no on-street parking. There is a minimum fifteen foot (15') landscaped parkway on each side of the street. Conceptual street cross-sections for this portion of Main Street is illustrated in Exhibit 2-9.

Shoppes Drive – Public Driveway, from Peyton Drive to Boys Republic Drive

Additional interior circulation is provided by Shoppes Drive which runs east-west connecting Peyton Drive and the Boys Republic Drive. The two-lane public driveway with a minimum twenty-six foot wide driving lane runs along the north side of the United States Post Office (USPS) and serves the Shoppes Retail, Civic Center and Shoppes Mixed-Use.



2.2.1.2 Pedestrian Access

Pedestrian access throughout the Shoppes, Civic Center, and Shoppes Mixed-Use site is an important element in the design concept for the Specific Plan. Pedestrian walkways tie the various elements and land uses together. On-site pedestrian circulation is provided by sidewalks (walkways). Walkways, located along the storefronts of Main Street and City Center Drive, are defined by the use of enhanced paving, landscape elements and street furniture.[7]

[7] Enhanced paving may include integral colored concrete with saw cut pattern including sandblast, acid wash finish, hard trowel borders, concrete interlocking paving units with accent bands, natural grey

The walkways on either side of City Center Drive and Main Street function as major pedestrian linkages within the Specific Plan area. The walkways on City Center Drive connect the major uses at the northern end (Shoppes Retail) with those uses located at the southern end of the Site (Civic Center & Shoppes Mixed-Use). The walkways on Main Street connect the major uses towards Peyton Drive with those toward the eastern end. The wide walkways, street furniture and canopy trees provide an environment where pedestrians stroll from one end of the street to the other experiencing the different uses along the way. There may be special times or events when the interior streets of the Shoppes Retail will be closed to automobiles. At these times, a pedestrian only environment may be created through the use of removable bollards or other similar methods. Pedestrian crossings clearly designated by enhanced paving at vehicle points of ingress and egress and at the street crossings provide safety by encouraging slow vehicle movement.

concrete with saw cut pattern and paver accents or borders or any combination of the materials, patterns and finishes listed.

2.2.2 Community Center Site

The circulation system within the Community Center site is designed to easily accommodate vehicle and pedestrian access and movement.

2.2.2.1 Roadway System

The Community Center component is served by one (1) major arterial, Peyton Drive. The main entrance is located at the existing signalized intersection serving Ayala High School. A second right in/out access point is located further south from the main entrance on Peyton Drive.

Peyton Drive – Public, Major Arterial

Defined as a Major Arterial in the City of Chino Hills Circulation Element, Peyton Drive is a public, north-south, four-lane divided roadway with a painted median, with three northbound lanes and one southbound lane between Grand Avenue and Eucalyptus Avenue, and with one lane in each direction between Eucalyptus Avenue and Chino Hills Parkway. The Peyton Drive improvement project, to be constructed in the near future by the City of Chino Hills, will widen Peyton Drive to six (6) lanes divided from Grand Avenue to Eucalyptus Avenue and four (4) lanes divided from Eucalyptus Avenue to Chino Hills Parkway. It is designed to carry volumes of local and regional traffic and on-street parking is prohibited. Peyton Drive has bike lanes south of Chino Hills Parkway. Peyton Drive provides one (1) full access point and one (1) right in/out access point for the Community Center component.

2.2.2.2 Pedestrian Access

Pedestrian access throughout the Community Center Site is provided by walkways (sidewalks). The Community Center component provides a pedestrian promenade that accommodates pedestrian access and movement between the Community Center and the McCoy Equestrian and Recreation Center.

2.2.3 Community Park Site

The circulation system within the Community Park site is designed to easily accommodate vehicle and pedestrian access and movement. Upon entry to the Community Park vehicles will be able to either park in one of the parking stalls or utilize the drop-off/pick-up area. Multipurpose trails along the perimeter of the Park provide a recreational connection to adjoining uses.

2.2.3.1 Roadway System

The Community Park is served by one (1) collector street which is Eucalyptus Avenue.

Eucalyptus Avenue –Public, Collector

Eucalyptus Avenue is a three-lane, undivided road oriented in an east-west direction east of Peyton Drive with two (2) west bound lanes and one (1) east bound lane, and a two-lane undivided roadway oriented in a east-west direction north of Chino Hills Parkway. In the City of Chino Hills General Plan Circulation Element, Eucalyptus Avenue is defined as a public, four-lane secondary highway east of Peyton between Peyton Drive and Pipeline, and it is classified as a public, two-lane collector west of Peyton Drive.

Prior to Specific Plan implementation, Eucalyptus Avenue terminated approximately 1.1 miles east of Chino Hills Parkway at Galloping Hills Road. Eucalyptus Avenue was not constructed between Galloping Hills Road and Peyton Drive. As part of the Community Park construction, Eucalyptus Avenue will be extended from its original terminus at Galloping Hills Road to the park entrance approximately 300 feet west of Chino Hills Parkway. On-street parking is allowed on this segment of Eucalyptus Avenue. The remaining 300 feet is planned to be constructed as part of the Peyton Drive improvement.

Eucalyptus Avenue provides two (2) access points to the Community Park Site. The primary entry/exit is located approximately 300 feet west of Peyton Drive and the secondary access is located further west towards Galloping Hills Road.

2.2.3.2 Pedestrian Access

Pedestrian access throughout the Community Park Site is provided by walkways (sidewalks) and multi-purpose trails. The multi-purpose trails meander along Eucalyptus Avenue and around the perimeter of the Park, and provide a possible connection to the communities located to the north of the Community Park. The Community Park has a main concourse located centrally between the sports fields that act as a gathering place for users.

2.3 INFRASTRUCTURE

The purpose of this section is to define the utilities and services that will be provided to the Specific Plan area. This section defines the major components of public and private sewage, water, drainage, solid waste disposal, energy and other essential facilities proposed to be located within or adjacent to the Specific Plan area.

2.3.1 Water

Potable water for the project is provided by the City of Chino Hills. Recycled water lines are included within the project site for connection when recycled water transmission lines are constructed. The water distribution facilities are designed and constructed in accordance with City of Chino Hills requirements. Water mains within the public right-of-way, Boys Republic Drive and Shoppes Drive shall be owned and maintained by the City.

2.3.1.1 Shoppes Retail, Civic Center, and Shoppes Mixed-Use Site

Water lines serving the Shoppes Retail, Civic Center and Shoppes Mixed-Use site include an existing sixteen inch (16") diameter line on the eastern and southern edges of the property; an existing twenty inch (20") diameter line in Grand Ave on the northern side; an existing sixteen inch (16") diameter line in Peyton Drive on the western side,an existing eight inch (8") line along Shoppes Drive and an existing twenty inch (20") transmission and eight inch (8") domestic line in Boys Republic Drive. Refer to the Conceptual Water plan provided in Exhibit 2-10, *Shoppes Retail, Civic Center and Shoppes Mixed-Use Conceptual Infrastructure Plan.*

2.3.1.2 Community Center Site

Water lines serving the Community Center site include an existing sixteen inch (16") diameter line in Peyton Drive on the site's eastern boundary.

2.3.1.3 Community Park Site

One water line exists on or near the site: a sixteen inch (16") diameter line in Peyton Drive. Another sixteen inch (16") diameter line is proposed in Eucalyptus Avenue.

2.3.2 Wastewater (Sewer)

The City of Chino Hills Sewer Division is responsible for collecting and conveying wastewater within Chino Hills. The Inland Empire Utility Agency (IEUA) is responsible for wastewater treatment.

2.3.2.1 Shoppes Retail, Civic Center, and Shoppes Mixed-Use Site

Wastewater lines serving the site include existing twelve inch (12") lines in Boys Republic Drive and Shoppes Drive that tie into an existing twelve inch (12") diameter line that crosses the Boy's Republic property to the east. The

wastewater lines are designed according to the City of Chino Hills Standard Design and are estimated to have one lateral connection for each building. Locations of major connections to wastewater lines serving the Shoppes Retail, Civic Center and Shoppes Mixed-Use site are illustrated in the Conceptual Sewer plan provided in Exhibit 2-10, *Shoppes Retail, Civic Center and Shoppes Mixed-Use Conceptual Infrastructure Plan.*

2.3.2.2 Community Center Site

Wastewater lines serving the Community Center site include an existing twelve inch (12") diameter line along Peyton Drive. On-site wastewater service is designed according to the City of Chino Hills standards and City-approved hydraulic sewer studies for the project

2.3.2.3 Community Park Site

Wastewater lines serving the Community Park site include an existing twelve inch (12") diameter line along Peyton Drive. On-site wastewater service complies with the City of Chino Hills standards and City-approved hydraulic sewer studies for the project

2.3.3 Storm Drainage

The Specific Plan area is drained by facilities provided and maintained by the City of Chino Hills in public right-of-ways.

2.3.3.1 Shoppes Retail, Civic Center, and Shoppes Mixed-Use Site

Major storm drain facilities that are forty-eight inches (48") in diameter are located along the Boys Republic Drive and Shoppes Drive (through street) at the Shoppes Retail, Civic Center and Shoppes Mixed-Use Site. This system conveys flow to the San Antonio Channel via an easement on the adjacent Boys Republic Property. Water flow is treated to comply with the County of San Bernardino's Water Quality Management Permit. Water flow is treated by man-made clarifiers and on- or off-site retention will be used. Storm drain lines within the Boys Republic Drive, Shoppes Drive and the Boy's Republic property shall be owned and maintained by the City. Storm drains lines within the Shoppes Retail and Shoppes Mixed Use project shall be owned and maintained by the Shoppes Retail and Shoppes Mixed-Use development respectively. The drainage from the retail buildings adjacent to the parking structure (along City Center Drive) is proposed for discharge into the City owned drainage system and the water quality and retenetion mitigation requirements only apply to Parcel 1 of PM 17933. Exhibit 2-10 shows the Conceptual Storm Drain Plan.

2.3.3.2 Community Center Site

The storm drain system for the Community Center development conveys stormwater into the Peyton Drive storm drain system which eventually drains into the English Canyon Channel.

2.3.3.3 Community Park Site

The Community Park site drains into the Eucalyptus Avenue storm drain system which eventually drains into the English Canyon Channel. The Community Park may have natural or artificial turf for ball fields which will include an integrated drainage system that conveys storm water to the City's storm drain system.

2.3.4 Solid Waste

Solid waste collection and disposal is provided through Chino Hills Disposal, the exclusive solid waste and recycling service provider for the City. The project is required to comply with applicable State and local regulations.

2.3.5 Utilities

2.3.5.1 Electricity

SCE supplies electrical services to the Specific Plan area and has indicated that sufficient capacity exists within the existing infrastructure to accommodate the project.

The easements for the power lines on the Shoppes Retail, Civic Center, and Shoppes Mixed-Use site is located in or adjacent to the new Boys Republic Drive, along the site's southern boundary. The easement on the Community Park and Community Center sites is located in or adjacent to the new alignment of the extension of Eucalyptus Avenue, west of Peyton Drive.

2.3.5.2 Natural Gas

The Southern California Gas Company supplies natural gas to the Specific Plan area and has indicated that sufficient capacity exists within existing infrastructure to accommodate the project. Additional points of connection are established where necessary.

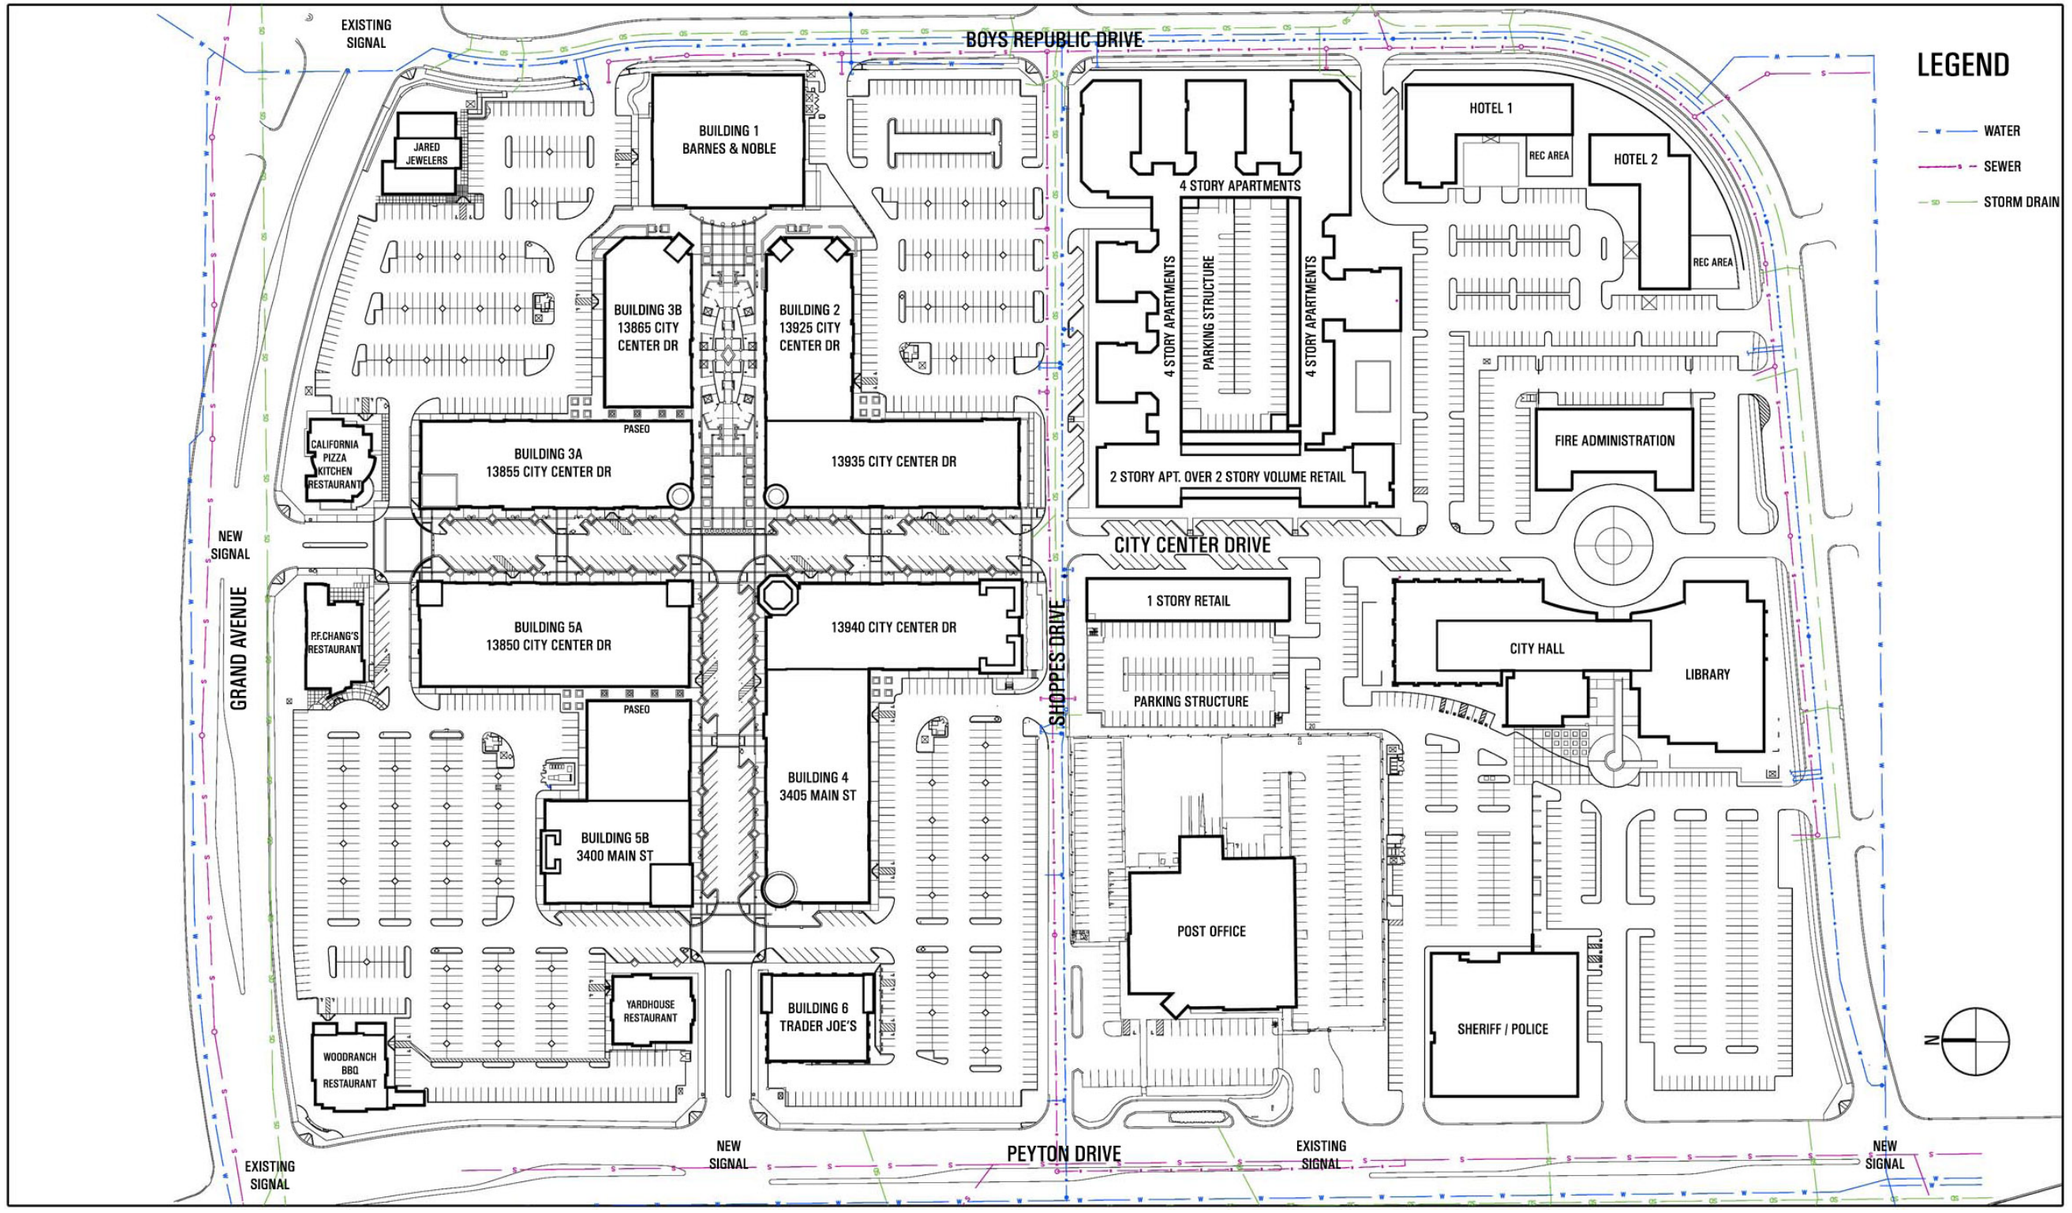
2.3.5.3 Telephone, Internet and Cable

Telephone, Internet, and cable television infrastructure and service are provided along with the other utilities.

2.4 PUBLIC FACILITIES AND SERVICES

2.4.1 Public Safety

2.4.1.1 Law Enforcement



Law enforcement for the Specific Plan area is provided to the City of Chino Hills by contract with the San Bernardino County Sheriff's Department.

2.4.1.2 Fire Protection

The Chino Valley Independent Fire District (CVIFD) provides fire protection, fire prevention services, emergency medical (first responder) and rescue services, arson investigation, and hazardous material coordination for the Specific Plan area. All development within the project area complies with the requirements of the CVIFD. The water supply system is designed to meet CVIDF requirements.

2.4.2 Public Transportation

Omnitrans provides bus service for the Specific Plan area. The Peyton Drive widening project includes ten foot (10') shoulders throughout with no parking allowed on the street. This allows flexibility in locating bus stops. Bus stop locations, as determined by Omnitrans, shall consider disability access to the project sites.

NOTE: LOCATION OF BUILDINGS AND USES WILL BE GENERALLY AS SHOWN

Amended - November 2008

The Shoppes Retail, Civic Center & Mixed-Use
Conceptual Infrastructure Plan
Exhibit 2-10

[This page intentionally left blank]

3 DEVELOPMENT STANDARDS

3.1 GENERAL PURPOSE

The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan Development Standards define the permitted uses, sizes, design of buildings and related improvements for the five land use designations within the Specific Plan area. The Development Standards implement the Land Use Plan for the project. The Development Standards will ensure that all future development within the Specific Plan area will conform and contribute to realizing the goals and objectives of the Specific Plan. The exhibits accompanying the Development Standards are intended to provide guidelines for development; they are schematic in nature and not intended for use as precise plans. The Specific Plan Development Standards shall be applied only in the Specific Plan area.

3.1.1 References

Any reference to Development Standards shall mean "The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Development Standards." The City of Chino Hills Development Code is referred to as the Development Code.

3.1.2 Resolution of Issues

A. Whenever this Specific Plan contains regulations or standards that differ from or conflict with the regulations and standards contained in the Chino Hills Development Code or any other applicable City regulation, rule or policy, the Specific Plan shall prevail.

B. If an issue, condition or situation arises or occurs that is not sufficiently covered or provided for in these regulations so as to be clearly understandable, those regulations of the Development Code that are applicable for the most similar issue, condition, or situation shall be used and implemented in a manner otherwise consistent with the Specific Plan. The City Manager or designee shall resolve issues, conditions or situations in manner that is consistent with these Specific Plan Development Standards. The intent is to resolve ambiguity in the regulations and ensure consistent application.

3.2 SHOPPES RETAIL: REGULATIONS FOR DEVELOPMENT

3.2.1 Shoppes Retail: Designation Intent and Purpose

The Shoppes Retail land use designation creates an area where residents, employees and visitors to Chino Hills can meet, socialize, shop, and conduct business. It is a pedestrian oriented Lifestyle Center which allows for a mix of retail, commercial, entertainment, restaurant and office uses. Sidewalks link the Shoppes Retail with adjacent civic center and Shoppes Mixed-Use. Exhibit 3-2 presents an illustrative conceptual site plan for the Shoppes Retail and Exhibit 3-3 provides conceptual elevations.

3.2.2 Shoppes Retail: Permitted Uses

A. The total square footage of development allowed on the Shoppes Retail land shall be limited to 378,230 square feet. Permitted uses within the Shoppes Retail land use designation shall include:

1. Department Store or Anchor Store. "Department Store" means a retail store that has at least 110,000 square feet of retail floor space within a single retail facility with a series of integrated departments for the sale of services, goods and merchandise of various kinds. Alternately, a minimum of two Major Anchors may be permitted, subject to City Manager or designee approval. "Major Anchor" means a retail store that has at least 20,000 square feet, and sells any of the following products: apparel, home decor, cooking, dining ware, goods, bedding and bathroom accessories, books and publications, gardening accessories and decor, outdoor living/furnishings, sporting goods, electronic goods.

2. Retail. Retail uses that do not exceed 40,000 square feet individually and, by way of example, sell any of the following products: Apparel, home decor, cooking, and dining ware, goods, jewelry, bedding and bathroom accessories, books and publications, gift shops, gardening accessories and decor, outdoor living/furnishings, sporting goods, children's toys, electronic goods. Specialty grocery stores and specialty food establishments that do not exceed 25,000 square feet are also permitted.

3. Restaurants. Permitted restaurant uses include: Full service restaurants (including those with bars serving alcoholic beverages and including entertainment as accessory uses) ("full service restaurant" means an establishment that prepares and sells food to customers that order food while seated in the establishment and have the food delivered to them and consume the food on the premises of the establishment); take out

restaurants that sell food to customers who order primarily at a counter or through call-in orders, and that allow food to be consumed on or off the premises of the restaurant but such restaurants shall not be located within 150 feet of Peyton or Grand Avenues and shall not be permitted to sell food at drive-thru facilities. The aggregate square footage for all restaurant uses shall be not more than 60,000 square feet and shall consist of a minimum of five (5) full service restaurants; take out restaurants with no waiter or waitress service shall be limited to an aggregate of 10,000 square feet.

4. Bar or night club. Bar or night club use is primarily an age restricted establishment and shall be permitted. This use shall not exceed, in aggregate, over 10,000 square feet.

5. Service uses. Professional office, professional service, or personal services on first floor limited to 5,000 square feet, and on second floor provided aggregate of service uses does not exceed 65,000 square feet. No automobile service or repair shall be allowed, including but not limited to service stations.

B. The sale of alcohol in grocery, supermarket and/or specialty retail stores (off-site sales) and in restaurants as an accessory use (on-site sales) located anywhere within the Shoppes Retail land use designation is permitted. The sale of alcohol shall be subject to licensing by the State of California Department of Alcoholic Beverage Control.

C. Throughout the Shoppes Retail, to create an atmosphere that encourages pedestrian traffic and invites people to walk between uses, outdoor vendors are permitted as an accessory use. While the vendors' cart or kiosk may appear to be temporary in nature, they shall be designed to complement the architectural style of the other buildings on site and integrated into the site design to provide for easy pedestrian access. The size and location of vendor carts shall be limited as determined by the Shoppes Retail management in order to ensure that business is oriented to the pedestrian and not surrounding streets and to provide for adequate pedestrian circulation around the use.

D. Due to the unique nature and specialty uses of the Shoppes Retail, Development Code Section 16.12.020, "Permitted uses, accessory uses, temporary uses and conditional uses" including Appendix A, "Regulation of Uses by Zoning District" shall not apply to the Shoppes Retail land use designation.

3.2.3 Shoppes Retail: Development Standards

A. Table 3-1 outlines the general Development Standards for the Shoppes Retail designation. Additional guiding principles are outlined in Section 4, *Design Guidelines.*

Table 3-1: Shoppes Retail: Development Standards

Development Standard	Shoppes Retail
A. Minimum Lot Size, GLA [1]	5,000 sf
B. Minimum Lot Dimensions ♦ Width ♦ Depth	 50' ft 50' ft
C. Maximum Height	50' ft. to roofline; 80' ft. to architectural feature.
D. Landscaping Required	Minimum 10% of the Shoppes Retail designation must be landscaped (may include planted areas & enhanced hardscape)
E. Parking Lot Landscaping	Minimum 2% of parking areas (exclusive of loading areas) must be landscaped. This landscaping may be counted toward the total site area landscaping required in item D above.
F. Maximum Floor Area Ratio (FAR)	No maximum floor area ratio.
G. Minimum Street-Side Building Setbacks [2] ♦ Setback from Grand Avenue ♦ Setback from Peyton Road ♦ Setback from Boys Republic Drive ♦ All other setbacks	 15' ft. 15' ft. 5' ft. 0' ft.
H. Minimum Internal Street –Side Building Setbacks[2]	0' ft.

Abbreviations: GLA = Gross Leasable Area; sf = square feet; ft = feet

Notes:

[1] Gross Leasable Area (GLA) shall be defined as the total space designed for exclusive use of the tenant and generally excludes common area and space devoted to heating, cooling, and other equipment of the building, including shafts or structural members.

[2] See Section 3.3.3.B for definition of a street-side building setback.

B. Street-Side Building Setbacks: A street-side building setback is the minimum distance required between any public right-of-way line and any part of a building or structure on the Shoppes Retail site. No minimum setback between any private street and any part of a building or structure in the Shoppes Retail site is required.

C. In addition to the standards outlined in Table 3-1, the following shall apply to all development projects proposed within the Shoppes Retail designation:

1. Roof top areas of commercial structures shall be shielded and screened from view from Grand Avenue and Peyton Drive by parapets or other finished architectural features.

2. Open space requirements as outlined in Development Code Section 16.08.070, "Open space requirements," shall not apply to the Shoppes Retail designation. The project is not required to set aside open space or dedicate open space to the City.

3.2.3.1 Maximum Projections into Street-Side Building Setback Areas

All required setback areas shall be open and unobstructed from finished grade to the sky except that projections into street-side setback areas which are permitted as indicated in Table 3-2. The architectural projections listed in the table must be attached to the principal building existing or planned on-site.

Table 3-2: Shoppes Retail: Maximum Projections into Street-Side Building Setback Areas[1]

Feature	Grand Avenue	Peyton Drive	Boys Republic Drive	Maximum Projection Above Height Limit
	Maximum Projection into Setback Area[1]	Maximum Projection into Setback Area[1]	Maximum Projection into Setback Area[1]	
Antennas/Satellite Dishes	Not permitted	Not permitted	Not permitted	Not permitted
Awnings	3'0"	3'0"	3'0"	Not permitted
Architectural Projection: Cornices, Eaves, Roof Overhangs	4'0"	4'0"	4'0"	See Table 3-1, item C.
Patios, Open & Enclosed	5'0"	5'0"	5'0"	Not permitted
HVAC, Mechanical Equip.[2]	5'0"	5'0"	5'0"	Not permitted[2]
Signs[3]	8'0"	8'0"	3'0"	Per City approved sign program
Pad Transformers (above ground utility cabinets)	5'0"	5'0"	5'0"	Not permitted

[1] See Section 3.3.3.B for definition of a street-side building setback.
[2] All air conditioning units and mechanical equipment shall be screened from view by solid walls with exterior finishes to match or compliment surrounding buildings and uses.
[3] Signs (monument and entryway) within clear areas shall not exceed 30" in height.

3.2.3.2 Line-of-Sight Triangle

A. A line-of-sight triangle defines an area of land adjacent to an intersection within which the height of structures, signs, walls, fences, plant materials, and any other physical object(s) is limited for the purpose of maintaining the line-of-sight between motorists and/or pedestrians on any other approach to the same intersection. A line-of-sight triangle shall be indicated with appropriate dimensions on site plans at each intersection of a public street with any other public or private street(s).

1. Each line-of-sight triangle at controlled intersections shall be determined and configured according to Caltrans standards as described in Topic 405 of the Caltrans Highway Design Manual.

2. Each line of sight triangle at the uncontrolled intersection of two public streets shall be configured as shown in Exhibit 3-1a "Line of Sight Triangle for Public Streets" and two sides of equal length shall have a minimum distance of twenty feet (20').

3. Each line-of-sight triangle at the uncontrolled intersection of a public street with a private street or public driveway shall be configured as shown on Exhibit 3-1b "Line of Sight Triangle for Private Street or Driveway" and two sides of equal length shall have a minimum dimension of ten feet (10').

4. The above standards do not apply to the uncontrolled intersection of two private streets.

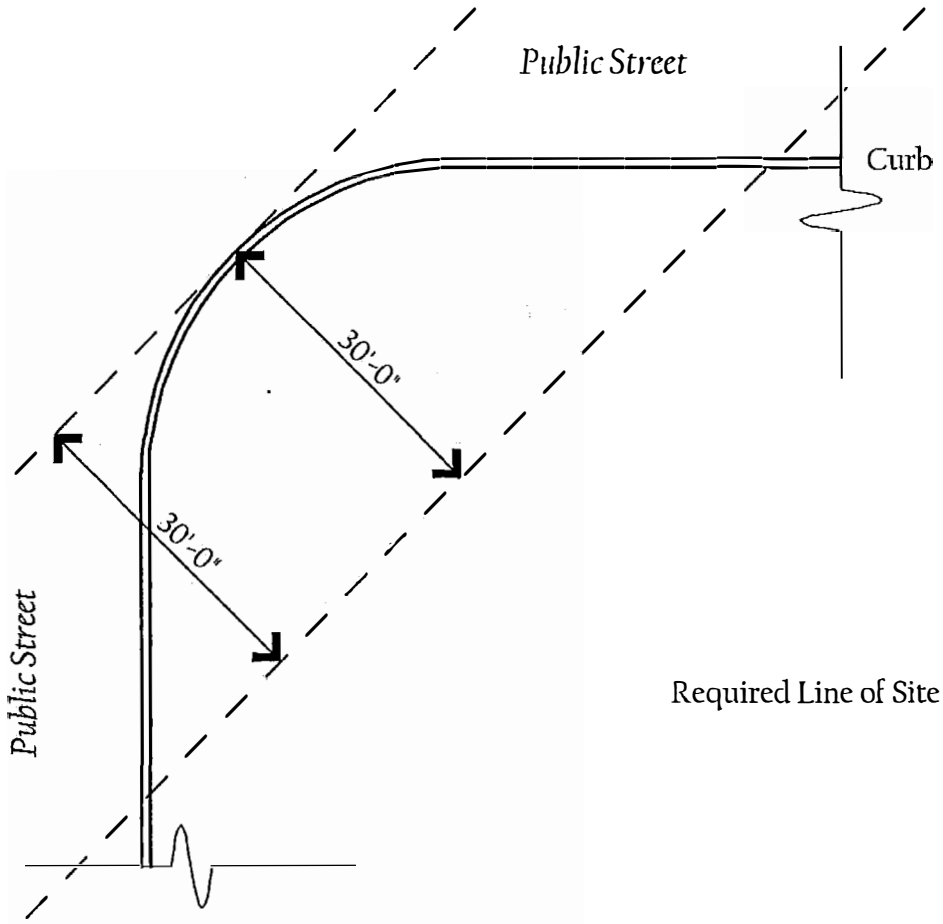


Figure 3-1a: Line of Sight Triangle for Public Streets

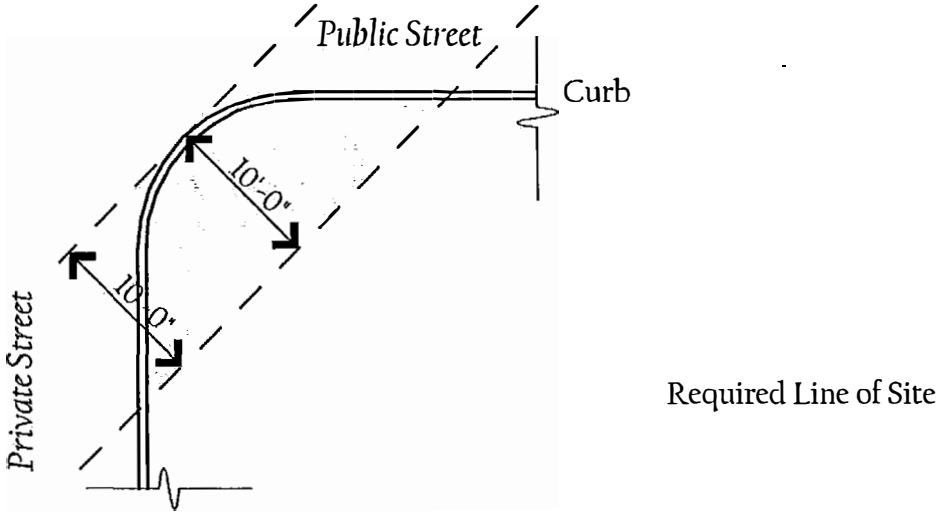

Figure 3-1b: Line of Sight Triangle for Private Street or Driveway

Line of Sight Triangle
Exhibit 3-1

[This page intentionally left blank]

3.2.3.3 Entertainment Uses

Primary entertainment uses such as a bar or night club shall be subject to the provisions of Development Code Section 16.12.070, "Entertainment establishments providing dancing, music, and similar activities" require submittal of a security plan to the City for review and approval. For restaurants whose primary use is an eating establishment, no security plan shall be required unless a security plan is a condition of licensing by the Department of Alcoholic Beverage Control.

3.2.3.4 Outdoor Accessory Uses and Events

A. Periodic use of portions of City Center Drive and Main Street within the Shoppes Retail designation for civic and promotional events shall be permitted. Those portions of these streets that are privately owned may be closed on a temporary basis during such events, without City approval. Because those portions of City Center Drive and Main Street within the Shoppes Retail designation are privately owned, maintained, and integrated within the Lifestyle Center format, and because the nature, places, and times of such civic and promotional events are subject to restrictions imposed by common area property management to maintain the quality and ambiance of the Shoppes Retail, the requirements of Development Code Section 16.40.050, "Special outdoor events," shall not apply.

1. Civic and promotional events on City Center Drive and on Main Street may include product displays, product promotions, and/or product demonstrations that shall be subject to restrictions imposed by common area property management and shall be exempt from Section 16.12.080, "Outdoor display and storage", of the Development Code provided such uses are consistent with the retail uses within the Shoppes Retail designation.

2. Outdoor storage shall not violate line of sight standards as outlined in Section 3.3.3.2 of this Specific Plan.

3. In order to create and enhance the Lifestyle Center ambiance, an outdoor sound system may be installed to provide background music and to serve as a public address system. Noise standards contained in Table N-1 "Noise/Land Compatibility Matrix" of the City of Chino Hills General Plan Noise Element shall apply and shall be used to define acceptable and unacceptable noise levels.

3.2.3.5 Trash Enclosures / Refuse Bins

A. Receptacles (bins) for the collection of refuse and recyclable materials generated within the Shoppes Retail designation shall be generally located as shown on Exhibit 3-2, *Shoppes Retail Conceptual Site Plan.*

B. All trash enclosures shall be designed with a walk-in access component.

C. Enclosures shall be provided for bins and shall consist of six (6) foot-high split face block masonry walls, , and solid, view-obscuring gates with self-closing devices.

3.2.3.6 Walls and Fences

A. Walls and/or fences, including retaining walls, may be permitted along the street and within street-side setback areas, provided they are outside of the public right-of-way and do not exceed twelve feet (12') in height. Location and design of a wall or fence is subject to review and approval by the City Manager or designee. Development Code Section 16.06.120, Subsections B, C, and D titled, "Fences, walls and hedges," shall not apply to the Shoppes Retail designation.

B. All walls shall be made of high-quality pre-cast concrete or of comparable material as approved by the City Manager or designee. Decorative coping requirements shall not apply to the Shoppes Retail designation.

C. There are active outdoor use areas, such as restaurants with outdoor eating areas, associated with the Shoppes Retail designation. Due to the proximity of these areas to Grand Avenue and Peyton Drive, these outdoor active use areas would be exposed to traffic noise levels. To reduce noise levels, sound barriers may be required for affected buildings and eating areas. Sound/noise barriers may consist of glass, plexi-glass or other similar transparent material and shall be a minimum six feet (6') in height.

3.2.3.7 Parking and Loading

A. The Shoppes Retail integrates a variety of retail goods and services uses with varying parking requirements, peak hour parking demands, and vehicle loading needs. Flexibility in meeting these varying requirements and demands is accommodated through inclusion of on-site parking and loading areas as part of the common area shared by tenants and occupants of the Shoppes Retail. Access to and use of common area shared parking shall be maintained through real property agreements applicable to all uses in the Shoppes Retail designation.

In recognition of these circumstances, the requirements of Development Code Chapter 16.34, "Parking and Loading," are not applicable and the location of parking and loading facilities that shall be required to be provided by the

developer are generally shown on Exhibit 3-2, *Shoppes Retail Conceptual Site Plan*, and in Table 3-3.

Table 3-3: Shoppes Retail Parking Requirements

Use	Required Number of Spaces
Retail/Commercial/Entertainment/Office/Restaurant Mix	Minimum 3.25 spaces/1000 SF-GLA[1]

Abbreviations: SF = Square feet, GLA = Gross Leasable Area
Notes:
[1] Gross Leasable Area (GLA) shall be defined as the total space designed for exclusive use of the tenant and generally excludes common area and space devoted to heating, cooling, and other equipment of the building, including shafts or structural members.

[2] Fractional spaces - If the calculation of required parking spaces results in a fractional number (greater than 0.5) that number shall be rounded up to the next whole numbered parking space.

B. Parking facility development standards:

1. Parking space dimensions - The minimum size of a parking space shall be nine feet (9') wide and nineteen feet (19') long including the two foot (2') curb overhang, if applicable. The minimum size of a handicapped parking space shall be as directed by Title 24 of the California Code of regulations.

2. Parking access - The minimum width of the parking lot drive aisles located along City Center Drive and Main Street shall be twenty-six feet (26'). The width of the non-fire access parking lot drive aisles located in the Shoppes Retail shall be a minimum of twenty-four feet (24'), and is subject to review and approval of the City Manager or designee.

3. All parking spaces and associated driveways shall be entirely paved with concrete or asphalt-type surfacing per City standards and requirements

4. Pavement graphics, directional signs and arrows shall be provided on parking lot drive aisles.

5. Parking space delineation – All parking spaces shall be clearly marked with paint or another easily distinguishable material and all spaces shall be delineated with double lines.

6. Metered parking may be provided along Main Street and City Center Drive for customer use only. Parking meters shall be patrolled by the City of Chino Hills.

C. Valet parking – Valet parking shall be permissible within the Shoppes Retail designation for restaurants, department stores and other retailers.

1. Valet parking may be provided anywhere on-site by Shoppes Retail management.

2. The number of proposed parking spaces to be utilized shall be sufficient to ensure that the valet parking operation should not unduly affect the availability of on-street parking spaces.

3. The proposed traffic flow and location of the valet station or stations should not create undue traffic congestion in the area proposed for the valet service

D. Loading Space Requirements:

1. Number of spaces – A minimum of four (4) loading spaces shall be provided within the Shoppes Retail designation.

2. Dimensions – - The minimum size of a loading space shall be at least ten feet wide (10') with a minimum length of 19 feet (19').

E. Bicycle Parking Standards:

1. Five (5) bicycle parking/storage spaces shall be located in one, area/location within the Shoppes Retail designation.

2. The Shoppes Retail designation shall be exempt from Section 16.34.110, "Bicycle parking standards", of the Chino Hills Development Code.

3.2.3.8 Trip Reduction Program

The Shoppes Retail designation shall be exempt from Section 16.36, "Trip Reduction Program", of the Chino Hills Development Code.

3.2.3.9 Signs

A. Temporary Signs: Temporary signs not visible from the public right-of-way are permitted, subject to City Manager or designee review and approval of a sign program. Pending City approval of said sign program, such temporary signs may not be subject to issuance of a temporary sign permit by City and not otherwise subject to restriction unless such signage is declared hazardous or unsafe by the City. Temporary signs visible from the public right-of-way are subject to the City of Chino Hills Development Code.

B. Tenant Signs: Tenant signs including standardized and logo signs of retailers with multiple store locations shall be permitted subject to size, height, bulk, and location regulations and subject to City Manager or designee

review and approval of a sign program. Pending City approval of said sign program, such tenant signs are to be consistent throughout the Shoppes Retail and tenants shall be allowed to install and maintain tenant brand, logo, and/or prototype signage advertising the names and logos of their uses within the development.

C. Freeway Oriented Signs:

1. Along the Chino Valley Freeway (SR-71), a Pylon/Reader Board sign may be located on the Boys Republic Property as shown in Exhibit 4-11, *Pylon Sign Location.* The sign shall be subject to City Manager or designee review and approval of a sign program, and may be up to 100' tall and 40' wide and indicate "The Shoppes at Chino Hills", a project logo and/or icon, "City of Chino Hills", and the names of the tenants. Maximum sign area is 2,000 square feet per side. Individual letter height shall be no more than 75" inches.

2. An electronic reader board may be included to identify upcoming cultural events and advertising for the project. The reader board shall be incorporated into the Pylon Sign.

3. The Shoppes Retail designation shall be exempt from Section 16.38.070, "Freeway-oriented signs", of the Chino Hills Development Code.

D. Additional details on the Specific Plan signage program can be found in Section 4, *Design Guidelines.*

3.2.4 Shoppes Retail: Landscaping and Lighting

Landscaping and lighting is an essential element to create the unique character of the Shoppes Retail. The location, design and detail of the landscaping and lighting shall be compatible with and reflect the spirit and quality of the Specific Plan objectives. In recognition of these circumstances, the landscape and lighting requirements of the City of Chino Hills Landscaping and Lighting Manual, 1992 and the Chino Hills Municipal Code are waived and shall not apply to the Shoppes Retail designation. All landscaping and lighting shall be subject to approval by the City Manager or designee.

A. The project shall be enhanced with larger than minimum sized plant material at the following entry focal points and/or main project entrances:

1. Southwest corner of Grand Avenue and the Boys Republic Drive;

2. Southeast corner of Grand Avenue and City Center Drive;

3. Southwest corner of Grand Avenue and City Center Drive;

4. Southeast corner of Grand Avenue and Peyton Drive. Streetscape improvements at the southeast corner of Grand and Peyton shall provide for an easement to accommodate the Citywide Identity Enhancement Program as specified by the City Manager or designee;

5. Northeast and southeast corners of Peyton Drive and Main Street

B. Pedestrian hardscape illustrated on Exhibit4-8, *Shoppes Retail Conceptual Landscape Plan*, such as walkways and plaza/patio areas shall be enhanced. Enhanced paving will generally be located along the storefront walkways of Main Street and City Center Drive, primary pedestrian crosswalks, the Department Store plaza and at the Main Street and City Center Drive intersection. Enhanced paving shall be defined by the following materials:

1. Integral colored concrete with saw cut pattern including sandblast or acid wash finish;

2. Concrete interlocking paving units with accent bands;

3. Natural grey concrete with saw cut pattern including a sandblast or acid wash finish with paver accents or borders;

4. Any combination of the above materials, pattern and finishes.

C. Standard pedestrian paving will be permitted only along the rear of the retail buildings where tenant service doors and loading activities are to take place or at other areas of secondary pedestrian access not affiliated with the retail storefronts. Standard pedestrian paving shall be defined by natural grey concrete with saw cut pattern including a sandblast or acid wash finish with paver accents or borders.

D. Exterior lighting shall be energy-efficient and shielded or recessed so that direct glare and reflections are contained within the boundaries of the Shoppes Retail district. No retail tenant lighting shall blink, flash, or be of unusually high intensity or brightness. All lighting fixtures shall be appropriate in scale, intensity, and height to the use it is serving. Parking lot lights shall not exceed forty (40') in height. Lighting of outdoor areas shall be designed and maintained in a manner to prevent glare or direct illumination from intruding into off-site areas.

E. Additional details on the landscape of the Shoppes Retail can be found in Section 4, *Design Guidelines*.

3.2.5 Shoppes Retail: Architecture and Design

A. The architecture of the Shoppes Retail is an eclectic blend of individual storefront designs distinguishing each retail, office, restaurant, and department store tenant from every other in the center while reinforcing the unique image and product or service of each. While encouraging uniqueness among tenants, design guidelines for the Shoppes Retail recognize the value of brand recognition for retailers with multiple store/restaurant locations. A retailer with multiple stores/restaurants typically employs a retail or restaurant format that is common among locations and may include standardized signs, architecture, design, interior and exterior colors, forms, shapes, materials, and the display of standardized logos to promote and enhance the company's image, products or services. Multiple store retailers include those whose market areas may be the local area or regional, national, or international markets. Accordingly, each tenant that is part of a multiple location retail or restaurant organization shall be permitted to construct and improve premises at the Shoppes Retail that are consistent with that company's retail or restaurant prototype format, including but not limited to, standardized signs, architecture, design, interior and exterior colors, forms, shapes, and materials, and the display of standardized logos, sign text, script, color, outdoor eating areas and patios, awnings and text thereon, lighting, and landscaping and shall not be subject to City review and without restriction or condition except as to size, bulk, height, or location restrictions applicable throughout the Shoppes Retail.

B. Additional details on the design and architecture of the Shoppes Retail can be found in Section 4, *Design Guidelines*.

3.3 CIVIC CENTER REGULATIONS FOR DEVELOPMENT

3.3.1 Civic Center: Designation Intent and Purpose

The Civic Center land use designation is an area where the City's government and institutional center resides, however it is integrated with the residential, retail, recreational, civic and cultural activities within the Specific Plan area. A key objective of the Civic Center concept is to provide a civic and community center and a public gathering area for Chino Hills' residents and business members. The Civic Center includes the City Hall at 58,826 square feet and a library at 28,224 square feet. Additionally, the area incorporates the Chino Valley Independent Fire District administration facility of 16,229 square feet. Within the Sheriff/Police land use district, a 29,777 square feet Sheriff's facility completes the Civic Center concept.

3.3.2 Civic Center: Permitted Uses

A. The Civic Center land use designation provides for institutional, civic and cultural uses intended to serve the needs of the Chino Hills community and that are consistent with the intent of the Specific Plan.

B. Other uses consistent with the Mixed-Use Specific Plan district such as structured parking, office, retail, residential or additional civic uses may be permitted. However, under no circumstances shall the overall density of this district cause the overall Specific Plan Area to exceed the maximum densities provided in Tables 2-1, 2-2, 2-3, 2-4 and 2-5.

C. The City Manager or designee has the discretion to determine whether a land use not referenced above and herein may be permitted provided such use is consistent with the intent of the Specific Plan.

3.3.3 Civic Center: Development Standards

A Table 3-4 outlines the general Development Standards for the Civic Center.

Table 3-4: Civic Center Development Standards

Development Standard	Civic Center
A. Minimum Lot Size	15,000 sf
B. Maximum Building Height	45" ft. to roofline; 80' ft. to architectural feature.
C. Landscaping Required	Minimum 15% of the overall Civic Center designation (exclusive of areas in a public right-of-way) must be landscaped.
D. Parking Lot Landscaping	Minimum 5% of parking areas (exclusive of loading areas) must be landscaped. This landscaping may be

Development Standard	Civic Center
	counted toward the total site area landscaping required in item C above.
E. Minimum Street-Side Building Setbacks[1]	
♦ Peyton Drive	20' ft
♦ Boys Republic Drive	10' ft
♦ City Center	5' ft
♦ Shoppes Drive	10' ft.
♦ All other setbacks	0' ft.
F. Minimum Internal Street –Side Building Setbacks[1]	0' ft.

Abbreviations: sf = square feet; ft = feet

Notes:

[1] See Section 3.4.3.B. (below) for definition of a street-side building setback.

B. Street-Side Building Setbacks: A street-side building setback is the minimum distance required between any public right-of-way line and any part of a building or structure on the Civic Center site. No minimum setback between any private street and any part of a buildings or structure in the Civic Center site is required.

C. In addition to the standards outlined in Table 3-4, the following shall apply to all development projects proposed within the Civic Center designation:

1. Open storage of material and equipment permitted in the Civic Center shall be surrounded and screened by a solid wall or fence, including solid gates where necessary, not less than six feet in height. Materials shall not be stacked above the height of the screening.

2. Roof top areas of structures shall be shielded and screened from view from Peyton Drive by parapets or other finished architectural features.

3. Development adjacent to property zoned or designated residential shall have walls and landscaping approved by the City Manager or designee at the time of site plan review.

3.3.3.1 Parking and Loading

A. The Civic Center integrates a variety of government service uses with varying parking requirements, peak hour parking demands, and vehicle loading needs. Flexibility in meeting these varying requirements and demands is accommodated through inclusion of on-site parking and loading areas as part of the common area shared by occupants of the Civic Center designation. Access to and use of common area shared parking shall be maintained through real property agreements applicable to all facilities in the Civic Center

designation. In recognition of these circumstances, the requirements of Development Code Chapter 16.34, "Parking and Loading," are waived and the location of parking and loading facilities shall be as shown in Table 3-5 and the text below.

Table 3-5: Civic Center Parking Requirements

Use	Required Number of Spaces
City Hall	4/1,000 sf
Library	4/1,000 sf
Fire Department Facility	(a)
Sheriff's Substation	(a)

Abbreviations: sf = square feet
Notes:
(a) Parking standards to be determined and approved by the City Manager or designee.

B. Parking Facility Development Standards:

1. Parking space dimensions - The minimum size of a parking space shall be nine feet wide (9') and nineteen feet (19') long including the two foot (2') curb overhang, if applicable. The minimum size of a handicapped parking space shall be as directed by Title 24 of the California Code of regulations.

2. Parking access - The minimum width of a parking lot drive aisle shall be twelve feet (12') for one-way traffic. The minimum width of the non-fire access parking lot drive aisles located in the Civic Center shall be a minimum twenty-four feet (24'), and is subject to review and approval of the City Manager or designee.

3. All parking spaces and associated driveways shall be entirely paved with concrete or asphalt-type surfacing per City standards and requirements.

4. Pavement graphics, directional signs and arrows shall be provided on parking lot drive aisles.

5. Parking space delineation – All parking spaces shall be clearly marked with paint or another easily distinguishable material and all spaces shall be delineated with single or double lines.

C. Loading Space Requirements: Loading space requirements shall be subject to the requirement of Section 16.34.100, "Loading space requirements," of the Chino Hills Development Code. Deviations from Section 16.34.100 may be approved by the City Manager or designee at the time of site plan review.

D. Bicycle Parking Standards:

1. Bicycle parking/storage shall be a minimum of 5% of total auto parking requirement.

2. Bicycle parking standards shall be subject to the requirement of Section 16.34.110, titled "Bicycle parking standards," of the Chino Hills Development Code. Deviations from Section 16.34.110 may be approved by the City Manager or designee at the time of site plan review.

3.3.3.2 Signs

A. Signs within the Civic Center land use designation shall be subject to Chapter 16.38, titled "Signs," of the Chino Hills Development Code with the exception of the following:

B. Freeway Oriented Signs:

1. Along the Chino Valley Freeway (SR-71), a Pylon/Reader Board sign may be located on the Boys Republic Property as shown in Exhibit 4-11, *Pylon Sign Location.* The sign may be up to 100' feet tall and 40' feet wide and indicate "The Shoppes at Chino Hills," a project logo and/or icon, "City of Chino Hills," and the names of the tenants. Maximum sign area is 2,000 square feet per side. Letter height will be no more than 75" inches.

2. An electronic reader board may be included to identify upcoming cultural events and advertising for the project. The reader board is approximately 20' wide and 10' tall and will be incorporated into the Pylon Sign.

3. The Civic Center land use designation shall be exempt from Section 16.38.070, "Freeway-oriented signs," of the Chino Hills Development Code.

3.3.3.3 Walls and Fences

Walls, fences and hedges shall be subject to the requirements of Chapter 16.06.120, "Fences, walls and hedges," of the Development Code. Deviations from Chapter 16.06.120 may be approved by the City Manager or designee at the time of site plan review.

3.3.3.4 Additional Standards

For any development guideline not specifically addressed herein, the City of Chino Hills Development Code shall govern.

3.4 SHOPPES MIXED-USE REGULATIONS FOR DEVELOPMENT

3.4.1 Shoppes Mixed-Use: Designation Intent and Purpose

The intent of the Mixed-Use Land Use designation is to permit a variety of retail and commercial services, including but not limited to restaurants, offices, and hotel uses. Residential uses can be provided in the form of apartments, townhomes, condominiums, flats, lofts, live/work units, residential above retail commercial/office or free standing buildings. Innovative housing options, integration with commercial and office uses, and pedestrian-oriented design are encouraged. Exhibit 3-4 presents a conceptual site plan for the Shoppes Mixed-Use development. Exhibit 3-5 provides a conceptual elevation for the retail/residential component of Shoppes Mixed-Use development and Exhibit 3-6 provides an example of the elevations and building designs for the hotel and retail/residential components of the Shoppes Mixed-Use. Exhibits 3-7 through 3-10, Shoppes Mixed-Use Visual Study, illustrate consistency with the surrounding environment.

3.4.2 Shoppes Mixed-Use: Permitted Uses

In the Shoppes Mixed-Use designation, uses consistent with the Shoppes Mixed-Use land use district, such as structured parking, office, retail, hotel, residential or civic uses may be permitted. Higher density residential development in the form of apartments, townhomes, condominiums, flats, lofts and live/work units are permitted. However, under no circumstances shall the total square footage of development allowed within the Shoppes Mixed-Use land use designation exceed 40,000 square feet, 300 hotel rooms and 295 residential units. Permitted uses within the Shoppes Mixes-Use land use designation include:

A. Retail. Retail uses by way of example, sell any of the following products: Apparel, home decor, cooking, and dining ware, goods, jewelry, bedding and bathroom accessories, books and publications, gift shops, gardening accessories and decor, outdoor living/furnishings, sporting goods, children's toys, electronic goods. Specialty grocery stores and specialty food establishments that do not exceed 25,000 square feet are also permitted.

1. Retail uses shall provide a minimum 25,000 square feet of the total 40,000 square feet permitted within the Shoppes Mixed-Use. A minimum 10,000 square feet of this total retail shall be located directly in front of and adjacent to the City owned parking structure. See Section 3.4.3.2 for additional details on the retail uses to be located directly in front of or adjacent to the City owned parking structure.

2. A minimum 80% of the retail space shall be for retail use only. The remaining 20% of the retail space may be used for office use. The office

space uses shall be consistent with the office uses in the Shoppes Retail

3. The second floor space (if any) above the ground floor retail in the building in front of and adjacent to the City owned parking structure may be developed as 100% office space. Minimum parking standards established for the Shoppes Mixed-Use shall be maintained for such office use.

4. Due to the design and depth challenges associated with the Shoppes Retail, there shall be no minimum size retail tenant space within the Shoppes Mixed-Use.

B. Restaurants. Permitted restaurant uses include: Full service restaurants (including those with bars serving alcoholic beverages and including entertainment as accessory uses) ("full service restaurant" means an establishment that prepares and sells food to customers that order food while seated in the establishment and have the food delivered to them and consume the food on the premises of the establishment); take out restaurants that sell food to customers who order primarily at a counter or through call-in orders, and that allow food to be consumed on or off the premises of the restaurant but such restaurants shall not be permitted to sell food at drive-thru facilities.

C. Bar or night club. Bar or night club use is primarily an age restricted establishment and shall be permitted. This use shall not exceed, in aggregate, over 10,000 square feet.

D. Service uses. Professional office, professional service, or personal services on first floor and on second floor provided aggregate of service use is parked according to guidelines established therein. No automobile service or repair shall be allowed, including but not limited to service stations.

E. Hotel. A minimum of 100 hotel rooms and a maximum of 300 hotel rooms shall be permitted within the Shoppes Mixed-Use. An hotelier with multiple hotels and whose market area may be the local area or regional, national, or international markets are permitted. An hotelier with multiple locations typically employs a hotel format that is common among locations and shall be developed in accordance with Sections 3.4.3.4 and 3.4.4.

F. Residential. A minimum of 125 residential units and a maximum of 295 residential units shall be permitted within the Shoppes Mixed-Use. See Section 3.4.3.3 for additional details on the Shoppes Mixed-Use residential.

G. The sale of alcohol in grocery, supermarket and/or specialty retail stores (off-site sales) and in restaurants as an accessory use (on site sales) located anywhere within the Shoppes Mixed-Use land use designation is permitted. The sale of alcohol shall be subject to licensing by the State of California Department of Alcoholic Beverage Control.

H. Throughout the Shoppes Mixed-use, and to create an atmosphere that encourages pedestrian traffic and invites people to walk between uses, outdoor vendors are permitted as an accessory use. While the vendors' cart or kiosk may appear to be temporary in nature, they shall be designed to complement the architectural style of the other buildings on site and integrated into the site design to provide for easy pedestrian access. The size and location of vendor carts shall be limited as determined by the Shoppes Mixed-Use management in order to ensure that business is oriented to the pedestrian and not surrounding streets and to provide for adequate pedestrian circulation around the use.

I. Due to the unique nature and specialty uses of the Shoppes Mixed-Use Development Code Section 16.12.020, "Permitted uses, accessory uses, temporary uses and conditional uses" including Appendix A, "Regulation of Uses by Zoning District" shall not apply to the Shoppes Mixed-Use land use designation.

3.4.3 Shoppes Mixed-Use: Development Standards

Table 3-6 outlines the general Development Standards for the Shoppes Mixed-Use land use designation.

Table 3-6: Shoppes Mixed-Use Development Standards

Development Standard	Shoppes Mixed-Use		
A. Minimum Project Area	5,000 sf		
B. Minimum Lot Width	None Required		
C. Minimum Lot Depth	None Required		
D. Maximum Floor Area Ratio[1]:			
♦ Commercial/Retail/Office	2.00		
♦ Hotel(s)	1.75		
♦ Residential	2.25		
E. Maximum Density/Intensity:			
♦ Commercial/Retail/Office[2]	40,000 sf		
♦ Hotel(s)	300 rooms Up to		
♦ Residential	295 du[3]		
F. Maximum Building Height[4]			
♦ Commercial/Retail/Office[5]	50' ft. to roofline; 80' ft. to architectural feature		
♦ Hotel(s)	80' ft to roofline; 85' ft to architectural feature		
♦ Residential/Mixed-Use Buildings[6]	70' ft. to roofline; 80' ft to architectural feature		
G. Minimum Street–Side Building Setbacks[7]:	Front	Side	Rear
♦ Boys Republic Drive	10' ft	10' ft	n/a
♦ City Center Drive	10' ft	10' ft	n/a
♦ Shoppes Drive	10' ft	10' ft	n/a
♦ Other Private Streets/Driveway[8]	10' ft	10' ft	5' ft
H. Residential Common Open Space[9]:	None Required		

Development Standard	Shoppes Mixed-Use
♦ Minimum Area per Unit ♦ Minimum Dimension	None Required
I. Residential Private Open Space[9]: ♦ Minimum Area per Unit ♦ Minimum Dimension	 None Required None Required
J. Minimum Required Building Separation[10]: ♦ Front of Building to Front of Building ♦ Front of Building to Side of Building ♦ Side of Building to Side of Building	 30' ft 20' ft 10' ft
K. Required Landscaping ♦ Commercial/Retail/Office ♦ Hotel(s) ♦ Residential ♦ Street Frontage	None Required Minimum 10% (may include planted areas, enhanced hardscape, parking and open space) None Required Must be consistent with Shoppes Retail

Abbreviations: sf = square feet, ft =a feet, ac = acre, du = dwelling unit, N/A = not applicable

Notes:

[1] Density of use shall not exceed the amount stated per parcel. If there are multiple uses on a parcel, then each use shall not exceed the amount indicated on each parcel (Does not apply to condominium units).

[2] Does not include hotel square footage or accessory residential uses.

[3] Should the Shoppes Mixed-Use designation area develop at less than the allocated units, the remainder units may be located elsewhere within the Specific Plan area, subject to City Manager or designee approval. This provision does not include amenity areas, leasing and administrative areas, and recreational areas associated with the project.

[4] Antennas as defined in the Chino Hills Development Code are exempt from maximum height restrictions.

[5] Maximum height requirement applies to free-standing retail buildings

[6] Maximum height requirement includes residential above retail/office (mixed-use) buildings

[7] See Section 3.4.3.1 below for definition of a street-side building setback. All setbacks are measures from center line of street unless noted otherwise

[8] Private street/driveway setbacks measured from the centerline of the private street or driveway.

[9] Residential uses shall have common private space and at a minimum will include a pool/spa area (see Section 4.7).

[10] Applies only to buildings on separate parcels. Does not apply to the distance between a building, a parking structure, or to condominium units.

3.4.3.1 Street-Side Building Setbacks

A street-side building setback is the minimum distance required between the curb face of the indicated street and any part of a building or structure on the Shoppes Mixed-Use site.

3.4.3.2 Retail Buildings in Front of and adjacent to City Owned Parking Structure

A. Minimum building height – A minimum of 22' ft. to top of parapet, tower or architectural feature,

B. Maximum building height: A maximum of 48' ft. to top of parapet, tower, or architectural feature.

C. Architectural elements – An architectural tower element that provides 360 degree architecture shall be located on the north and south end of the building as a way of defining each of the corners of the building. These architectural elements shall be constructed in order to achieve a minimum of 12' feet in height above the minimum building height for a minimum height of 34' feet unless otherwise approved by the City Manager or designee. All architectural tower elements shall provide 360 degree architecture to avoid a fake or false facade or front, similar to corners of buildings within the Shoppes Retail.

D. Storefront glazing – The southern end of the building fronting City Center Drive shall be finished with storefront glazing consistent with the Shoppes Retail and also utilize areas above the storefront for internal illumination.

3.4.3.3 Shoppes Mixed-Use: Residential

A. Residential Unit Size – The residential component of the Shoppes Mixed-Use will include urban and innovative housing options and may be integrated with commercial, retail and office uses. Therefore, unit sizes may differ from the Section 16.10.040(A) of the Chino Hills Development Code. In such case, section 16.10.040(A) shall be waived.

B. Common Open Space Amenities - The residential component in the Shoppes Mixed Use will allow for private amenities that may be accessed and used by residents and their guests only and, at a minimum, will include a pool/spa, bbq area and meeting/activity room.

C. Private Open Space – Due to the urban nature of the residential units, balconies and/or patios may not be provided for every residential unit. However, where possible, the use of balconies and patio areas are encouraged to provide architectural relief and private open space throughout the project. Exhibit 3-11 provides examples of the type of balconies and patios that may be used within the residential component of the Shoppes Mixed-Use.

D. Due to the conceptual nature of the residential portion of the Shoppes Mixed-Use, the residential developer shall undergo formal site plan review and obtain approval from the Planning Commission for the final residential product and residential site plan. Site plans contained herein are for conceptual use only

3.4.3.4 Shoppes Mixed-Use: Hotel

A. Common Open Space Amenities - The hotel component in the Shoppes Mixed Use will allow for private amenities that may be accessed and used by hotel guests only and, at a minimum, will include a pool and business center.

B. Architecture – Consistent with Section 3.4.4 Shoppes Mixed-Use Architecture and Design, hotel operators that employ the use of prototypes that

are national or regional in use shall be deemed approved in meeting the Shoppes Mixed-Use Design Guidelines and shall not be subject to further review by the Planning Commission. However, a Site Development Permit (SDP, Staff Level Approval) is required prior to submittal of construction plans.

3.4.3.5 Entertainment Uses

Primary entertainment uses such as a bar or night club shall be subject to the provisions of Development Code Section 16.12.070, "Entertainment establishments providing dancing, music, and similar activities" require submittal of a security plan to the City for review and approval. For restaurants whose primary use is an eating establishment, no security plan shall be required unless a security plan is a condition of licensing by the Department of Alcoholic Beverage Control.

3.4.3.6 Outdoor Accessory Uses and Events

A. Periodic use of portions of City Center Drive within the Shoppes Mixed-Use designation for civic and promotional events shall be permitted. Those portions of the street that are privately owned may be closed on a temporary basis during such events, without City approval. Those portions of the street that are publicly owned may be closed on a temporary basis during such events with prior approval from the City. When approved by the City, the requirements of Development Code Section 16.40.050, "Special outdoor events," shall not apply.

1. Civic and promotional events on City Center Drive may include product displays, product promotions, and/or product demonstrations that shall be subject to restrictions imposed by common area property management and shall be exempt from Section 16.12.080, "Outdoor display and storage", of the Development Code provided such uses are consistent with the retail uses within the Shoppes Mixed-Use designation.

2. Outdoor storage shall not violate line of sight standards as outlined in Section 3.3.3.2 of this Specific Plan.

3. In order to create and enhance the Shoppes Mixed-Use ambiance, an outdoor sound system may be installed to provide background music and to serve as a public address system. Noise standards contained in Table N-1 "Noise/Land Compatibility Matrix" of the City of Chino Hills General Plan Noise Element shall apply and shall be used to define acceptable and unacceptable noise levels.

3.4.3.7 Trash Enclosures / Refuse Bins

A. Receptacles (bins) for the collection of refuse and recyclable materials generated within the Shoppes Retail designation shall be agreed upon with the City.

B. All trash enclosures shall be designed with a walk-in access component.

C. Enclosures shall be provided for bins and shall consist of six (6) foot-high (split face) block masonry walls finished to be consistent with the Shoppes Retail, and solid, view-obscuring gates with self-closing devices.

3.4.3.8 Walls and Fences

A. The maximum height of fences and walls, including retaining walls within the building setback, shall be a maximum of six feet (6') in height Location and design of a wall or fence is subject to review and approval by the City Manager or designee. Development Code Section 16.06.120, Subsections B, C, and D titled, "Fences, walls and hedges," shall not apply to the Shoppes Mixed-Use designation.

B. All walls shall be made of high-quality, split face block or pre-cast concrete and include a decorative cap or if not those materials then as approved by the City Manager or designee.

C. There are active outdoor use areas, such as restaurants with outdoor eating areas, associated with the Shoppes Mixed-Use designation. Due to the proximity of these areas to City Center Drive, these outdoor active use areas would be exposed to traffic noise levels. Sound barriers will not be required for affected buildings and eating areas.

3.4.3.9 Parking

A. The Shoppes Mixed Use integrates a variety of retail goods and services, office and residential uses with varying parking requirements, peak hour parking demands, and vehicle loading needs. Flexibility in meeting these varying requirements and demands is accommodated through inclusion of on-site parking and loading areas as part of the common area shared by tenants, occupants and residents of the Shoppes Mixed Use. Further, shared parking between parcels is acceptable and may be authorized pursuant to a shared parking study and agreement, approved by the City Manager or designee. To the extent there is ambiguity or parking is short, a reduction in the number of residential units may be necessary. Under no circumstance shall there be a reduction in the minimum amount of retail space or minimum number of hotel rooms to meet shared parking requirements.

In recognition of these circumstances, the Shoppes Retail parking requirements shall supercede the requirements of Development Code Section 16.34.060, "Number of parking spaces," and Section 16.34.050, Location of parking and loading facilities." Table 3-7 shows the number of spaces shall be as described in the text below.

Table 3-7: Shoppes Mixed-Use Parking Requirements

Use	Number of Spaces Required	Number of Unassigned Guest Spaces
Hotel		
• Hotel Room	1 space per hotel room[1]	N/A
• Meeting Space/Dining	Minimum 3.25 spaces/ 1000 SF-GLA[2]	N/A
Commercial/Retail/Restaurant/Office	Minimum 3.25 spaces/ 1000 SF-GLA[2]	N/A
Residential: Condominium and Multi-Family		
• Studio (10 units or less)	1.0	.25 per unit
• Studio (For each additional unit above 10 units)	1.25	.25 per unit
• 1 Bedroom	1.5	.25 per unit
• 2 Bedroom	2.0	.25 per unit
• 3 Bedroom	2.0	.25 per unit

Abbreviations: SF = Square feet, GLA = Gross Leasable Area

Notes:

[1] Hotel parking requirements includes handicap parking spaces and includes employee parking.

[2] Gross Leasable Area (GLA) shall be defined as the total space designed for exclusive use of the tenant and generally excludes common area and space devoted to heating, cooling, and other equipment of the building, including shafts or structural members.

B. Shared Parking - Shared parking between parcels is acceptable and may be authorized pursuant to a shared parking study and agreement, approved by the City Manager or designee.

1. If shared parking is required, a reduction in the minimum number of residential units (175 units) may be necessary and is allowed. Under no circumstance shall there be a reduction in the minimum amount of retail space or minimum number of hotel rooms to meet shared parking requirements.

2. A portion of the retail parking may be shared with residential visitor parking as outlined in a shared parking study and approved by the City Manager or designee.

C. Parking Facility Development Standards:

1. Parking access – Vehicular access leading to parking facilities, including private parking structures or garages for private residences, shall have a minimum width of ten feet (10') for one-way traffic, and a minimum width of twenty feet (20') for two-way traffic. Greater widths may be required to meet Fire Department Codes. Pavement graphics, directional signs and arrows shall be provided.

2. Parking space dimensions - The minimum size of a parking space along City Center Drive shall be nine feet wide (9') and nineteen feet (19') long. The minimum size of a handicapped parking space shall be as directed by Title 24 of the California Code of regulations. If the minimum size of a parking space in a parking garage varies from the aforementioned dimensions, the variation must be agreed upon by City Manager or his/her designee.

3. Parking space delineation – All parking spaces shall be clearly marked with paint or another easily distinguishable material and all spaces shall be delineated with single or double lines.

4. All parking spaces and associated driveways shall be entirely paved with concrete or asphalt-type surfacing per City standards and requirements.

5. All signage, pavement graphics, directional signs and arrows shall be provided on parking lot drive aisles, consistent with the Shoppes Retail.

D. Metered Parking – Metered parking may be provided along City Center Drive and be designed and constructed to be consistent with Shoppes Retail. Parking meters shall be patrolled by the City of Chino Hills. Consistent with Section 3.4.3.9, metered parking spaces along City Center Drive shall be applied toward meeting the parking requirements within the Shoppes Mixed-Use district.

E. Valet Parking – Valet parking shall be permissible within the Shoppes Mixed-Use designation for residential, restaurants, retailers and hotels.

1. Valet parking may be provided anywhere on-site by Shoppes Mixed-Use management.

2. Valet parking operation should not unduly affect the availability of on-street parking spaces along City Center Drive.

3. The proposed traffic flow and location of the valet station or stations should not create undue traffic congestion in the area proposed for the valet service

F. Bicycle Parking Standards:

1. An area designated for three (3) bicycle parking spaces shall be located in one, area/location within the Shoppes Mixed-Use designation.

2. The Shoppes Mixed-Use designation shall be exempt from Section 16.34.110, "Bicycle parking standards", of the Chino Hills Development Code.

3.4.3.10 Trip Reduction Program

The Shoppes Mixed-Use designation shall be exempt from Section 16.36, "Trip Reduction Program", of the Chino Hills Development Code.

3.4.3.11 Minor Site Plan Changes

Changes to the Shoppes Mixed-Use site plan, illustrated in Exhibit 3-4, *Shoppes Mixed-Use Conceptual Site Plan*, are subject to approval by the City Manager or designee. However, the Shoppes Mixed-Use must maintain the urban character and form of the Shoppes Retail, Civic Center and Shoppes Mixed-Use site.

3.4.4 Shoppes Mixed-Use: Architecture and Design

A. The architecture of the Shoppes Mixed-Use is an eclectic blend of designs distinguishing each use from every other on the site while reinforcing the unique image and product or service of each. While encouraging uniqueness among tenants, design guidelines for the Shoppes Mixed-Use recognize the value of brand recognition for retailers and hoteliers with multiple locations. A retailer or hotelier with multiple stores/restaurants/hotels typically employs a format that is common among locations and may include standardized signs, architecture, design, interior and exterior colors, forms, shapes, materials, and the display of standardized logos to promote and enhance the company's image, products or services. Multiple store retailers and hoteliers include those whose market areas may be the local area or regional, national, or international markets. Accordingly, each tenant that is part of a multiple location retail, restaurant or lodging organization shall be permitted to construct and improve premises at the Shoppes Mixed-Use that are consistent with that company's retail, restaurant or lodging prototype format, including but not limited to, standardized signs, architecture, design, interior and exterior colors, forms, shapes, and materials, and the display of standardized logos, sign text, script, color, outdoor eating areas and patios, awnings and text thereon, lighting, and landscaping and shall not be subject to City review and without restriction or condition except as to size, bulk, height, or location restrictions applicable throughout the Shoppes Mixed-Use. In addition, the architecture of the brand retailers and hotels shall be upscale and consistent with the architecture and design of the Shoppes Retail.

B. Additional details on the design and architecture of the Shoppes Mixed-Use can be found in Section 4, *Design Guidelines*.

3.4.5 Shoppes Mixed-Use: Landscaping and Lighting

A. Landscaping within the Shoppes Mixed-Use is an essential element in creating a contiguous environment with the Shoppes Retail. The location, design and detail of the landscaping and lighting shall be consistent and compatible with and reflect the spirit and quality of the Specific Plan objectives and, in particular, the Shoppes Retail. In recognition of these

circumstances, the landscape and lighting requirements of the City of Chino Hills Landscaping and Lighting Manual, 1992 and the Chino Hills Municipal Code are waived and shall not apply to the Shoppes Mixed-Use designation. All landscaping and lighting shall be subject to approval by the City Manager or designee.

B. Landscaping shall be used to tie together the Shoppes Retail and the Shoppes Mixed-Use and look as though the two districts were designed and developed as one project. To accomplish this goal, similar design, palette and sizing of landscape shall be provided along City Center Drive.B. Pedestrian hardscape, similar to what is illustrated on Exhibit 4-8, *Shoppes Retail Conceptual Landscape Plan*, such as walkways and plaza/patio areas shall be enhanced. Enhanced paving will generally be located along the storefront walkways of City Center Drive, primary pedestrian crosswalks, and at the Shoppes Drive and City Center Drive intersection and Boys Republic and City Center intersection. Enhanced paving shall be defined by the following materials:

1. Integral colored concrete with saw cut pattern including sandblast or acid wash finish;

2. Concrete interlocking paving units with accent bands;

3. Natural grey concrete with saw cut pattern including a sandblast or acid wash finish with paver accents or borders;

4. Any combination of the above materials, pattern and finishes.

C. Standard pedestrian paving will be permitted only along the rear of the retail buildings where tenant service doors and loading activities are to take place or at other areas of secondary pedestrian access not affiliated with the retail storefronts. Standard pedestrian paving shall be defined by natural grey concrete with saw cut pattern including a sandblast or acid wash finish with paver accents or borders.

D. Exterior lighting shall be energy-efficient and shielded or recessed so that direct glare and reflections are contained within the boundaries of the Shoppes Retail and Shoppes Mixed-Use districts, and shall be directed downward and away from adjoining properties and public rights-of-way. No lighting shall blink, flash, or be of unusually high intensity or brightness. All lighting fixtures shall be appropriate in scale, intensity, and height to the use it is serving. Parking lot lights shall not exceed forty (40') in height. Lighting of outdoor areas shall be designed and maintained in a manner to prevent glare or direct illumination from intruding into off-site areas.

E. Additional details on the landscape of the Shoppes Mixed-Use can be found in Section 4.11 and 4.12.

3.4.6 Shoppes Mixed-Use: Signs

A. Tenant Signs: Tenant signs including standardized and logo signs of retailers with multiple store locations shall be permitted subject to size, height, bulk, and location regulations and subject to City Manager or designee review and approval of a sign program. Pending City approval of said sign program, such tenant signs are to be consistent throughout the Shoppes Mixed-Use and tenants shall be allowed to install and maintain tenant brand, logo, and/or prototype signage advertising the names and logos of their uses within the development.

B. Pylon/Reader Board – With written approval from the Shoppes Retail owner, tenants located within the Shoppes Mixed-Use district may be allowed to advertise on the Pylon/Reader Board discussed in Section 3.2.3.9 (C) of this Specific Plan and the Shoppes Mixed-Use shall be exempt from Section 16.38.070 "Freeway-Oriented Signs" of the Chino Hills Development Code.

C. Major Site Identity Monument - With written approval from the Shoppes Retail owner, tenants located within the Shoppes Mixed-Use district may advertise on the Major Site Identity Monument discussed in Section 4.13.3 of this Specific Plan.

D. Residential Leasing/Identification Signs – Signs establishing the leasing of residential units shall be permitted throughout the Shoppes Mixed-Use district. The final design and location of such signage shall be subject to Community Development Director or designee approval. An identification sign identifying the name of the residential project at the major intersections of Boys Republic Drive and Shoppes Drive shall be permitted. The name of the residential project shall be approved per City Manager or designee.

E. Hotel(s) Signs – The hotel(s) shall be permitted to have building top/wall signage consistent with the name of the hotel chain, subject to approval as to height of such lettering by the City Manager or designee. In addition, the hotel(s) shall be entitled to a monument sign along Boys Republic Drive. The actual design and location of such sign shall be approved by the Community Development Director or designee.

F. Additional details on the Specific Plan signage program can be found in Section 4, *Design Guidelines*.

3.4.7 Additional Standards

For any development standard not specifically addressed herein, the City of Chino Hills Development Code shall govern.

3.5 COMMUNITY CENTER REGULATIONS FOR DEVELOPMENT

3.5.1 Community Center: Designation Intent and Purpose

The Community Center Land Use designation provides for a 19,000± sf Community Center. Exhibits 3-12 presents a conceptual site plan for the Community Center development.

3.5.2 Community Center: Permitted Uses

A. Permitted uses within the Community Center land use designation may include a recreational community center and passive park component.

3.5.2.1 Parking

The location of parking and loading facilities for the Community Center shall be generally shown on Exhibit 3-12, Community *Center Conceptual Site Plan,* and in Table 3-9 and the text below.

Table 3-9: Community Center Parking Requirements

Use	Required Number of Spaces
Community Center'	4/1000 sf

Abbreviations: sf = square feet

Notes:

If the calculation of required parking spaces results in a fractional number, that number shall be rounded up to the next whole numbered parking space.

Parking standards shall be approved by the City Manager or designee.

A. Parking Facility Development Standards:

6. Parking space dimensions - The minimum size of a parking space shall be nine feet wide (9') and nineteen feet (19') long. The minimum size of a handicapped parking space shall be as directed by Title 24 of the California Code of regulations.

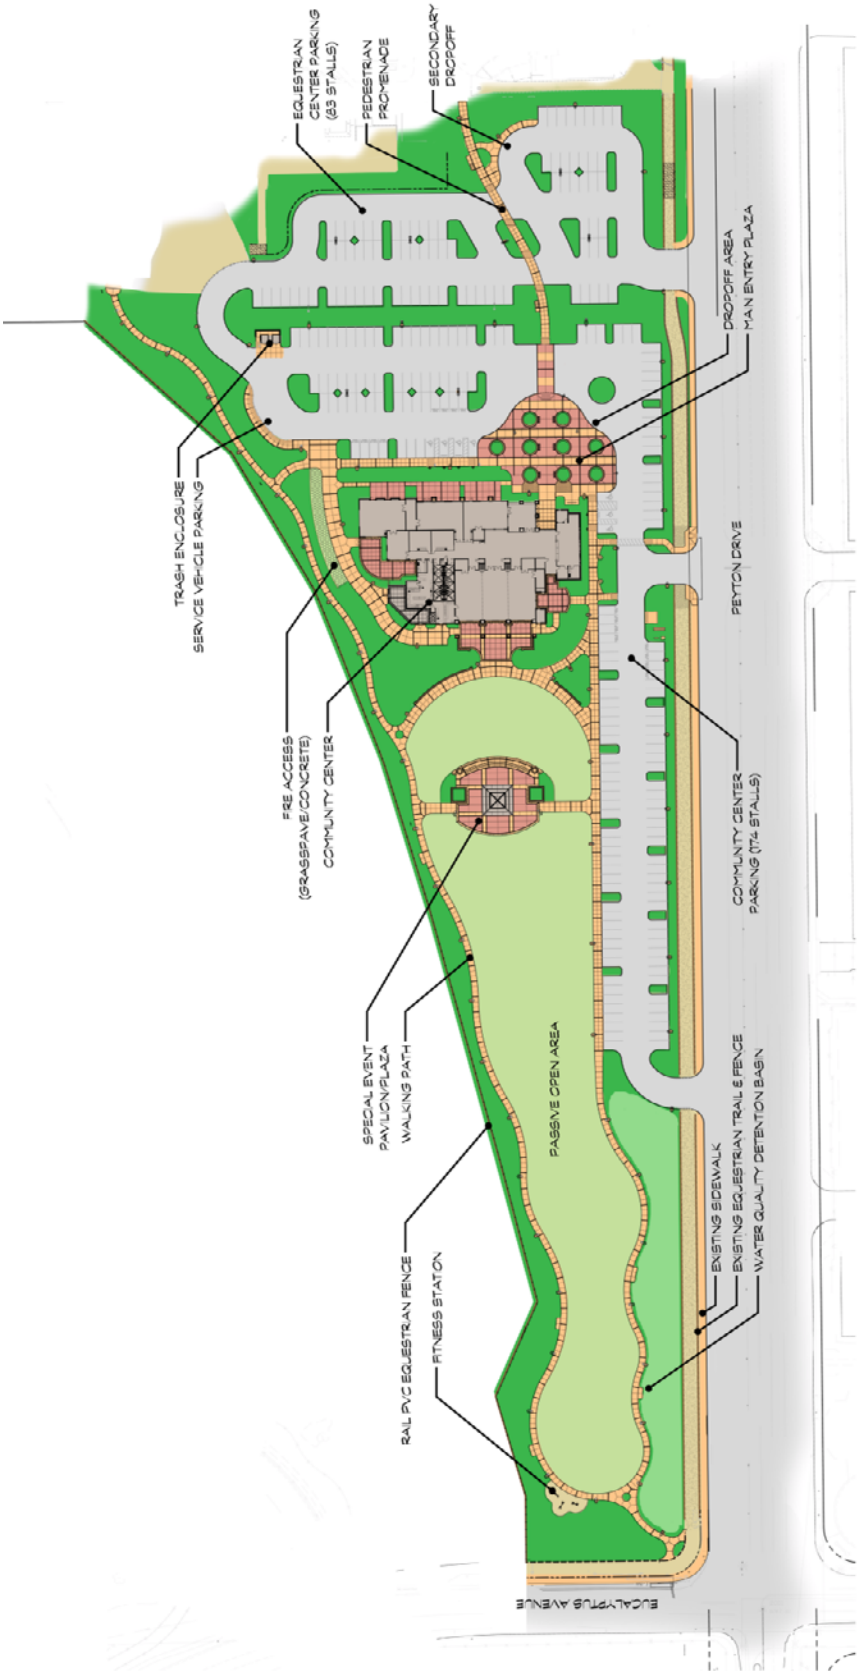
1. Parking space delineation - All parking spaces shall be clearly marked with paint or another easily distinguishable material and all spaces shall be delineated with single or double lines.

2. All parking spaces and associated driveways shall be entirely paved with concrete or asphalt-type surfacing per City standards and requirements.

1. Pavement graphics, directional signs and arrows shall be provided on parking lot drive aisles.

B. Bicycle Parking Standards - The total number of bicycle parking spaces shall be a minimum of 5% of the total parking spaces provided.

3.5.2.2 Wall and Fences



Walls, fences and hedges shall be subject to the requirements of Chapter 16.06.120, ""Walls, fences and hedges," of the Development Code. Deviations from Chapter 16.06.120 may be approved by the City Manager or designee at the time of site plan review.

3.5.2.3 Minor Site Plan Changes

Changes to the Community Center site plan, shown in Exhibit 3-12, *Community Center Conceptual Site* Plan, are subject to approval by the City Manager or designee. Changes may not be made to minimum setbacks or maximum heights.

3.5.2.4 Additional Standards.

For any development standard not specifically addressed herein, the City of Chino Hills Development Code shall govern.

Community Center Conceptual Site Plan
Exhibit 3-12

Amended – September 2012

[This page intentionally left blank]

3.6 COMMUNITY PARK REGULATIONS FOR DEVELOPMENT

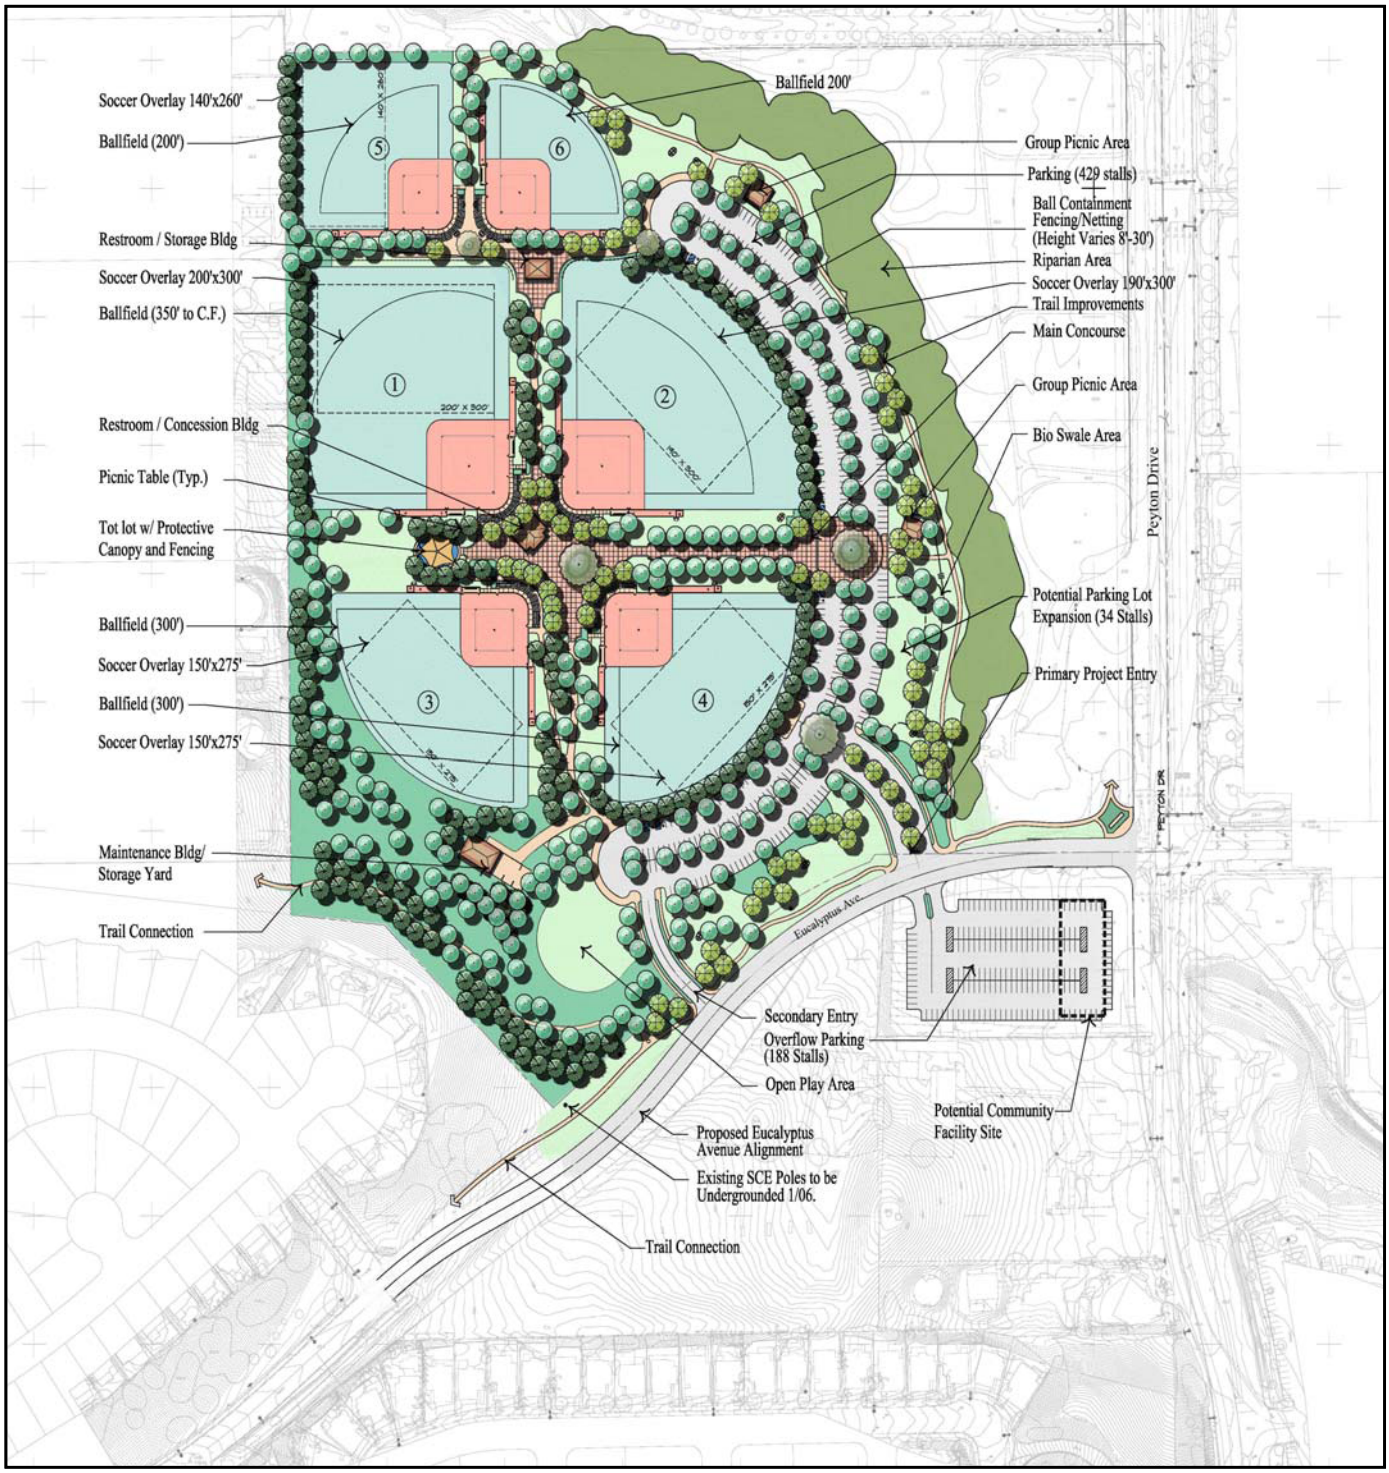
3.6.1 Community Park: Designation Intent and Purpose

The Community Park land use district and designation is intended to allow for a wide variety of open space activities and opportunities for residents of Chino Hills. The Community Park is an important recreational open space and park asset to the community. The Community Park is approximately forty-three (43) acres in size and is intended to accommodate active, organized sports as well as other park uses. This park contains a minimum of six (6) sports fields. Exhibit 3-10 presents an illustrative conceptual site plan for the Community Park development.

3.6.2 Community Park: Permitted Uses

A. The Community Park district allows a variety of open space uses, ranging from active parks, equestrian facilities and wildlife preserves. Accessory uses may include game courts, sporting fields and other outdoor recreational uses.

3.6.3 Community Park: Development Standards



A. No specific development standards apply to public facility buildings constructed within public parks. Buildings shall be designed and constructed to reflect the character of the parks in which they are located and to ensure compatibility with surrounding development on adjacent properties.

B. For all development proposed within the Community Park district, building height, distance between buildings, and yard requirements shall be determined by the City Manager or designee.

3.6.3.1 Parking and Loading

Off-street parking and loading shall be subject to the requirements of Chapter 16.34, "Parking and loading," of the Chino Hills Development Code. Deviations from Chapter 16.34 may be approved by the City Manager or designee at the time of site plan review.

4 DESIGN GUIDELINES

4.1 DESIGN GOALS

The Shoppes at Chino Hills Specific Plan area is the hub of the City in the form of a traditional downtown, civic center, and community park and is complemented by upscale multiple-family housing. The project is a source of civic pride. This mixed use development includes offices, retail shops, restaurants, hotels, as well as civic and residential uses.

The development plan for the Shoppes Retail, Civic Center and Shoppes Mixed-Use is based on a grid pattern of tree-lined streets oriented north-south and east-west. The pedestrian scale of the traditional "Main Street" is carefully blended with the modern demands for ease of access and adequate parking. Shaded sidewalks encourage people to walk among the various uses rather than drive. Pedestrian circulation is designed so that the development can be crossed by foot east to west in five minutes and north to south in seven minutes.

The designs of streetscapes, buildings, and landscaping within the Shoppes Retail, Civic Center, and Shoppes Mixed-Use reinforce the traditional downtown atmosphere and provide a vibrant, urban setting for those living, dining, working, relaxing, and shopping at the project. The development is a pedestrian-scaled venue of refined architectural expression rendered in high quality materials and finishes. The design guidelines in this section identify components important to the creation of this environment.

4.2 DESIGN CONTEXT

4.2.1 Shoppes Retail

The Shoppes Retail includes a department store, specialty retail shops, restaurants, and office uses. The Shoppes Retail component will combine modern retailing requirements for visibility, identity, ease of access and service, convenient parking and flexibility in leasing with the feel and scale of traditional "Main Street" shopping in order to create a successful retail center with a regional draw.

The Shoppes Retail is located along two tree-lined streets with angled, head-in parking at curbside. "Main Street" runs east-west and connects to Peyton Drive. "City Center Drive" runs north-south from Grand Avenue and connects the retail, restaurants and offices to the housing, civic buildings and library to the Boys Republic Drive to the south. Wide sidewalks adjoin the roadways.

The streetscape is comprised of one and two story buildings that provide an intimate, human-scaled space.

4.2.2 Civic Center

The Civic Center includes City Hall, the County library, the Police/Sheriff's substation, and the Chino Valley Fire District administration building. City Hall has frontage on City Center Drive. The County library and Fire administration facilities front on both City Center Drive and on the Boys Republic Drive. The Police/Sheriff substation has frontage on Peyton Drive. The Civic Center area is interconnected with the Shoppes Retail and the Shoppes Mixed-Use areas by pedestrian walkways and the grid-pattern street network. As in the Shoppes Retail area, the pedestrian-friendly scale is maintained.

While respecting and repeating the building massing and scale of the other uses within the Specific Plan area, the designs of Civic Center buildings suggest their unique roles within the community. The symbolic importance and the unique functions of the Civic Center are reflected in overall building forms and design. Unique shapes, massing, and fenestration are incorporated into the public gathering spaces of Civic Center buildings to accentuate their accessibility and their role in shaping community identity.

4.2.3 Shoppes Mixed-Use

Buildings are integrated within the overall plan and are buffered from arterial streets by the Shoppes Retail to the north and the Civic Center component to the west. The pedestrian-friendly environment of the Shoppes Retail is continued into the mixed-use area. For the residential component, attached units repeat the pattern of contiguous yet distinctive facades employed in the Retail component. Pedestrian-oriented city blocks are again formed by access roads and their intersections with driveways into parking areas. Some individual entries into the units maybe oriented toward the exterior street and adjoining sidewalks and others shall allow interior access from parking areas only.

4.2.4 Community Center

The Community Center is located adjacent to the Peyton Drive/Eucalyptus Avenue intersection. The configuration of the buildings, streets, parking, open space and landscaping balances the needs of the pedestrian and the automobile. Parking does not dominate the experience.

4.3 BUILDING FORM AND CHARACTER

The architecture for buildings comprising each of the land uses is a blend of building forms, massing, scale, and character that creates a pedestrian-oriented environment meant to be viewed and experienced on-foot rather than from the car. Examples of building design and form are shown in Exhibit 4-1.

Consistent with the overall character of the environment envisioned for the Specific Plan area, streetscape and building designs are guided by the following principles:

- Streetscape facades are comprised of a series of human-scaled wall segments, rather than monolithic wall expanses, to provide a comfortable and pleasant pedestrian experience;
- Articulation of building openings, roof, parapet and floor lines and changes in wall plane are used to provide visual interest and contrasts in light and shadow;
- Rooftop mechanical equipment is screened from view in a manner consistent with the architectural character of the building;

Particularly for the Shoppes Retail designation:

- Primary building entrances and display windows are oriented toward the street so as to support and encourage pedestrian activity;
- Diversity of architectural styles, quality materials and finishes, and variety of complementary colors is evident;
- Entryways are enhanced by means that include, but are not limited to, use of recessed doorways, inclusion of articulated lintels and pediments, incorporation of eaves, awnings, or canopies, and the use of doorway surround materials that contrast with those of major wall surfaces;
- Secondary building entrances and service doors will be oriented towards the rear of buildings, typically facing the main parking fields. The architecture will have similar articulation and materials to compliment the front streetscapes facades, but will be generally scaled back in design to delineate it from the primary pedestrian-oriented environment of the streets. A combination of tenant secondary entrance storefronts and single door service entrances may be provided along the rear elevations as determined by the Shoppes Retail operational needs and leasing requirements;
- For the comfort of pedestrians during hot weather, awnings, sunshades, or comparable assemblies project over sidewalks adjoining storefronts. Examples of canopies and sunshades are illustrated in Exhibit 4-2.

4.4 ENTRYWAYS

Enhanced entry features and landscaping are located at the major corners and entries to the Shoppes Retail, Civic Center, and the Residential Site. Elements such as water features, theme trees and/or enhanced landscape and paving are utilized. Exhibit 4-3 provides examples of corner and entry features.

4.5 PEDESTRIAN WALKWAYS

Walkways are located and configured so that pedestrians moving from parking spaces to buildings are separated from drive aisles to the maximum extent feasible. Entrances and parking lots will be configured to be functional and tied to logical destinations.

The walkways along Main Street and City Center Drive will feature adjoining landscaped areas to enhance the appearance of the walkway areas. Walkways along Main Street and City Center Drive will be readily distinguishable where they traverse drive aisles through the use of durable, low-maintenance surface materials such as pavers, brick scored concrete or similar architectural treatments.

4.6 OUTDOOR PUBLIC SPACES

Outdoor public spaces will offer attractive and inviting pedestrian scale features, spaces, and amenities such as:

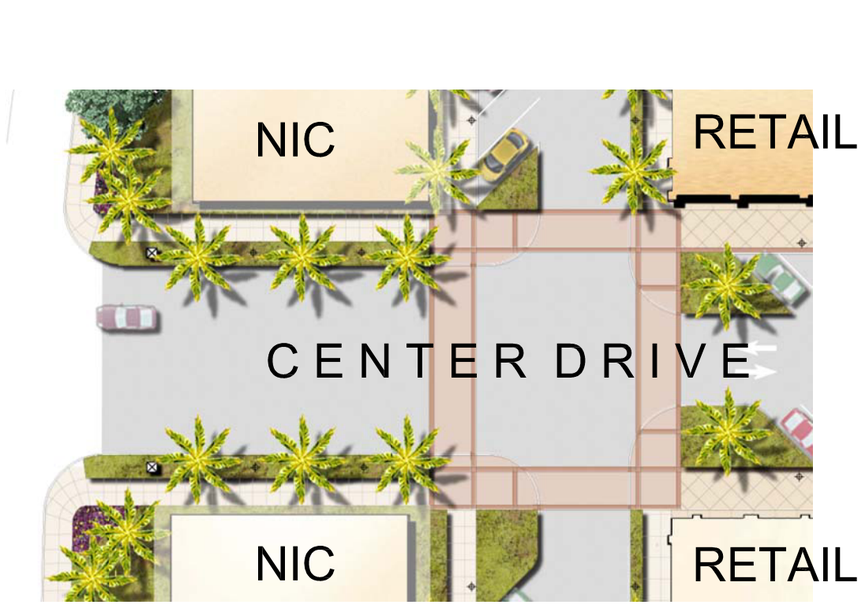
- Patio/seating area;
- Pedestrian plaza with benches;
- Window shopping walkways;
- Kiosks;
- Amenities such as fountains, street furniture, bicycle racks, and bus shelters.

Examples of outdoor public spaces are provided in Exhibit 4-4.

4.7 PRIVATE SPACES

The residential component in the Shoppes Mixed Use and Park Residential will allow for private amenities that may be accessed and used by residents and their guests only. Potential amenities may include, but are not limited to:

- Balconies/Patio areas;
- Pools and spas;



- Recreational areas;
- Game rooms;
- Food facilities;
- Classrooms;
- Cyber cafes; and
- Movie Theater areas.

In addition to the uses above, hotel and lodging uses may also include the following private spaces on site:

- Dining facilities;
- Bar or drinking establishment;
- Meetings rooms; and
- Onsite cleaning/Laundromat services.

4.8 PEDESTRIAN AMENITIES

The Shoppes Retail and Shoppes Mixed-Use includes a variety of uses and tenants. As a destination location, many visitors are on-site for several hours and move between uses on foot. Special care is taken to furnish amenities for these pedestrians such as:

- Bench Seating
  Public seating allows the pedestrians to sit down, relax, and people watch.

- Trash and Ash Urns
  Trash receptacles and, where possible, recycling containers are provided as well as ash stands for extinguishing smoking materials.

- Seat Walls
  Retaining walls in outdoor public spaces may include integrated seating surfaces.

- Bicycle Racks
  Bicycle racks are located in well-lighted areas and placed in a location visible from entrances and/or parking areas.

- Drinking Fountains, Planting Pots, Saucers (moveable) and Planting Boxes
  These may be placed near public walkways without obstructing them.

- Entry Pylon
  Entry pylons provide an "entry experience"

- Parking Meters (street front spaces)
  The project includes metered "street parking" along Main Street and City Center Drive. The use of metered parking assures a continuous vehicle turnover at the street front. The meters will be of a color which compliments the architecture of the project. Parking meters will be enforced for security by the City of Chino Hills.

- Public Restrooms
  The Shoppes Retail will include one (1) set of public restrooms, location to be determined by the Shoppes Retail developer. Public restrooms may not be located within the Shoppes Mixed-Use.

Examples of public amenities are provided in Exhibits 4-5 and 4-6.

4.9 SITE LIGHTING

All site lighting is coordinated as to style, material, and color. Illumination patterns overlap, creating an even level of illumination throughout the parking area. Pedestrian level lighting is used along pedestrian walkways.

The use of diverse lighting types and methods ensure that the Specific Plan area's unique character is apparent during the day when the fixtures are plainly visible and at night when the fixtures illuminate the walks, buildings, landscaping, and parking. All lighting is located and aimed away from adjacent properties and roadways as consistent with City of Chino Hills lighting guidelines. All lighting fixtures shall be appropriate in scale, intensity, and height to the use it is serving. Parking lot lights shall not exceed forty feet (40') in height. Examples of project lighting are provided in Exhibit 4-7.

Basic lighting types include but are not limited to:

- Street pole lighting along principal circulation paths (sidewalks);
- Ground-mounted bollard lighting along pathways/parking areas;
- Decorative lighting fixtures integrated into/atop entry pylons/gates;
- Elevated pole lighting at parking lots;
- Below-grade uplights;
- Ground-mounted up lights to illuminate landscape, etc;
- Building up-lighting discreetly mounted above human eye points;
- Strung lighting cross paseos/terrace areas (including seasonal lighting).

4.10 EXTERIOR BUILDING MATERIALS

No one or single, exterior material or color scheme dominates the architecture of a street or open space in the project. Diversity and richness of architectural expression are achieved with a variety of material choices. Materials such as stucco, EIFS, stone, tile, enhanced concrete, metal, and glass are introduced in different façade treatments to ensure that no single material dominates the palette. Rich materials and warm vibrant colors are used.

4.11 LANDSCAPING / HARDSCAPING

A Landscape Master Plan provides planting materials and locations to complement the building architecture, enhance the parking lot areas, and soften the effect of hardscapes and hard surfaces. Exhibit 4-8 provides the conceptual landscape plan for the Shoppes Retail. Although, the Landscape Plan is conceptual and displays only the retail component, similar design, palette and sizing of landscaping will provided in the other components of the Specific Plan including The Shoppes Mixed Use. The plant palette includes a variety of plant materials such as:

- Parking Lot Trees
  Cinnamomum Camphora
  Tristania Conferta
  Magnolia Grandiflora
  Lagerstoemia Indica
  Ulmus Parvifolia

- Entry/Accent Trees
  Phoenix Dactylifera
  Washington Filfera
  Washington Robusta

- Screen Trees
  Brachychiton Populneus
  Cupressus Sempervirens "Glauca"
  Cupressus Arizonica

- Small Accent Trees
  Bauhinia Variegata
  Lagerstroemia Sp.
  Geijera Parviflora

Substitution of the aforementioned list may be approved by the City Manager or designee.

Enhanced paving will generally be located along the storefront walkways of Main Street and City Center Drive, primary pedestrian crosswalks and at the Main Street and City Center Drive intersection. Enhanced paving shall be defined by the following materials, as approved by the City Manager or designee:

- Integral colored concrete with saw cut pattern including a sandblast or acid wash finish;

- Concrete interlocking paving units with accent bands;

- Natural grey concrete with saw cut pattern including including a sandblast or acid wash finish with paver accents or borders;
- Any combination of the above materials, pattern and finishes;
- Standard pedestrian paving will be permitted located along the rear of the retail buildings where tenant service doors and loading activities are to take place or at other areas of secondary pedestrian access not affiliated with the retail storefronts. Standard pedestrian paving shall be defined by natural grey concrete with saw cut pattern including a sandblast or acid wash finish with paver accents or borders.

4.12 STREET TREES

Trees in the public rights-of-way complement the unique character of each street. Street trees include:

- City Center Drive and Main Street
  Pyrus Calleryana Bradford
  Koelreuteria Paniculata
  Platanus Acerifolia
- Grand Avenue and Peyton Drive
  Brachychiton Populneus
- Remaining Project Perimeter
  Tipuana Tipu
  Lirodendron Tulipifera
  Brachychiton Populneus

Substitution of the aforementioned list may be approved by the City Manager or designee.

4.13 SIGNS

Signs within the Shoppes Retail and Shoppes Mixed Use provide for tenant identification signs and directional signs utilizing colors, materials, finishes, and illumination so as to complement one another and be consistent with the upscale character of the Specific Plan area. The overall character of the signage and graphics for the Shoppes Retail and Shoppes Mixed-Use is one of a traditional American Main Street that reflects the variety and uniqueness of the architecture. Signs are compatible with the pedestrian scale of the environment rather than that of a larger vehicular-scaled venue. In recognition of these distinct characteristics, the requirements of Development Code Chapter 16.38, "Signs," are waived subject to City Manager or designee review and approval of a sign program. The general location of the major signs for the Shoppes Retail may be as generally shown on Exhibit 4-9, *Shoppes Retail Conceptual Sign Locations*, and described in the following sections.

4.13.1 Wayfinding Signs

The wayfinding signs help the visitor navigate through an urban environment. The graphics, like in many similar urban environments, help to create a sense of orientation for the first time visitor, and a sense of comfort for those that return often.

4.13.2 Pylon / Reader Board

The Pylon/Reader Board sign will be located near the intersection of Grand Avenue and the Chino Valley Freeway (SR-71) either south of Grand Avenue on private property or within the Grand Avenue right-of-way, as depicted in Exhibit 4-12. The Pylon/Reader Board sign may be up to 100 feet tall and may only include the project name (i.e. 'The Shoppes at Chino Hills'), a project logo or icon, the name 'City of Chino Hills', and the names of the tenants operating on the project site.[§§] With approval from the Shoppes Retail owner and management, tenants located in the Shoppes Mixed-Use district may advertise on the Pylon/Reader Board sign.

4.13.3 Major Site Identity Monuments

Located at major corners to the project, the major site identity monuments are of sizes appropriate to be readable from vehicles traveling at speeds of up to 50 miles per hour. Individual dimensional letters and logo will identify the project. The letters and logo may be internally illuminated. Exhibit 4-13 illustrates examples of Major Site Identity Monuments.

4.13.4 Project Gateways and Identity

The vehicular entrance gateways and identities will be located on either side of the major roadway entrances on masonry pylons or "neighborhood" markers

[§§] Text as amended May 18, 2006.

and will be at a scale appropriate to be read from within a vehicle. Illumination of the identity plaques will be from the ground or a wall mounted external source, not internally illuminated. Exhibit 4-13 illustrates examples of Project Gateways and Identity signage.

4.13.5 Vehicular Scaled Directional Signs

Located at vehicular intersections on-site, these signs guide the visitor to different uses on the site such as to offices, major anchors, and municipal buildings. The project name is located on the sign in a smaller, more understated way so as not to detract from the listings. This type of signage may also provide direction to the sales/leasing office for residential uses within The Shoppes Mixed Use. Exhibit 4-14 illustrates examples of Vehicle Scaled Directional Signs.

4.13.6 Pedestrian Scaled Directional Signs

This sign type is used to direct the pedestrian to various on-site uses and is located along major paths of travel on sidewalks and in gathering areas. Pedestrian-scaled signs also point the way to amenities such as public restrooms, security, information booths, and elevators. The signs are pole or ground-mounted and include appropriate text and arrows. Exhibit 4-14 illustrates examples of Pedestrian Scaled Directional Signs.

4.13.7 Project Directory Signs and Community Board

Project directory signs are located in at least two prominent positions on the Retail Shoppes Site. The signs include a map of the Shoppes Retail and indicate all uses/tenants so as to allow visitors to orient themselves and proceed to any destination shown. Exhibit 4-15 illustrates examples of Project Directory Signs and Community Board.

4.13.8 Site Pageantry

Site pageantry consists of fabric or metal banners that are attached to light poles or building facades throughout the project. They are a part of themed graphics of the project and may include the project's name and/or logo, holiday or special event greetings and are not intended for display of tenant graphics. Site Pageantry will be concentrated along the main retail streets of the project and at major entrances to the site. Exhibit 4-16 illustrates examples of Site Pageantry.

Note: Signage at the southeast corner of Grand and Peyton shall provide for an easement to accommodate the Citywide Identity Enhancement Program as specified by the City Manager or designee.

4.13.9 Regulatory Signage

The street and passage name identities will be in the form of traditional street signs that will be freestanding or mounted to a pole light, or mounted on building walls adjacent to street or sidewalks. The design of the signs will be reflective of the theme of the overall project. Other site regulatory signs such as stop signs, parking signs, handicap parking signs, service areas, etc. will incorporate elements of similar to the street identity signs. Exhibit 4-17 illustrates examples of Regulatory Signage.

4.13.10 Tenant Identity Signage

Tenant identity signage mounted to building facades is located throughout the Shoppes Retail and Shoppes Mixed-Use designation. Signage is an integral design feature of each tenant's storefront design. Each tenant storefront is designed to complement the design of the overall facade and building design. Individual tenants are encouraged to use a mixture of urban signage techniques to give variety and the appearance of having evolved in a high-end urban setting. An eclectic mix of dimensional signage will be encouraged to create a sense of uniqueness and variety along the streetscape.

Sign formats for tenant signs may be applied in the following fashion depending on location and storefront design:

- Fascia signs;
- Blade signs;
- Lettering and graphics on valances or awnings;
- Signage applied to the glass show windows, storefronts and entrances;
- Inlaid floor graphics;
- Wall mounted plaques and
- Signage applied to canopies.

Acceptable sign types include:

- Dimensional metal, glass or other material with a permanent appearance indirectly lit;
- Reverse channel letters with halo illumination, with opaque face and sides and non-reflective background;
- Embedded, flush, recessed box signs of an opaque material with push through, translucent copy;

- Incised letters cut into or cast out of an opaque material and indirectly lit;
- Sculptured, iconographic elements contextual to the storefront design;
- Internally illuminated channel letters or logo.

In general, all tenant signage must be proportionate to the storefront and building design as well as the urban nature of the street. Each tenant is allowed primary building fascia signage for each elevation facing the common area, with additional blade, show window, wall plaques, floor, awning, and canopy signs in accordance with the City approved sign program for the project. No sign will exceed sixty-six percent (66%) of storefront width. Blade signs will be mounted to allow an eight foot (8') minimum clearance above the walkway. Exhibits 4-18 and 4-19 illustrate examples of Tenant Signage. The dashed line on Exhibit 4-9, *Shoppes Retail Conceptual Sign Locations,* is to indicate possible sign locations only. Final location will be determined as each space is tailored to each individual tenant.

4.13.11 Prohibited Signage

- Animated components, flashing lights, rotating or flashing signs (except for the reader board/pylon sign);
- Illuminated sign boxes;
- Portable signs**;
- Balloon or inflatable signs**;
- Signs which emit sound or odor;
- Signs with exposed raceways, conduit, junction boxes, or transformers;
- Paper, cardboard, or Styrofoam and signs made of simulated materials e.g. wood-grained plastic**;
- Wood signs.

** Such signage may be allowed to be used at The Shoppes Mixed-Use on a temporary basis. Such signage shall be approved by the Community Development Director or designee.

5 IMPLEMENTATION PLAN

The purpose of this section is to define the implementation measures necessary to carry out The Shoppes at Chino Hills Retail/Civic Center/Residential/Community Park Specific Plan.

5.1 PHASING

Phasing of the Specific Plan meets the following objectives:

- The orderly build-out of the mixed-use project based upon market and economic conditions.
- The provision of adequate infrastructure and public facilities concurrent with development of each phase.
- The protection of public health, safety and welfare.

The timing of implementation of the five project components is dependent upon the completion of a new Community Park. The City requires that the public continuously have reasonably adequate access to park facilities. No demolition or construction activity on the current Chino Hills Community Park is expected to occur until construction of the Community Park is substantially completed. Construction of the Community Park was completed by the City in February 2007.

It is envisioned that the Shoppes Retail will be built in one phase, with the timing of completion of perimeter restaurant pads dependent upon market activity.

5.2 FINANCING AND FEES

California Government Code Section 65451 sets forth the basic content of specific plans and one of the requirements is to include information relating to project financing and fees.

Various techniques are available for financing the required infrastructure and project components. Since certain elements of the infrastructure and project will be for use of the general public, public financing may be appropriate for these elements. Possible public financing sources include: Community Facility District funds, Development Impact Fees, Grants, Landscape and Lighting District Funds and the General Fund. All applicable development impact fees and all other related administration fees are collected at the time of issuance of building permits, unless otherwise determined by the City.

5.3 GENERAL PROVISIONS

5.3.1 Applicability

The development standards contained herein provide specific standards for land use development within the Specific Plan area. The Specific Plan supersedes the otherwise applicable City of Chino Hills development standards/regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Chino Hills Development Code, the provisions of the Specific Plan shall take precedence. Where the Specific Plan is silent, the City of Chino Hills Development Code shall apply.

5.3.2 Administration

The Shoppes at Chino Hills Retail/Civic Center/Residential/Community Park Specific Plan serves as the implementation tool for the General Plan as well as the zoning for the project site. The Specific Plan addresses general provisions, permitted uses, development standards and design guidelines.

5.3.3 Interpretation

Development within the Specific Plan area is implemented through the approval of parcel and tentative and/or tract maps. The administrative process described below provides mechanisms for review and approval of development projects within the Specific Plan consistent with the Specific Plan objectives.

Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan is resolved by the City Manager or designee in a manner consistent with the goals, policies, purposes and intent established in this Specific Plan.

5.3.4 Implementation

All development proposals within the Specific Plan are subject to the implementation procedures established herein. See Exhibit 5-1, for the Project Review and Approval Process Chart.

5.3.5 Specific Plan Revisions

Revisions to the Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the Government Code. Revisions are processed pursuant to the provisions of the Government Code for Specific Plan and the City of Chino Hills Development Code. In the event the proposed revisions require supplemental environmental analysis, pursuant to the California Environmental Quality Act (CEQA), the applicant is responsible for preparing the necessary CEQA documentation.

5.3.6 Minor Modifications

The following constitute Minor Modifications to the Specific Plan. They are subject to review and approval by the City Manger or designee. They do not require amendment to the Specific Plan In no case, shall minor modifications result in an increase in density, increase in height, reduction in setback, decrease in parking ratios, or change of use in a manner that would be inconsistent with the requirement of the Specific Plan:

- Change in utility and/ public service provider;
- Minor changes to text and maps intended to clarify Specific Plan information, provided such changes do not add density or modify the development policies or standards of the Specific Plan;
- Minor changes to landscape materials, wall materials, entry design, streetscape design and signage which are consistent with the conceptual design set forth in the design guidelines contained with the Specific Plan provided that the substitute materials and designs approved are of the same of better quality;
- Minor changes to the design guidelines including architecture, design, and color palette, provided that the design is of the same or better quality;
- Minor changes to the Shoppes Retail and Shoppes Mixed-Use conceptual site plans, building dimensions, or architectural elevations as depicted in the Specific Plan necessary to accommodate proposed improvements and determined residential product provided that such do not alter the general layout and location on the conceptual site plans and are in compliance with all of the restrictions set forth in Table 2-1, "Shoppes Retail Uses" and Table 2-3, "Shoppes Mixed-Use," respectively;
- Changes to the Civic Center conceptual site plan, building dimensions, or architectural elevations as depicted in the Specific Plan to accommodate City requirements;
- Other modifications of a similar nature to those listed above as determined by the City Manager or designee.

5.3.7 Appeals

All appeals pertaining to this Specific Plan shall be made to the Planning Commission. The applicant or any other entity shall have the right to appeal the decision of the Planning Commission on any determination by filing an application on forms provided by the City of Chino Hills within ten (10) business days following the final date of action for which an appeal is made.

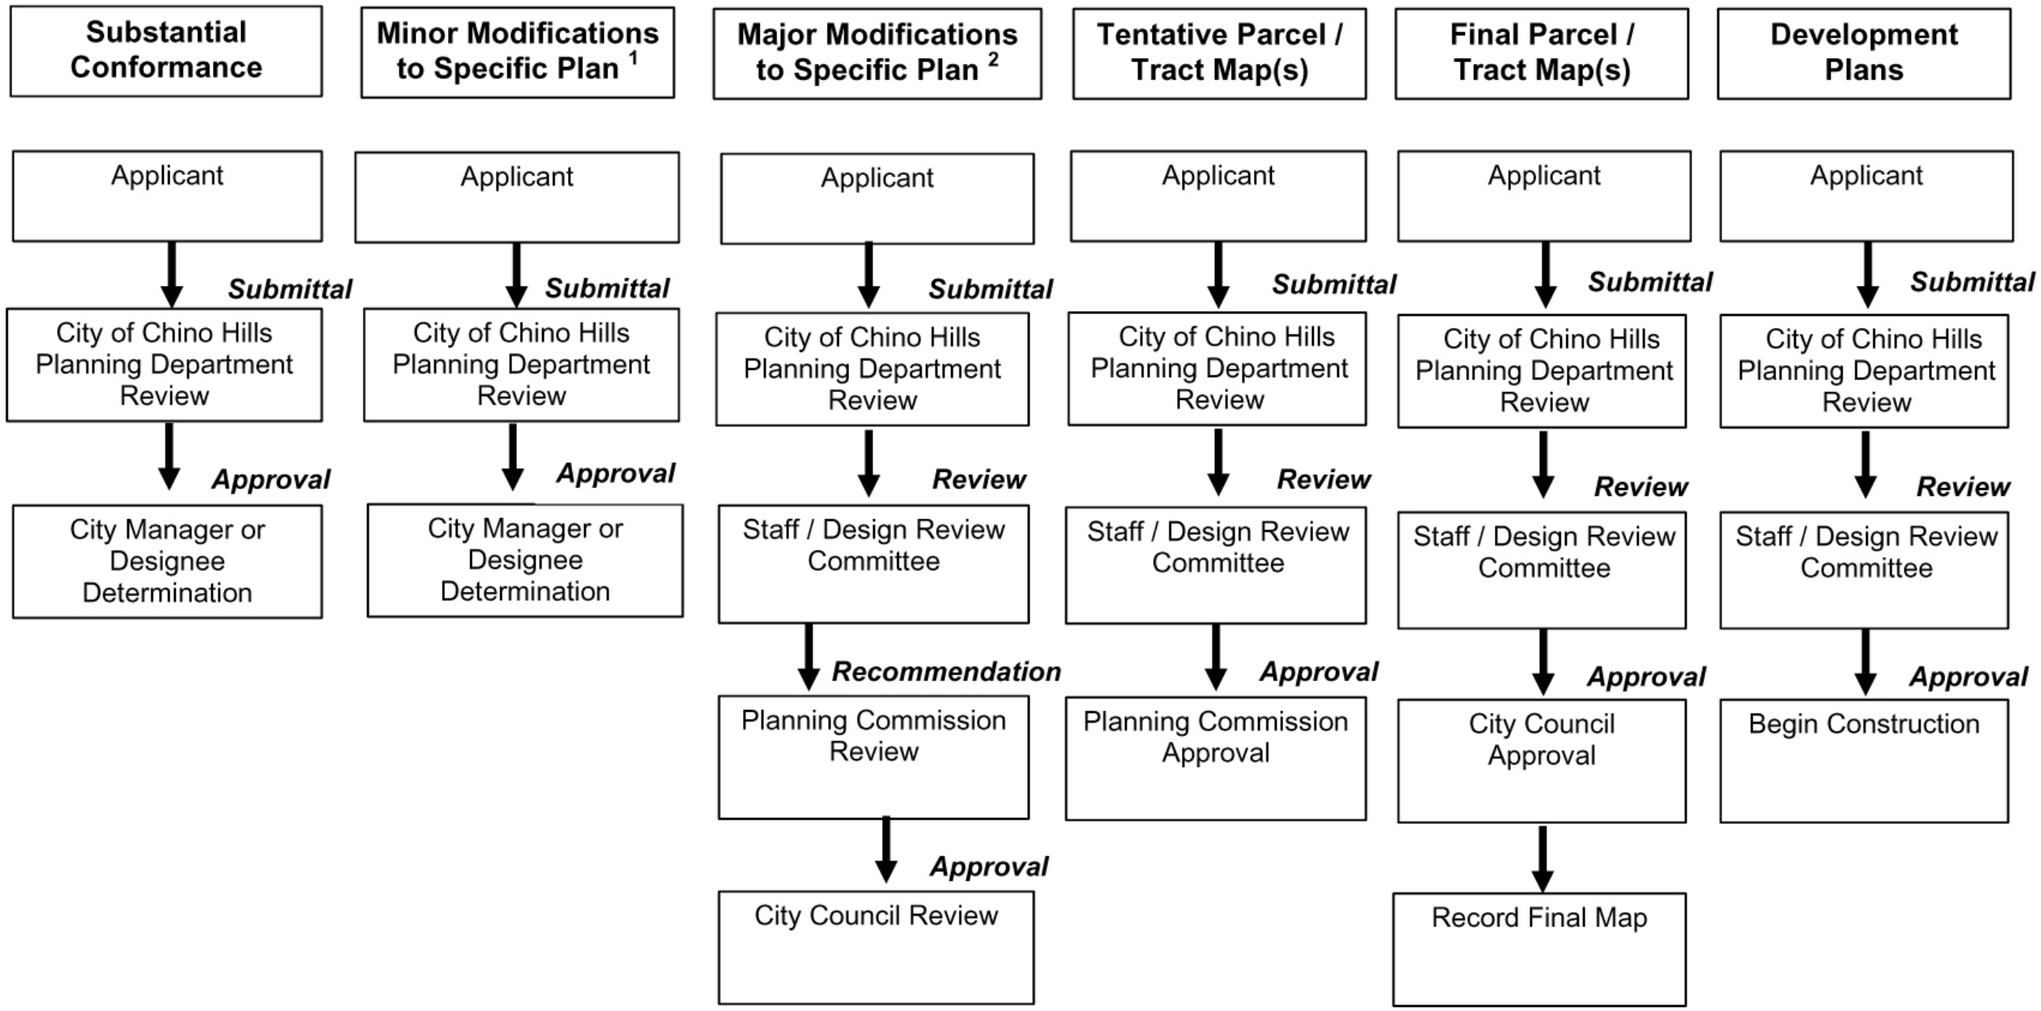
Appeals shall be processed consistent with the provisions of the City of Chino Hills Development Code.

5.3.8 Site Development Permits

A Site Development Permit (SDP, Staff Approval) is required for the hotel and retail components of the Shoppes Mixed-Use prior to submittal of construction plans. Adoption of the Specific Plan includes adoption of the design guidelines contained herein which provide direction for the design of the development projects within the project site.

5.3.9 Maps

Approval of maps may occur with or subsequent to the adoption of the Specific Plan creating parcels for development. The project may include parcel map(s), lot line adjustments and/or other minor subdivision actions.



5.3.10 Development Agreement

No provisions within this Specific Plan shall alter or supersede Development Agreement provisions concerning the Shoppes Retail project as approved by the City of Chino Hills City Council.

5.4 GENERAL PLAN CONSISTENCY

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines and programs with the goals and policies set forth in the general plan.

The Shoppes at Chino Hills Retail/Civic Center/Mixed-Use/Residential/Community Park Specific Plan has been prepared in conformance with the goals and policies of the City of Chino Hills General Plan.

[1] Minor Modifications are defined in Section 5.3.6, *Minor Modifications*, in this Specific Plan
[2] Major Modifications constitute those changes and revisions not referenced in Section 5.3.6, *Minor Modifications*, of the Specific Plan

Project Review & Approval Process Chart
Exhibit 5-1

[This page intentionally left blank]

[This page intentionally left blank]

APPENDIX G: PROPOSED GENERAL PLAN GOALS, POLICIES, AND ACTIONS

SUMMARY OF REVISED GOALS, POLICES AND ACTIONS

All new language is provided in **bold/underline** and deleted language is provide with ~~strikeout~~.

CIRCULATION ELEMENT

The following goals, policies, and actions support the City of Chino Hills Circulation Plan and the City's vision to provide well-planned transportation and utility systems that support the general pattern of development.

Goal C-1: Provide a Comprehensive Vehicular Transportation Network

Policy C-1.1: Provide a comprehensive roadway network that supports the movement of people and goods in a safe and efficient manner.

Action C-1.1.1: Achieve and maintain a minimum Level of Service D on all roadway links and at all roadway intersections, with the exception of intersections within one-half mile of the SR-71 Freeway, where a minimum Level of Service E shall be maintained.

Action C-1.1.2: Maintain San Bernardino County Congestion Management Program (CMP) highway system roadway links and intersections at Level of Service E.

Action C-1.1.3: Require traffic impact analyses or traffic studies for private and public projects, applying LOS criteria, to ensure that discretionary development projects do not cause roadway congestion in excess of acceptable levels of service within Chino Hills, or on CMP roadway links or intersections.

Action C-1.1.4: Require new developments to provide for all roads within their boundaries and to pay their fair share of planned roadway improvement costs.

Action C-1.1.5: Continue to assert that all improvements to and maintenance of the portion of Chino Hills Parkway/ Carbon Canyon Road that is part of SR-142 shall be the responsibility of the State of California.

Action C-1.1.6: Continue to enforce heavy truck travel restrictions throughout the City.

Policy C-1.2: Create a safe, efficient, and neighborhood-friendly street system.

Action C-1.2.1: Minimize through traffic in residential neighborhoods through a variety of land use controls and traffic control devices.

Action C-1.2.2: Construct major streets on the perimeter of the neighborhood to improve public safety by eliminating hazards, noise, smoke, odor, and other nuisances from residential areas.

Action C-1.2.3: Design collector streets to circulate traffic within the neighborhood but discourage through traffic.

Action C-1.2.4: Design local streets to primarily provide access to homes and other properties.

Action C-1.2.5: Require all development projects to meet mandatory standards with regard to vertical and horizontal alignments, access control, rights of way, cross-sections, intersections, sidewalks, curbs and gutters, cul de sacs, driveway widths and grades, right of way dedication and improvements, and curb cuts for the disabled.

~~Action C-1.2.6: Retain the switchbacks on Carbon Canyon Road between Feldspar Drive and the Western Hills Country Club~~.

Action C-1.2.**6**~~7~~: Provide adequate sight distances for safe vehicular movement at a road's design speed and at all intersections as consistent with City and Caltrans standards.

Action C-1.2.**7**~~8~~: Prohibit direct driveway access from individual residences to ~~major~~ arterials~~, major highways, secondary highways~~, and collectors.

Action C-1.2.**8**~~9~~: Require driveway placement to be primarily designed for safety and, secondarily, to enhance circulation.

Action C-1.2.**9**~~10~~: Plan access and circulation of each development project to accommodate vehicles (including emergency vehicles and trash trucks), pedestrians, and bicycles.

Action C-1.2.**10**~~11~~: Require adequate off-street parking for all developments.

Goal C-2: Support Regional Transportation Policies That Link Chino Hills to Neighboring Cities and Counties

Policy C-2.1: Support and participate in regional efforts to improve vehicular and non-vehicular transportation systems.

Action C-2.1.1: Support and cooperate with all aspects of the countywide CMP for maintaining levels of service for CMP segments located in the City.

Action C-2.1.2: Coordinate with San Bernardino Associated Governments (SANBAG) regarding the integration of Intelligent Transportation Systems (ITS) that will maximize

the efficiency of the transportation system through advanced technologies, such as adaptive signal controls.

Action C-2.1.3: Collaborate with regional transportation planning and transit agencies to plan for the efficient allocation of transportation resources.

Action C-2.1.4: Support regional efforts to the extent feasible to reduce single-occupancy vehicle travel.

Action C-2.1.5: Continue to implement the citywide trip reduction ordinance, consistent with San Bernardino County CMP requirements, to reduce traffic congestion and improve air quality.

Action C-2.1.6: Continue to implement Vehicle Miles Traveled (VMT) City policy and guidelines to ensure consistency with State Office of Planning and Research Green House Gas reduction efforts.

Goal C-3: Provide Safe and Adequate Pedestrian, Bicycle, and Public Transportation Systems to Provide Alternatives to Single Occupant Vehicular Travel and to Support Land Uses

Policy C-3.1: Encourage the use of public transportation for commute and local, and increase citywide transit ridership.

Action C-3.1.1: Work with OmniTrans and/or other **transit** ~~bus~~ providers to **maintain and** expand transit routes serving the City and the surrounding communities.

Action C-3.1.2: Work with OmniTrans and/or other bus providers to assess and provide paratransit services for low-income, elderly, disabled, and other residents in need of access assistance.

Action C-3.1.3: Work to ensure that all transit stops have as many amenities as feasible such as: shade structures, water fountains, wayfinding, live route information, and bicycle parking.

Action C-3.1.4: Partner with transit agencies to continue and further develop a free or reduced fare program, and other transportation modes such as dial-a-ride, for youth, seniors, disabled, and other vulnerable populations.

Action C-3.1.5: Make available to the public maps that show mobility routes for walking, biking and transit, as well as, how these networks connect to schools, parks, healthy food, and transit.

~~Action C-3.1.3: Require bus turn-outs in residential, commercial, and industrial public use areas.~~

~~Action C-3.1.4: Plan for a transit station within walking distance (as determined by state and regional policy) of Grand Avenue and Peyton Drive.~~

Policy C-3.2: Support other alternatives to single-occupant vehicular travel.

Action C-3.2.1: Work with the Chino Valley Unified School District to implement ride sharing, bike routes, and other non-single-occupant vehicle transportation options.

Action C-3.2.2: Establish one or more park-and-ride lots to be located near freeway interchanges, and require secure and easily accessible park-and-ride facilities.

Action C-3.2.3: Support the citywide Bicycle Master Plan and bikeway improvements.

Action C-3.2.4~~1~~: Add bike lanes, sidewalks, and crosswalk improvements to close gaps in walking and biking networks and improve safe mobility across the City with a focus on areas around schools and public facilities.

Goal C-4: Encourage Development That Supports Balanced Land Uses and Alternative Modes of Transportation That Reduce the Reliance on the Automobile

Policy C-4.1: Plan for high-density mixed-use development close to arterial roadways and available transit.

Action C-4.1.1: Locate high density housing within walking distance of transit, as determined by state and regional policies.

Action C-4.1.2: Locate high density housing within walking distance of shopping, services and transit.

Action C-4.1.3: Prioritize transportation investments to increase safety around parks, open spaces, community centers, major shopping centers, schools, preschools, and childcare centers.

Action C-4.1.4 Require mixed use and/or high-density development to incorporate pedestrian-oriented design elements, such as accessibility to adjacent shopping, services and transit; safe pedestrian connections and crossings; parks and public open spaces; street furniture, attractive pedestrian-oriented design at the street level; street facing buildings; and street trees and landscaping.

Action C-4.1.5: Encourage use of alternative fuel vehicles and the construction of infrastructure to charge/fuel alternative fuel vehicles.

Action C-4.1.6: Require EV chargers in new public and private developments, including new multifamily developments.

Goal C-5: Ensure an Adequate and Well-Maintained Infrastructure System

Policy C-5.1: Provide adequate infrastructure improvements in conjunction with development.

Action C-5.1.1: Plan and design new roadways and expansion/completion of existing roadways to allow for co-location of water, sewer, storm drainage, communications, and energy facilities within the road right of way.

Action C-5.1.2: Require private and public development projects to be responsible for providing road improvements along all frontages abutting a public street right of way in accordance with the design specifications for that roadway.

Action C-5.1.3: Require private and public development projects to be responsible for providing traffic control devices and wet and dry utility improvements necessary to meet the needs of the project, and to properly integrate into the established and planned infrastructure systems.

CONSERVATION ELEMENT

The following goals, policies, and actions support the City of Chino Hills Conservation Plan and its vision to preserve natural resources, promote energy conservation, and protect cultural resources.

Goal CN-1: Preserve Chino Hills' Rural Character

Policy CN-1.1: Preserve and protect Chino Hills' rural and natural scenic qualities

Action CN-1.1.1: **Protecting ridgelines as** ~~Protect~~ identified **under Land Use Element Goal LU-1, Policy LU-1.1, Action LU-1.1.2.** ~~extremely prominent ridgelines, prominent ridgelines, and knolls.~~

Action CN-1.1.2: Preserve the character of natural open spaces **as identified under Land Use Element Goal LU-1, Policy LU-1.1, Action LU-1.1.3 and Action LU-1.1.12**~~by integrating existing natural features into new development.~~

Action CN-1.1.3: Preserve as much open space as possible along canyon roadways such as Carbon Canyon, Soquel Canyon, and the canyons adjacent to Chino Hills State Park.

Action CN-1.1.4: Keep canyon floors ~~as close~~ as close as possible to their natural condition to accommodate natural periodic flooding, wildlife habitat, and native riparian plants.

~~Action CN-1.1.5: In canyon areas committed to development, emphasize the retention of natural topographic features, and require low visual profiles and dense vegetation for buildings.~~

Action CN-1.1.6: Encourage natural contour grading **as identified under Land Use Element Goal LU-1, Policy LU-1.2, Action LU-1.2.3**.

Action CN-1.1.7: Use existing trees and additional tree planting to blend new development and manufactured slopes with the natural setting, especially in highly visible locations.

Action CN-1.1.8: Preserve existing significant trees where feasible, and extensively plant new trees consistent with **the** City tree **protection ordinance.** ~~policies.~~

Policy CN-1.2: Preserve and protect Chino Hills' biological resources.

Action CN-1.2.1: Preserve natural open spaces that act as wildlife corridors.

Action CN-1.2.2: Discourage new development in areas that contain sensitive, rare, or endangered species, oak woodlands, chaparral, and riparian habitats

Action CN-1.2.3: Preserve oak woodlands, riparian areas, and fresh water marshes to the maximum extent feasible.

Action CN-1.2.4: Require **and monitor compliance with the City tree protection ordinance.** ~~City approval to remove trees that in the opinion of the City function as an important part of the City's or a neighborhood's aesthetics character.~~

Action CN-1.2.5: Limit channeling of streams to the minimal improvements necessary for flood control as determined by a City-approved project-specific hydrologic analysis, **and encourage these improvements to have a natural appearance.**

Action CN-1.2.6: Require biological resources surveys prior to proposed development within the Biotic Resources Overlay District and in other areas where there is a potential for special-status species or habitat to occur.

Action CN-1.2.7: Require a wildlife movement study for any project, including any new or extended roadway, potentially adversely affecting wildlife movement. This shall include identification of, and if warranted mitigation to protect, existing habitat linkages, wildlife corridors, wildlife movement in the vicinity, and crossing structures at freeways and major roadways; and recommended project design changes and avoidance, minimization, and mitigation measures to offset potentially significant adverse impacts to wildlife movement. For a new or extended roadway that is anticipated to result in a significant adverse impact to wildlife movement, require project design changes and/or avoidance, minimization, and/or mitigation measures which could include, but not be limited to: construction of wildlife crossings (e.g., underpass, overpass), fencing to guide wildlife, native plant restoration, and/or a lighting plan (to ensure that any new lighting does not deter wildlife through remaining habitat linkages.

Goal CN-2: Protect Chino Hills' Cultural Resources

Policy CN-2.1: Protect Chino Hills' archaeological resources.

Action CN-2.1.1: Require appropriate archaeological surveys as part of the environmental review process where archaeological resources may be present.

Action CN-2.1.2: Require on-site inspections by a qualified archaeologist during grading activities where archaeological resources may be present.

Action CN-2.1.3: Where archaeological resources are found during development activities, require identified archaeological materials to be preserved, restored, cataloged, and/or transmitted to the appropriate repository or as otherwise directed by a qualified professional archaeologist.

Action CN-2.1.4: Consult with local Native American tribes as required to avoid impacts on tribal cultural archaeological resources.

Policy CN-2.2: Protect Chino Hills' paleontological resources.

Action CN-2.2.1: Require appropriate paleontological surveys as part of the environmental review process where paleontological resources may be present.

Action CN-2.2.2: Where paleontological resources are found during development activities, require on-site inspections by a qualified paleontologist during grading activities where paleontological resources may be present.

Action CN-2.2.3: Require identified paleontological materials to be preserved, restored, cataloged, and/or transmitted to the appropriate repository or as otherwise directed by a qualified professional paleontologist.

Policy CN-2.3: Protect Chino Hills' potential historical resources.

Action CN-2.3.1: Prior to a change of land use or other action on the Boys Republic property that could disturb a potential historic resource, require a historic resource survey of the property by a qualified historic resource consultant, and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.2: Prior to a change of land use or other action on the Tres Hermanos property that could disturb a potential historic resource, require a historic resource survey of the property by a qualified historic **resource consultant, and consider incorporating any recommendations as requirements into subsequent development approval**.

Action CN-2.3.3: Prior to grading on-site of the original clubhouse of the 1925 Los Serranos Country Club, require an appropriate archaeological survey to determine the presence of artifacts associated with the former Bridger/Gird Adobe site and consider incorporating any recommendations as requirements into subsequent development approval.

~~Action CN-2.3.4: Consider placement of markers to acknowledge the local importance to Chino Hills' history of the Carbon Canyon and English Road equestrian communities.~~

Action CN-2.3.**4**~~5~~: For structures over 45 years old, review available City building records and make a determination regarding the structure's potential historical significance prior to permitting its demolition or substantial alteration.

Goal CN-3: Promote Sustainable Practices that Conserve Natural Resources and Reduce Greenhouse Gas Emissions

Policy CN-3.1: Endorse green building design in new and existing construction.

Action CN-3.1.1: Implement green building policies that promote increased use of energy efficiency, alternative energy, recycled materials, renewable resources, local materials, water efficiency, and pollution reduction.

Action CN-3.1.2: Establish programs that encourage homeowners to reduce energy consumption.

Action CN-3.1.3: Seek available funding sources that can be applied toward green building programs.

Action CN-3.1.4: Coordinate with state and regional agencies to ensure that alternative energy facilities are compatible with Chino Hills' natural and built environment.

Policy CN-3.2: **Continue to participate in County** ~~Develop~~ and **regional greenhouse gas reduction programs**. ~~implement a Climate Action Plan.~~

Action CN-3.2.1: Reduce greenhouse gas emissions in City operations.

Action CN-3.2.2: Power City vehicles and equipment with reduced carbon dioxide emission fuels.

Action CN-3.2.3: Provide **greenhouse gas reduction** ~~Climate Action Plan~~ information and resources to the Chino Hills community.

Goal CN-4: Ensure Adequate Water Supply and Delivery

Policy CN-4.1: Promote water conservation.

Action CN-4.1.1: Continue to implement water conservation programs to sustain potable water sources.

Action CN-4.1.2: Promote use of drought-tolerant plant materials and low-water-usage irrigation systems.

Action CN-4.1.3: Promote low-water-use plantings and materials in City street medians and parkways.

Action CN-4.1.4: Continue to use reclaimed water for non-potable water supplies wherever not precluded by public health considerations.

Policy CN-4.2: Plan for water resources and distribution.

Action CN-4.2.1: Continue master **planning for** ~~plan~~ water supply and distribution to meet current and projected City demands.

Action CN-4.2.2: Implement water master plan policies through the City's capital improvement program.

Policy CN-4.3: Protect water quality.

Action CN-4.3.1: Protect water resources from urban runoff and other potential pollution sources through implementation of best management practices and area-wide Urban Storm Water Runoff Programs.

Action CN-4.3.2: Require reclaimed water to meet the Regional Quality Control Board requirements.

Action CN-4.3.3: Support appropriate ground water contamination ~~i~~nvestigations and cleanup efforts by the local water agencies, the Regional Water Quality Control Board, and responsible private parties.

Goal CN-5: Provide for Adequate and Efficient Solid Waste Disposal

Policy CN-5.1: Meet the City's solid waste disposal needs, while maximizing opportunities for waste reduction and recycling.

Action CN-5.1.1: **Partner with** ~~Implement~~ the **City's franchised solid waste hauler to host regular cleanup events, including e-waste collection**. ~~City's Source Reduction and Recycling Element as required by the California Integrated Waste Management Act~~.

Action CN-5.1.2: **Work with** ~~Publicize and educate~~ the **County of San Bernardino and the City's franchised solid** ~~public about~~ waste **hauler to advertise programs** ~~reduction techniques~~ and **locations accepting household hazardous materials, such as paint, batteries, motor oil and oil filters**. ~~facilities.~~

Goal CN-6: Promote Clean Air to Reduce Adverse Effects on Human Health and the Environment

Policy CN-6.1: Reduce air pollution through coordinated land use, transportation, and energy use planning.

Action CN-6.1.1: Endorse regional air quality and transportation management plans in order to reduce air pollution emissions and vehicle trips.

Action CN-6.1.2: Review CEQA checklist for Air Quality Impacts to sensitive land uses and model mitigation measures consistent with the most recent CAPCOA handbook.

Action CN-6.1.3~~.2~~: Encourage multifamily development to develop close to existing/planned transit and commercial areas to encourage pedestrian and non-automobile traffic.

Action CN-6.1.**4**~~3~~: Promote transit that serves the City and links to adjacent cities and counties.

Action CN-6.1.**5**~~4~~: Provide commercial areas that are conducive to pedestrian and bicycle circulation.

Action CN-6.1.**6**~~5~~: Provide a coordinated system of pedestrian and bikeways.

Action CN-6.1.**7**~~6~~: Encourage businesses to alter truck delivery routes and local delivery schedules to off-peak hours.

Policy CN-6.2: Reduce air pollution impacts on health.

Action CN-6.2.1: **Locate residential** ~~Encourage compliance with the California Air Resources Board (CARB) "Air Quality~~ and **other** ~~Land Use Handbook: A Community Health Perspective," which provides guidelines for siting new~~ sensitive land uses **away from freeways and other major** ~~in proximity to~~ air pollutant emitting sources.

Action CN-6.2.2: Require landscaping, ventilation systems, double-paned windows, setbacks, barriers, air filters and other measures to achieve healthy indoor air quality levels in the development of new sensitive land uses.

Action CN-6.2.3: Provide public information to let residents living within 1,000 feet of a freeway know what the risks are and what mitigation measures they can take. These would include things such as installing high-efficiency air filters, keeping windows

closed in the early morning, refraining from outdoor exercise in the mornings, installing thick landscaping, reducing driving, and using public transport instead.

Action CN-6.2.4: Prioritize tree planting on high volume roadways adjacent to sensitive uses.

Action CN-6.2.5 ~~.2~~: Require businesses to limit air pollution emissions in compliance with state and regional regulations and to reduce health impacts on sensitive land uses.

Action CN-6.2.**6** ~~3~~: Require businesses to limit odor emissions to eliminate or reduce nuisance impacts on sensitive land uses.

Policy CN-6.3: Reduce air pollution emissions from construction activities.

Action CN-6.3.1: Require preparation of air quality analyses of construction-related air quality impacts using the latest available air emissions model or other analytical method determined in conjunction with SCAQMD for all projects subject to the California Environmental Quality Act (CEQA). If such analyses identify potentially significant regional or local air quality impacts, require the incorporation of appropriate mitigation to reduce such impacts.

Action CN-6.3.2: Encourage large construction projects to mitigate diesel exhaust emissions through the use of alternative fuels and control devices.

Action CN-6.3:3: Require dust abatement actions for all new construction and redevelopment projects.

Policy CN-6.4: Reduce air pollution emissions from new development.

Action CN-6.4.1: Require preparation of air quality analyses that analyze operational air quality impacts using the latest available air emissions model or other analytical method determined in conjunction with SCAQMD for all projects subject to the California Environmental Quality Act (CEQA). If such analyses identify potentially significant regional or local air quality impacts, require the incorporation of appropriate mitigation to reduce such impacts.

ECONOMIC ELEMENT

The following goals, policies, and actions support the City's Economic Development Plan to maintain and enhance the City's high quality mix of sustainable land uses and monitor future growth.

Goal ED-1: Promote a Diversified Economic Base

Policy ED-1.1: Promote commercial service uses targeted to serve Chino Hills residents and shoppers from other areas.

Action ED-1.1.1: Concentrate major commercial uses near the SR-71 Freeway **and major arterials**.

Action ED-1.1.2: Encourage ~~uses near the SR-71 Freeway and major~~ commercial **uses** ~~arterials~~ that have a positive net fiscal benefit to the City.

Action ED-1.1.3: Continue to expand commercial activity in the City by emphasizing retail stores that serve regional, rather than purely local, needs.

Action ED-1.1.4: Promote and maintain levels of shopping, services, and entertainment that are appropriate to meet the market demand of the community and the region.

Action ED-1.1.5: Ensure the development of an aesthetically attractive and balanced commercial sector compatible with the community and recognizing the predominantly residential character of Chino Hills.

Action ED-1.1.6. Strive to locate grocery and other healthy food retailers within a short or walking distance of all residents.

Action ED-1.1.7. Support farmer's markets in the community.

Policy ED-1.2: Promote employment opportunities in Chino Hills.

Action ED-1.2.1: Promote a broad range of employment opportunities for Chino Hills residents that are compatible with the community's ~~low-density~~ residential character and the skills and education of Chino Hills' workforce.

Action ED-1.2.2: Concentrate major business park and office development near the SR-71 Freeway **and major arterials**.

Action ED-1.2.3: Work with regional agencies to promote employment growth coordinated with the availability of adequate housing and transportation.

Action ED-1.2.4: Encourage child care/day care centers in proximity to employment centers and residential areas.

Goal ED-2: Support Managed Growth with Sound Fiscal Policies

Policy ED-2.1: Promote fiscal policies that support local tax-generating land uses.

Action ED-2.1.1: Where appropriate, offer development agreements for prospective developments that would have a positive net fiscal benefit to the City.

Action ED-2.1.2: Where appropriate, seek state and regional funding sources for infrastructure needed to support tax-generating land uses.

Action ED-2.1.3: Require new development to contribute its share of cost of providing necessary public services and infrastructure through equitable fees and exactions.

Policy ED-2.2: Review City fees annually to ensure appropriate relationship between fees and services.

Action ED-2.2.1: Set development fees as needed to provide adequate infrastructure and services for new development.

Action ED-2.2.2: Set municipal service fees as needed to maintain adequate infrastructure and services for existing residents and businesses.

LAND USE ELEMENT

The following goals, policies, and actions support the City of Chino Hills Land Use Plan and its vision to preserve and enhance high quality, balanced development; the rural character of the natural environment; ample private and public services; sustainable land use patterns; community character; ~~and~~ healthy living**; and environmental justice**.

Goal LU-1: Protect Chino Hills' Natural Environment

Policy LU-1.1: Preserve Chino Hills' Rural Character by Limiting Intrusion of Development into Natural Open Spaces.

Action LU-1.1.1: Continue to monitor, enforce, and update as required the adopted City hillside development standards.

Action LU-1.1.2: **Continue to protect City-designated** ~~Discourage new development from obstructing public views of~~ extremely prominent ridgelines, prominent ridgelines, **and** knolls **from intrusion by development**. ~~, significant open spaces, or important visual resources as identified in the Municipal Code.~~

Action LU-1.1.3: Ensure that new development conforms to the unique natural setting of each area and site, retaining the character of existing landforms and preserving significant native vegetation.

Action LU-1.1.4: Continue to require ridgelines and natural slopes to be dedicated and maintained as open space as required by the Municipal Code.

Action LU-1.1.5: Maintain open space requirements for new development based on the slope of the land as required by the Municipal Code; and require that a percentage of required open space be left in its natural state.

Action LU-1.1.6: Cluster development where appropriate to minimize grading, and roadway and driveway intrusions into sensitive habitat areas, open spaces, and Chino Hills State Park.

Action LU-1.1.7: Prohibit development in areas adjacent to Chino Hills State Park (for example, ridgelines), which would result in urban runoff to the watershed of the Park.

Action LU-1.1.8: Continue to require residential tract development to preserve open space based on the slope of the land.

Action LU-1.1.9: In areas adjacent to Chino Hills State Park, require substantial open space buffers between the proposed development and the State Park.

~~Action LU-1.1.7: Discourage development on slopes over 30%.~~

~~Action LU-1.1.8: Strongly discourage development on slopes over 40%.~~

Action LU-1.1.**10**~~9~~: Promote preservation of natural features such as streams, rock outcroppings, and unique vegetative clusters.

Action LU-1.1.**11**~~10~~: Use dedicated open space, as opposed to built barriers, as a buffer between development areas, wherever possible.

~~Action LU-1.1.11: Require contour grading, and encourage grading techniques that simulate the varied gradients and rounded contours of natural landforms.~~

Action LU-1.1.12: Design roads and driveways for hillside residential development that conforms to existing topography and that minimizes grading and retaining walls.

Action LU-1.1.13: ~~In areas adjacent to Chino Hills State Park, require substantial open space buffers between the proposed development and the Park.~~

~~Action LU-1.1.14:~~ Discourage development intrusions on biological resources **identified** ~~Action LU-1.1.15: Retain natural drainage courses~~ in **the Conservation Element**. ~~all cases where an independent hydrologic review of a specific development project finds that such preservation of natural drainage is physically feasible and where preservation of the natural feature will not render the subject project economically unviable~~.

Action LU-1.1.**14**~~16~~: Use designated fuel modification zones to buffer natural areas and new residential development.

Action LU-1.1.15: ~~17: For the~~ **Maintain the** southeastern portion of the City designated with an asterisk as "*40 ac. min. lot size" in the City's Zoning Map**.** ~~dated January 14, 2013 as shown in Figure 3-2 of the General Plan Update EIR, retain the City's General Plan policies and statements adopted and in effect prior to this General Plan Update.~~ The existing designations for this southeastern portion remain unchanged by this General Plan Update and the Zoning Map Amendment. ~~Research the City's original intent regarding the density for this southeastern portion of the City and work with the property owners and community to clarify the area's density.~~

Policy LU-1.2: Preserve and enhance the aesthetics resources of Chino Hills, including the City's unique natural resources, roadside views, and scenic resources.

Action LU-1.2.1: **Discourage new development from obstructing public views of** ~~Continue to protect City- designated~~ extremely prominent ridgelines, prominent ridgelines, ~~and~~ knolls**, significant open spaces, or important visual resources as identified in the Municipal Code.**

Action LU-1.2.2: Require buildings to be designed and to utilize materials and colors to blend with the natural terrain in hillside areas and adjacent to public open spaces, extremely prominent ridgelines, prominent ridgelines, knolls, or important visual resources as identified in the Municipal Code.

Action LU-1.2.3: In conjunction with project development, **require** contour disturbed areas that are to be retained as open space to blend with natural slopes, and revegetate the open space with native plants.

Action LU-1.2.4: Minimize the visual bulk of new development through implementation of the City residential and non-residential design guidelines.

Action LU-1.2.5: **Direct** ~~Develop~~ new development **to limit visibility** from the visitor center, the campgrounds, the parking areas, the trails, and the floors of Aliso, Telegraph and tributary canyons within the Chino Hills State Park. ~~Prohibit housing and other development on ridgelines visible to Chino Hills State Park.~~

Action LU-1.2.6: Dedicate and maintain landscaped areas as required by the City.

Goal LU-2: Balance Residential with Commercial, Business, and Public Land Uses

Policy LU-2.1: Ensure that development of commercial and business uses **meet** ~~are balanced with~~ the **needs** ~~predominantly residential character~~ of **the residents.** ~~Chino Hills.~~

Action LU-2.1.1: Ensure that new commercial and business development is consistent and compatible with the existing character of the community and meets City development standards.

Action LU-2.1.2: Continue to review, and amend as necessary, the Municipal Code to ensure that land uses and development standards reflect current market trends, community needs, and state requirements.

Action LU-2.1.3: For new developments, provide appropriate buffers between traffic-intensive land uses and roadways and residential uses.

Policy LU-2.2: Ensure balanced residential development.

Action LU-2.2.1: **Protect environmental** ~~To protect environmental~~ and visual resources within Agriculture/ Ranches and Rural Residential properties **by promoting clustering of**~~,~~ residential lots **with reduced** ~~may be clustered and~~ minimum lot **sizes,** ~~size reduced~~ provided the overall residential density of the property is **reduced**. ~~not increased.~~

Action LU-2.2.2: Continue to identify appropriate sites to meet the City's RHNA allocation.

Policy LU-2.3: Ensure public land uses and utilities **are visually and functionally compatible** ~~blend~~ with surrounding development.

Action LU-2.3.1: Require underground utilities for all new development.

Action LU-2.3.2: Require all utilities to be designed and installed in a manner that minimizes visual and environmental impacts.

Action LU-2.3.3: Locate and design public facilities to ensure visual and functional compatibility with adjacent residential and commercial land uses.

~~Action LU-2.3.3: Require all utilities to be designed and installed in a manner that minimizes visual and environmental impacts.~~

Policy LU-2.4: Manage land use plans to ensure **high quality,** ~~balanced and~~ cohesive development.

Action LU-2.4.1: **Continue to convert** ~~Track setback and other development standards for residential properties within former~~ Planned Development (PD) **districts** ~~areas, and continue~~ to **conventional zoning** ~~allow development within these areas to proceed in accordance with approved PD standards~~.

Action LU-2.4.2: **Discourage new PDs or PD amendments, and instead encourage developers to use** ~~Process applications for residential clustering in~~ the **specific** ~~Agriculture/ Ranches and Rural Residential areas through the site~~ plan ~~review~~ process **when site specific development standards are requested**.

Action LU-2.4.3: **Continue to implement the** ~~Establish minimum lot sizes for clustering in the Agriculture/Ranches and Rural Residential areas through subsequent~~ Municipal

Code **clustering provisions for designated Agricultural/Ranches and Rural Residential properties** ~~amendments~~.

Action LU-2.4.4: **Recognize and implement the Tres Hermanos Authority directives for** ~~Require development of~~ the Tres Hermanos area **within Chino Hills** ~~to be planned through~~.

Policy LU-2.5: Promote land use patterns that support a regional jobs/housing balance.

Action LU-2.5.1: Achieve a balance of commercial uses that provides for the retail, business, professional, and other service needs of City residents, and that will attract customers from the surrounding region.

Action LU-2.5.2: Create a broad range of employment opportunities for Chino Hills' residents that are compatible with the community's residential character and the skills and education of Chino Hills' work force.

Action LU-2.5.3: Concentrate major business park and commercial uses that represent a potential employment base near the Chino Valley Freeway corridor and along major arterials.

Action LU-2.5.4: Continue to review, and amend as necessary, the Municipal Code to ensure that a wide range of commercial and employment **uses are** ~~is~~ available.

Action LU-2.5.5: Encourage the revitalization of existing commercial areas.

Goal LU-3: Maintain, and enhance where feasible, the Integrity of City Neighborhoods

Policy LU-3.1: Maintain the character and quality of existing neighborhoods.

Action LU-3.1.1: **Continue and expand as feasible,** ~~Establish~~ programs to maintain and enhance the City's older areas, including **the communities of** Los Serranos, Sleepy Hollow, Canon Lane, and English Road.

Action LU-3.1.2: Maintain programs to balance the keeping of horses and large animals with contemporary land use and environmental requirements.

Action LU-3.1.3: **Protect** ~~To protect~~ the character of low density residential neighborhoods, **by discouraging** ~~discourage~~ nonresidential uses that are of a size or scale substantially larger than a typical single-family house.

Policy LU-3.2: Minimize traffic, noise, and other nuisance intrusions in residential neighborhoods.

Action LU-3.2.1: Locate assembly and other neighborhood serving facilities on the perimeter of residential neighborhoods with access to a collector street.

Action LU-3.2.2: Provide sidewalks along all streets in residential neighborhoods; and where possible, provide sidewalks in internal green belts.

Goal LU-4: Provide for Excellence in Urban Design

Policy LU-4.1: Promote high quality development.

Action LU-4.1.1: Continually monitor and amend, as necessary, the design guidelines for all types of development.

Action LU-4.1.2: Encourage rehabilitation or upgrade of aging residential, commercial, and business-related areas and structures.

Action LU-4.1.3: Screen negative views through site planning, architectural, and landscape devices.

Action LU-4.1.4: Discourage commercial signage that creates visual clutter and obstructs public views into the establishment.

Action LU-4.1.5: Ensure that all development within a recognized residential tract is of comparable or superior exterior design and materials and in accordance with City residential design guidelines to prevent partially completed residential tracts from being completed in a manner that is not aesthetically compatible with existing portions of the tract.

Action LU-4.1.6: Implement policies that require residential development to be designed at a scale that is in harmony with surrounding uses and the environment.

Policy LU- 4.2: Utilize extensive landscaping to beautify Chino Hills' **suburban and urban** ~~urbanized~~ areas.

Action LU-4.2.1: Continually monitor and upgrade the City Landscape Standards.

Action LU-4.2.2: Require landscaping to be continuously maintained in good condition.

Action LU-4.2.3: **Support use** ~~Promote landscape materials that consist~~ of drought-resistant **landscape materials** ~~plant varieties~~ complementary to the area, **and consistent with state and local landscape and water conservation requirements**.

Action LU-4.2.4: Require landscaping that uses water efficiently and reduces water use to the lowest practicable amount without a decline in the quality or quantity of landscapes.

Action LU-4.2.5: Require landscaping that protects existing habitat and creates new habitat by requiring local native plants, climate adapted non-natives, and prohibiting invasive plant species.

Policy LU-4.3: Promote high-quality public spaces.

Action LU-4.3.1: Maintain high-quality streetscape design for major corridors into and through the City.

Action LU-4.3.2: Maintain enhanced signage and landscape treatments at major entrances to the City.

Goal LU-5: Plan for Sustainable Land Uses

Policy LU-5.1: Promote infill, mixed use, and higher density development.

Action LU-5.1.1: **Continue to identify** ~~Identify~~ sites suitable for mixed use development **while maintaining** ~~within an existing urban service area and establish appropriate site-specific standards to accommodate~~ **the vitality of the commercial** ~~mixed~~ uses.

~~Action LU-5.1.2: Identify mixed use development standards that support sustainable development.~~

Action LU-5.1.**2**~~3~~: Coordinate land use patterns with transportation plans to improve and protect air quality, and reduce vehicular trips.

Action LU-5.1.**3**~~4~~: **Continue to plan** ~~Plan~~ for high density residential and mixed use development near commercial areas, major roadways, and transit facilities.

Action LU-5.1.**4**~~5~~: Encourage development to incorporate pedestrian and bicycle trails, fitness areas, and/or other facilities that promote healthy living.

Policy LU-5.2: Encourage residential density transfers to areas more suitable for residential development for more cohesive planning and preserve natural resources.

Action LU-5.2.1: Continue to collaborate with residential developers and property owners for density transfer opportunities pursuant to Measure U. Goal LU-6: Promote Healthy Balanced Neighborhoods.

Policy LU-6.1: Pursue programs and services that assist senior, disabled and lower income households locate and remain in Chino Hills neighborhoods.

Action LU-6.1.1: Engage with the target population to ensure needs are being met and pursue assistance programs where needed.

Policy LU – 6.2 - Strive to locate groceries and other healthy food retailers within a short or walking distance of all residents.

Action LU-6.2.1: Continue to work with the City's economic development consultant and property owners to encourage food retailers to occupy neighborhood commercial spaces in the city.

Policy LU – 6.3 – Support farmer's markets in the community.

Action LU-6.3.1: Continue to engage, promote, and facilitate farmers markets within commercial centers and religious institutions.

Policy LU – 6.4 – Implement Housing Element policies that support maintenance of both multifamily for-sale housing and rental housing options.

Action LU-6.4.1: Review housing policies annually during the General Plan Annual Report to ensure the facilitation of housing types.

NOISE ELEMENT

The following goals, policies, and actions support the City's Noise Plan to maintain and enhance the City's high quality mix of sustainable land uses and monitor future growth, while reducing existing and future noise levels. The Noise Plan provisions focus on reducing noise associated with traffic, operational activities, and stationary sources.

Goal N-1: Manage Existing Noise Sources

Policy N-1.1: Protect public health and welfare by eliminating or minimizing the effects of existing noise problems.

Action N-1.1.1: Control noise conditions in Chino Hills through the active, ongoing efforts of the City in coordination with other government agencies.

Action N-1.1.2: Increase public input on environmental noise issues, and establish a program for the monitoring and abatement of local noise sources.

Action N-1.1.3: Prohibit large commercial truck traffic in noise-sensitive areas, such as school sites, located in Chino Hills.

Action N-1.1.4: Restrict truck traffic to roadways that are located away from sensitive land uses.

Action N-1.1.5: Minimize through vehicular traffic in the City's residential areas.

Action N-1.1.6: Enforce state motor vehicle noise standards for cars, trucks, and motorcycles.

Action N-1.1.7: Incorporate sound attenuation measures in residential developments to achieve the City's standards. Such sound attenuation measures may include noise barriers, replacing existing windows and doors with sound-rated assemblies, insulating exterior walls and attics, and/or installing forced air ventilation.

Action N-1.1.8: Incorporate sound attenuation measures in commercial and industrial developments to ensure that mechanical equipment does not generate excessive noise levels.

Policy N-1.2: Where complaints are received by residents with regard to non-transportation noise sources (e.g., commercial/retail equipment or activities, fans, air conditioners), the City will protect the public health and welfare by implementing the following Action statement as necessary to ensure that the non-transportation noise source does not exceed the noise standards identified in Titles 6, 8 and 16 of the City of Chino Hills Municipal Code.

Action N-1.2.1: Ensure that equipment, machinery, fan, and air conditioning noise does not exceed specified levels, established in the City's Noise Ordinance.

Goal N-2: Limit New Noise Conflicts

Policy N-2.1: Minimize increases in noise levels due to new land use and transportation facility decisions.

Action N-2.1.1: Enforce the standards of Table 7-1**Error! Reference source not found.**, which specify acceptable exterior and interior noise limits for various land uses throughout the City.

Action N-2.1.2: Continue to assess projects through the subdivision, site plan, conditional use permit, and other development review processes and incorporate conditions of approval and mitigation measures that ensure noise compatibility where appropriate.

Action N-2.1.3: Require a noise study to be performed and appropriate noise attenuation to be incorporated to reduce interior noise levels to 45 dB CNEL or less prior to approving any multifamily or mixed-use residential development in an area with a CNEL of 65 dB or greater.

Action N-2.1.4: Incorporate ambient noise level considerations into land use decisions involving schools, hospitals, and similar noise sensitive uses.

Action N-2.1.5: Ensure all new developments provide adequate sound insulation or other protection from existing and projected noise sources.

Action N-2.1.6: Design new transportation facilities to minimize noise impacts on nearby sensitive sources.

Action N-2.1.7: Ensure that all new hotels, motels, multifamily and single-family dwellings to be developed within an area where the outdoor CNEL exceeds 60 dB are designed to achieve an indoor CNEL of 45 dB or less.

SAFETY ELEMENT

The following goals, policies, and actions support the City of Chino Hills Safety Plan and its vision to protect the community from unreasonable risks caused by natural and human-made hazards:

Additional policies related to mitigating natural and manmade hazards can be found in the Chino Hills Hazard Mitigation Plan.

Goal S-1~~6~~: Provide Adequate Emergency Service ~~Maintain Plans for Emergency Response~~.

Policy S-**1.1** ~~3.1~~: Ensure that new development has sufficient fire protection, police, and emergency medical services available.

Action S-1.1.1: Require the review of development proposals to determine impacts on emergency services and ensure developments meet appropriate safety standards.

Action S-1.1.2: Regularly assess emergency service response times to ensure a safe and secure environment for people and property in the community.

Policy S-**1.2** ~~6.1~~: Maintain and update the City Emergency Operations Plan (EOP) and City of Chino Hills Hazard Mitigation Plan (HMP), as required, to respond to extraordinary emergency situations associated with natural disasters, man-made disasters, technological incidents, and national security emergencies.

Action S-**1.2.1** ~~6.1.1~~:Provide for effective life safety measures and reduce property loss.

Action S-**1.2.2** ~~6.1.2~~:Provide for the rapid resumption of impacted businesses and community services.

Action S-**1.2.3** ~~6.1.3~~:Provide for accurate documentation and records required for cost recovery efforts from federal, state, and any other appropriate agencies.

Action S-**1.2.4** ~~6.1.4~~:Utilize water reservoirs, other smaller ponds, and swimming pools in the City as water sources for fire-suppression, if necessary.

Action S-**1.2.5** ~~6.1.5~~:Encourage residents to be prepared to be without electricity for three days or more in cases of emergency.

Action S-**1.2.6** ~~6.1.6~~Provide information to residents about how to shut off domestic gas supply in cases of emergency.

Action S-1.2.7: Continue to provide current and extensive emergency preparedness information on internet, social media and other communication networks to maximize community outreach.

Action S-1.2.8: Collaborate with local, regional, and state emergency management, law enforcement, and fire agencies when updating the City's EOP, City of Chino Hills HMP, and other plans related to emergency preparedness and response.

Goal S-2: Educate at-risk and underserved communities

Policy S-2.1: Develop a targeted outreach program for vulnerable populations (including non-English speakers, outdoor workers, non-white communities, individuals with chronic health conditions, seniors, persons with a disability, and homeless individuals) to educate them on how to prepare for and recover from disasters and climate change effects.

> **Action S-2.2.1: Ensure emergency preparedness information, including printed material, radio broadcasts, video, websites, and other media, is available in all languages spoken by at least 5% of the population.**
>
> **Action S-2.2.2: Develop and annually update a list of languages spoken by at least 5% of the population, using data provided by the United States Census Bureau American Community Survey.**
>
> **Action S-2.2.3: Engage community organizations and community partners to educate and distribute emergency response and preparedness information (such as evacuation procedures, evacuation routes, emergency notification protocol, home hardening tactics, etc.) to underserved and at-risk populations**.

Policy S-2.2: Develop an outreach strategy to inform the community on climate change impacts.

> **Action S-2.2.1: Include Alerts for High-heat Days in the City's Emergency Alerts, including instructions for location of resiliency hubs, cooling centers and self-care steps.**
>
> **Action S-2.2.2: Educate those who use active transportation (bicycle and pedestrian), outdoor workers, low-income households, and seniors about heat illness prevention and treatment.**
>
> **Action S-2.2.3: Partner with existing public health community outreach and engagement efforts to spread greater awareness of the impacts of climate change.**

Goal S-3: Increase the City's climate resilience.

Policy S-3.1: Identify and implement strategies to reduce water demand and support community water saving measures.

> **Action S-3.1.1: Continue to implement water conservation provisions. Distribute educational outreach materials to spread awareness of the City's water saving programs and rebates.**
>
> **Action S-3.1.2: Provide education and resources to promote the use of alternative sources of water, such as greywater, rainwater, air conditioning condensation, and foundation drainage.**

Policy S-3.2: Support greater resilience, redundancy, and reliability of local and regional infrastructure and services through collaboration, coordination, and implementation.

> **Action S-3.2.1: Assess critical facilities, including those for first responders and critical service providers to determine retrofits needed for long-term resilience to climate change-affected hazards including flooding and landslides, increased wind/storm events, an increase in high heat days, and/or wildfire.**

Action S-3.2.2: Promote the use of street trees, bioswales, understory planting, and green roofs, that provide shading, mitigate wind, tolerate drought, and resist fire, including fire resistant landscaping and street trees, and landscaped areas, as part of cooling and resilience strategies in public and private spaces. Promote the addition of shade structures in public spaces.

Action S-3.2.3: Distribute information on climate change impacts to the community with adapted communications for vulnerable populations, including but not limited to actions residents can take to reduce exposure to unhealthy conditions associated with flood damaged properties, extreme heat, and poor air quality days.

Action S-3.2.4: Increase the capacity/resilience of vulnerable populations by ensuring they have a role in decision-making surrounding climate change in their communities, particularly within the Carbon Canyon and Los Serranos neighborhoods. Partner with community organizations to promote participation in community outreach events and planning efforts related to climate change planning and resilience.

Action S-3.2.5: Site new essential public facilities and infrastructure outside of High and Very High Fire Hazard Severity Zones and FEMA Flood Hazard Zones, when feasible.

Action S-3.2.6: Require alternatives to air conditioning such as ceiling fans, air exchangers, increased insulation and low-solar-gain exterior materials to reduce peak electrical demands during high heat events to ensure reliability of the electrical grid.

Policy S-3.3: Protect energy infrastructure and increase redundancy of energy storage and distribution systems.

Action S-3.3.1: Pursue funds to establish sustainable power sources to provide redundancy and continued services for critical facilities during periods of high demand, such as extreme heat events.

Action S-3.3.2: Identify targeted and sustained funding sources to improve access to solar with battery backup to blackout -proof the homes of vulnerable populations.

Action S-3.3.3: Explore the feasibility of installing self-sufficient energy systems, such as microgrids, at city-owned facilities to minimize service disruptions during power outages triggered by a climate event.

Action S-3.3.4: Encourage weatherization retrofits of private properties and retrofit all critical facilities with adequate cooling and air filtration.

Policy S-3.4: Utilize natural and recreational open space and parks to reduce extreme heat and flood impacts.

Action S-3.4.1: Develop a plan to expand and maintain large contiguous greenspaces wherever possible for greater cooling magnitude and extent.

Action S-3.4.2: Identify opportunities and update the City's Landscape Manual to increase urban tree canopy and maintenance projects in coordination with existing efforts. of drought tolerant and native plants in landscaping.

Action S-3.4.3: Restore degraded ecosystems to enhance the natural adaptive capacity of biological communities that are vulnerable to the effects of climate change.

Action S-3.4.4: Develop an outreach program focused on vulnerable populations that provides information on staying healthy and safe before, during, and after climate hazard events.

Action S-3.4.5: Develop a program to increase tree canopy coverage in Chino Hills to contrast urban heat island effect and reduce heat inequality, focusing on areas with a tree equity score below 80, such as Los Serranos.

Policy S-3.5: Develop short-term and long-term strategies to address climate change impacts related to wildfire, extreme heat, flooding, and drought.

Action S-3.5.1: Develop a climate action plan that includes climate change projections and policies and programs to reduce impacts of climate change and address climate adaptation.

Action S-3.5.2: Incorporate climate change projections in future resource conservation plans and land use plans, including research and monitoring plans.

Action S-3.5.3: Use the most recent available data to assess climate change impacts that may affect the City, including wildfire, extreme heat, flooding, and drought.

Action S-3.5.4: Convene a climate change task force to strategize and support implementation of climate related programs.

Goal S-4: Protect City infrastructure and facilities.

Policy S-4.1: Continue to mitigate the risk of a cyber-attack and deter physical threats.

Action S-4.1.1: Authorize the City Information Technology Division to regularly update computer software and hardware to keep the network secure.

Action S-4.1.2: Authorize the City Facilities Division to strengthen the physical security at all City facilities by ensuring that only the proper personnel have access.

Goal S-5: Maintain a safe and efficient evacuation network.

Policy S-5.1: Ensure the Chino Valley Fire District has complete access to all locations in the city, including gated residential communities and critical infrastructure.

Action S-5.1.1: Require that all homes and businesses have visible street addressing and signage. Consider adopting a standardized street-addressing system.

Action S-5.1.2: Ensure roads used for emergency access are properly maintained and free of obstructions.

Action S-5.1.3: Install lighting and clear signage on emergency access routes.

Action S-5.1.4: Require all gated communities and buildings to have a KNOX box or other emergency access system to ensure quick emergency response.

Policy S-5.2: Improve emergency access and evacuation capacity for neighborhoods that have a single ingress/egress.

Action S-5.2.1: Develop and deploy evacuation and/or alternative emergency access route alternatives for single-access neighborhoods.

Action S-5.2.2: Designate and publicize evacuation routes for individual neighborhoods; including existing pedestrian pathways.

Action S-5.2.3: Encourage residents to take only one or two vehicles (based on household size) to reduce the number of evacuating vehicles. Offer offsite parking facilities to safely store secondary vehicles in advance of an emergency event.

Action S-5.2.4: Implement early evacuations under high-risk conditions for vulnerable communities with limited egress routes, including single-access neighborhoods.

Policy S-5.3: Prioritize engagement with single access neighborhoods and high wildfire risk areas to encourage home retrofits, meet current standards on structure hardening and road standards, proactively enforce defensible space standards, and conduct emergency preparedness trainings.

Action S-5.3.1: Conduct targeted evacuation outreach and communication for single-access neighborhoods and neighborhoods in the Fire Hazard Overlay District and High and Very High Fire Hazard Severity Zones to educate residents on their evacuation zone, nearby emergency shelters, and plan evacuation routes. Outreach and communication should include in-person, print, and digital outreach methods and should utilize available neighborhood-specific communication methods, including homeowners associations, Nextdoor, Ring Neighborhoods, school notification systems, etc.).

Action S-5.3.2: Encourage residents in single-access communities to maintain emergency supplies for at least 3 - 10 days.

Action S-5.3.3: In coordination with the Chino Valley Fire District and Chino Hills Police Department/San Bernardino County Sheriff's Department, conduct regular evacuation trainings with single-access community homeowner associations and residents.

Action S-5.3.4: Maintain critical evacuation routes and emergency vehicle access.

Policy S-5.4: Increase evacuation capacity and efficiency throughout the city.

Action S-5.4.1: In the event of an emergency requiring evacuation, consider implementing the following traffic management strategies to increase evacuation capacity and efficiency:

- **Reverse one or more lanes of highway to accommodate an increased flow of traffic in one direction.**
- **Redirect all lanes of a designated evacuation route to accommodate rapid evacuation from a city or region.**
- **Temporarily close inbound travel lanes on selected unlimited access arterials (such as parkways and boulevards) to allow outbound traffic to utilize these lanes during evacuation.**

- **Close inbound lanes on highways utilized for evacuation routes to prevent drivers on these routes from entering the city while evacuation is underway.**
- **Minimize left-turn movements along evacuation routes and on roads leading to evacuation routes.**
- **Increase the green time and/or progression band for through movements leading out of an evacuation zone.**
- **Install signal battery backups in case signal operations need to be maintained during a power outage. Consider using channeling devices, static signs, and coning strategies to manage intersection flow during power outage if the signals lack power.**
- **Consider how to stage tow trucks at bottleneck locations along evacuation routes to help detect and clear minor crashes and maintain traffic flows.**
- **Prioritize adding additional access to communities which are currently served by only one or two access points.**
- **Develop transportation solutions such as the use of a bus system for evacuating individuals with special needs (such as those with mobility limitations) and/or evacuating larger groups of people in fewer vehicles.**
- **Establish traffic control points (i.e., locations along designated evacuation routes with emergency management personnel) to maintain a greater degree of evacuation management. These locations could enhance the efficiency of an evacuation, reduce public confusion, and allow increased operational flexibility during an evacuation.**

Policy S-5.5: Improve evacuation communication protocols among local agencies, organizations and the general public.

Action S-5.5.1: Strengthen and maintain communication among coordinating emergency event agencies. This could be achieved through systems such as the Public Information Emergency System and Emergency Satellite Communications.

Action S-5.5.2: Use variable message board equipment and targeted installation of permanent dynamic message signs on evacuation routes to improve communication and reduce public confusion.

Action S-5.5.3: Implement a traffic control center to coordinate all evacuation activities. This center would have up to the minute reports on traffic patterns and can communicate directly with emergency officers via broadcast media, social media, and other emergency communications channels (e.g., County Telephone Emergency Notification System and San Bernardino Ready App) to let drivers know about roadway congestion and conditions and direct them to alternate routes.

Action S-5.5.4: Install traffic counters and/or CCTV cameras on freeways, which can help assess traffic flow, volume of vehicles evacuating, and monitor incidents during emergency evacuation events.

Action S-5.5.5: Implement highway advisory radio to provide information regarding primary and secondary evacuation routes and incidents to the public.

Action S-5.5.6: Consider implementing a system of pre-defined evacuation zones. Pre-defined evacuation zones can provide a common reference system for first responders and the community.

Policy S-5.6: Maintain and update the City's Evacuation Plan, in conjunction with the Emergency Operations Plan, at minimum every eight years.

Action S-5.5.1: Establish minimum standards for evacuation and emergency vehicle access to and from the new or planned development, including regulations for weight and vertical clearance, dead-end, one-way, and single-lane conditions.

Policy S-5.7: Ensure well-maintained evacuation routes that are clear of obstruction.

Action S-5.7.1: Prioritize Capital Improvement Program (CIP) projects for roadways that serve as evacuation routes or require roadway improvements to better function in the event of an evacuation.

Action S-5.7.2: Require new development to provide adequate access (ingress, egress) and a minimum of two roadways with widths and lengths in compliance with California Building Code Chapter 7A requirements.

Action S-5.7.3: Maintain evacuation roadways and shoulders to clear them of trees, vegetation, and debris that would block travel lanes and shoulders for evacuating and emergency operation vehicles.

Policy S-5.8: Coordinate with specialized organizations such as hospitals, medical associations, public service organizations, public health staff, and other providers or community groups to provide evacuation assistance to vulnerable populations.

Action S-5.8.1: Incorporate the following considerations that vulnerable populations may require during evacuation planning and outreach efforts:

- **Tailor evacuation outreach and communication protocols for those who are visually or hearing impaired, taking in to consideration that people who are blind or partially sighted may depend on their guide dogs and/or others to lead them to safety and that people with hearing difficulties may require special arrangements to receive evacuation warnings, such as visual aids and maps.**
- **Partner with neighboring cities/private/non-profit agencies to provide adequate paratransit services for those who are mobility impaired.**
- **Publicize evacuation methods for people without vehicles, including emphasizing the importance of carpooling with neighbors or other community members and providing information on transit routes and transit stops.**
- **Provide bilingual or multilingual materials to support communication with non-English speaking populations during evacuation.**
- **Communicate in advance the location and availability of hospitals or facilities with emergency/life-sustaining medical equipment such as a dialysis machine.**

- **Arrange for food, shelter, and transportation for unhoused (homeless) population. Offer age-appropriate emergency and evacuation information to homeless children.**

Action S-5.8.2: Identify areas of the city with a greater percentage of senior adults, persons with a disability, mobility impaired, and people with medical conditions, and people without vehicles.

Goal S-6 ~~S-1~~: Protect the Community from Geologic Hazards

Policy S-**6.1** ~~1.1~~: Regulate development in high-risk seismic, landslide and liquefaction hazard areas to avoid exposure to hazards.

Action S-**6.1.1** ~~1.1.1~~: Observe prudent land use planning in the Fault Hazard Zone delineated for the Chino Fault, restricting high occupancy and emergency operation facilities and limiting residential development.

Action S-**6.1.2** ~~1.1.2~~: Conduct site-specific studies on soils, seismicity, and groundwater conditions to evaluate the potential for liquefaction and related ground failure phenomena in canyon floors and the alluvial flatlands.

Action S-**6.1.3** ~~1.1.3~~: Regulate development of utility structures over 100 feet in height in geologic hazard areas ~~when~~ adjacent to existing or planned sensitive land uses.

Action S-**6.1.4** ~~1.1.4~~: Continue to regularly update Building and Fire Codes to provide for seismic safety design.

Action S-**6.1.5** ~~1.1.5~~: Support and encourage the seismic retrofitting and strengthening of existing facilities to minimize damage in the event of seismic or geologic hazards.

Action S-**6.1.6** ~~1.1.6~~: Discourage any grading beyond that necessary to create adequate and stable building pads.

Action S-**6.1.7** ~~1.1.7~~: Require all development to conform to the grading guidelines contained in the City Development Code.

Action S-**6.1.8** ~~1.1.8~~: Require fault zones to be clearly identified on tract and parcel maps to increase public awareness of fault rupture hazards.

Action S-**6.1.9** ~~1.1.9~~: Within geologic hazard overlay areas, require developments to minimize landscape irrigation.

Action S-**6.1.10** ~~1.1.10~~: Require new development to minimize peak runoff as required by the Municipal Code.

Goal S-7 ~~2~~: Protect the Community from Flooding Hazards

Policy S-**7.1** ~~2.1~~: Restrict development in areas prone to flooding or within dam inundation areas.

Action S-**7.1.1** ~~2.1.1~~: Prohibit development of residential, commercial, industrial, and emergency facilities in the 100-year flood plain and on canyon floors.

Action S-**7.1.2** ~~2.1.2~~: Discourage development of emergency facilities in dam inundation areas.

Action S-**7.1.3**~~2.1.3~~: Coordinate with the U.S. Army Corps of Engineers and the San Bernardino County Flood Control and Water Conservation District to keep current on Prado Dam Basin conditions and plans.

Action S-**7.1.4**~~2.1.4~~: Provide accurate and up-to-date maps of areas exposed to 100-year and 500-year flood hazards, based on National Flood Insurance Program criteria.

Policy S-**7.2** ~~2.2~~: Maintain adequate flood control facilities.

Action S-**7.2.1**~~2.2.1~~: Maintain and implement the City Master Drainage Plan.

Action S-**7.3.2**~~2.2.2~~: Require that the potential environmental drainage impacts of new construction be assessed and mitigated, including impacts that privately owned and operated storm drains adjacent to slopes and canyon areas would have on City and County-maintained drains.

Action S-**7.2.3**~~2.2.3~~: Review individual project designs to ensure that proposed drainage facilities will be properly linked with community-wide drainage facilities.

Action S-**7.2.4**~~2.2.4~~: Coordinate the construction of a comprehensive storm drain system with individual projects in the General Plan area to ensure that all new development will be adequately protected from flooding prior to completion of the backbone system.

Action S-**7.2.5**~~2.2.5~~: Maintain a schedule for funding of all flood control backbone facilities, including phasing.

Action S-**7.2.6**~~2.2.6~~: Require property owners to install and maintain storm drains on their properties as necessary to address drainage related to their property

Action S-**7.2.7**~~2.2.7~~: Strengthen storm drain maintenance district to prevent local flooding, and to prevent mud and debris flows from overtaxing storm drains during strong storms.

Action S-**7.2.8**~~2.2.8~~:Require measures to be undertaken to control runoff from construction sites.

Action S-**7.2.9**~~2.2.9~~: Require prompt revegetation and/or construction of newly graded sites to control erosion.

Action S-**7.2.10**~~2.2.10~~: Limit grading operations during the rainy season.

Action S-**7.2.11**~~2.2.11~~: Review individual project designs to ensure the stability of slopes adjacent to flood control facilities, which could be blocked due to slope failures.

Goal S-8: Minimize the Risk from Fire Hazards

Policy S-8.1: Actively collaborate with regional, state and federal fire agencies to coordinate and implement wildfire mitigation measures and fuel load modifications reduction zones, including load clearing, prescribed burns, fire breaks, livestock grazing, and public and private road clearance and other mitigation activities for areas proximal to the city.

Policy S-**8.2** ~~4.1~~: Maintain the water distribution system to deliver the fire flow requirements set in the City adopted Fire Code.

Action S-**8.2.1**~~4.1.1~~: Ensure adequate fire flow capabilities in the Los Serranos and Carbon Canyon areas, and other sections of the City where deficiencies may occur.

Action S-**8.2.2**~~4.1.2~~: Replace and upgrade old cast-iron pipelines and/or inadequately sized water mains when street improvements are made.

Action S-**8.2.3**~~4.1.3~~: Provide for redundant emergency distribution pipelines in areas of potential ground failure or where deemed necessary by the Fire District and City.

Policy S-**8.3** ~~4.2:~~ Continue to reduce fire risk through City development and operation policies.

Action S-**8.3.1**~~4.2.1~~: Continue to implement and enforce fuel modification zones.

Action S-**8.3.2**~~4.2.2~~: Encourage residents to plant and maintain fire-retardant slope cover to reduce the risk of brush fire in areas adjacent to canyons.

~~Action S-4.2.3: Maintain stringent site design and maintenance standards for areas with high fire hazard potential~~.

Action S-**8.3.3**~~4.2.4~~: Continue to provide for public education programs to enhance public awareness of fire safety, including the storage of flammable materials, use of fire-retardant building materials, and vegetation management in the perimeter of structures.

Action S-**8.3.4**~~4.2.5~~: Encourage the Fire District to ~~review its agreement to coordinate for~~ **maintain and update** mutual aid ~~and fire services~~ **agreements** with fire agencies from adjacent cities and counties.

Action S-**8.3.5**~~4.2.6~~: Work with the Fire District to enforce all existing codes and ordinances regarding fire protection, building inspection, and vegetation management.

Action S-**8.3.6**~~4.2.7~~: ~~Maintain~~ **Coordinate with Chino Valley Fire District and State Fire Marshall personnel to provide and maintain two points of emergency** evacuation ~~plans for~~ **, as required by SB 99**.

Action S-8.3.7: Coordinate with Southern California Edison to implement an electrical undergrounding plan with a focus on critical evacuation roadways and areas with highest wildfire risk.

Action S-8.3.8: Encourage home hardening strategies and home retrofits to meet current building standards and road standards and proactively enforce defensible space standards.

Action S-8.3.9: Prohibit new and/or intensification of existing general assembly uses in Very High Fire Hazard Severity Zones unless it is determined that there is sufficient secondary egress and that adjoining major highways and street networks are sufficient for evacuation, as well as safe access for emergency responders under a range of emergency scenarios.

Action S-8.3.10: Establish fire-smart landscaping standards to increase wildfire resistance for landscaping, such as:

- **Develop a list of approved fire-safe plants that can be used in landscaping in the Fire Hazard Overlay District, High and Very High Fire Hazard Severity Zones.**
- **Publish guidelines for strategic placement of fire-safe plants and vegetation maintenance to minimize fire risk.**
- **Develop vertical clearance standards for landscaping and street trees.**

Action S-8.3.11: Develop fuel modification plans for all new developments.

Action S-8.3.12: Support implementation of recommended projects in the Carbon Canyon CWPP.

Goal S-9~~5~~: Minimize the Risk from Hazardous Materials

Policy S-**9.1** ~~5.1:~~ Minimize risk to life and property from production, use, and storage of hazardous materials and waste.

Action S-**9.1.1**~~5.1.1~~: Continue to enforce Fire and Building Code provisions regarding secondary containment; segregation of chemicals to reduce reactivity during a release; sprinkler and alarm systems; and monitoring, venting, and automatic shut-off systems on all new developments.

Action S-**9.1.2**~~5.1.2~~: Continue to require businesses that use, store, or generate hazardous materials to annually notify the San Bernardino County Department of Environmental Health Services or appropriate County agency, and to comply with applicable regulations.

Policy S-**9.2** ~~5.2:~~ Control the transportation of toxic, explosive, and other hazardous materials.

Action S-**9.2.1**~~5.2.1~~: Require business owners to follow designated hazardous materials transportation routes.

Action S-**9.2.2**~~5.2.2~~: Coordinate with adjacent jurisdictions to maintain regional objectives for hazardous materials management.

Action S-**9.2.3**~~5.2.3~~: Regulate and limit the transport of vehicles carrying hazardous materials through the City.

Action S-**9.2.4**~~5.2.4~~: Support annual checks for leaks of high pressure fuel and natural gas transmission lines.

Policy S-**9.3** ~~5.3:~~ Monitor and enforce regulations to ensure adequate clean-up of hazardous materials and waste.

Action S-**9.3.1**~~5.3.1~~: Require all new developments occurring within areas previously utilized for oil production to mitigate any hazards associated with the oil fields.

Action S-**9.3.2**~~5.3.2~~: Confirm that oil and gas wells in areas proposed for development are abandoned to current standards set by the State.

Action S-**9.3.3**~~5.3.3~~: Confirm that existing toxics are contained, removed, and/or remediated as required by applicable federal and state standards.

OPEN SPACE ELEMENT

The following goals, policies, and actions support the City of Chino Hills Parks, Recreation and Open Space Plan and its vision to support a sustainable balance of land uses, healthy living, and ample park and recreational facilities for all residents.

Goal PR-1: Provide a high quality and ample park and recreational opportunities for all residents

Policy PR-1.1 ~~Focused Goal 2-1~~: Provide active and passive public park facilities and ~~recreation programs~~ that will satisfy the basic leisure time needs of the City's residents and enhance the quality of life in Chino Hills.

> **Action PR-1.1.1: Maintain and upgrade the existing public parks to ensure they continue to provide quality facilities to meet the needs of the residents**.
>
> **Action PR-1.1.2:** ~~Objective 2-1~~: Provide a citywide standard of at least 5 acres of improved public park land per 1000 residents (minimum 5 acres in size useable).
>
> **Action PR-1.1.3:** ~~Policy 2-5:~~ Ensure that all existing and future recreation facilities are accessible to everyone and consistent with the requirements of the Americans with Disabilities Act.
>
> **Action PR-1.1.4:** ~~Policy 2-6:~~ Provide in each park site various facilities that, at a minimum, include bike racks, picnic tables, benches, drinking fountain, restrooms, signage, concrete trash receptacles, tot lot and accommodations for at least one other sport or recreational activity.
>
> **Action PR-1.1.5: Add or improve public access to WIFI in parks.**
>
> **Action PR-1.1.6: Maintain shade trees and landscaping that makes parks more comfortable and visually appealing while adapting to extreme heat and drought.**
>
> **Action PR-1.1.7**: ~~Policy 6-3:~~ Promote use of drought tolerant and native plant material where appropriate in parks.
>
> **Action PR-1.1.8**: ~~Policy 2-7:~~ Provide adequate parking at each location to minimize parking problems on residential streets.
>
> **Action PR-1.9**: ~~Policy 6-4:~~ Maintain lighting levels suitable for safety as well as the nighttime use of community and citywide facilities without undue glare impacts on nearby residential areas.
>
> Action PR-1.1.10: ~~Policy 6-5:~~ Maintain ~~Develop~~ identification signage for all parks that is consistent with the adopted City identification program and complementary to any established theme in each park.

Policy PR-1.2: ~~Policy 2-18:~~ **Maintain the Parks** ~~Periodically review and evaluate the progress made in implementing the~~ Master Plan **as a fluid document**.

> **Action PR-1.2.1:** ~~Policy 2-17~~: **Implement the park and recreation recommendations of the Parks Master Plan as sites become available**. ~~Regularly review priorities for acquisition, development and improvement of existing and proposed facilities and programs.~~

Action PR-1.2.2: ~~Goal 2-4:~~ Continue to seek community input and community support on development of park and recreation programs.

Action PR-1.2.3: As part of future Parks Master Plan updates, consider opportunities for community gardens.

Action PR-1.2.4: Continue to ensure that parks available in all residential areas of the City.

Action PR-1.2.5: Implement Parks Master Plan recommendations to pursue funding sources for acquisition and maintenance of City park facilities.

Policy PR-1.3: ~~Objective 4-1:~~ **Provide recreational facilities and programs that will satisfy the basic** ~~Improve the quality of life through the creative and constructive~~ **use of leisure time needs of the City's residents and enhance the quality of life in Chino Hills**.

Action PR-1.3.1: ~~Focused Goal 2-3:~~ Provide a wide variety of recreation programs that meet the diverse needs of the community and contribute to the physical and mental health of the population.

Action PR-1.3.2: ~~Policy 2-12:~~ Provide multi-use facilities for the City's residents, including space for meeting rooms, athletic activities, kitchen facilities, and recreation classes and programs.

Action PR-1.3.3: ~~Policy 2-13:~~ **Locate community centers** ~~where they are accessible to public transportation systems~~ **in various locations throughout the City for the convenience of residents**.

Action PR-1.3.4: Provide an adequate supply of courts and fields for the top sports in Chino Hills, and modify or add as needed to accommodate changing sport trends.

Action PR-1.3.5: ~~Policy 4-1:~~ Enrich the cultural and creative life of the community through a diverse program of recreation opportunities for all ages and populations.

Policy PR-1.4: ~~Objective 2-5:~~ Promote the cooperation of all private and governmental entities in achieving the acquisition, development, funding, and operation of the park and recreational facilities and programs in the community.

Action PR-1.4.1: ~~Policy 2-19:~~ Continue to foster good relations with the School District ~~through the Joint Powers Agreement~~ in the design and development of school and City facilities to achieve maximum public benefit.

Action-1.4.2: ~~Policy 2-21:~~ Encourage individual and group participation in the support and development of new park and recreation facilities and programs.

Action-1.4.3: ~~Policy 2-22:~~ **Continue to promote the** ~~Expand the existing~~ City**'s existing** volunteer program to provide needed recreation services in the City by recruiting high school and college students.

Action-1.4.4: ~~Policy 2-23:~~ Work with equestrian groups to maintain the McCoy Equestrian Center and to create and maintain equestrian facilities such as trailheads, and to carry out a trail patrol and maintenance program.

Action-1.4.4: ~~Policy 4-3:~~ Joint venture with private recreational providers in the City to further expand the scope of recreation program availability.

Goal PR-2: ~~Objective 3-1:~~ Continue to plan, ~~Plan,~~ create, and maintain a system of safe accessible trails throughout the City.

Policy PR-2.1: ~~Policy 1-11:~~ Provide and maintain a multi-use trail system that safely accommodates bicycles, hikers, and equestrians.

Action PR-2.1.1: ~~Focused Goal 2-2:~~ **Maintain** ~~Develop~~ a network of multiuse trails that provides interconnectivity between Community and Neighborhood Parks, adjacent communities, the Chino Hills State Park, and areas of scenic interest.

Action PR-2.1.2: ~~Policy 3-2:~~ Integrate the planning for the trail network with the planning for streetscapes, parks, and open space.

Action PR-2.1.3: ~~Policy 3-5:~~ **Where possible, provide** ~~Provide~~ trail users with rest areas in parks and open space, including bike racks, hitching posts, water, shade, and picnic facilities where appropriate.

Action PR-2.1.4: ~~Policy 3-8:~~ Develop **and maintain** trailheads or staging areas as focal points for trail activities and to enhance access for those who must drive to the trail.

Action PR-2.1.5: ~~Policy 3-9:~~ Whenever possible, provide trail connections to regional trails, local trails, and recreation facilities in adjacent communities.

Policy PR-2.2: ~~Policy 2-8:~~ **Promote community access and use of the City trail system**. ~~Create recreation opportunities for residents through the use of the trail network.~~

Action PR-2.2.1: ~~Policy 3-10:~~ **Maintain** ~~Develop~~ a signage system that identifies trails and provides users with information regarding the trail system. Identify safety regulations, trail etiquette, difficulty, distance, and interpretive opportunities.

Action PR-2.2.2: Keep a current App based or similar system that provides a digital connection to trail maps and trail details.

~~**Policy S-1.2**~~**Goal PR-3: ~~Objective 1-1:~~ Protect and preserve City designated open space areas. ~~Develop a plan that protects and preserves the natural features of the open space while providing for use of these areas by the community.~~**

Policy PR-3.1: ~~Policy 1-1:~~ **Implement** ~~Develop a method~~ **strategies** for protecting and maintaining the open space in perpetuity, ~~and oversee the protection of these areas~~.

Action PR-3.1.1: Promote open space uses that generate revenue while limiting community impacts, such as grazing and/or agricultural production or communication facilities, where appropriate.

Action PR-3.1.2: ~~Policy 1-10:~~ Encourage dedications of open space adjacent to or connecting to the State Park.

Action PR-3.1.3: Pursue funding to ensure the long term maintenance of City open spaces, including development impact fees, assessment districts, grants, and other funding mechanisms available to the City.

Action PR-3.1.4: Provide adequate access for fire, emergency, and maintenance equipment.

Action PR-3.1.5: ~~Policy 7-5:~~ Continue to coordinate weed abatement efforts underway by the City with the Chino Valley Independent Fire District. ~~Continue a fuel modification~~

~~program for the City's open space areas in order to protect private property from loss due to wild/and fires.~~

Policy PR-3.2: Implement strategies to protect open space natural resources.

Action PR-3.2.1: Develop and implement policies to protect the open space natural resources of the Tres Hermanos property.

Action PR-3.2.2: ~~Policy 1-4:~~ Continue to protect native trees through implementation of City tree preservation policies. ~~Protect native trees and cliffsides because they pro- vide habitat for wildlife such as birds that keep the rodent population in check and add to the aesthetic value of the open space.~~

Action PR-3.2.3: Continue to protect exceptionally prominent and prominent ridgelines through implementation of City development policies.

Action PR-3.2.4: ~~Policy 7-4:~~ **Continue to implement local, state, and federal policies that protect the natural springs and waterways, and** ~~Protect the native vegetation and wildlife habitat in the City's open space areas and preserve the wildlife corridors~~ wildlife **habitats and** corridors.

~~Focused Goal 2-5: Create a strong community image for Chino Hills using the City parks and natural open space~~

~~Policy 1-2: Accept for development as public open space, only land that meets the recommendations of the City, Landscape Standards~~

~~Policy 1-6: Preserve large scale natural areas to protect biological diversity and enhance recreation opportunities~~

~~Policy 1-12: Limit grading for trails and other development in the hillsides by maintaining the natural topography where feasible~~

~~Policy 1-14: Develop and support policies to remove illegal encroachments into open space areas~~

~~Policy 2-1: Provide local park facilities and recreation areas that are appropriate for the individual neighborhoods and communities in which they are located and that reflect the needs and interests of the population they serve~~

~~Policy 2-2: Acquire, plan, develop, and staff facilities to make possible a wide variety of passive, active and organized recreation activities and opportunities to enrich the lives of the citizens~~

~~Policy 2-3: Provide policies and standards which will enable the City to provide the local parks needed for future City buildout~~

~~Policy 2-4: Accept for development as public park land only land that meets the recommendations of the City, Landscape Standards~~

~~Policy 2-9: Require park land dedicated to the City by developers of property to meet or exceed the development standards established by the City~~

~~Policy 2-10: Acquire and/or preserve diverse open spaces and provide for the advantageous use of these areas for recreation purposes and visual enjoyment.~~

~~Policy 2-11: Preserve the historical, scenic and cultural heritage sites of the community and its environs~~

~~**Objective 2-2: Develop several community centers in the City to provide focus areas for facilities and programs**~~

~~**Objective 2-3: Develop a long-term financial strategy for providing sufficient parks, recreational, and open space facilities and programs and for ensuring a stable funding mechanism for the on-going maintenance and operation of the park system when complete.**~~

~~Policy 2-14: Evaluate including new areas in City's Landscape and Lighting Districts.~~

~~Policy 2-15: Seek grant funding wherever available~~

~~**Objective 2-4: Develop an on-going program to periodically review and update the City's parks, recreation, and open space needs assessments.**~~

~~Policy 2-16: Prepare long- and short-term capital expenditure programs to finance implementation of the Parks Master Plan.~~

~~Policy 2-20: Work with the School District to determine if the school buildings that are no longer used and no longer needed could be used for park and recreation activities~~

~~Policy 3-1: Provide a multi-use trail system that safely accommodates bicycles, hikers, and equestrians~~

~~Policy 3-3: Accept for development as public trails, only lands that meet the standards contained in the Trails Master Plan.~~

~~Policy 3-4: Require all new development projects to implement the Trails Master Plan~~

~~Policy 3-7: Develop, in coordination with the State Department of Parks and Recreation, trail connections to Chino Hills State Park~~

~~Policy 3-11: Provide maps and trail signage that identifies the multi-use trails as a system for bicycles, hikers, and/or equestrians~~

~~Policy 3-12: Encourage use of the trail system through recreation programming, school field trips, and community awareness.~~

~~Policy 3-13: Provide a convenient trail system that promotes use of modes of transportation other than the automobile.~~

~~Policy 3-14: Mitigate impacts to residential homeowners adjacent to public trails through appropriate trail design.~~

~~**Objective 4-1: Improve the quality of life through the creative and constructive use of leisure time.**~~

~~Policy 4-2: Endeavor to provide recreational programs that are economically self-sustaining where possible.~~

~~Policy 4-4: Develop methods, such as newsletters or recreation brochures, to market and increase awareness of and participation in community recreation programs~~

~~**Objective 5-1: Strengthen community life by improving and enriching democratic values and increasing participation in civic activities.**~~

~~Policy 5-1: Use newsletters, the local newspapers, and other media to notify residents of City activities and events.~~

~~Policy 5-3: Include public participation in the design process for future park and facility development~~

~~**Objective 6-1: Use parks to enhance the City's overall beauty including the quality of landscaping and landscape maintenance.**~~

~~Policy 6-1: Locate parks and other recreation facilities for maximum visibility from surrounding streets~~

~~Policy 6-6: Develop a dedicated scenic pedestrian network throughout the City~~

~~**Objective 7-1: Maintenance shall maximize safety of users, promote full enjoyment of the landscape, and protect the visual and environmental qualities of the landscape**~~

~~Policy 7-2: Prune trees as necessary to preserve visual access for pedestrians and vehicular traffic~~

~~Policy 7-3: Protect and carefully maintain the landscape to foster its value for air pollution mitigation, fire safety, wildlife habitat and recreation activities~~

~~Policy 7-6: Require all construction to meet City Landscape Standards.~~

~~Policy 7-7: Cooperate with private and government agencies (such as Inland Empire Resource Conservation District, California Conservation Corps, etc.) to ensure that the best management practices are utilized.~~

~~Policy 7-8: Parks shall regularly be reviewed by a group of professionals with diverse perspectives for safety items and risk management overview.~~

~~Policy 7-9: Design park facilities to minimize water use and maintenance demands~~

GLOSSARY OF TERMS

AQMP	Air Quality Management Plan
CAAQS	California Ambient Air Quality Standards
CARB	California Air Resources Board
CEQA	California Environmental Quality Act
CFCs	Chlorofluorocarbons
CH_4	Methane
CNG	Compressed natural gas
CO	Carbon monoxide
CO_2	Carbon dioxide
CO_2e	Carbon dioxide equivalent
DPM	Diesel particulate matter
GHG	Greenhouse gas
HFCs	Hydrofluorocarbons
LST	Localized Significant Thresholds
$MTCO_2e$	Metric tons of carbon dioxide equivalent
$MMTCO_2e$	Million metric tons of carbon dioxide equivalent
NAAQS	National Ambient Air Quality Standards
NOx	Nitrogen Oxides
NO_2	Nitrogen dioxide
N_2O	Nitrous oxide
O_3	Ozone
PFCs	Perfluorocarbons
PM	Particle matter
PM10	Particles that are less than 10 micrometers in diameter
PM2.5	Particles that are less than 2.5 micrometers in diameter
PMI	Point of maximum impact
PPM	Parts per million
PPB	Parts per billion
RTIP	Regional Transportation Improvement Plan
RTP	Regional Transportation Plan
SCAB	South Coast Air Basin
SCAQMD	South Coast Air Quality Management District
SF_6	Sulfur hexafluoride
SIP	State Implementation Plan
SOx	Sulfur Oxides
SRA	Source/Receptor Area
TAC	Toxic air contaminants
VOC	Volatile organic compounds
WRCC	Western Regional Climate Center

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

This air quality and greenhouse gas (GHG) analysis was prepared to evaluate whether the estimated criteria pollutants and GHG emissions generated from the Project would cause a significant impact to the air resources in the Project area. This assessment was conducted within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.). The assessment is consistent with the methodology and emission factors endorsed by South Coast Air Quality Management District (SCAQMD), California Air Resource Board (CARB), and the United States Environmental Protection Agency (US EPA).

1.2 Project Summary

1.2.1 Existing Land Uses

Chino Hills is dominated by single-family housing. Other residential uses, including mobile home communities and multi-family housing developments, exist in Chino Hills but are less prevalent than single-family developments within the City. Additionally, there are several pockets of retail and light industrial land uses and parks spread throughout the city. There is also a significant amount of vacant land within the City boundaries and across its sphere of influence.

1.2.2 Project Description

The City of Chino Hills is preparing a comprehensive update to its existing General Plan. The updated Chino Hills General Plan is expected to be adopted in 2024 or 2025 and will guide the City's development and conservation through land use objectives and policy guidance. The General Plan Update is intended to be an expression of the community's vision for the City and Study Area and constitutes the policy and regulatory framework by which future development projects will be reviewed, and public improvements will be implemented. The City will implement the General Plan Update by requiring development, infrastructure improvements, and other projects to be consistent with its policies and by implementing the actions included in the General Plan Update.

The City's General Plan was last comprehensively updated in 2015, and the Housing Element was adopted in 2022. The City's Proposed General Plan Land Use Plan (Exhibit A) represents the proposed plan for land use development within the Study Area which includes the City and its Sphere of Influence. It includes labels indicating potential lower income RHNA sites. The purpose of this air quality and greenhouse gas impact analysis is to evaluate the potential for the potential lower income RHNA sites and any changes to the Roadway Circulation Plan to result in impacts to the community and to recommend mitigation measures when applicable.

Table 1 shows the CalEEMod modeling inputs for existing and proposed housing.

Table 1: Land Use Summary

Existing			
Land Use	**CalEEMod Category**	**Unit Amount**	**Size Metric**
Very High Density	Apartments High Rise	4,997	Units
Medium Density	Condo/Townhouse	633	Units
Low Density	Single Family Housing	20,071	Units
Proposed			
Land Use	**CalEEMod Category**	**Unit Amount**	**Size Metric**
Very High Density	Apartments High Rise	2,207	Units
Medium Density	Condo/Townhouse	435	Units
Low Density	Single Family Housing	207	Units
Total Existing + Proposed		**28,550**	**Units**

1.2.3 Sensitive Receptors

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution than others due to their exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. For CEQA purposes, a sensitive receptor would be a location where a sensitive individual could remain for 24-hours or longer, such as residencies, hospitals, and schools (etc).

The existing sensitive receptors withing the Project area are the various residential land uses including single family housing, multi-family housing, and mobile home communities.

1.3 Executive Summary of Findings and Mitigation Measures

The following is a summary of the analysis results:

Construction-Source Emissions
Project construction-source emissions would not exceed regional thresholds of significance established by the SCAQMD with inclusion of Mitigation Measure AQ-1. However, construction-source emissions from future developments within the project would have the potential to conflict with the Basin Air Quality Management Plan (AQMP) at the localized level. As discussed herein, future developments within the project will be required to comply with all applicable SCAQMD construction-source emission reduction rules and guidelines. Project construction source emissions could potentially cause or substantively contribute to violation of the California Ambient Air Quality Standards (CAAQS) or National Ambient Air Quality Standards (NAAQS). Therefore, the Project is considered to have a potentially significant and unavoidable impact.

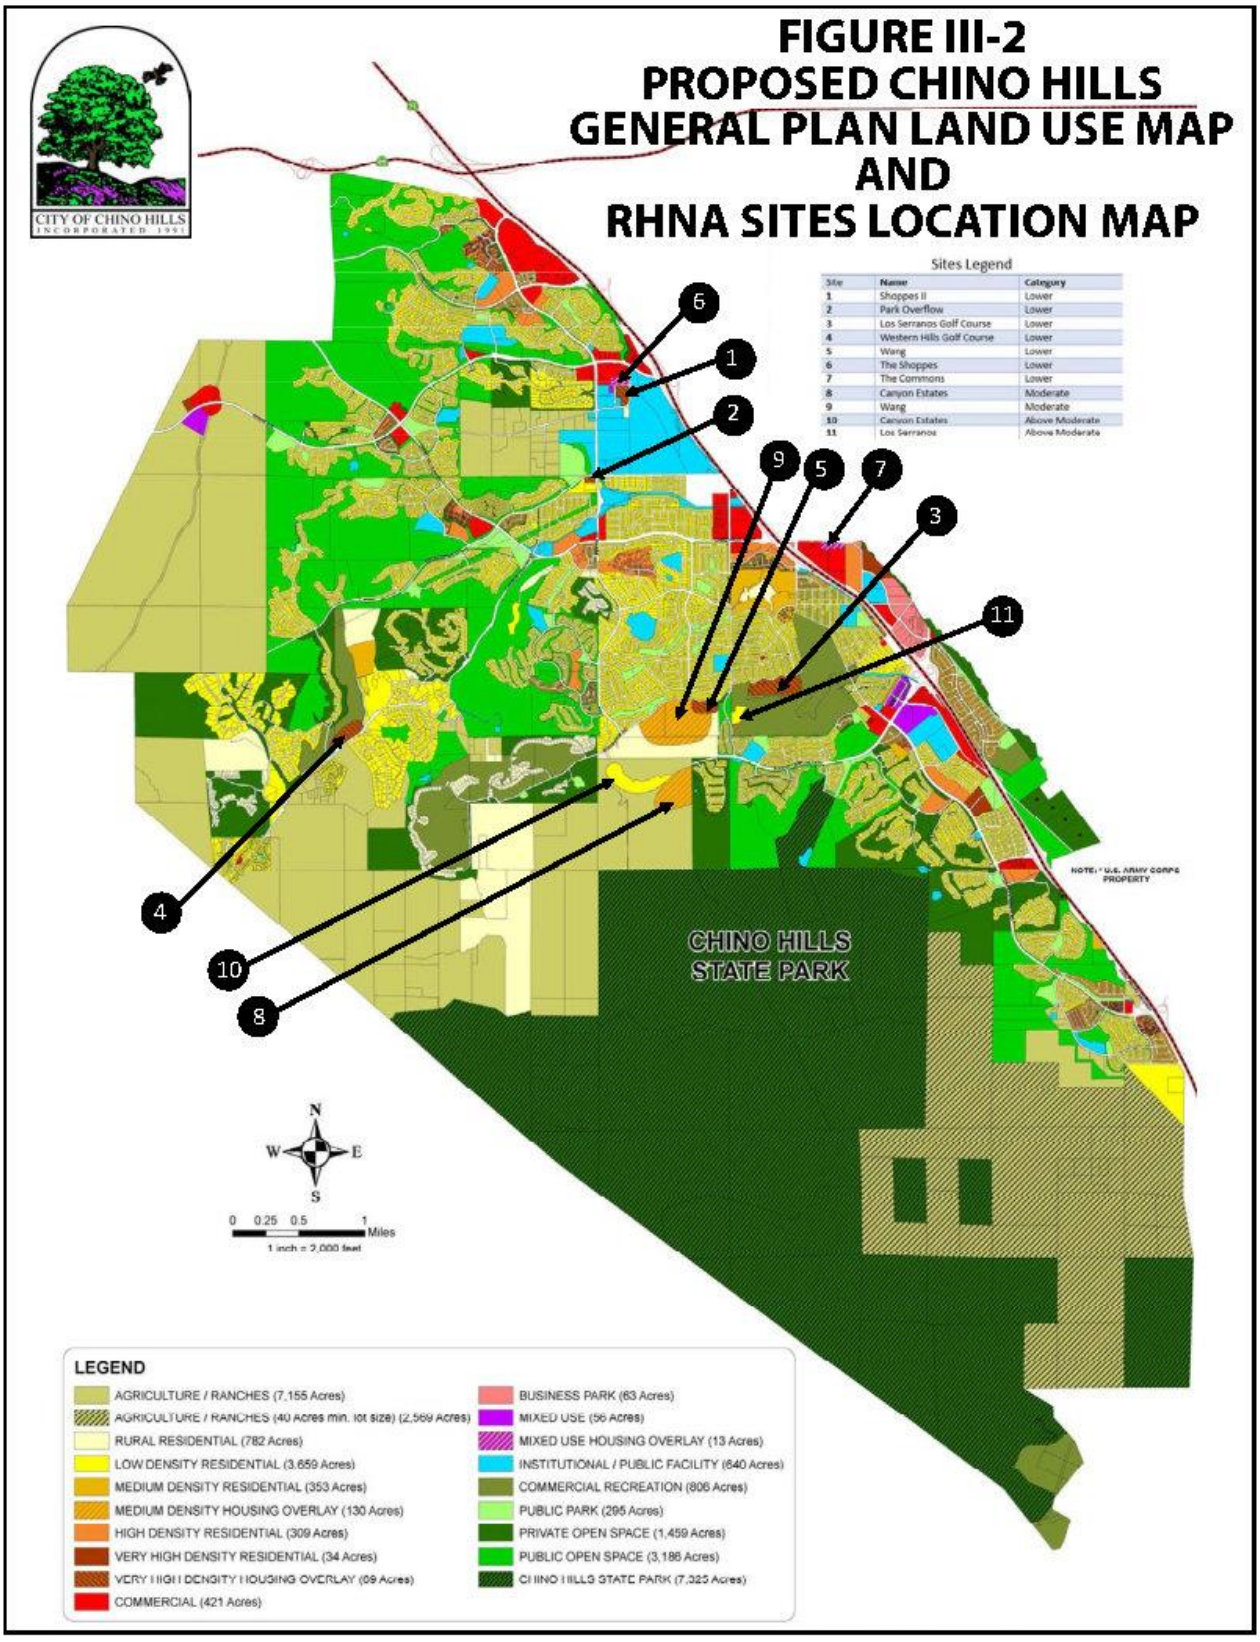
Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are considered less-than-significant.

Operational-Source Emissions

Air Quality Emissions Impact

The Project operational-sourced emissions would exceed applicable regional thresholds of significance established by the SCAQMD, primarily due to area sources (emissions from consumer products, architectural coatings, and landscaping equipment). Mitigation Measure AQ-1 (see below) has been incorporated to reduce VOC emissions from architectural coatings; however, with mitigation, Project operational-source emissions would still have the potential to adversely affect sensitive receptors within the Project and would therefore have a potentially **significant and unavoidable impact**. As such, Project operational-source emissions would conflict with the Basin Air Quality Management Plan (AQMP) as the Project's emissions exceed SCAQMD regional thresholds and would potentially result in a **significant cumulative impact**.

Project-related traffic will not cause or result in carbon dioxide (CO) concentrations exceeding applicable state and/or federal standards (CO "hotspots). The Project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential operational-source odor impacts are therefore considered less-than-significant.



Greenhouse Gas Emissions Impact

Project-related GHG emissions meet the San Bernardino County and SCAQMD draft threshold. Therefore, Project GHG emissions are considered to be less than significant. The Project also complies with the goals of the CARB Scoping Plan, Assembly Bill (AB) 32, Senate Bill (SB) 32, County of San Bernardino Greenhouse Gas Emissions Reduction Plan, and the County of San Bernardino Climate Action Plan.

Mitigation Measures

AQ-1: All residential architectural coatings for construction and operational use shall be limited to a VOC content of 20 grams per liter.

Exhibit A
Land Use and Potential RHNA Site Map

2.0 Regulatory Framework and Background

2.1 Air Quality Regulatory Setting

Air pollutants are regulated at the national, state, and air basin level; each agency has a different level of regulatory responsibility. The United States EPA regulates at the national level. CARB regulates at the state level. SCAQMD regulates at the air basin level.

2.1.1 National and State

The EPA is responsible for global, international, and interstate air pollution issues and policies. The EPA sets national vehicle and stationary source emission standards, oversees approval of all State Implementation Plans, provides research and guidance for air pollution programs, and sets National Air Quality Standards, also known as federal standards. There are six common air pollutants, called criteria pollutants, which were identified from the provisions of the Clean Air Act of 1970.

- Ozone
- Nitrogen Dioxide
- Lead
- Particulate Matter (PM10 and PM2.5)
- Carbon Monoxide
- Particulate Matter
- Sulfur Dioxide

The federal standards were set to protect public health, including that of sensitive individuals; thus, the standards continue to change as more medical research is available regarding the health effects of the criteria pollutants. Primary federal standards are the levels of air quality necessary, with an adequate margin of safety, to protect the public health.

A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain federal standards. The State Implementation Plan for the State of California is administered by CARB, which has overall responsibility for statewide air quality maintenance and air pollution prevention. California's State Implementation Plan incorporates individual federal attainment plans for regional air districts—air district prepares their federal attainment plan, which sent to CARB to be approved and incorporated into the California State Implementation Plan. Federal attainment plans include the technical foundation for understanding air quality (e.g., emission inventories and air quality monitoring), control measures and strategies, and enforcement mechanisms. See http://www.arb.ca.gov/research/aaqs/aaqs.htm for additional information on criteria pollutants and air quality standards.

The federal and state ambient air quality standards are summarized in Table 2 and can also be found at http://www.arb.ca.gov/research/aaqs/aaqs2.pdf.

Table 2: Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1]		National Standards[2]		
		Concentrations[3]	Method[4]	Primary[3,5]	Secondary[3,6]	Method[7]
Ozone (O3)	1-Hour	0.09 ppm	Ultraviolet Photometry	- -	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.070 ppm		0.070 ppm (147 µg/m³)		
Respirable Particulate Matter (PM10)[8]	24-Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µ/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		- -		
Fine Particulate Matter (PM2.5)[8]	24-Hour	- -	- -	35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12 µg/m³	15 µg/m³	
Carbon Monoxide (CO)	1-Hour	20 ppm (23 µg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 µg/m³)	- -	Non-Dispersive Infrared Photometry (NDIR)
	8-Hour	9.0 ppm (10 µg/m³)		9 ppm (10 µg/m³)	- -	
Nitrogen Dioxide (NO_2)[9]	1-Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m³)	- -	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (357 µg/m³)		0.053 ppm (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[10]	1-Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)	- -	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3-Hour	- -		- -	0.5 ppm (1300 mg/m³)	
	24-Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)[10]	- -	
	Annual Arithmetic Mean	- -		0.130ppm (for certain areas)[10]	- -	
Lead[11,12]	30 Day Average	1.5 µg/m³	Atomic Absorption	- -		
	Calendar Qrtr	- -		1.5 µg/m³ (for certain areas)[12]	Same as Primary Standard	High Volume Sampler and Atomic Absorption
	Rolling 3-Month Average	- -		0.15 µg/m³		
Visibility Reducing Particles[13]	8-Hour	See footnote 13	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates	24-Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1-Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[11]	24-Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

Notes:

1. California standards for ozone, carbon monoxide, sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m³ is equal to or less than one. For PM2.5, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of CARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.

8. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM10 standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

9. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

10. On June 2, 2010, a new 1-hour SO2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

11. CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

12. The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

13. In 1989, CARB converted the general statewide 10-mile visibility standard to an instrumental equivalent of "extinction of 0.23 per kilometer."

Several pollutants listed in Table 2 are not addressed in this analysis. Analysis of lead is not included in this report because the Project is not anticipated to emit lead. Visibility-reducing particles are not explicitly addressed in this analysis because particulate matter is addressed. The Project is not expected to generate or be exposed to vinyl chloride because proposed Project uses do not utilize the chemical processes that create this pollutant and there are no such uses in the Project vicinity. The proposed Project is not expected to cause exposure to hydrogen sulfide because it would not generate hydrogen sulfide in any substantial quantity.

2.1.2 South Coast Air Quality Management District

The agency for air pollution control for the South Coast Air Basin (basin) is SCAQMD. SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout the basin. SCAQMD, in coordination with the Southern California Association of Governments, is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the basin. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the federal and/or California ambient air quality standards. The term nonattainment area is used to refer to an air basin where one or more ambient air quality standards are exceeded.

Every three (3) years the SCAQMD prepares a new AQMP, updating the previous plan and having a 20-year horizon.

On March 23, 2017, CARB approved the 2016 AQMP. The 2016 AQMP is a regional blueprint for achieving the federal air quality standards and healthful air.

The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approaching attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the Plan is not approved or if the NAAQS are not met on time. As with every AQMP, a comprehensive analysis of emissions, meteorology, atmospheric chemistry, regional growth projections, and the impact of existing control measures is updated with the latest data and methods. The most significant air quality challenge in the Basin is to reduce nitrogen oxide (NOx) emissions sufficiently to meet the upcoming ozone standard deadlines. The primary goal of the 2016 AQMP is to meet clean air standards and protect public health, including ensuring benefits to environmental justice and disadvantaged communities. Now that the plan has been approved by CARB, it has been forwarded to the U.S. Environmental Protection Agency for its review. If approved by EPA, the plan becomes federally enforceable.

South Coast AQMD has initiated the development of the 2022 AQMP to address the attainment of the 2015 8-hour ozone standard (70 ppb) for South Coast Air Basin and Coachella Valley. To support the development of mobile source strategies for the 2022 AQMP, South Coast AQMD, in conjunction with California Air Resources Board, has established Mobile Source Working Groups which are open to all interested parties.

South Coast Air Quality Management District Rules

The AQMP for the basin establishes a program of rules and regulations administered by SCAQMD to obtain attainment of the state and federal standards. Some of the rules and regulations that apply to this Project include, but are not limited to, the following:

SCAQMD Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

SCAQMD Rule 403 governs emissions of fugitive dust during construction and operation activities. Compliance with this rule is achieved through application of standard Best Management Practices, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph, and establishing a permanent ground cover on finished sites.

Rule 403 requires that fugitive dust be controlled with best available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, Rule 403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Applicable suppression techniques are indicated below and include but are not limited to the following:

- Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas in active for 10 days or more).
- Water active sites at least three times daily.
- Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) section 23114.
- Pave construction access roads at least 100 feet onto the site from the main road.
- Reduce traffic speeds on all unpaved roads to 15 mph or less.
- Suspension of all grading activities when wind speeds (including instantaneous wind gusts) exceed 25 mph.
- Bumper strips or similar best management practices shall be provided where vehicles enter and exit the construction site onto paved roads or wash off trucks and any equipment leaving the site each trip.
- Replanting disturbed areas as soon as practical.
- During all construction activities, construction contractors shall sweep on-site and off-site streets if silt is carried to adjacent public thoroughfares, to reduce the amount of particulate matter on public streets.

SCAQMD Rule 1113 governs the sale, use, and manufacturing of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction. Therefore, all paints and solvents used during construction and operation of Project must comply with Rule 1113.

Idling Diesel Vehicle Trucks – Idling for more than 5 minutes in any one location is prohibited within California borders.

Rule 2702. The SCAQMD adopted Rule 2702 on February 6, 2009, which establishes a voluntary air quality investment program from which SCAQMD can collect funds from parties that desire certified GHG emission reductions, pool those funds, and use them to purchase or fund GHG emission reduction projects within two years, unless extended by the Governing Board. Priority will be given to projects that result in co-benefit emission reductions of GHG emissions and criteria or toxic air pollutants within environmental justice areas. Further, this voluntary program may compete with the cap-and-trade program identified for implementation in CARB's Scoping Plan, or a Federal cap and trade program.

2.2 Greenhouse Gas Regulatory Setting

2.2.1 International

Many countries around the globe have made an effort to reduce GHGs since climate change is a global issue.

Intergovernmental Panel on Climate Change. In 1988, the United Nations and the World Meteorological Organization established the Intergovernmental Panel on Climate Change to assess the scientific,

technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

United Nations. The United States participates in the United Nations Framework Convention on Climate Change (UNFCCC) (signed on March 21, 1994). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

The 2014 UN Climate Change Conference in Lima Peru provided a unique opportunity to engage all countries to assess how developed countries are implementing actions to reduce emissions.

Kyoto Protocol. The Kyoto Protocol is a treaty made under the UNFCCC and was the first international agreement to regulate GHG emissions. It has been estimated that if the commitments outlined in the Kyoto Protocol are met, global GHG emissions could be reduced by an estimated 5 percent from 1990 levels during the first commitment period of 2008 – 2012 (UNFCCC 1997). On December 8, 2012, the Doha Amendment to the Kyoto Protocol was adopted. The amendment includes: New commitments for Annex I Parties to the Kyoto Protocol who agreed to take on commitments in a second commitment period from 2013 – 2020; a revised list of greenhouse gases (GHG) to be reported on by Parties in the second commitment period; and Amendments to several articles of the Kyoto Protocol which specifically referenced issues pertaining to the first commitment period and which needed to be updated for the second commitment period.

2.2.2 National

Greenhouse Gas Endangerment. On December 2, 2009, the EPA announced that GHGs threaten the public health and welfare of the American people. The EPA also states that GHG emissions from on-road vehicles contribute to that threat. The decision was based on *Massachusetts v. EPA* (Supreme Court Case 05-1120) which argued that GHGs are air pollutants covered by the Clean Air Act and that the EPA has authority to regulate those emissions.

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation's National Highway Safety Administration announced a joint final rule establishing a national program that would reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program would apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards would cut carbon dioxide emissions by an

estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012-2016). The second phase of the national program would involve proposing new fuel economy and greenhouse gas standards for model years 2017 – 2025 by September 1, 2011.

On October 25, 2010, the EPA and the U.S. Department of Transportation proposed the first national standards to reduce greenhouse gas emissions and improve fuel efficiency of heavy-duty trucks and buses. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20 percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For heavy-duty pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10 percent reduction for gasoline vehicles and 15 percent reduction for diesel vehicles by 2018 model year (12 and 17 percent respectively if accounting for air conditioning leakage). Lastly, for vocational vehicles, the agencies are proposing engine and vehicle standards starting in the 2014 model year which would achieve up to a 10 percent reduction in fuel consumption and carbon dioxide emissions by 2018 model year.

Issued by the National Highway Traffic Safety Administration (NHTSA) and EPA in March 2020 (published on April 30, 2020, and effective after June 29, 2020), the Safer Affordable Fuel-Efficient Vehicles Rule would maintain the Corporate Average Fuel Economy (CAFE) and CO2 standards applicable in model year 2020 for model years 2021 through 2026. The estimated CAFE and CO2 standards for model year 2020 are 43.7 mpg and 204 grams of CO2 per mile for passenger cars and 31.3 mpg and 284 grams of CO2 per mile for light trucks, projecting an overall industry average of 37 mpg, as compared to 46.7 mpg under the standards issued in 2012. This Rule also excludes CO2- equivalent emission improvements associated with air conditioning refrigerants and leakage (and, optionally, offsets for nitrous oxide and methane emissions) after model year 2020.[1]

Mandatory Reporting of Greenhouse Gases. On January 1, 2010, the EPA started requiring large emitters of heat-trapping emissions to begin collecting GHG data under a new reporting system. Under the rule, suppliers of fossil fuels or industrial greenhouse gases, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of greenhouse gas emissions are required to submit annual reports to the EPA.

Climate Adaption Plan. The EPA Plan identifies priority actions the Agency will take to incorporate considerations of climate change into its programs, policies, rules and operations to ensure they are effective under future climatic conditions. The following link provides more information on the EPA Plan: https://www.epa.gov/arc-x/planning-climate-change-adaptation

[1] National Highway Traffic Safety Administration (NHTSA) and U.S. Environmental Protection Agency (USEPA), 2018. Federal Register / Vol. 83, No. 165 / Friday, August 24, 2018 / Proposed Rules, The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks 2018. Available at: https://www.gpo.gov/fdsys/pkg/FR-2018-08-24/pdf/2018-16820.pdf.

2.2.3 California

California Code of Regulations (CCR) Title 24, Part 6. CCR Title 24, Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24) were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. Although it was not originally intended to reduce GHG emissions, electricity production by fossil fuels results in GHG emissions and energy efficient buildings require less electricity. Therefore, increased energy efficiency results in decreased GHG emissions.

The Energy Commission adopted 2008 Standards on April 23, 2008, and Building Standards Commission approved them for publication on September 11, 2008. These updates became effective on August 1, 2009. 2013, 2016, and 2019 standards have been approved and became effective July 1, 2014, January 1, 2016, and January 1, 2020, respectively.

California Code of Regulations (CCR) Title 24, Part 11.
All buildings for which an application for a building permit is submitted on or after January 1, 2020, must follow the 2019 standards. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas emissions. The following links provide more information on Title 24, Part 11:
https://www.dgs.ca.gov/BSC/Codeshttps://www.energy.ca.gov/sites/default/files/2020-03/Title_24_2019_Building_Standards_FAQ_ada.pdf

California Green Building Standards.
On January 12, 2010, the State Building Standards Commission unanimously adopted updates to the California Green Building Standards Code, which went into effect on January 1, 2011. The Housing and Community Development (HCD) updated CALGreen through the 2015 Triennial Code Adoption Cycle, during the 2016 to 2017 fiscal year. During the 2019-2020 fiscal year, the Department of Housing and Community Development (HCD) updated CALGreen through the 2019 Triennial Code Adoption Cycle.

The Code is a comprehensive and uniform regulatory code for all residential, commercial and school buildings. CCR Title 24, Part 11: California Green Building Standards (Title 24) became effective in 2001 in response to continued efforts to reduce GHG emissions associated with energy consumption. CCR Title 24, Part 11 now require that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. One focus of CCR Title 24, Part 11 is water conservation measures, which reduce GHG emissions by reducing electrical consumption associated with pumping and treating water. CCR Title 24, Part 11 has approximately 52 nonresidential mandatory measures and an additional 130 provisions for optional use. Some key mandatory measures for commercial occupancies include specified parking for clean air vehicles, a 20 percent reduction of potable water use within buildings, a 50 percent construction waste diversion from landfills, use of building finish materials

that emit low levels of volatile organic compounds, and commissioning for new, nonresidential buildings over 10,000 square feet.

The 2019 CalGreen Code includes the following changes and/or additional regulations:

Single-family homes built with the 2019 standards will use about 7 percent less energy due to energy efficiency measures versus those built under the 2016 standards. Once rooftop solar electricity generation is factored in, homes built under the 2019 standards will use about 53 percent less energy than those under the 2016 standards. Nonresidential buildings will use about 30 percent less energy due mainly to lighting upgrades[2].

HCD modified the best management practices for stormwater pollution prevention adding Section 5.106.2 for projects that disturb one or more acres of land. This section requires projects that disturb one acre or more of land or less than one acre of land but are part of a larger common plan of development or sale must comply with the post-construction requirement detailed in the applicable National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities issued by the State Water Resources Control Board. The NPDES permits require post-construction runoff (post-project hydrology) to match the preconstruction runoff (pre-project hydrology) with installation of post-construction stormwater management measures.

HCD added sections 5.106.4.1.3 and 5.106.4.1.5 in regard to bicycle parking. Section 5.106.4.1.3 requires new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5 percent of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility. In addition, Section 5.106.4.1.5 states that acceptable bicycle parking facility for Sections 5.106.4.1.2 through 5.106.4.1.4 shall be convenient from the street and shall meeting one of the following: (1) covered, lockable enclosures with permanently anchored racks for bicycles; (2) lockable bicycle rooms with permanently anchored racks; or (3) lockable, permanently anchored bicycle lockers.

HCD amended section 5.106.5.3.5 allowing future charging spaces to qualify as designated parking for clean air vehicles.

HCD updated section 5.303.3.3 in regard to showerhead flow rates. This update reduced the flow rate to 1.8 GPM.

HCD amended section 5.304.1 for outdoor potable water use in landscape areas and repealed sections 5.304.2 and 5.304.3. The update requires nonresidential developments to comply with a local water efficient landscape ordinance or the current California Department of Water Resource's' Model Water

[2] https://ww2.energy.ca.gov/title24/2019standards/documents/2018_Title_24_2019_Building_Standards_FAQ.pdf

Efficient Landscape Ordinance (MWELO), whichever is more stringent. Some updates were also made in regard to the outdoor potable water use in landscape areas for public schools and community colleges.

HCD updated Section 5.504.5.3 in regard to the use of MERV filters in mechanically ventilated buildings. This update changed the filter use from MERV 8 to MERV 13.

The California Green Building Standards Code does not prevent a local jurisdiction from adopting a more stringent code as state law provides methods for local enhancements. The Code recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided, they provide a minimum 50-percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. State building code provides the minimum standard that buildings need to meet in order to be certified for occupancy. Enforcement is generally through the local building official. The following link provides more on CalGreen Building Standards:
http://www.bsc.ca.gov/Home/CALGreen.aspx

Executive Order S-3-05. California Governor issued Executive Order S-3-05, GHG Emission, in June 2005, which established the following targets:

- By 2010, California shall reduce greenhouse gas emissions to 2000 levels;
- By 2020, California shall reduce greenhouse gas emissions to 1990 levels; and
- By 2050, California shall reduce greenhouse gas emissions to 80 percent below 1990 levels.

The executive order directed the secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce GHG emissions to the target levels. To comply with the Executive Order, the secretary of CalEPA created the California Climate Action Team (CAT), made up of members from various state agencies and commissions. The team released its first report in March 2006. The report proposed to achieve the targets by building on the voluntary actions of businesses, local governments, and communities and through State incentive and regulatory programs.

Executive Order S-01-07. Executive Order S-1-07 was issued in 2007 and proclaims that the transportation sector is the main source of GHG emissions in the State, since it generates more than 40 percent of the State's GHG emissions. It establishes a goal to reduce the carbon intensity of transportation fuels sold in the State by at least ten percent by 2020. This Order also directs CARB to determine whether this Low Carbon Fuel Standard (LCFS) could be adopted as a discrete early-action measure as part of the effort to meet the mandates in AB 32.

On April 23, 2009 CARB approved the proposed regulation to implement the low carbon fuel standard and began implementation on January 1, 2011. The low carbon fuel standard is anticipated to reduce GHG emissions by about 16 MMT per year by 2020. CARB approved some amendments to the LCFS in December 2011, which were implemented on January 1, 2013. In September 2015, the Board approved the re-adoption of the LCFS, which became effective on January 1, 2016, to address procedural deficiencies in the way the original regulation was adopted. In 2018, the Board approved amendments

to the regulation, which included strengthening and smoothing the carbon intensity benchmarks through 2030 in-line with California's 2030 GHG emission reduction target enacted through SB 32, adding new crediting opportunities to promote zero emission vehicle adoption, alternative jet fuel, carbon capture and sequestration, and advanced technologies to achieve deep decarbonization in the transportation sector.

The LCFS is designed to encourage the use of cleaner low-carbon transportation fuels in California, encourage the production of those fuels, and therefore, reduce GHG emissions and decrease petroleum dependence in the transportation sector. Separate standards are established for gasoline and diesel fuels and the alternative fuels that can replace each. The standards are "back-loaded", with more reductions required in the last five years, than the first five years. This schedule allows for the development of advanced fuels that are lower in carbon than today's fuels and the market penetration of plug-in hybrid electric vehicles, battery electric vehicles, fuel cell vehicles, and flexible fuel vehicles. It is anticipated that compliance with the low carbon fuel standard will be based on a combination of both lower carbon fuels and more efficient vehicles.

Reformulated gasoline mixed with corn-derived ethanol at ten percent by volume and low sulfur diesel fuel represent the baseline fuels. Lower carbon fuels may be ethanol, biodiesel, renewable diesel, or blends of these fuels with gasoline or diesel as appropriate. Compressed natural gas and liquefied natural gas also may be low carbon fuels. Hydrogen and electricity, when used in fuel cells or electric vehicles are also considered as low carbon fuels for the low carbon fuel standard.

SB 97. Senate Bill 97 (SB 97) was adopted August 2007 and acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. SB 97 directed the Governor's Office of Planning and Research (OPR), which is part of the State Resource Agency, to prepare, develop, and transmit to CARB guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, by July 1, 2009. The Resources Agency was required to certify and adopt those guidelines by January 1, 2010.

Pursuant to the requirements of SB 97 as stated above, on December 30, 2009, the Natural Resources Agency adopted amendments to the state CEQA guidelines that address GHG emissions. The CEQA Guidelines Amendments changed 14 sections of the CEQA Guidelines and incorporate GHG language throughout the Guidelines. However, no GHG emissions thresholds of significance are provided and no specific mitigation measures are identified. The GHG emission reduction amendments went into effect on March 18, 2010, and are summarized below:

- Climate action plans and other greenhouse gas reduction plans can be used to determine whether a project has significant impacts, based upon its compliance with the plan.
- Local governments are encouraged to quantify the greenhouse gas emissions of proposed projects, noting that they have the freedom to select the models and methodologies that best meet their needs and circumstances. The section also recommends consideration of several qualitative factors that may be used in the determination of significance, such as the extent to which the given Project complies with state, regional, or local GHG reduction plans and policies. OPR does not set or dictate

specific thresholds of significance. Consistent with existing CEQA Guidelines, OPR encourages local governments to develop and publish their own thresholds of significance for GHG impacts assessment.

- When creating their own thresholds of significance, local governments may consider the thresholds of significance adopted or recommended by other public agencies, or recommended by experts.
- New amendments include guidelines for determining methods to mitigate the effects of greenhouse gas emissions in Appendix F of the CEQA Guidelines.
- OPR is clear to state that "to qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the Project; general compliance with a plan, by itself, is not mitigation."
- OPR's emphasizes the advantages of analyzing GHG impacts on an institutional, programmatic level. OPR therefore approves tiering of environmental analyses and highlights some benefits of such an approach.
- Environmental impact reports (EIRs) must specifically consider a project's energy use and energy efficiency potential.

AB 32. The California State Legislature enacted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires that greenhouse gases emitted in California be reduced to 1990 levels by the year 2020. "Greenhouse gases" as defined under AB 32 include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. CARB is the state agency charged with monitoring and regulating sources of greenhouse gases. AB 32 states the following:

> Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.

The CARB Board approved the 1990 greenhouse gas emissions level of 427 million metric tons of carbon dioxide equivalent (MMTCO2e) on December 6, 2007 (California Air Resources Board 2007). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 MMTCO2e. Emissions in 2020 in a "business as usual" scenario are estimated to be 596 MMTCO2e.

Under AB 32, CARB published its Final Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California. Discrete early action measures are currently underway or are enforceable by January 1, 2010. CARB has 44 early action measures that apply to the transportation, commercial, forestry, agriculture, cement, oil and gas, fire suppression, fuels, education, energy efficiency, electricity, and waste sectors. Of these early action measures, nine are considered discrete early action measures, as they are regulatory and enforceable by January 1, 2010. CARB estimates that the 44 recommendations are expected to result in reductions of at least 42 MMTCO2e by 2020, representing approximately 25 percent of the 2020 target.

CARB's Climate Change Scoping Plan (Scoping Plan) contains measures designed to reduce the State's emissions to 1990 levels by the year 2020 (California Air Resources Board 2008). The Scoping Plan identifies recommended measures for multiple greenhouse gas emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target—each sector has a different emission reduction target. Most of the measures target the transportation and electricity sectors. As stated in the Scoping Plan, the key elements of the strategy for achieving the 2020 greenhouse gas target include:

- Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
- Achieving a statewide renewables energy mix of 33 percent;
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system;
- Establishing targets for transportation-related greenhouse gas emissions for regions throughout California and pursuing policies and incentives to achieve those targets;
- Adopting and implementing measures pursuant to existing State laws and policies, Including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard; and
- Creating targeted fees, including a public goods charge on water use, fees on high global warming potential gases, and a fee to fund the administrative costs of the State's long-term commitment to AB 32 implementation.

In addition, the Scoping Plan differentiates between "capped" and "uncapped" strategies. "Capped" strategies are subject to the proposed cap-and-trade program. The Scoping Plan states that the inclusion of these emissions within the cap-and trade program will help ensure that the year 2020 emission targets are met despite some degree of uncertainty in the emission reduction estimates for any individual measure. Implementation of the capped strategies is calculated to achieve a sufficient amount of reductions by 2020 to achieve the emission target contained in AB 32. "Uncapped" strategies that will not be subject to the cap-and-trade emissions caps and requirements are provided as a margin of safety by accounting for additional greenhouse gas emission reductions.[4]

Senate Bill 100. Senate Bill 100 (SB 100) requires 100 percent of total retail sales of electricity in California to come from eligible renewable energy resources and zero-carbon resources by December 31, 2045. SB 100 was adopted September 2018.

The interim thresholds from prior Senate Bills and Executive Orders would also remain in effect. These include Senate Bill 1078 (SB 1078), which requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. Senate Bill 107 (SB 107) which changed the target date to 2010. Executive Order S-14-08, which was signed on November 2008 and expanded the State's Renewable Energy Standard to 33 percent renewable energy by 2020. Executive Order S-21-09 directed CARB to adopt regulations by July 31, 2010 to enforce S-14-08. Senate Bill X1-2 codifies the 33 percent renewable energy requirement by 2020.

SB 375. Senate Bill 375 (SB 375) was adopted September 2008 and aligns regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires Metropolitan Planning Organizations (MPO) to adopt a sustainable communities strategy (SCS) or alternate planning strategy (APS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP). CARB, in consultation with each MPO, will provide each affected region with reduction targets for GHGs emitted by passenger cars and light trucks in the region for the years 2020 and 2035. These reduction targets will be updated every eight years but can be updated every four years if advancements in emissions technologies affect the reduction strategies to achieve the targets. CARB is also charged with reviewing each MPO's sustainable communities strategy or alternate planning strategy for consistency with its assigned targets.

The proposed Project is located within the Southern California Association of Governments (SCAG), which has authority to develop the SCS or APS. For the SCAG region, the targets set by CARB are at eight percent below 2005 per capita GHG emissions levels by 2020 and 13 percent below 2005 per capita GHG emissions levels by 2035. On April 4, 2012, SCAG adopted the 2012-2035 Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS), which meets the CARB emission reduction requirements.

On September 3, 2020, SCAG's Regional Council approved and fully adopted the Connect SoCal (2020–2045 Regional Transportation Plan/Sustainable Communities Strategy), and the addendum to the Connect SoCal Program Environmental Impact Report. Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. Connect SoCal outlines more than $638 billion in transportation system investments through 2045. Connect SoCal is supported by a combination of transportation and land use strategies that help the region achieve state greenhouse gas emission reduction goals and federal Clean Air Act requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry and utilize resources more efficiently. By integrating the Forecasted Development Pattern with a suite of financially constrained transportation investments, Connect SoCal can reach the regional target of reducing greenhouse gases, or GHGs, from autos and light-duty trucks by 8 percent per capita by 2020, and 19 percent by 2035 (compared to 2005 levels).

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS or APS. However, new provisions of CEQA would incentivize, through streamlining and other provisions, qualified projects that are consistent with an approved SCS or APS and categorized as "transit priority projects."

Assembly Bill 939, Assembly Bill, and Senate Bill 1374. Assembly Bill 939 (AB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. AB 341 requires at least 75 percent of generated waste be source reduced, recycled, or composted by the year 2020. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills.

Executive Order S-13-08. Executive Order S-13-08 indicates that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in the order, the 2009 California Climate Adaptation Strategy (California Natural Resource Agency 2009) was adopted, which is the "… first statewide, multi-sector, region-specific, and information-based climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-30-15. Executive Order B-30-15, establishing a new interim statewide greenhouse gas emission reduction target to reduce greenhouse gas emissions to 40 percent below 1990 levels by 2030, was signed by Governor Brown in April 2015.

Executive Order B-29-15. Executive Order B-29-15, mandates a statewide 25% reduction in potable water usage and was signed into law on April 1, 2015.

Executive Order B-37-16. Executive Order B-37-16, continuing the State's adopted water reduction, was signed into law on May 9, 2016. The water reduction builds off the mandatory 25% reduction called for in EO B-29-15.

Executive Order N-79-20. Executive Order N-79-20 was signed into law on September 23, 2020 and mandates 100 percent of in-state sales of new passenger cars and trucks be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the state be zero-emission vehicles by 2045 for all operations where feasible and by 2035 for drayage trucks; and to transition to 100 percent zero-emission off-road vehicles and equipment by 2035 where feasible.

2.2.4 South Coast Air Quality Management District

The Project is within the South Coast Air Basin, which is under the jurisdiction of SCAQMD. SCAQMD Regulation XXVII currently includes three rules:

- The purpose of Rule 2700 is to define terms and post global warming potentials.
- The purpose of Rule 2701, SoCal Climate Solutions Exchange, is to establish a voluntary program to encourage, quantify, and certify voluntary, high quality certified greenhouse gas emission reductions in the SCAQMD.
- Rule 2702, Greenhouse Gas Reduction Program, was adopted on February 6, 2009. The purpose of this rule is to create a Greenhouse Gas Reduction Program for greenhouse gas emission reductions in the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD Threshold Development

The SCAQMD has established recommended significance thresholds for greenhouse gases for local lead agency consideration ("SCAQMD draft local agency threshold"). SCAQMD has published a five-tiered draft GHG threshold which includes a 10,000 metric ton of CO_2e per year for stationary/industrial sources and 3,000 metric tons of CO_2e per year significance threshold for residential/commercial projects (South Coast Air Quality Management District 2010c). Tier 3 is anticipated to be the primary tier by which the SCAQMD will determine significance for projects. The Tier 3 screening level for stationary sources is based on an emission capture rate of 90 percent for all new or modified projects. A 90-precent emission capture rate means that 90 percent of total emissions from all new or modified stationary source projects would be subject to CEQA analysis. The 90-percent capture rate GHG significance screening level in Tier 3 for stationary sources was derived using the SCAQMD's annual Emissions Reporting Program.

The current draft thresholds consist of the following tiered approach:

- Tier 1 consists of evaluating whether or not the Project qualifies for any applicable exemption under CEQA.
- Tier 2 consists of determining whether or not the Project is consistent with a greenhouse gas reduction plan. If a project is consistent with a qualifying local greenhouse gas reduction plan, it does not have significant greenhouse gas emissions.
- Tier 3 consists of screening values, which the lead agency can choose but must be consistent. A project's construction emissions are averaged over 30 years and are added to a project's operational emissions. If a project's emissions are under one of the following screening thresholds, then the project is less than significant:
  - All land use types: 3,000 MTCO2e per year; and
  - Based on land use types: residential is 3,500 MTCO2e per year; commercial is 1,400 MTCO2e per year; and mixed use is 3,000 MTCO2e per year
- Tier 4 has the following options:
  - Option 1: Reduce emissions from business as usual by a certain percentage; this percentage is currently undefined;
  - Option 2: Early implementation of applicable AB 32 Scoping Plan measures;
  - Option 3: Year 2020 target for service populations (SP), which includes residents and employees: 4.8 MTCO2e/SP/year for projects and 6.6 MTCO2e/SP/year for plans; or
  - Option 3, 2035 target: 3.0 MTCO2e/SP/year for projects and 4.1 MTCO2e/SP/year for plans
- Tier 5 involves mitigation offsets to achieve target significance threshold.

Therefore, to determine whether the Project's GHG emissions are significant, this analysis uses the SCAQMD draft tier 4 threshold screening threshold of 4.1 MTCO2e per Service Population per year for plans.

2.2.5 County of San Bernardino

County of San Bernardino Climate Action Plan

The County of San Bernardino adopted its "Greenhouse Gas Emissions Reduction Plan" in December in 2011. An update to the GHG Emissions Development Review Process was made in 2015. The purpose of the GHG Plan is to reduce the County's internal and external GHG emissions by 15 percent below current (2011) levels by year 2020. The GHG Plan includes a two-tiered development review procedure to determine if a project could result in a significant impact related greenhouse gas emissions or otherwise comply with the Plan pursuant to Section 15183.5 of the state CEQA Guidelines.

The initial screening procedure is to determine if a project will emit 3,000 metric tons of carbon dioxide equivalent (MTCO2e) per year or more. Projects that do not exceed this threshold require no further climate change analysis. Projects exceeding this threshold must meet a minimum 31 percent emissions reduction in order to garner a less than significant determination. This can be met by either (1) achieving 100 points from a menu of mitigation options provided in the GHG Plan or (2) quantifying proposed reduction measures. Projects failing to meet the 31 percent reduction threshold would have a potentially significant impact related to climate change and greenhouse gas emissions. An update to the GHG Emissions Development Review Process was made in March 2015 to both improve upon the menu of options available in the screening tables and to bring performance standards up to current code.

All future developments within the Project will be subject to the latest requirements of the California Green Building and Title 24 Energy Efficiency Standards (currently 2019) which would reduce Project-related greenhouse gas emissions.

2.2.6 City of Chino Hills

City of Chino Hills General Plan

The City's existing General Plan includes various policies related to reducing greenhouse gas emissions. The applicable policies to the Project are listed below.

Goal CN-3 Promote Sustainable Practices that Conserve Natural Resources and Reduce Greenhouse Gas Emissions.

Policies

Policy CN-3.1: Endorse green building design in new and existing construction.

Action CN-3.1.1: Implement green building policies that promote increased use of energy efficiency, alternative energy, recycled materials, renewable resources, local materials, water efficiency, and pollution reduction.

Action CN-3.1.2: Establish programs that encourage homeowners to reduce energy consumption.

Action CN-3.1.3: Seek available funding sources that can be applied toward green building programs.

Action CN-3.1.4: Coordinate with state and regional agencies to ensure that alternative energy facilities are compatible with Chino Hills' natural and built environment.

Policy CN-3.2: Develop and implement a Climate Action Plan.

Action CN-3.2.1: Reduce greenhouse gas emissions in City operations.

Action CN-3.2.2: Power City vehicles and equipment with reduced carbon dioxide emission fuels.

Action CN-3.2.3: Provide Climate Action Plan information and resources to the Chino Hills community.

Goal CN-6 Promote Clean Air to Reduce Adverse Effects on Human Health and the Environment.

Policies

Policy CN-6.1: Reduce air pollution through coordinated land use, transportation, and energy use planning.

Action CN-6.1.1: Endorse regional air quality and transportation management plans in order to reduce air pollution emissions and vehicle trips.

Action CN-6.1.2: Encourage multifamily development to develop close to existing/planned transit and commercial areas to encourage pedestrian and nonautomobile traffic.

Action CN-6.1.3: Promote transit that serves the City and links to adjacent cities and counties.

Action CN-6.1.4: Provide commercial areas that are conducive to pedestrian and bicycle circulation.

Policy CN-6.2: Reduce air pollution impacts on health.

Action CN-6.2.1: Encourage compliance with CARB "Air Quality and Land Use Handbook: A Community Health Perspective," which provides guidelines for siting new sensitive land uses in proximity to air pollutant emitting sources.

Action CN-6.2.2: Require businesses to limit air pollution emissions in compliance with state and regional regulations and to reduce health impacts on sensitive land uses.

Action CN-6.2.3: Require businesses to limit odor emissions to eliminate or reduce nuisance impacts on sensitive land uses.

Policy CN-6.3: Reduce air pollution emissions from construction activities.

Action CN-6.3.1: Require preparation of air quality analyses of construction-related air quality impacts using the latest available air emissions model or other analytical method determined in conjunction with SCAQMD for all projects subject to the California Environmental Quality Act (CEQA). If such analyses identify potentially significant regional or local air quality impacts, require the incorporation of appropriate mitigation to reduce such impacts.

Action CN-6.3.2: Encourage large construction projects to mitigate diesel exhaust emissions through the use of alternative fuels and control devices.

Action CN-6.3:3: Require dust abatement actions for all new construction and redevelopment projects.

Policy CN-6.4: Reduce air pollution emissions from new development.

Action CN-6.4.1: Require preparation of air quality analyses that analyze operational air quality impacts using the latest available air emissions model or other analytical method determined in conjunction with SCAQMD for all projects subject to the California Environmental Quality Act (CEQA). If such analyses identify potentially significant regional or local air quality impacts, require the incorporation of appropriate mitigation to reduce such impacts.

3.0 Setting

3.1 Existing Physical Setting

The Project site is located in the City of Chino Hills within the southwestern portion of County of San Bernardino, which is part of the South Coast Air Basin (SCAB) that includes all of Orange County as well as the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. The South Coast Air Basin is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the South Coast Air Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter.

3.1.1 Local Climate and Meteorology

Dominant airflows provide the driving mechanism for transport and dispersion of air pollution. The mountains surrounding the region form natural horizontal barriers to the dispersion of air contaminants. Air pollution created in the coastal areas and around the Los Angeles area is transported inland until it reaches the mountains where the combination of mountains and inversion layers generally prevent further dispersion. This poor ventilation results in a gradual degradation of air quality from the coastal areas to inland areas. Air stagnation may occur during the early evening and early morning periods of transition between day and nighttime flows. The region also experiences periods of hot, dry winds from the desert, known as Santa Ana winds. If the Santa Ana winds are strong, they can surpass the sea breeze, which blows from the ocean to the land, and carry the suspended dust and pollutants out to the ocean. If the winds are weak, they are opposed by the sea breeze and cause stagnation, resulting in high pollution events.

The annual average temperature varies little throughout much of the basin, ranging from the low to middle 60s, measured in degrees Fahrenheit (°F). With more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas where the Project site is located. The majority of the annual rainfall in the basin occurs between November and April. Summer rainfall is minimal and is generally limited to scattered thunderstorms in the coastal regions and slightly heavier showers in the eastern portion of the basin along the coastal side of the mountains. Year-to-year patterns in rainfall are unpredictable because of fluctuations in the weather.

Temperature inversions limit the vertical depth through which pollution can be mixed. Among the most common temperature inversions in the basin are radiation inversions, which form on clear winter nights when cold air off mountains sink to the valley floor while the air aloft over the valley remains warm. These inversions, in conjunction with calm winds, trap pollutants near the source. Other types of temperature inversions that affect the basin include marine, subsidence, and high-pressure inversions.

Summers are often periods of hazy visibility and occasionally unhealthful air. Strong temperature inversions may occur that limit the vertical depth through which air pollution can be dispersed. Air pollutants concentrate because they cannot rise through the inversion layer and disperse. These inversions are more common and persistent during the summer months. Over time, sunlight produces photochemical reactions within this inversion layer that creates ozone, a particularly harmful air

pollutant. Occasionally, strong thermal convections occur which allows the air pollutants to rise high enough to pass over the mountains and ultimately dilute the smog cloudtrap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution "hot spots" in heavily developed coastal areas of the basin, there is not enough traffic in inland valleys to cause any winter air pollution problems. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the Project vicinity.

In the winter, light nocturnal winds result mainly from the drainage of cool air off of the mountains toward the valley floor while the air aloft over the valley remains warm. This forms a type of inversion known as a radiation inversion. Such winds are characterized by stagnation and poor local mixing and trap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution "hot spots" in heavily developed coastal areas of the basin, there is not enough traffic to cause any winter air pollution problems. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the Project vicinity.

The temperature and precipitation levels for the City of Yorba Linda, the closest monitoring station to the Project site with available meteorological data, are in Table 3. Table 3 shows that August is typically the warmest month and January is typically the coolest month. Rainfall in the Project area varies considerably in both time and space. Almost all the annual rainfall comes from the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table 3: Meteorological Summary

Month	Temperature (˚F)		Average Precipitation (inches)
	Average High	Average Low	
January	66.9	41.7	2.99
February	68.4	43.3	3.10
March	70.6	44.2	2.37
April	73.5	46.7	1.11
May	76.5	51.0	0.30
June	81.3	54.6	0.04
July	87.9	58.2	0.01
August	88.4	58.5	0.10
September	86.5	56.2	0.31
October	80.6	52.2	0.53
November	74.6	46.8	1.31
December	68.6	42.7	2.21
Annual Average	**77.0**	**49.7**	**14.4**

3.1.2 Local Air Quality

The SCAQMD is divided into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The Project site is located in the City of Chino Hills in the Southwest San Bernardino Valley (Area 33). The nearest air monitoring station to the Project site with available air

quality data is the Upland Station located approximately 9 miles northeast of the Project site; however, this location does not provide all ambient weather data. Therefore, additional data was pulled from the SCAQMD historical data for the Southwest San Bernardino Valley (Area 33) for both sulfur dioxide and carbon monoxide to provide the existing levels. Table 4 presents the monitored pollutant levels within the vicinity. However, it should be noted that due to the air monitoring station distance from the Project site, recorded air pollution levels at the air monitoring station reflect with varying degrees of accuracy, local air quality conditions at the Project site.

Table 4: Local Area Air Quality Levels from the Upland Monitoring Station

Pollutant (Standard)[2]	Year		
	2020	2021	2022
Ozone:			
Maximum 1-Hour Concentration (ppm)	0.158	0.124	0.155
Days > CAAQS (0.09 ppm)	**82**	**42**	**45**
Maximum 8-Hour Concentration (ppm)	0.124	0.100	0.100
Days > NAAQS (0.07 ppm)	**116**	**78**	**67**
Days > CAAQS (0.070 ppm)	**118**	**81**	**69**
Carbon Monoxide:			
Maximum 1-Hour Concentration (ppm)	1.5	2.8	1.3
Days > NAAQS (20 ppm)	0	0	0
Maximum 8-Hour Concentration (ppm)	1.2	1.4	1.0
Days > NAAQS (9 ppm)	0	0	0
Nitrogen Dioxide:			
Maximum 1-Hour Concentration (ppm)	0.055	0.065	0.054
Days > NAAQS (0.25 ppm)	0	0	0
Sulfur Dioxide:			
Maximum 1-Hour Concentration (ppm)[3]	*	*	*
Days > CAAQS (0.04 ppm)[3]	*	*	*
Inhalable Particulates (PM10):			
Maximum 24-Hour Concentration (ug/m^3)	174.8	124.3	144.9
Days > NAAQS (150 ug/m^3)	1	0	0
Days > CAAQS (50 ug/m^3) [3]	*	*	*
Annual Average (ug/m^3)	33.5	32.6	30.1
Annual > NAAQS (50 ug/m^3)	No	No	No
Annual > CAAQS (20 ug/m^3)	**Yes**	**Yes**	**Yes**
Ultra-Fine Particulates (PM2.5):			
Maximum 24-Hour Concentration (ug/m^3)	74.0	83.8	66.2
Days > NAAQS (35 ug/m^3) [3]	*	*	*
Annual Average (ug/m^3) [3]	*	*	*
Annual > NAAQS (15 ug/m^3) [3]	*	*	*
Annual > CAAQS (12 ug/m^3) [3]	*	*	*

[1.] Source: obtained from https://www.aqmd.gov/home/air-quality/air-quality-data-studies/historical-data-by-year and /or https://www.arb.ca.gov/adam/topfour/topfour1.php

[2] CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million

[3] No data available.

The monitoring data presented in Table 4 shows that ozone and particulate matter (PM10 and PM2.5) are the air pollutants of primary concern in the Project area, which are detailed below.

Ozone
During the 2020 to 2022 monitoring period, the State 1-hour concentration standard for ozone has been exceeded between 42 and 82 days each year at the Upland Station. The State 8-hour concentration standard for ozone has been exceeded between 69 and 118 days each year over the past three years at the Upland Station. The Federal 8-hour concentration standard for ozone has been exceeded between 67 and 116 days each year over the past three years at the Upland Station.

Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO_2, which occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of the SCAQMD contribute to the ozone levels experienced at the monitoring station, with the more significant areas being those directly upwind.

Carbon Monoxide
CO is another important pollutant that is due mainly to motor vehicles. The Southwest San Bernardino Valley Area did not record an exceedance of the state or federal 1-hour or 8-hour CO standards for the last three years.

Nitrogen Dioxide
The Upland Station did not record an exceedance of the State or Federal NO_2 standards for the last three years.

Sulfur Dioxide
The Southwest San Bernardino Valley area did not record an exceedance of the State SO_2 standards for the last three years.

Particulate Matter
During the 2020 to 2022 monitoring period, the Upland Station did not record an exceedance of the State 24-hour concentration standard for PM10. Over the same time period the Federal 24-hour standard for PM10 was exceeded one day in 2020 at the Upland Station.

During the 2020 to 2022 monitoring period, the Upland Station did not record an exceedance of the Federal 24-hour standard for PM2.5.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM10 and PM2.5). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM10 and PM2.5. Other groups considered

sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive because many breathe through their mouths during exercise.

3.1.3 Attainment Status

The EPA and CARB designate air basins where ambient air quality standards are exceeded as "nonattainment" areas. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered "unclassified." National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Each standard has a different definition, or 'form' of what constitutes attainment, based on specific air quality statistics. For example, the Federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual PM2.5 standard is met if the three-year average of the annual average PM2.5 concentration is less than or equal to the standard. Table 5 lists the attainment status for the criteria pollutants in the basin.

Table 5: South Coast Air Basin Attainment Status

Pollutant	Standard[1]	Averaging Time	Designation[2]	Attainment Date[3]
1-Hour Ozone	NAAQS	1979 1-Hour (0.12 ppm)	Nonattainment (Extreme)	2/6/2023 (not attained)[4]
	CAAQS	1-Hour (0.09 ppm)	Nonattainment	N/A
8-Hour Ozone[5]	NAAQS	1997 8-Hour (0.08 ppm)	Nonattainment (Extreme)	6/15/2024
	NAAQS	2008 8-Hour (0.075 ppm)	Nonattainment (Extreme)	7/20/2032
	NAAQS	2015 8-Hour (0.070 ppm)	Nonattainment (Extreme)	8/3/2038
	CAAQS	8-Hour (0.070 ppm)	Nonattainment	Beyond 2032
CO	NAAQS	1-Hour (35 ppm)	Attainment (Maintenance)	6/11/2007 (attained)
	CAAQS	8-Hour (9 ppm)	Attainment	6/11/2007 (attained)
NO_2 [6]	NAAQS	1-Hour (0.1 ppm)	Unclassifiable/Attainment	N/A (attained)
	NAAQS	Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (attained)
	CAAQS	1-hour (0.18 ppm) Annual (0.030 ppm)	Attainment	-
SO_2[7]	NAAQS	1-Hour (75 ppb)	Designations Pending (expect Uncl./Attainment)	N/A (attained)
	NAAQS	24-Hour (0.14 ppm) Annual (0.03 ppm)	Unclassifiable/Attainment	3/19/1979 (attained)
PM10	NAAQS	1987 24-Hour (150 µg/m^3)	Attainment (Maintenance)[8]	7/26/2013 (attained)
	CAAQS	24-Hour (50 µg/m^3) Annual (20 µg/m^3)	Nonattainment	N/A
PM2.5 [9]	NAAQS	2006 24-Hour (35 µg/m^3)	Nonattainment (Serious)	12/31/2019

Pollutant	Standard[1]	Averaging Time	Designation[2]	Attainment Date[3]
	NAAQS	1997 Annual (15.0 µg/m^3)	Attainment	8/24/2016
	NAAQS	2021 Annual (12.0 µg/m^3)	Nonattainment (Serious)	12/31/2025
	CAAQS	Annual (12.0 µg/m^3)	Nonattainment	N/A
Lead	NAAQS	3-Months Rolling (0.15 µg/m^3)	Nonattainment (Partial)[10]	12/31/2015

Notes:
Source: http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/naaqs-caaqs-feb2016.pdf
[1] NAAQS = National Ambient Air Quality Standards, CAAQS = California Ambient Air Quality Standards
[2] U.S. EPA often only declares Nonattainment areas; everywhere else is listed as Unclassifiable/Attainment or Unclassifiable.
[3] A design value below the NAAQS for data through the full year or smog season prior to the attainment date is typically required for attainment demonstration.
[4] 1-hour O3 standard (0.12 ppm) was revoked, effective June 15, 2005; however, the Basin has not attained this standard based on 2008-2010 data and is still subject to anti-backsliding requirements.
[5] 1997 8-hour O3 standard (0.08 ppm) was reduced (0.075 ppm), effective May 27, 2008; the revoked 1997 O3 standard is still subject to anti-backsliding requirements.
[6] New NO2 1-hour standard, effective August 2, 2010; attainment designations January 20, 2012; annual NO2 standard retained.
[7] The 1971 annual and 24-hour SO2 standards were revoked, effective August 23, 2010; however, these 1971 standards will remain in effect until one year after U.S. EPA promulgates area designations for the 2010 SO2 1-hour standard. Area designations are still pending, with Basin expected to be designated Unclassifiable /Attainment.
[8] Annual PM10 standard was revoked, effective December 18, 2006; 24-hour PM10 NAAQS deadline was 12/31/2006; SCAQMD request for attainment redesignation and PM10 maintenance plan was approved by U.S. EPA on June 26, 2013, effective July 26, 2013.
[9] Attainment deadline for the 2006 24-Hour PM2.5 NAAQS (designation effective December 14, 2009) is December 31, 2019 (end of the 10th calendar year after effective date of designations for Serious nonattainment areas). Annual PM2.5 standard was revised on January 15, 2013, effective March 18, 2013, from 15 to 12 µg/m3. Designations effective April 15, 2015, so Serious area attainment deadline is December 31, 2025.
[10] Partial Nonattainment designation – Los Angeles County portion of Basin only for near-source monitors. Expect redesignation to attainment based on current monitoring data.

3.2 Greenhouse Gases

Constituent gases of the Earth's atmosphere, called atmospheric greenhouse gases (GHG), play a critical role in the Earth's radiation amount by trapping infrared radiation emitted from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone, water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Transportation is responsible for 41 percent of the State's greenhouse gas emissions, followed by electricity generation. Emissions of CO_2 and nitrous oxide (NO_2) are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. Table 6 provides a description of each of the greenhouse gases and their global warming potential.

Additional information is available: https://www.arb.ca.gov/cc/inventory/data/data.htm

Table 6: Description of Greenhouse Gases

Greenhouse Gas	Description and Physical Properties	Sources
Nitrous oxide	Nitrous oxide (N_20),also known as laughing gas is a colorless gas. It has a lifetime of 114 years. Its global warming potential is 298.	Microbial processes in soil and water, fuel combustion, and industrial processes. In addition to agricultural sources, some industrial processes (nylon production, nitric acid production) also emit N_20.
Methane	Methane (CH_4) is a flammable gas and is the main component of natural gas. It has a lifetime of 12 years. Its global warming potential is 25.	A natural source of CH_4 is from the decay of organic matter. Methane is extracted from geological deposits (natural gas fields). Other sources are from the decay of organic material in landfills, fermentation of manure, and cattle farming.
Carbon dioxide	Carbon dioxide (CO_2) is an odorless, colorless, natural greenhouse gas. Carbon dioxide's global warming potential is 1. The concentration in 2005 was 379 parts per million (ppm), which is an increase of about 1.4 ppm per year since 1960.	Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood.
Chlorofluorocarbons	CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). They are gases formed synthetically by replacing all hydrogen atoms in methane or methane with chlorine and/or fluorine atoms. Global warming potentials range from 3,800 to 8,100.	Chlorofluorocarbons were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. They destroy stratospheric ozone, therefore their production was stopped as required by the Montreal Protocol.
Hydrofluorocarbons	Hydrofluorocarbons (HFCs) are a group of greenhouse gases containing carbon, chlorine, and at least one hydrogen atom. Global warming potentials range from 140 to 11,700.	Hydrofluorocarbons are synthetic manmade chemicals used as a substitute for chlorofluorocarbons in applications such as automobile air conditioners and refrigerants.
Perfluorocarbons	Perfluorocarbons (PFCs) have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above the Earth's surface. They have a lifetime 10,000 to 50,000 years. They have a global warming potential range of 6,200 to 9,500.	Two main sources of perfluorocarbons are primary aluminum production and semiconductor manufacturing.
Sulfur hexafluoride	Sulfur hexafluoride (SF_6) is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. It has a high global warming potential, 23,900.	This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Notes:

1. Sources: Intergovernmental Panel on Climate Change 2014a and Intergovernmental Panel on Climate Change 2014b. https://www.ipcc.ch/publications_and_data/ar4/wg1/en/ch2s2-10-2.html

4.0 Modeling Parameters and Assumptions

4.1 Construction

Typical emission rates from construction activities were obtained from CalEEMod Version 2022.1.1.26 CalEEMod is a computer model published by the SCAQMD for estimating air pollutant emissions. The CalEEMod program uses the EMFAC2017 computer program to calculate the emission rates specific for the southwestern portion of San Bernardino County for construction-related employee vehicle trips and the OFFROAD2011 computer program to calculate emission rates for heavy truck operations. EMFAC2017 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour. Using CalEEMod, the peak daily air pollutant emissions were calculated and presented below. These emissions represent the highest level of emissions for each of the construction phases in terms of air pollutant emissions.

The analysis assesses the emissions associated with the construction of the proposed Project as indicated in Table 1. Construction is estimated as beginning in February 2023 and finishing in January 2031. The phases of the construction activities which have been analyzed below are: 1) demolition, 2) site preparation, 3) grading, 4) building, 5) paving, and 6) architectural coating. For details on construction modeling and construction equipment for each phase, please see Appendix A.

The Project will be required to comply with existing SCAQMD rules for the reduction of fugitive dust emissions. SCAQMD Rule 403 establishes these procedures. Compliance with this rule is achieved through application of standard best management practices in construction and operation activities, such as application of water or chemical stabilizers to disturbed soils, managing haul road dust by application of water, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 mph, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph and establishing a permanent, stabilizing ground cover on finished sites. In addition, projects that disturb 50 acres or more of soil or move 5,000 cubic yards of materials per day will be required to submit a Fugitive Dust Control Plan or a Large Operation Notification Form to SCAQMD.

SCAQMD's Rule 403 minimum requirements require that the application of the best available dust control measures are used for all grading operations and include the application of water or other soil stabilizers in sufficient quantity to prevent the generation of visible dust plumes. Compliance with Rule 403 would require the use of water trucks during all phases where earth moving operations would occur. Compliance with Rule 403 is required for all future projects.

4.2 Operations

Operational or long-term emissions occur over the life of the Project. Both mobile and area sources generate operational emissions. Area source emissions arise from consumer product usage, heaters that consume natural gas, gasoline-powered landscape equipment, and architectural coatings (painting). Mobile source emissions from motor vehicles are the largest single long-term source of air pollutants from the operation of the Project. Small amounts of emissions would also occur from area sources such

as the consumption of natural gas for heating, from landscaping emissions, and consumer product usage. The operational emissions were estimated using the latest version of CalEEMod.

Mobile Sources

Mobile sources include emissions from the additional vehicle miles generated from the proposed Project. The vehicle trips associated with the proposed Project are based upon the trip generation rates give in the Project-specific trip generation analysis (Linscott, Law & Greenspan, Engineers) which uses the Institute of Transportation Engineers (ITE) Trip Generation Manual 11th Edition. The trip generation analysis shows a net trip generation rate of 14,042 trips per day for the proposed Project.

The program then applies the emission factors for each trip which is provided by the EMFAC2017 model to determine the vehicular traffic pollutant emissions. The CalEEMod default trip lengths were used in this analysis. Please see CalEEMod output comments sections in Appendix A and B for details.

Area Sources

Area sources include emissions from consumer products, landscape equipment and architectural coatings. Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers, as well as air compressors, generators, and pumps. As specifics were not known about the landscaping equipment fleet, CalEEMod defaults were used to estimate emissions from landscaping equipment.

Per SCAQMD Rule 1113 as amended on June 3, 2011, the architectural coatings that would be applied after January 1, 2014 will be limited to an average of 50 grams per liter or less for buildings and 100 grams per liter or less for parking lot striping. No changes were made to the CalEEMod architectural coating default values.

Per AB 341, at least 75 percent of generated waste will be source reduced, recycled, or composted. This is shown in the CalEEMod model as a mitigation measure; however, it is required.

Energy Usage

2022.1.1.26 CalEEMod defaults were utilized.

4.3 Localized Analysis

Localized Significance Thresholds (LSTs) are the amount of project-related emissions at which localized concentrations could exceed the AAQS for criteria pollutants for which the South Coast Air Basin is designated nonattainment. SCAQMD LSTs to determine if emissions of NO2, CO, PM10, and PM2.5 generated at a project site (offsite mobile-source emissions are not included in the LST analysis) would expose sensitive receptors to substantial concentrations of criteria air pollutants. The SCAQMD has published a “Fact Sheet for Applying CalEEMod to Localized Significance Thresholds” (South Coast Air Quality Management District 2011b).

Per the LST methodology, information regarding specific development projects and the location of receptors would be need in order to quantify the levels of impact associated with future development

projects. Thus, as the General Plan is a plan level analysis, it is not possible to calculate individual project-related localized emissions at this time. Air quality emissions would be addressed on a project-by-project basis as individual development projects are considered.

Furthermore, in accordance with SCAQMD's LST methodology, construction LSTs are based on the acreage disturbed per day based on equipment use. However, as discussed above, an LST analysis for construction-related localized impacts can only be conducted at a project level, and quantification of LSTs is not applicable for this program-level analysis.

LST analysis is applicable to projects to five acres and less and can be used as a screening criterion for larger projects to determine whether or not dispersion modeling may be required. However, according to SCAQMD LST methodology, LSTs would apply to the operational phase of a project, if the project includes stationary sources, or attracts mobile sources (such as heavy-duty trucks) that may spend long periods queuing and idling at the site; such as industrial warehouse/transfer facilities. The future development accommodated by the General Plan includes only an increased number of residential uses and does not include such uses. Therefore, due to the lack of stationary source emissions, no long-term localized significance threshold analysis is to be warranted for the future individual project.

Therefore, as future development associated with the General Plan could exceed SCAQMD regional significance thresholds for construction, in accordance with SCAQMD methodology, it may also result in significant construction-related localized impacts. However, due to the nature of the planned development, operational localized significance thresholds are considered less than significant.

5.0 Thresholds of Significance

5.1 Air Quality Thresholds of Significance

5.1.1 CEQA Guidelines for Air Quality

The CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on air quality, the type, level, and impact of emissions generated by the project must be evaluated.

The following air quality significance thresholds are contained in Appendix G of the CEQA Guidelines. A significant impact would occur if the project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable national or state ambient air quality standard;

c) Expose sensitive receptors to substantial pollutant concentrations; or

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

While the final determination of whether a project is significant is within the purview of the Lead Agency pursuant to Section 15064(b) of the CEQA Guidelines, SCAQMD recommends that its quantitative air pollution thresholds be used to determine the significance of project emissions. If the Lead Agency finds that the project has the potential to exceed these air pollution thresholds, the project should be considered to have significant air quality impacts. There are daily emission thresholds for construction and operation of a proposed project in the basin.

5.1.2 Regional Significance Thresholds for Construction Emissions

The following CEQA significance thresholds for construction emissions are established for the Basin:

- 75 pounds per day (lbs/day) of VOC
- 100 lbs/day of NO_x
- 550 lbs/day of CO
- 150 lbs/day of PM10
- 55 lbs/day of PM2.5
- 150 lbs/day of SO_2

Projects in the basin with construction-related emissions that exceed any of the emission thresholds are considered to be significant under SCAQMD guidelines.

5.1.3 Regional Significance Thresholds for Operational Emissions

The daily operational emissions significance thresholds for the basin are as follows:

- 55 pounds per day (lbs/day) of VOC
- 55 lbs/day of NO_x
- 550 lbs/day of CO
- 150 lbs/day of PM10
- 55 lbs/day of PM2.5
- 150 lbs/day of SO_2

Local Microscale Concentration Standards The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or federal standard, project emissions are considered significant if they increase 1-hour CO concentrations by 1.0 ppm or more or 8-hour CO concentrations by 0.45 ppm or more. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20.0 ppm
- California State 8-hour CO standard of 9.0 ppm

5.2 Greenhouse Gas Thresholds of Significance

5.2.1 CEQA Guidelines for Greenhouse Gas

CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on greenhouse gases, the type, level, and impact of emissions generated by the project must be evaluated.

The following greenhouse gas significance thresholds are contained in Appendix G of the CEQA Guidelines, which were amendments adopted into the Guidelines on March 18, 2010, pursuant to SB 97. A significant impact would occur if the project would:

(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or

(b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

However, despite this, currently neither the CEQA statutes, OPR guidelines, nor the draft proposed changes to the CEQA Guidelines prescribe thresholds of significance or a particular methodology for performing an impact analysis; as with most environmental topics, significance criteria are left to the judgment and discretion of the Lead Agency. As previously discussed (Section 2.2.4 of this report), SCAQMD has drafted interim thresholds. The screening threshold of 4.1 MTCO2e per service population per year for all land uses was used in this analysis.

5.3 Toxic Air Contaminants

The threshold for toxic air contaminants (TACs) has a maximum incremental cancer risk of 10 per million and a non-cancer (acute and chronic) hazard index of 1.0 or greater. An exceedance to these values for an individual project would be considered a significant impact.

6.0 Air Quality Emissions Impact

6.1 Construction Air Quality Emissions Impact

The latest version of CalEEMod was used to estimate the onsite and offsite construction emissions. The emissions incorporate Rule 402 and 403. Rule 402 and 403 (fugitive dust) are not considered mitigation measures as the Project by default is required to incorporate these rules during construction.

6.1.1 Regional Construction Emissions

The construction emissions for the Project would exceed the SCAQMD's daily emission thresholds at the regional level VOC emissions but would not exceed any other calculated pollutant as demonstrated in Table 7, and therefore would be considered significant without mitigation.

Table 7: Regional Significance – Unmitigated Construction Emissions (pounds/day)

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Maximum Daily Emissions	**170.00**	**39.84**	**186.20**	**0.09**	**29.08**	**7.37**
SCAQMD Thresholds	**75**	**100**	**550**	**150**	**150**	**55**
Exceeds Thresholds	**Yes**	No	No	No	No	No

Notes:
[1] Source: CalEEMod Version 2022.1.1.26. Complete output is provided in Appendix A.

However, with implementation of Mitigation Measure AQ-1 limiting residential architectural coatings to a VOC content of 20 grams per liter, the project would be below all thresholds and there less than significant with mitigation, shown below in Table 8.

Table 8: Regional Significance – Mitigated Construction Emissions (pounds/day)

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Total of overlapping phases[4]	**68.88**	**39.84**	**186.20**	**0.09**	**29.08**	**7.37**
SCAQMD Thresholds	**75**	**100**	**550**	**150**	**150**	**55**
Exceeds Thresholds	No	No	No	No	No	No

Notes:
[1] Source: CalEEMod Version 2022.1.1.26. Complete output is provided in Appendix B.

6.1.3 Localized Construction Emissions

Regarding health effects related to criteria pollutant emissions, the applicable significance thresholds are established for regional compliance with the state and federal ambient air quality standards, which are intended to protect public health from both acute and long-term health impacts, depending on the potential effects of the pollutant.

An LST analysis for construction-related localized impacts can only be conducted at a project level, and quantification of LSTs requires specific project-level information that is not available for this Program SEIR. Accordingly, new development resulting from the GPU could potentially exceed SCAQMD construction LSTs. Future developments within the project area will be required to perform analyses to determine individual project impacts and have the potential to cause a significant impact. Therefore, significant adverse acute health impacts could occur as a result of Project construction.

6.1.4 Odors

Potential sources that may emit odors during construction activities include the application of materials such as asphalt pavement. The objectionable odors that may be produced during the construction process are of short-term in nature and the odor emissions are expected cease upon the drying or hardening of the odor producing materials. Diesel exhaust and VOCs would be emitted during construction of the Project, which are objectionable to some; however, emissions would disperse rapidly from individual project sites. Due to the short-term nature and limited amounts of odor producing materials being utilized, no significant impact related to odors would occur during construction of the proposed Project.

The SCAQMD recommends that odor impacts be addressed in a qualitative manner. Such an analysis shall determine whether the Project would result in excessive nuisance odors, as defined under the California Code of Regulations and Section 41700 of the California Health and Safety Code, and thus would constitute a public nuisance related to air quality. Through required compliance with SCAQMD's Rule 402 for all future developments, no significant impact related to odors would occur during the on-going operations of the proposed Project.

6.1.5 Construction-Related Toxic Air Contaminant Impact

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during construction of the proposed Project. The Office of Environmental Health Hazard Assessment (OEHHA) has issued the Air Toxic Hot Spots Program Risk Assessment Guidelines and Guidance Manual for the Preparation of Health Risk Assessments, February 2015 to provide a description of the algorithms, recommended exposure variates, cancer and noncancer health values, and the air modeling protocols needed to perform a health risk assessment (HRA) under the Air Toxics Hot Spots Information and Assessment Act of 1987. Hazard identification includes identifying all substances that are evaluated for cancer risk and/or non-cancer acute, 8-hour, and chronic health impacts. In addition, identifying any multi-pathway substances that present a cancer risk or chronic non-cancer hazard via non-inhalation routes of exposure.

Future developments within the project area will be required to perform analyses to determine individual project impacts and have the potential to cause a significant impact. Therefore, significant adverse acute health impacts could occur as a result of Project construction.

6.2 Operational Air Quality Emissions Impact

6.2.1 Regional Operational Emissions

The operations-related criteria air quality impacts created by the proposed Project have been analyzed through the use of CalEEMod model. The operating emissions were based on year 2040. The summer and winter emissions created by the proposed Project's long-term operations were calculated and the highest emissions from either summer or winter are summarized in Table 9.

Table 9: Regional Significance - Unmitigated Operational Emissions (lbs/day)

Activity	Pollutant Emissions (pounds/day)[1]					
	VOC	NOx	CO	SO2	PM10	PM2.5
Total Emissions	**115.00**	**39.15**	**493.48**	**1.06**	**107.39**	**28.19**
SCAQMD Thresholds	**55**	**55**	**550**	**150**	**150**	**55**
Exceeds Threshold?	**Yes**	No	No	No	No	No

Notes:
[1] Source: CalEEMod Version 2022.1.1.26. Complete output is provided in Appendix A.
[2] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[3] Energy usage consists of emissions from on-site natural gas usage.
[4] Mobile sources consist of emissions from vehicles and road dust.

Table 9 provides the Project's unmitigated operational emissions. Table 9 shows that the Project would exceed the SCAQMD daily emission threshold for VOC emissions. Table 10 below provides the Project's emissions with implementation of Mitigation Measure AQ-1 limiting residential architectural coatings to a VOC content of 20 grams per liter. With mitigation, the Project would still exceed the threshold for VOC emissions and would therefore have a significant and unavoidable impact.

Table 10: Regional Significance - Mitigated Operational Emissions (lbs/day)

Activity	Pollutant Emissions (pounds/day)[1]					
	VOC	NOx	CO	SO2	PM10	PM2.5
Total Emissions	**112.32**	**39.15**	**493.48**	**1.06**	**107.39**	**28.19**
SCAQMD Thresholds	**55**	**55**	**550**	**150**	**150**	**55**
Exceeds Threshold?	**Yes**	No	No	No	No	No

Notes:
[1] Source: CalEEMod Version 2022.1.1.26. Complete output is provided in Appendix B.
[2] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[3] Energy usage consists of emissions from on-site natural gas usage.
[4] Mobile sources consist of emissions from vehicles and road dust.

6.2.3 Localized Operational Emissions

Project-related air emissions from on-site sources such as architectural coatings, landscaping equipment, on-site usage of natural gas appliances as well as the operation of vehicles on-site may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

As stated previously, according to SCAQMD LST methodology, LSTs would apply to the operational phase of a project, if the project includes stationary sources, or attracts mobile sources (such as heavy-duty trucks) that may spend long periods queuing and idling at the site; such as industrial warehouse/transfer facilities. The proposed project includes the updating of the general plan zoning under the Housing Element to include an increased number of residential uses and does not include such uses. Therefore, due to the lack of stationary source emissions, no long-term localized significance threshold analysis is warranted.

6.3 CO Hot Spot Emissions

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with Project CO levels to the State and Federal CO standards which were presented in above in Section 5.0.

To determine if the proposed Project could cause emission levels in excess of the CO standards discussed above in Section 5.0, a sensitivity analysis is typically conducted to determine the potential for CO "hot spots" at a number of intersections in the general Project vicinity. Because of reduced speeds and vehicle queuing, "hot spots" potentially can occur at high traffic volume intersections with a Level of Service E or worse.

Micro-scale air quality emissions have traditionally been analyzed in environmental documents where the air basin was a non-attainment area for CO. However, the SCAQMD has demonstrated in the CO attainment redesignation request to EPA that there are no "hot spots" anywhere in the air basin, even at intersections with much higher volumes, much worse congestion, and much higher background CO levels than anywhere in San Bernardino County. If the worst-case intersections in the air basin have no "hot spot" potential, any local impacts will be below thresholds.

The Project-specific trip generation analysis showed that withing the Project area, the maximum daily vehicle trip rate in 2040 with development of the Project would be 43,459 on Chino Hills Parkway, east of Carbon Canyon Road. The 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan) showed that an intersection which has a daily traffic volume of approximately 100,000 vehicles per day would not violate the CO standard. The volume of traffic at Project buildout would be well below 100,000 vehicles and below the necessary volume to even get close to causing a violation of the CO standard. Therefore, no CO "hot spot" modeling was performed and no significant long-term air quality impact is anticipated to local air quality with the on-going use of the proposed Project.

6.4 Cumulative Regional Air Quality Impacts

Cumulative projects include local development as well as general growth within the project area. However, as with most development, the greatest source of emissions is from mobile sources, which travel well out of the local area. Therefore, from an air quality standpoint, the cumulative analysis would extend beyond any local projects and when wind patterns are considered, would cover an even larger area. Accordingly, the cumulative analysis for the Project's air quality must be generic by nature.

The Project area is out of attainment for both ozone and PM10 particulate matter. Construction and operation of cumulative projects will further degrade the local air quality, as well as the air quality of the South Coast Air Basin. The greatest cumulative impact on the quality of regional air cell will be the incremental addition of pollutants mainly from increased traffic from residential, commercial, and industrial development and the use of heavy equipment and trucks associated with the construction of these projects. Air quality will be temporarily degraded during construction activities that occur separately or simultaneously. However, in accordance with the SCAQMD methodology, projects that do not exceed the SCAQMD criteria or can be mitigated to less than criteria levels are not significant and do not add to the overall cumulative impact.[3]

As discussed in the construction analysis above, Section 6.1, it is possible that some of the future development projects accommodated under the GPU could exceed relevant SCAQMD construction-related significance thresholds. Therefore, during short-term construction related activities, the GPU has the potential to cumulatively contribute to the nonattainment designations of the South Coast Air Basin for Ozone and particulate matter. Therefore, construction-related air quality impacts of the future development associated with the GPU could be significant. However, as the long-term emissions of the future development associated with the GPU would not exceed SCAQMD operational thresholds of significance the project is considered to not substantially cumulatively contribute to the nonattainment designations of the South Coast Air Basin.

6.5 Air Quality Compliance

The California Environmental Quality Act (CEQA) requires a discussion of any inconsistencies between a proposed project and applicable General Plans and Regional Plans (CEQA Guidelines Section 15125). The regional plan that applies to the proposed Project includes the SCAQMD Air Quality Management Plan (AQMP). Therefore, this section discusses any potential inconsistencies of the proposed Project with the AQMP.

The purpose of this discussion is to set forth the issues regarding consistency with the assumptions and objectives of the AQMP and discuss whether the proposed Project would interfere with the region's ability to comply with Federal and State air quality standards. If the decision-makers determine that the proposed Project is inconsistent, the lead agency may consider Project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended General Plan Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A

[3] SCAQMD. White Paper on Potential Control Strategies to Address Cumulative Impacts From Air Pollution. 2003. https://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper.pdf?sfvrsn=2.

proposed Project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the Project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the Project will exceed the assumptions in the AQMP in 2022 or increments based on the year of Project buildout and phase.

Both of these criteria are evaluated in the following sections.

A. Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in this Air Analysis in sections 6.1 and 6.2, short-term construction impacts with mitigation would not result in significant impacts based on the SCAQMD regional thresholds of significance; however, individual future developments would have the potential to cause a significant impact project. Furthermore, operational emissions would result in potentially significant impacts based on SCAQMD thresholds.

Therefore, the proposed Project is projected to potentially contribute to the exceedance of air pollutant concentration standards and be inconsistent with the AQMP for the first criterion.

B. Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed Project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the proposed Project are based on the same forecasts as the AQMP. The 2022-2045 Regional Transportation/Sustainable Communities Strategy, prepared by SCAG, 2022, includes chapters on: the challenges in a changing region, creating a plan for our future, and the road to greater mobility and sustainable growth. These chapters currently respond directly to federal and state requirements placed on SCAG. Local governments are required to use these as the basis of their plans for purposes of consistency with applicable regional plans under CEQA. For this Project, the SCAG Regional Housing Needs Assessment (RHNA) defines the assumptions that are represented in the AQMP.

The RHNA allotted an additional 3,729 units to be added to the City in the 2021-2029 planning period. As the Project plans for 2,849 new units, of which 2,528 are lower income housing, the project would be within the assumptions of the RHNA and would be consistent with the AQMP for the second criterion.

Therefore, as Criterion 1 would not be met, the proposed Project would result in a potential inconsistency with the SCAQMD AQMP. Therefore, a potentially significant impact would occur.

7.0 Greenhouse Gas Impact Analysis

7.1 Greenhouse Gas Emissions Impact

Operational emissions occur over the life of the Project. The operational emissions for the Project are 22,579 metric tons of CO_2e ($MTCO_2e$) per year (see Table 11). Furthermore, as shown in Table 11, the Project's total emissions (with incorporation of amortized construction related GHG emissions) would be 23,490 $MTCO_2e$ per year, or 2.02 $MTCO_2e$ per service population per year. These emissions do not exceed the SCAQMD screening threshold of 4.1 $MTCO_2e$ per year. Furthermore, this is a reduction compared to emissions of 4.53 $MTCO_2e$ per service population per year from existing uses and the combined emissions will be reduced to 4.28 $MTCO_2e$ per service population per year, due to increased housing density which requires less energy and vehicle usage. Therefore, the Project's GHG emissions are considered to be less than significant.

Table 11: Opening Year Unmitigated Project-Related Greenhouse Gas Emissions

Category	Greenhouse Gas Emissions (Metric Tons/Year)[1]		
	Existing	**Project**	**Existing Plus Project**
Area Sources[2]	6,830.90	49.18	6,880.08
Energy Usage[3]	79,946.00	5,276.50	85,222.50
Mobile Sources[4]	371,413.00	16,162.00	387,575.00
Solid Waste[5]	7,355.00	672.32	8,027.32
Water[6]	9,155.00	418.57	9,573.57
Contruction[7]	-	911.43	8,102.00
Total Emissions	474,179.90	23,490.00	497,669.90
Population	104,659	11,601.39	116,260.00
Emissions per Capita	4.53	2.02	4.28
SCAQMD Draft Screening Threshold	4.1	4.1	4.1
Exceeds Threshold?	Yes	No	Yes

Notes:
[1] Source: CalEEMod Version 2022.1.1.26. Complete output is provided in Appendix A for the Project and Appendix C for existing uses.
[2] Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
[3] Energy usage consist of GHG emissions from electricity and natural gas usage.
[4] Mobile sources consist of GHG emissions from vehicles.
[5] Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
[6] Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
[7] Construction GHG emissions based on a 30-year amortization rate.

7.2 Greenhouse Gas Plan Consistency

The proposed Project would have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

The CARB 2017 Climate Change Scoping Plan is CARB's primary document used to ensure State GHG reduction goals are met. The plan identifies an increasing need for coordination among State, regional, and local governments to achieve the GHG emissions reductions that can be gained from local land use planning and decisions. Nearly all of the specific measures identified in the 2017 Climate Change Scoping Plan would be implemented at the state level, with CARB and/or another state or regional agency having the primary responsibility for achieving required GHG reductions. The Project, therefore, would have limited ability to directly conflict with any of the specific measures identified in the 2017 Climate Change Scoping Plan. Nonetheless, the overarching goal of the 2017 Climate Change Scoping Plan is to achieve a 40 percent reduction in GHG emissions below 1990 levels by the Year 2030. To achieve this statewide goal, the 2017 Climate Change Scoping Plan recommends a statewide efficiency metric of six metric tons per capita by 2030 and two metric tons per capita by 2050. These statewide per capita targets are based on the statewide GHG emissions inventory that includes all emissions sectors in the State. Under an unmitigated scenario as shown in Table 11, implementation of the proposed Project is estimated to result in a GHG emission efficiency of 4.28 $MTCO_2e$ per capita. Project growth would result in emissions that meet the 2017 Climate Change Scoping Plan adjusted statewide 2040 metric of four $MTCO_2e$ per capita employed for this EIR.[4]

[4] The Project plans for growth through Year 2040. Therefore, the 2040 statewide efficiency metric is linearly derived from the State's 2030 (6 $MTCO_2e$ per capita) and 2050 (2 $MTCO_2e$ per capita) targets.

8.0 CEQA Analysis

The California Environmental Quality Act Guidelines (Appendix D) establishes thresholds for air quality, greenhouse gas, and energy impact analyses as presented below:

Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

(a) Conflict with or obstruct implementation of the applicable air quality plan?

The regional plan that applies to the proposed project includes the SCAQMD Air Quality Management Plan (AQMP). A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the project will exceed the assumptions in the AQMP in 2022 or increments based on the year of project buildout and phase.

As discussed in section 6, this air quality analysis finds that short-term construction impacts with mitigation would not result in significant impacts based on the SCAQMD regional thresholds of significance. However, operational emissions would result in potentially significant impacts based on SCAQMD thresholds. **Mitigation Measure AQ-1** has been implemented to limit residential architectural coatings to a VOC content of 20 grams per liter; however, the project would still exceed the threshold for VOC emissions with mitigation. Therefore, due to inconsistency with criterion 1, a **potentially significant** impact would occur.

The project would be consistent with the assumptions of the RHNA, which defines the assumptions that are represented in the AQMP and would therefore be consistent with criterion 2.

(b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

In accordance with the SCAQMD methodology, projects that do not exceed the SCAQMD criteria or can be mitigated to less than criteria levels are not significant and do not add to the overall cumulative impact. As discussed in section 6.4, future developments within the Project have the potential to exceed the thresholds of significance with inclusion of Mitigation Measure AQ-1 and the Project is therefore **potentially significant**.

(c) Expose sensitive receptors to substantial pollutant concentrations?

As discussed in section 6, the project would potentially exceed operational localized emissions thresholds set by the SCAQMD with inclusion of Mitigation Measure AQ-1 and would therefore have a **potentially significant** impact on sensitive receptors.

(d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

As discussed in section 6.1.4, potential sources that may emit odors during the on-going operations of the proposed project would include odor emissions from vehicle emissions. Through compliance with SCAQMD's Rule 402 **no significant impact** related to odors would occur during the on-going operations of the proposed project. Furthermore, the project would **not be a significant source** of toxic air contaminants during construction or operation, as discussed in sections 6.1.5 and 6.2.3.

Greenhouse Gas Emissions

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

As discussed in section 7.2, combined project emissions from construction and operation would not exceed SCAQMD screening threshold of 4.1 metric tons of CO_2e per service population per year. Therefore, the project's GHG emissions are considered to be **less than significant**.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

As discussed in section 7.2, implementation of the proposed Project is estimated to result in a GHG emission efficiency of 2.02 MTCO2e per capita, which would reduce the cumulative efficiency from 4.53 MTCO2e to 4.28 MTCO2e per capita. Project growth would result in emissions that meet the CARB 2017 Climate Change Scoping Plan adjusted statewide 2040 metric of four MTCO2e per capita employed for this analysis. Therefore, the project would be consistent with the Scoping Plan and would have a **less than significant** impact.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Chino Hills General Plan - Project
Construction Start Date	10/1/2024
Operational Year	2040
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.60
Precipitation (days)	18.8
Location	Chino Hills, CA, USA
County	San Bernardino-South Coast
City	Chino Hills
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5201
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	207	Dwelling Unit	67.2	403,650	2,424,561	—	685	—

Apartments High Rise	2,207	Dwelling Unit	35.6	2,118,720	0.00	—	7,305	—
Condo/Townhouse	435	Dwelling Unit	27.2	461,100	0.00	—	1,440	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-3	Use Local Construction Contractors
Construction	C-4*	Use Local and Sustainable Building Materials
Transportation	T-4	Integrate A ordable and Below Market Rate Housing
Transportation	T-19-B	Construct or Improve Bike Boulevard
Waste	S-1/S-2	Implement Waste Reduction Plan
Waste	S-4*	Recycle Demolished Construction Material
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	AS-2	Use Low-VOC Paints

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.9	annual days of extreme heat
Extreme Precipitation	5.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	70.5
AQ-PM	91.4
AQ-DPM	27.5
Drinking Water	94.6
Lead Risk Housing	0.63
Pesticides	0.00
Toxic Releases	63.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	11.8
Groundwater	35.0
Haz Waste Facilities/Generators	77.0
Impaired Water Bodies	23.9
Solid Waste	0.00
Sensitive Population	—
Asthma	21.8

Cardio-vascular	54.2
Low Birth Weights	72.9
Socioeconomic Factor Indicators	—
Education	39.5
Housing	1.93
Linguistic	81.9
Poverty	17.2
Unemployment	33.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.518029
Employed	85.29449506
Median HI	92.23662261
Education	—
Bachelor's or higher	82.16348005
High school enrollment	25.92069806
Preschool enrollment	79.32760169
Transportation	—
Auto Access	91.71050943
Active commuting	26.15167458
Social	—
2-parent households	63.95483126
Voting	60.09239061
Neighborhood	—
Alcohol availability	50.891826

Park access	55.78082895
Retail density	58.37289876
Supermarket access	43.94969845
Tree canopy	44.89926857
Housing	—
Homeownership	79.76389067
Housing habitability	95.05966893
Low-inc homeowner severe housing cost burden	93.13486462
Low-inc renter severe housing cost burden	89.06711151
Uncrowded housing	82.07365584
Health Outcomes	—
Insured adults	81.30373412
Arthritis	90.1
Asthma ER Admissions	79.0
High Blood Pressure	78.2
Cancer (excluding skin)	66.1
Asthma	95.7
Coronary Heart Disease	94.7
Chronic Obstructive Pulmonary Disease	95.5
Diagnosed Diabetes	80.8
Life Expectancy at Birth	52.7
Cognitively Disabled	92.5
Physically Disabled	93.4
Heart Attack ER Admissions	42.2
Mental Health Not Good	91.8
Chronic Kidney Disease	93.4
Obesity	95.5
Pedestrian Injuries	42.8

Physical Health Not Good	92.3
Stroke	93.8
Health Risk Behaviors	—
Binge Drinking	69.8
Current Smoker	91.5
No Leisure Time for Physical Activity	80.7
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	75.0
Elderly	81.3
English Speaking	49.4
Foreign-born	72.0
Outdoor Workers	84.9
Climate Change Adaptive Capacity	—
Impervious Surface Cover	80.2
Traffic Density	51.9
Traffic Access	23.0
Other Indices	—
Hardship	10.7
Other Decision Support	—
2016 Voting	73.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	87.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per project description
Operations: Vehicle Data	227,461 total trips per traffic analysis. Estimated as all Condo/Townhouse trips for simplicity.
Operations: Hearths	No woodstoves or fireplaces
Construction: Construction Phases	Phase lengths adjusted proportionally for 9 year construction schedule
Construction: Architectural Coatings	Mitigation
Operations: Architectural Coatings	Mitigation

Appendix B:

CalEEMod Mitigated Project Emission Output

Chino Hills General Plan - Project Mitigated Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2023) - Unmitigated

3.2. Demolition (2023) - Mitigated

3.3. Site Preparation (2023) - Unmitigated

3.4. Site Preparation (2023) - Mitigated

3.5. Grading (2023) - Unmitigated

3.6. Grading (2023) - Mitigated

3.7. Grading (2024) - Unmitigated

3.8. Grading (2024) - Mitigated

3.9. Building Construction (2024) - Unmitigated

3.10. Building Construction (2024) - Mitigated

3.11. Building Construction (2025) - Unmitigated

3.12. Building Construction (2025) - Mitigated

3.13. Building Construction (2026) - Unmitigated

3.14. Building Construction (2026) - Mitigated

3.15. Building Construction (2027) - Unmitigated

3.16. Building Construction (2027) - Mitigated

3.17. Building Construction (2028) - Unmitigated

3.18. Building Construction (2028) - Mitigated

3.19. Building Construction (2029) - Unmitigated

3.20. Building Construction (2029) - Mitigated

3.21. Building Construction (2030) - Unmitigated

3.22. Building Construction (2030) - Mitigated

3.23. Paving (2030) - Unmitigated

3.24. Paving (2030) - Mitigated

3.25. Architectural Coating (2030) - Unmitigated

3.26. Architectural Coating (2030) - Mitigated

3.27. Architectural Coating (2031) - Unmitigated

3.28. Architectural Coating (2031) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Chino Hills General Plan - Project Mitigated
Construction Start Date	10/1/2024
Operational Year	2040
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.60
Precipitation (days)	18.8
Location	Chino Hills, CA, USA
County	San Bernardino-South Coast
City	Chino Hills
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5201
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	207	Dwelling Unit	67.2	403,650	2,424,561	—	685	—

Apartments High Rise	2,207	Dwelling Unit	35.6	2,118,720	0.00	—	7,305	—
Condo/Townhouse	435	Dwelling Unit	27.2	461,100	0.00	—	1,440	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-3	Use Local Construction Contractors
Construction	C-4*	Use Local and Sustainable Building Materials
Transportation	T-4	Integrate A ordable and Below Market Rate Housing
Transportation	T-19-B	Construct or Improve Bike Boulevard
Waste	S-4*	Recycle Demolished Construction Material
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	AS-2	Use Low-VOC Paints

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.9	annual days of extreme heat
Extreme Precipitation	5.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	70.5
AQ-PM	91.4
AQ-DPM	27.5
Drinking Water	94.6
Lead Risk Housing	0.63
Pesticides	0.00
Toxic Releases	63.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	11.8
Groundwater	35.0
Haz Waste Facilities/Generators	77.0
Impaired Water Bodies	23.9
Solid Waste	0.00
Sensitive Population	—
Asthma	21.8

Cardio-vascular	54.2
Low Birth Weights	72.9
Socioeconomic Factor Indicators	—
Education	39.5
Housing	1.93
Linguistic	81.9
Poverty	17.2
Unemployment	33.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.518029
Employed	85.29449506
Median HI	92.23662261
Education	—
Bachelor's or higher	82.16348005

2016 Voting	73.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	87.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per project description
Operations: Vehicle Data	227,461 total trips per traffic analysis. Estimated as all Condo/Townhouse trips for simplicity.
Operations: Hearths	No woodstoves or fireplaces
Construction: Construction Phases	Phase lengths adjusted proportionally for 9 year construction schedule
Construction: Architectural Coatings	Mitigation
Operations: Architectural Coatings	Mitigation

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.9	annual days of extreme heat
Extreme Precipitation	5.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	70.5
AQ-PM	91.4
AQ-DPM	27.5
Drinking Water	94.6
Lead Risk Housing	0.63
Pesticides	0.00
Toxic Releases	63.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	11.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	87.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per project description
Operations: Vehicle Data	227,461 total trips per traffic analysis. Estimated as all Condo/Townhouse trips for simplicity.
Operations: Hearths	No woodstoves

and regional movement linkages for species and gene flow. Additional community-owned open space is scattered throughout the city, encompassing over 3,000 acres managed by the city.

Open spaces offer refugia where wildlife can escape interaction with humans and domestic pets, and in some locations, avoid night lighting and vehicles. Native plants are protected in such areas from non-native invasive species, off-road activities and illegal dumping.

7.2 Existing Biological Conditions at the RHNA Sites

SWCA biologists conducted reconnaissance-level field surveys at seven of the eleven RHNA sites on July 13 and 14, 2022 (Sites 1 through 7). General biological conditions were noted, including dominant vegetation and existing land uses. In addition, site-specific desktop review was conducted for the remaining four sites. Below is a summary of the information gathered from the field surveys and desktop review.

Site 1 – The Shoppes II: This site supports annual grassland and developed land. During the site visits conducted in the development of this technical report, ruderal species such as short-pod mustard (*Hirschfeldia incana*) and Russian thistle (*Salsola tragus*) were observed. Grasses had been recently mowed and were not identifiable beyond being annual non-native grasses.

Site 2 – Community Park Overflow: This site is graded and only supports disturbed and developed land. Where there was a soil surface, common ruderal species such as horseweed (*Erigeron* sp.) and puncture vine (*Tribulus terrestris*) were observed during the site visits conducted in support of this technical report.

Site 3 – Los Serranos Golf Course: This site is largely developed with non-native ornamental vegetation. However, the site includes an incised channel that supports disturbed southern riparian scrub co-dominated by black willow (*Salix gooddingii*) and arroyo willow (*Salix lasiolepis*) along with non-native trees such as Mexican fan palm (*Washingtonia robusta*) and edible fig (*Ficus carica*). The understory largely comprises non-native species such as castor bean (*Ricinus communis*), umbrella plant (*Cyperus involucratus*), and small tamarisk (*Tamarix* sp.) individuals, but did include cattail (*Typha* sp.) along the margins of the channel. Two male least Bell's vireo (*Vireo bellii pusillus*) were heard singing along the channel during the field survey.

Site 4 – Western Hills Golf Course: This site is largely developed and supports predominantly non-native ornamental vegetation. However, there are also scattered native trees such as coast live oak, southern California black walnut, and arroyo willow. The site contains a small channel that bisects the maintained grass but supports few wetland species. Small areas of undeveloped slopes support remnants of native habitat with coast live oak, southern California black walnut, mule-fat (*Baccharis salicifolia*), and toyon (*Heteromeles arbutifolia*).

Site 5 – Wang (High Density): The site supports agriculture and walnut woodland. Domestic cows were observed grazing on-site, supporting the designation of agriculture instead of annual grassland. The non-native grasses that dominate much of the site consist of ripgut brome (*Bromus diandrus*) and oats (*Avena* spp.). Native species were scattered throughout the site, including fiddleneck (*Amsinckia* sp.), doveweed (*Croton setiger*), and pine-bush (*Ericameria pinifolia*).

Site 6 – The Shoppes: The site is entirely developed and supports ornamental species. No native habitat remains.

Site 7 – The Commons: The site is mostly developed and supports ornamental species. No native habitat remains.

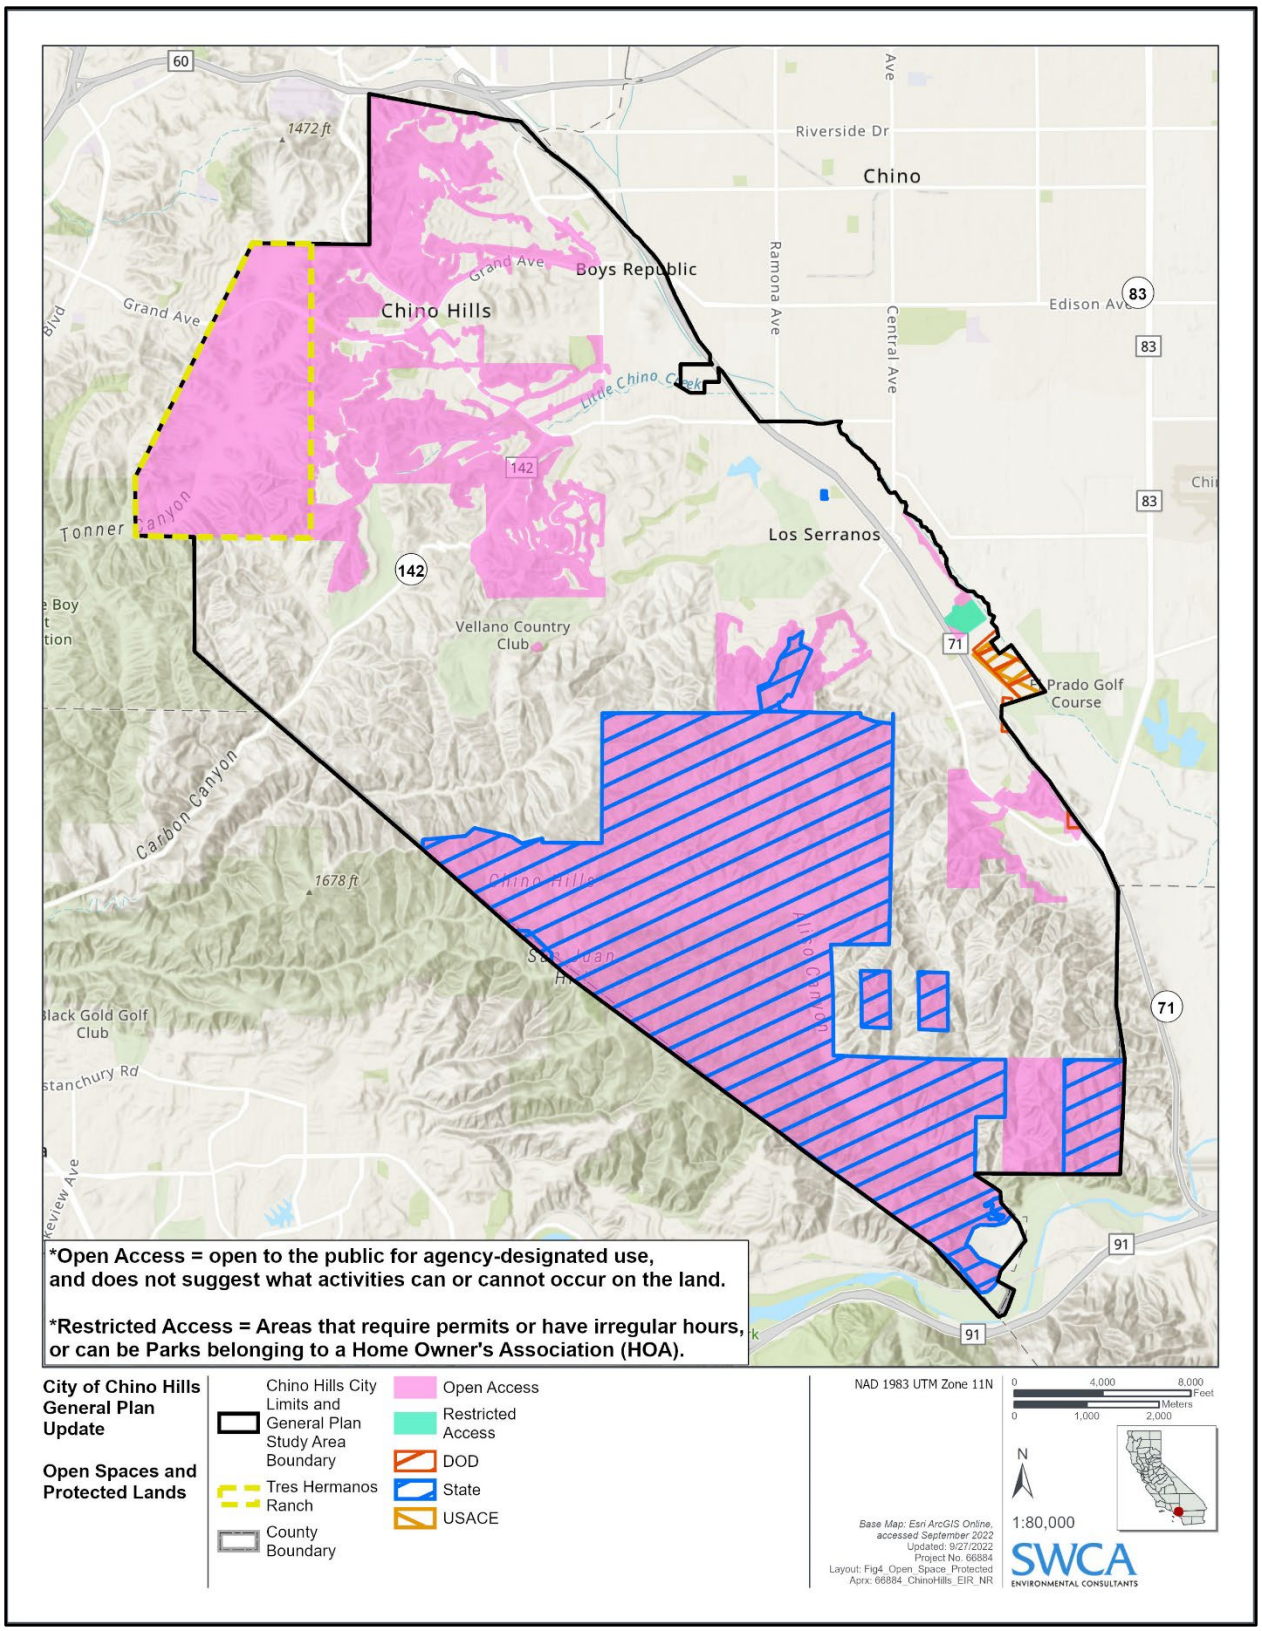

Figure 3. Open space and protected lands.

Site 8 – Canyon Estates (Medium Density): This site was evaluated by desktop only and supports annual grassland and a blueline stream.[1]

Site 9 – Wang (Medium Density): The site was evaluated by desktop only and supports agriculture. This is mapped as agriculture because the cows observed at Site 5 also have access to this site.

Site 10 – Canyon Estates (Low Density): The site was evaluated by desktop only. The site supports agriculture and walnut woodland. This site is dominated by disturbed/ruderal lands dominate, possibly previously grazed. A dense woodland occupies the north- and southwest portion of the site, along Old Woodview Road. The NWI maps this area are Freshwater Forested/Shrub Wetland, with several smaller channels draining into the main branch. These are mapped as intermittent Riverine Streambed. Review of aerial photos identified dense stands of gum trees (*Eucalyptus sp.*). Numerous walnut (*Juglans sp.*) trees and a few willows (*Salix sp.*) are present. Although positive identification cannot be made from an aerial photo, the walnuts appear to be Southern California Black Walnut (*J. californica*).

Site 11 – Los Serranos Golf Course (Low Density): The site was evaluated by desktop only. This site is entirely within the existing golf course and as such is dominated by manicured lawn (fairway) and scattered mature landscape trees (e.g., gums, pines, peppers) with little to no understory. Native plants are not expected to occur on this site and surface water resources are absent. Wildlife movement across the golf course (intra-site) is unrestricted; however, fencing is present adjacent to the western side of this site along Pipeline Avenue which would limit inter-site movement.

Undeveloped open space is present contiguous to the western side of this site, west of the paved cart path. The area appears to be disturbed/ruderal with few trees, likely the result of regular mowing and/or discing for fire safety fuel modification. A pond is present approximately 25 feet west of the western border of this site. The U.S. Fish and Wildlife Service on-line National Wetlands Inventory (NWI) identifies this site as a freshwater pond, which drains to the west and southwest into an intermittent riverine streambed.[2]

7.3 Sensitive Biological Resources

Sensitive biological resources occurring within the study area are discussed below.

7.3.1 Land Cover Categories and Sensitive Natural Communities

Sensitive or special-status communities are vegetation types, associations, or sub-associations with a Global or State Rank of 3 or lower; additionally riparian communities are always considered sensitive. A CNDDB query identified 14 land cover categories and sensitive natural communities that occur within the study area (Table 1, Figure 4). Of the communities identified within the study area, four sensitive habitats have CNDDB records within the city limits. These habitats include California Walnut Woodland, Southern California Arroyo Chub/Santa Ana Sucker Stream, Southern Sycamore Alder Riparian Woodland, and Southern Willow Scrub. Most of these natural communities are described under the Holland classification (Holland 1986, Holland 1992).

[1] A creek, stream or watercourse indicated by a solid or broken blue line on a U.S. Geologic Survey 7.5 minute series quadrangle map, sometimes a regulated aquatic resource.
[2] USFWS on-line Wetlands Mapper available at https://www.fws.gov/program/national-wetlands-inventory/wetlands-mapper.

Table 1. Natural Communities and Land Cover Categories in the Study Area

Natural Community/Land Cover	Acres
Agriculture	184
Annual Grassland/Ruderal	7762
California Walnut Woodland	288
Chaparral	734
Coastal Sage Scrub	1646
Coastal Sage Scrub/Chaparral	104
Disturbed/Developed	9109
Freshwater Emergent Wetland	70
Oak Woodland	766
Open Water	36
Riparian Oak Woodland	180
Riverine	155
Southern Sycamore Alder Riparian Woodland	40
Southern Willow Scrub	411

7.3.1.1 ANNUAL GRASSLAND

Annual grassland is dominated by non-native annual grasses and typically consist of species such as wild oat (*Avena fatua*) and ripgut brome. Other common non-native species observed in this habitat include black mustard (*Brassica nigra*), tocalote (*Centaurea melitensis*), and radish (*Raphanus sativus*).

7.3.1.2 CALIFORNIA WALNUT WOODLAND

California Walnut Woodland is an open woodland found in relatively moist, fine-textured soils of valley slopes and bottoms, and often surround rocky outcrops. This community is dominated by southern California black walnut with an open canopy that allows for the growth of a grassy understory. The understory typically consists of non-native winter-active annuals that complete their growth cycle before the leafy canopy emerges in spring. Other species associated with this community include sugar bush (*Rhus ovata*), coast live oak, Engelmann oak (*Quercus engelmannii*), and fragrant sumac (*Rhus aromatica*).

7.3.1.3 CHAPARRAL

Chaparral is typified by broadleaved evergreen shrubs with sclerophyllous leaves. These shrubs are medium to tall and form a dense cover on steep slopes. The herb layer is often poorly developed but contains abundant leaf litter. Dominant species of this habitat include toyon, laurel sumac (*Malosma laurina*), scrub oak, and lemonade berry (*Rhus integrifolia*).

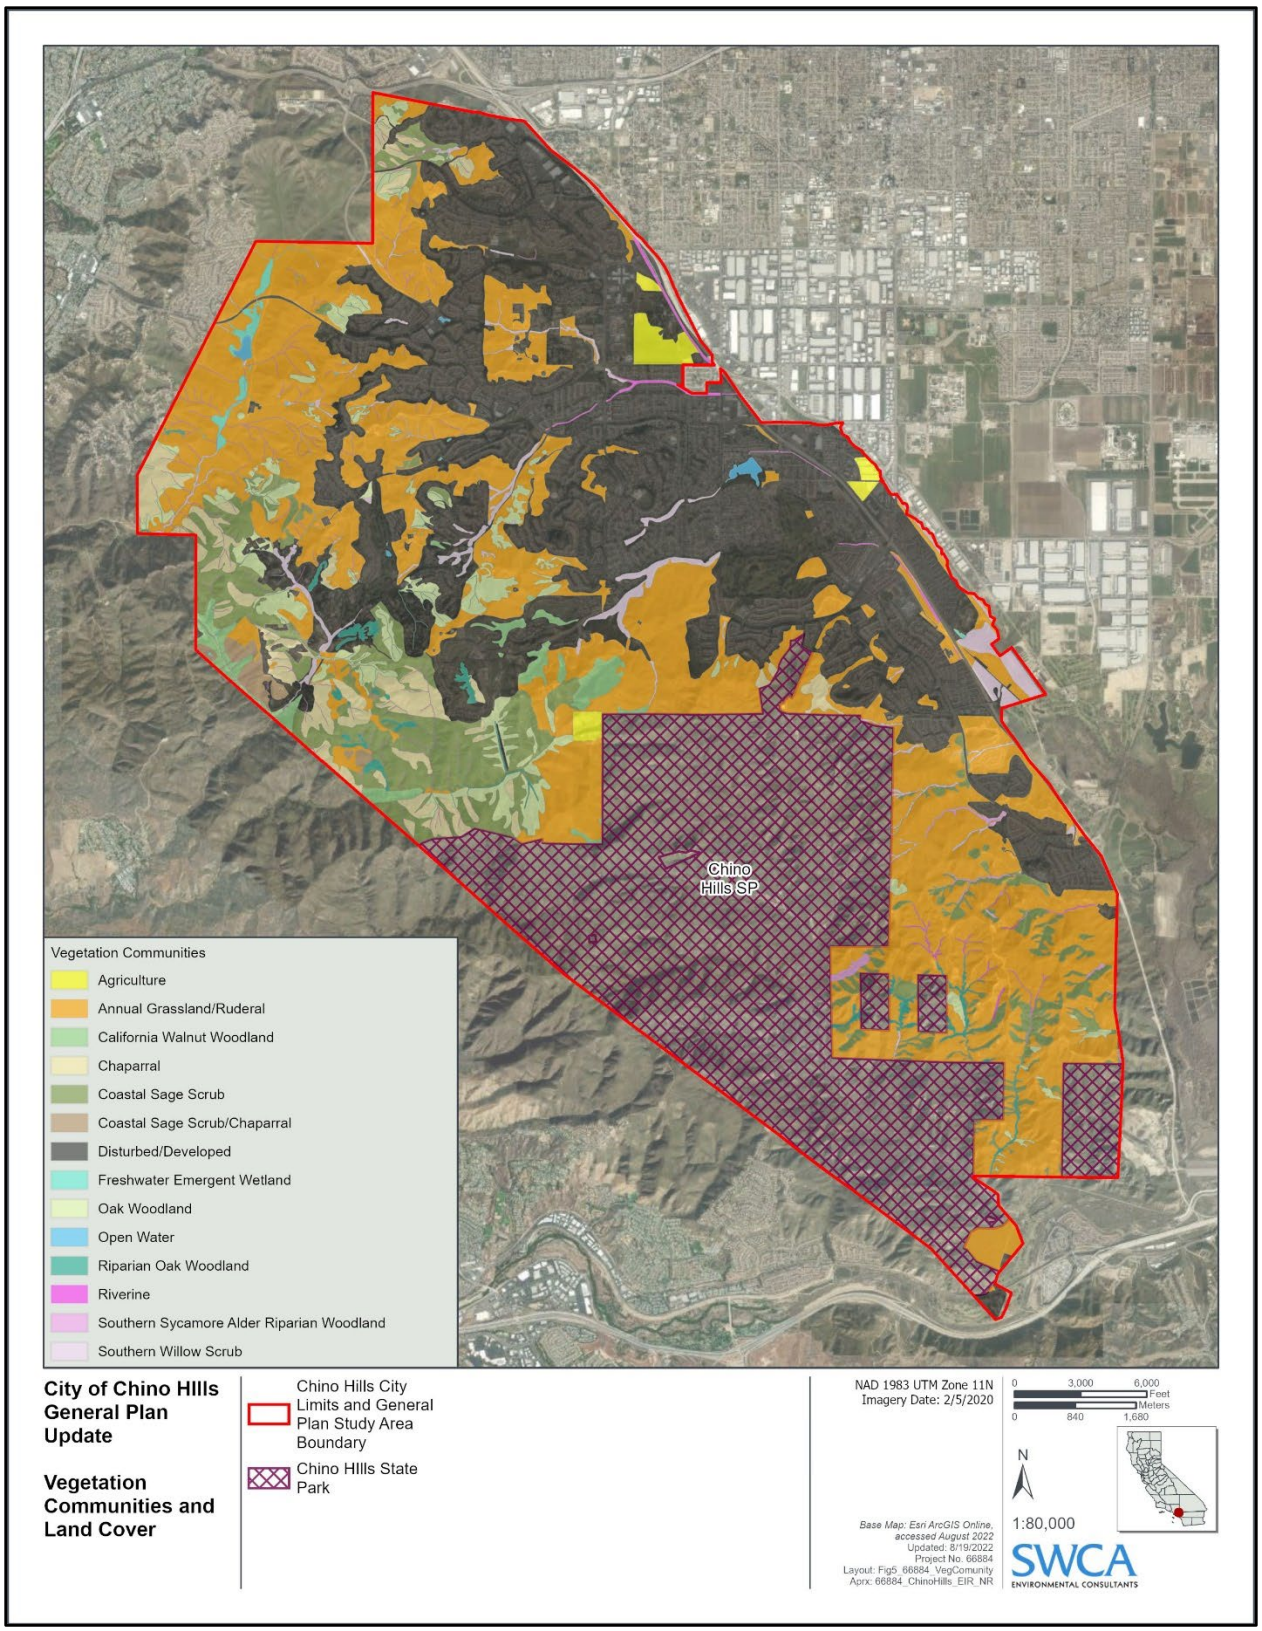

Figure 4. Vegetation communities and land cover.

7.3.1.4 COASTAL SAGE SCRUB

Coastal sage scrub consists of drought-deciduous shrubs and subshrubs with soft leaves and is typically found on slopes below 3,000 feet. Dominant species consists of coastal sagebrush (*Artemisia californica*) and California buckwheat (*Eriogonum fasciculatum*), and other typical species include coyote brush (*Baccharis pilularis*), white sage (*Salvia apiana*), and goldenbush (*Isocoma menziesii*).

7.3.1.5 COASTAL SAGE SCRUB/CHAPARRAL

This ecotonal habitat consists of intermixed chaparral and coastal sage scrub, forming a mosaic of species characteristic of each habitat.

7.3.1.6 DISTURBED AND DEVELOPED

Disturbed and developed land has been subject to anthropogenic disturbance in varying degrees. Disturbed land maintains a soil surface, but often consists of largely bare ground and offers no habitat value except for species highly adapted to disturbance. Developed land includes areas covered in pavement and structures, as well as associated landscaped areas maintained with irrigation. Developed land has no value except for common urban-adapted species.

7.3.1.7 FRESHWATER EMERGENT WETLAND

Freshwater emergent wetland includes freshwater marsh and seep communities. This habitat is typically located within channel bottoms with at least intermittent flow and are often dominated by emergent species such as cattail, bulrush (*Scirpus* spp.), rushes (*Juncus* spp.), and spike rushes (*Eleocharis* spp.).

7.3.1.8 COAST LIVE OAK WOODLAND

Coast live oak woodland is dominated by coast live oak and includes a sparse to moderately dense shrub layer that typically includes toyon, gooseberry (*Ribes* spp.), and blue elderberry (*Sambucus nigra ssp. caerulea*).

7.3.1.9 OPEN WATER

Open water includes ponds and other bodies of water without emergent vegetation. These areas are further discussed in Section 7.3.4, *Aquatic Resources*.

7.3.1.10 SOUTHERN COAST LIVE OAK RIPARIAN FOREST

Southern coast live oak riparian forest is found in the canyons and valleys of coastal southern California. This community is a dense evergreen woodland dominated by coast live oak. It occurs along large streams in outer floodplains and bottomlands on rich, fine-grained alluvium. Southern coast live oak riparian forest typically has a closed, or nearly closed, canopy with an understory that rich in herbs, but poor in understory shrubs. Species typically associated with this community include bigleaf maple (*Acer macrophyllum*), Douglas' sagewort (*Artemisia douglasiana*), milkmaids (*Cardamine californica*), spotted hideseed (*Eucrypta chrysanthemifolia*), toyon, heartleaf keckiella (*Keckiella cordifolia*), pink honeysuckle (*Lonicera hispidula*), Cucamonga manroot (*Marah macrocarpus*), blue fiesta flower (*Pholistoma auritum*), fragrant sumac, California wild rose (*Rosa californica*), California blackberry (*Rubus ursinus*), blue elderberry (*Sambucus nigra ssp. caerulea*), snowberry (*Symphoricarpos mollis*), poison oak (*Toxicodendron diversilobum*), and California laurel (*Umbellularia californica*).

7.3.1.11 RIVERINE

Riverine habitat consists of unvegetated ephemeral, intermittent, or perennial stream channels. These areas, including riparian corridors associated with aquatic resources, are further discussed in Section 7.3.4, *Aquatic Resources*.

7.3.1.12 SOUTHERN SYCAMORE-ALDER RIPARIAN WOODLAND

Southern sycamore-alder riparian woodland is a tall, open, broad-leaved, winter-deciduous woodland that is dominated by western sycamore and white alder (*Alnus rhombifolia*), which are often codominant or sub-codominant. White alder favors perennial stream systems, while western sycamore favors more intermittent flooding regime. These stands rarely form closed canopy forests, and often contain a dense understory of hard drought-resistant evergreens and deciduous species. Other species associated with southern sycamore-alder riparian woodland include bigleaf maple, Douglas' sagewort, California spikenard (*Aralia californica*), scouring rush horsetail (*Equisetum hyemale*), smilo grass (*Stipa miliacea*), coast live oak, California blackberry, blue elderberry, poison oak, California laurel, and stinging nettle (*Urtica dioica*).

7.3.1.13 SOUTHERN WILLOW SCRUB

Southern willow scrub is characterized by broad-leafed, winter deciduous riparian thickets that grow in loose, sandy, or fine gravelly alluvium deposited near stream channels during flood flows. This community is dominated by several willow species (*Salix* spp.), with scattered emergent Fremont cottonwood (*Populus fremontii*) and western sycamore. Stands of this community are typically dense, which limits the understory growth. This community requires repeated flooding events to prevent succession to the Southern Cottonwood-Sycamore Riparian Forest community. Species associated with this community include narrowleaf willow (*Salix exigua*), black willow, red willow (*Salix laevigata*), and arroyo willow.

7.3.2 Critical Habitat

The USFWS designates critical habitat for listed endangered or threatened species of flora and fauna. Critical habitat is defined in the federal ESA as habitat deemed essential to the survival of a federally listed species. One plant and four wildlife species that have been designated as federally endangered (FE) or federally threatened (FT) have designated critical habitat areas in the vicinity of the study area (Figure 5). Critical habitat for these five species has been designated within or adjacent to the City:

- Braunton's milk-vetch (*Astragalus brauntonii;* FE)
- Santa Ana sucker (*Catostomus santaanae*; FT)
- coastal California gnatcatcher (*Polioptila californica*; FT)
- southwestern willow flycatcher (*Empidonax traillii extimus;* FE, State Endangered [SE])
- least Bell's vireo (FE; SE)

Braunton's milk-vetch critical habitat occurs south of the southernmost tip of the city across the Santa Ana River. The Santa Ana River is listed as Santa Ana sucker critical habitat. The coastal California gnatcatcher critical habitat area occurs along the southwestern edge of the city within Chino Hills State Park. Critical habitat for the southwestern willow flycatcher occurs just east of the city limits along Chino Creek. Least Bell's vireo critical habitat occurs along the central eastern edge of the city, east of Chino Valley Freeway (California State Route [SR]-71). There is no other designated critical habitat in the city.

7.3.3 Special-Status Species

The CDFW defines special animals, plants and communities as those where at least one of the following conditions applies (CDFW 2022b):

- officially listed or proposed for listing under the state and/or federal ESAs;
- considered by the CDFW to be a species of special concern (SSC);
- listed by the CNPS with a CRPR;
- included on other lists, such as Riverside County;
- taxa which meet the criteria for listing, even if not currently included on any list, as described in Section 15380 of the CEQA Guidelines;
- taxa that are biologically rare, very restricted in distribution, or declining throughout their range but not currently threatened with extirpation;
- population(s) in California that may be peripheral to the major portion of a taxon's range but are threatened with extirpation in California;
- taxa closely associated with a habitat that is declining in California at a significant rate (e.g. wetlands, riparian, vernal pools, old growth forests, desert aquatic systems, native grasslands, valley shrubland habitats, etc.); or
- taxa designated as a special status, sensitive, or declining species by other state or federal agencies, or a non-governmental organization and determined by the state to be rare, restricted, declining, or threatened across their range in California.

7.3.3.1 SPECIAL-STATUS PLANTS

A review of CNDDB and the CNPS Rare Plant Inventory identified species that may occur in the study area. Thirty-five special-status species have CNDDB records within the study area (Figure 6, Appendix A).

7.3.3.2 SPECIAL-STATUS WILDLIFE

A review of CNDDB identified species that may occur in the city. Fifty-one special-status wildlife species have CNDDB records that occur within the study area (Figure 7, Appendix B). Some of the special-status species described below, such as the special-status fish, western ridged mussel (*Gonidea angulata*), and western pond turtle (*Emys marmorata*) require permanent sources of water or specific vegetation community composition to be considered habitat. Due to the size and diversity of the city, field surveys are recommended to determine if any of these species have any potential to occur; it should be assumed that these species have at least a low potential to occur within some areas of the city.

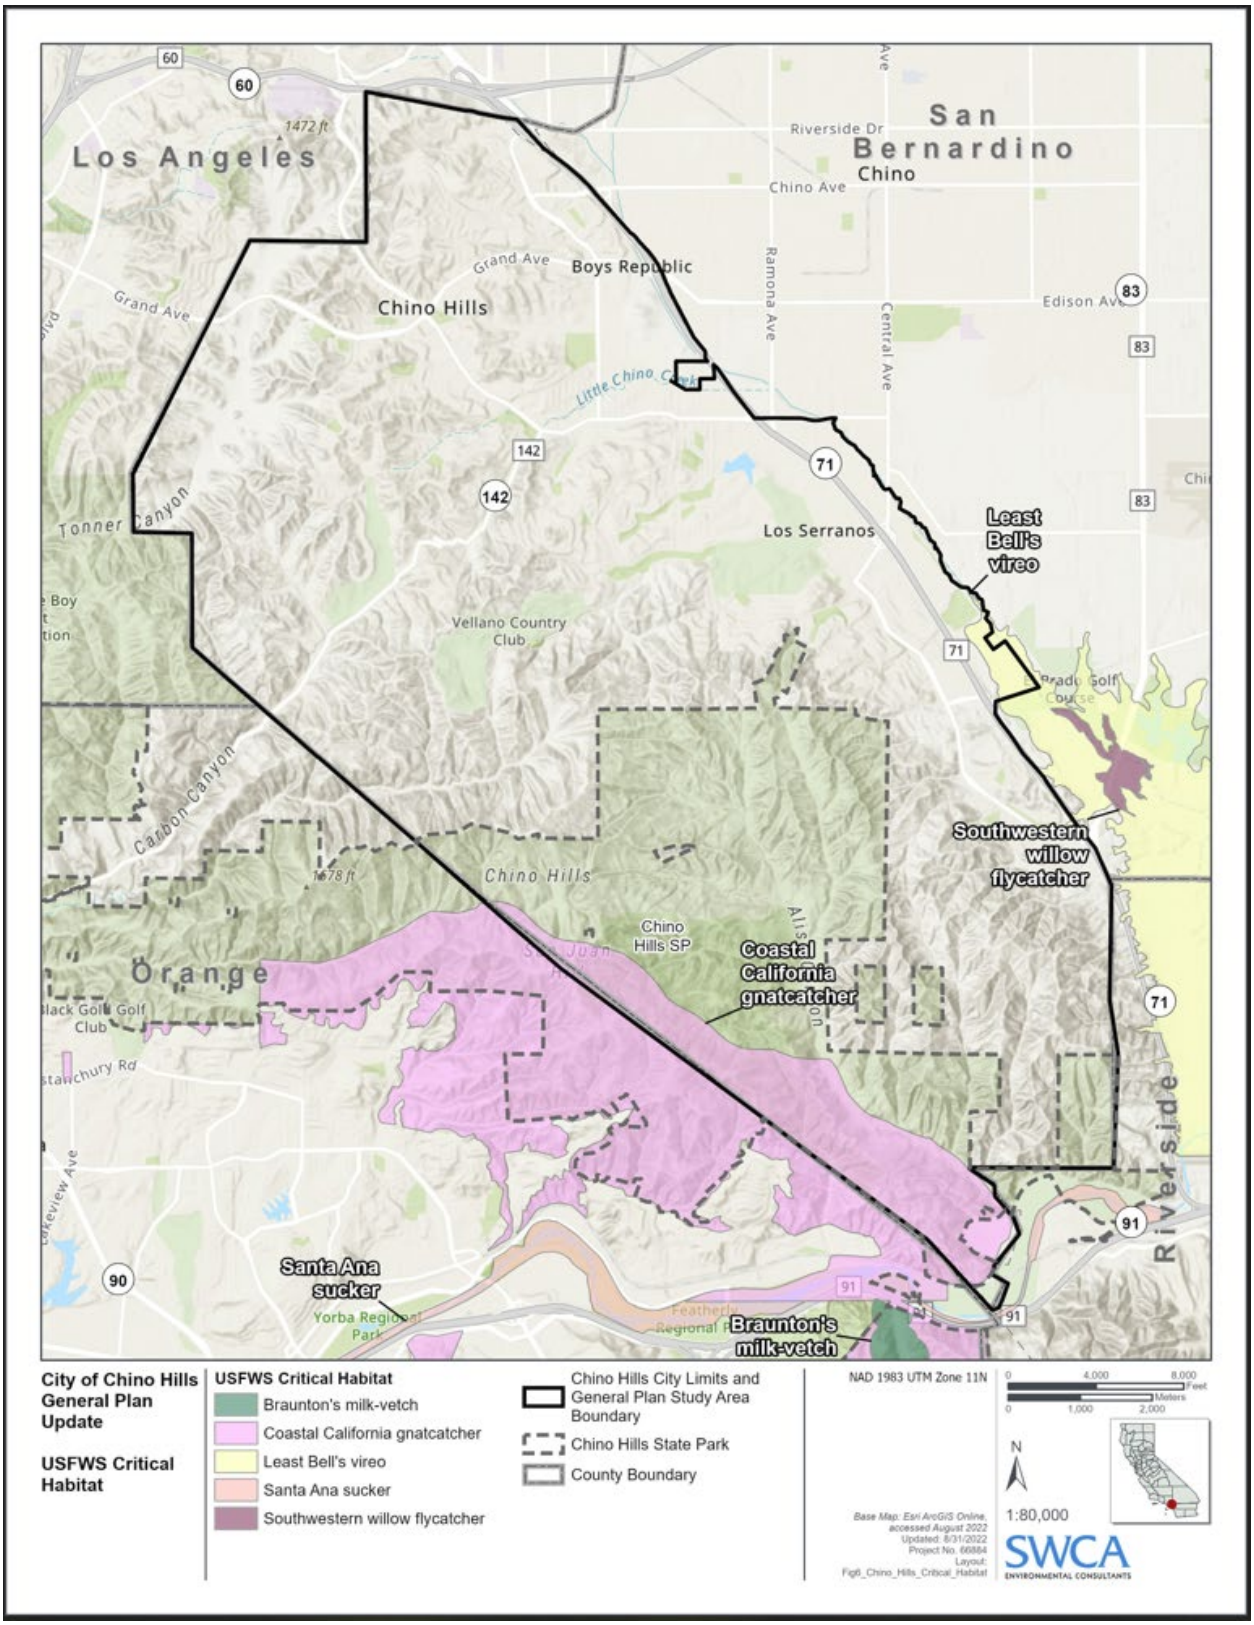

Figure 5. Designated critical habitat.

7.3.4 Aquatic Resources

The city is located within the Santa Ana and San Gabriel watersheds and within the Upper Chino, Middle Chino Creek, Lower Chino, Brea Creek-Coyote Creek, Carbon Creek, Walnut Canyon-Santa Ana River, and Alios Creek-Santa Ana River sub-watersheds. The city's watershed comprises a system of drainages and reservoirs that generally drain east and south, toward Chino Creek and Prado Flood Control Basin, and on to the Santa Ana River. Artificial ponds and lakes are also present throughout the city, with variable amounts of associated natural habitat. Canyons on the west side of the city, including Tonner Canyon, Carbon Canyon, Soquel Canyon, and Aliso Canyon, drain westward toward Los Angeles and Orange Counties. With the exception of Tonner Canyon, which drains into the San Gabriel River watershed, the remaining canyons drain into the lower reaches of the Santa Ana River Basin. Urban runoff from the city can pollute the natural watersheds of the Santa Ana River and San Gabriel River Basins.

7.3.4.1 DRAINAGES

Major creeks present within the city limits include Little Chino Creek and Chino Creek. Little Chino Creek is located within the northern portion of the city and flows eastward, crossing SR-71 before eventually discharging into San Antonio Channel. Chino Creek traverses the easterly boundary of the city and travels south before connecting with the Santa Ana River. There are a number of unnamed drainages that flow throughout the city, some of which include associated riparian corridors. Intermittent and perennial drainage systems that support substantial amounts of riparian vegetation may provide habitat for a range of wildlife, including small mammals, amphibians, and birds.

In addition, the City's 2015 General Plan Final Program EIR (City of Chino Hills 2015b) describes several storm drainage systems located throughout the city within the following drainage basins: Puente Hills, Boys Republic, English Channel, Little Chino Creek, Los Serranos Lake, Lower Los Serranos, Slaughter Canyon, Aliso Canyon, Southeast Chino Hills, Tonner Canyon, Carbon Canyon, and Soquel Canyon. Any City-owned drainage facilities within these basins are managed systems, although small amounts of associated vegetation may be present seasonally. Runoff from some of these systems drain into Chino Creek, Little Chino Creek, the Prado Flood Control Basin, and Prado Dam.

7.3.4.2 ARTIFICIAL LAKES

Artificial (created) lakes, ponds, and reservoirs are present throughout the city. The major reservoirs within the city include Los Serranos Lake and Arnold Reservoir. Los Serranos Lake is located within the Los Serranos area and is surrounded by residential development to the north and is fed by a drainage system to the west. Arnold Reservoir is located behind Chino Ranch within Tonner Canyon and is fed by drainage systems to the north and west. Both lakes serve as open water areas, and any associated riparian vegetation and corridors provide cover and foraging habitat for wildlife. Additional artificial ponds throughout the city include those associated with City parks and golf courses.

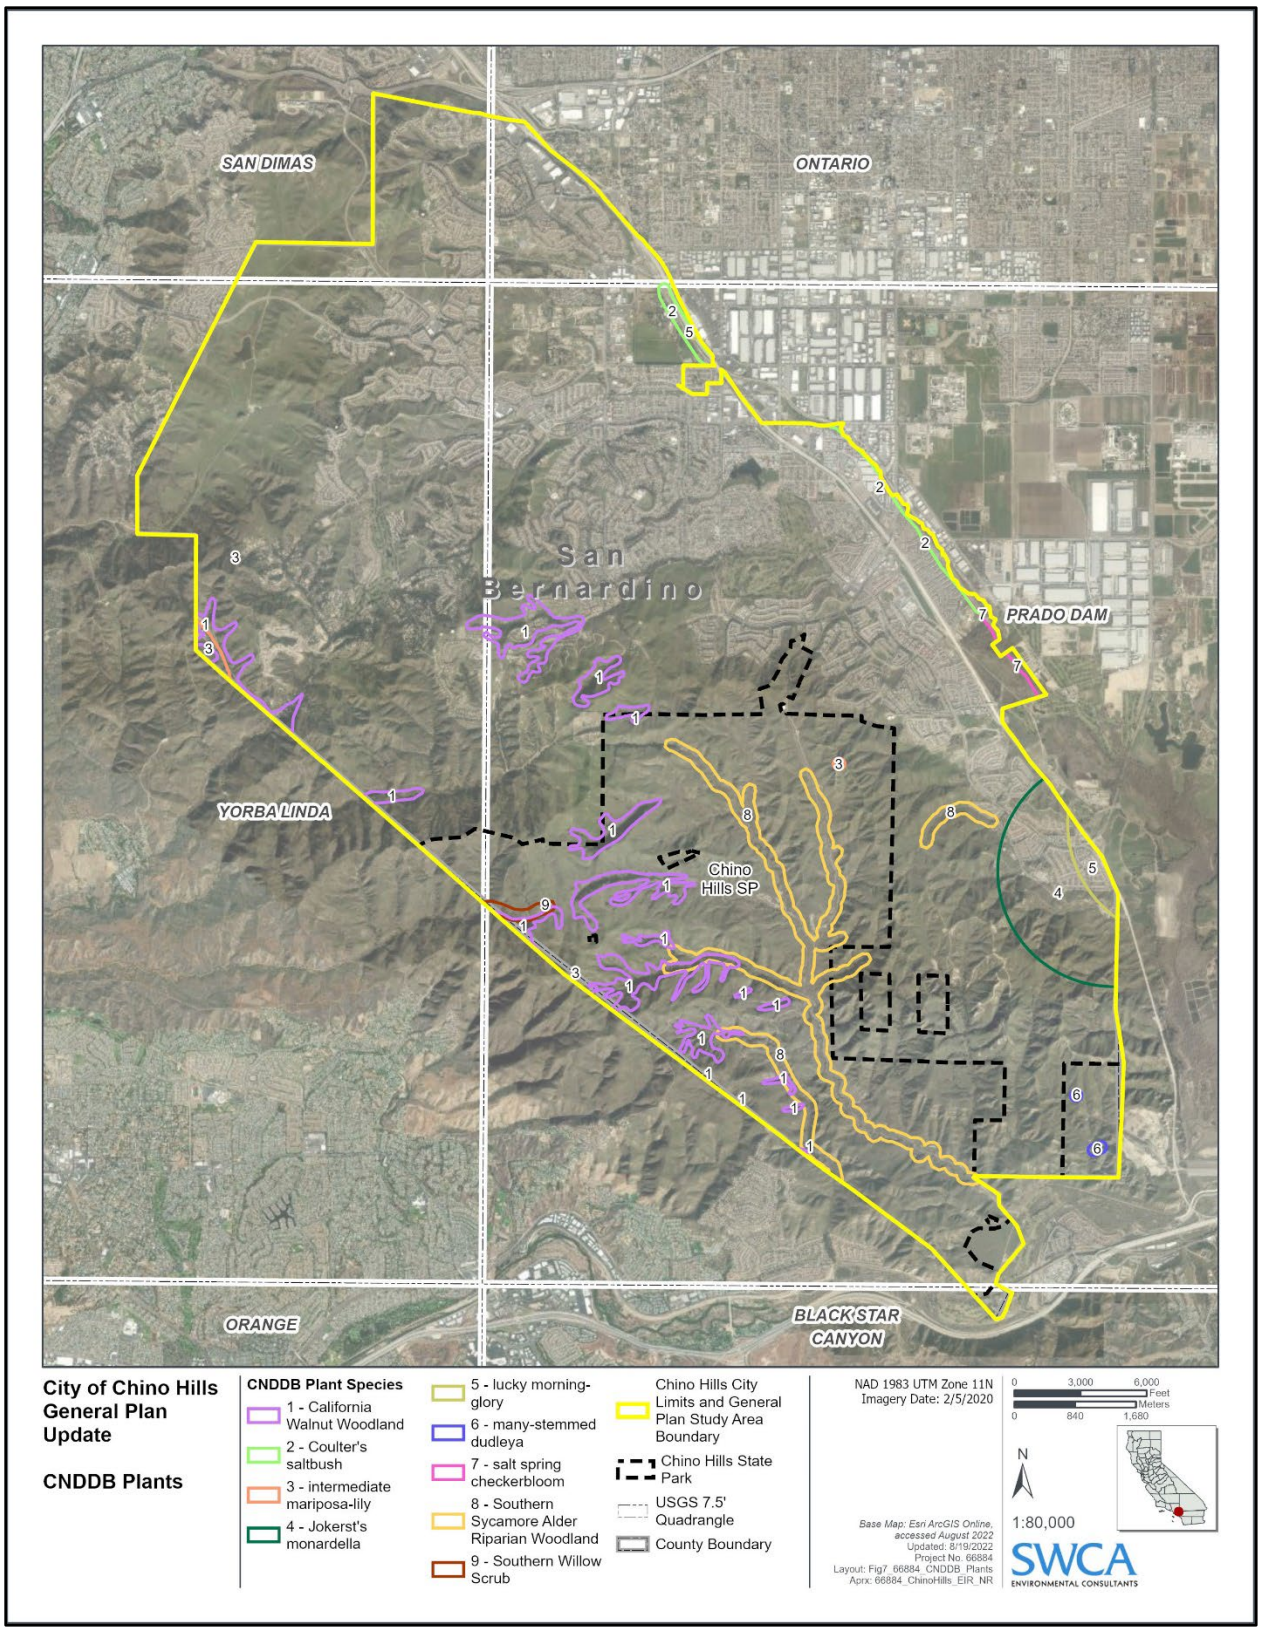

Figure 6. CNDDB plant records.

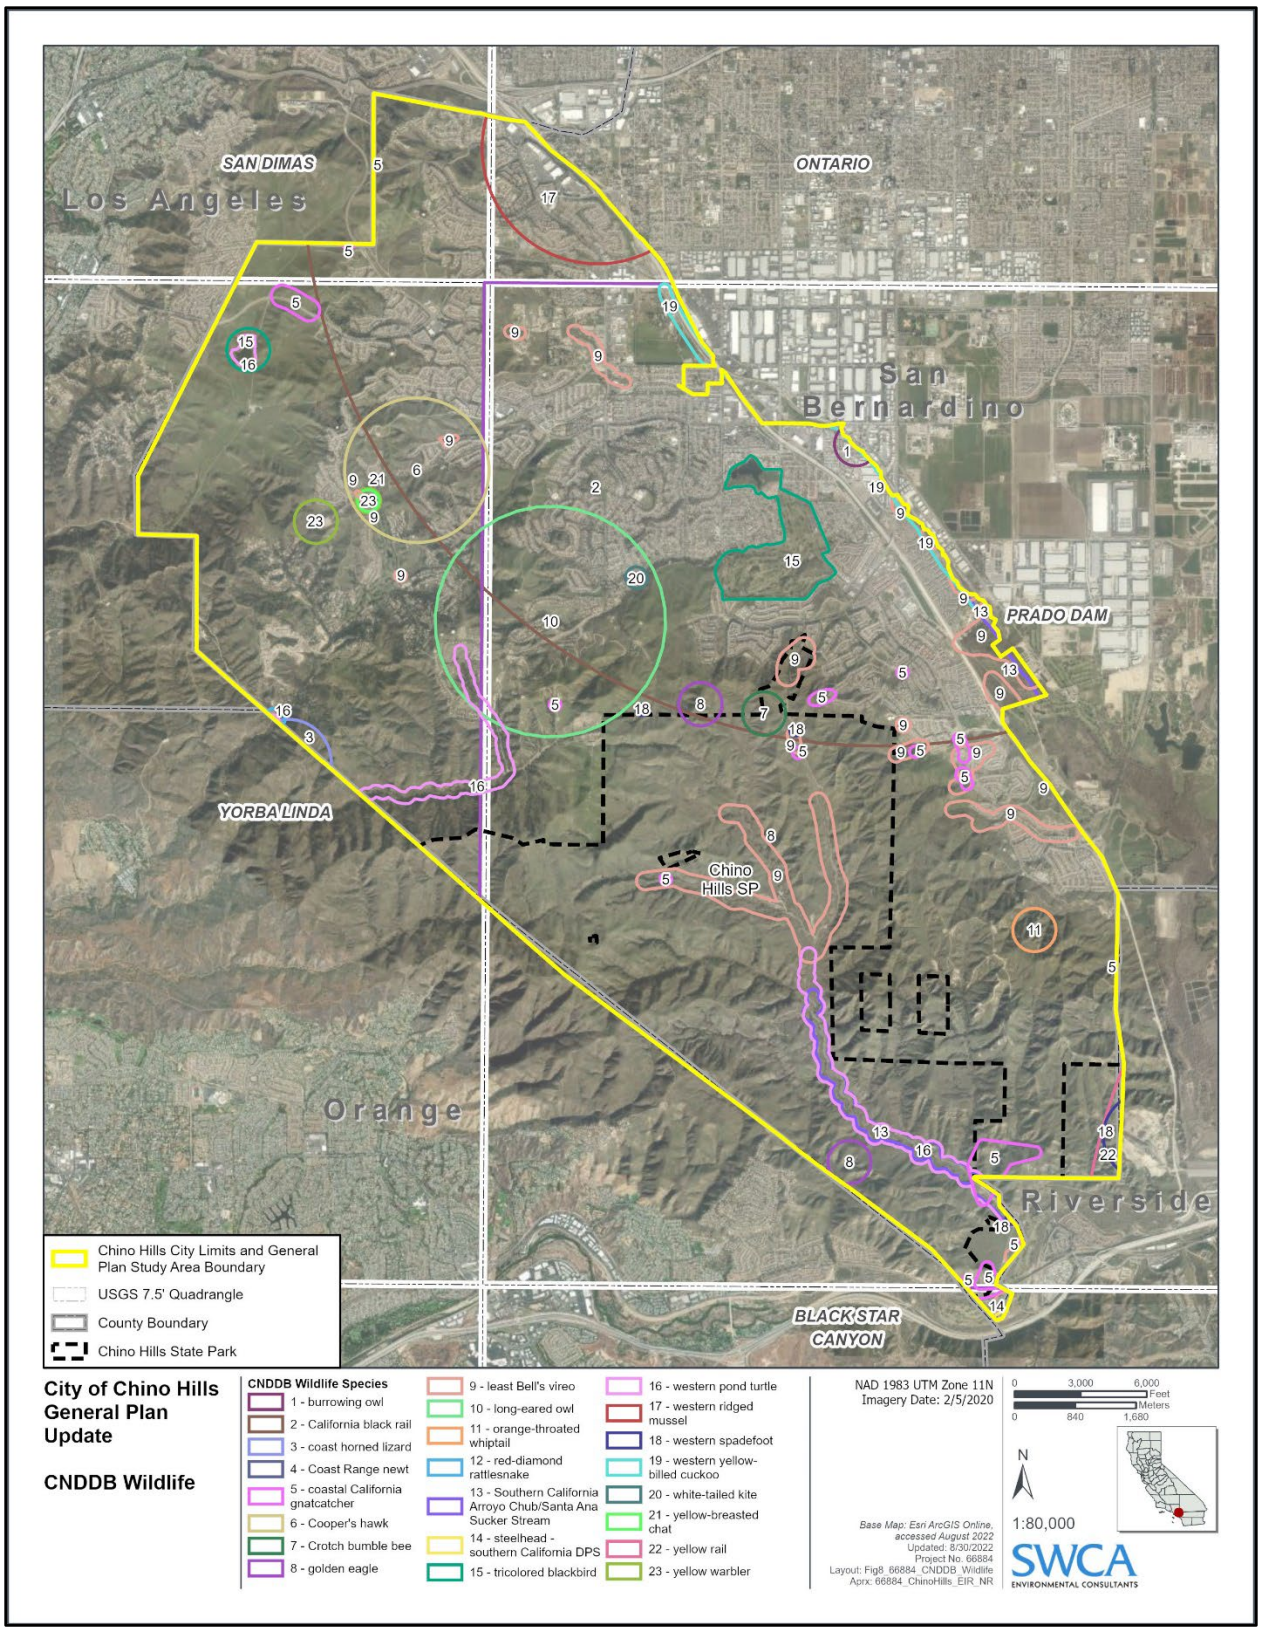

Figure 7. CNDDB wildlife records.

7.3.5 Vegetation

Vegetation within the city broadly includes grassland, woodland, chaparral, coastal sage scrub, riparian woodland, riparian scrub, freshwater wetland, and aquatic resources (i.e., open water and riverine). Most of the vegetation within the city is grassland. In the western portion of the city chaparral and coastal sage scrub habitats are present as well as stretches of oak woodland. California walnut woodland is also present in the western and central region of the city to a lesser extent. Riparian woodland, riparian scrub, freshwater wetland, and aquatic resources are found in and along topographically low places throughout the western and southern portions of the city. Much of the eastern and northern areas of the city are developed and no longer contain natural habitats. Vegetation observed on the RHNA sites during the July 13 and 14, 2022 site visits is described below.

Site 1 – The Shoppes II: During the site visits, it was observed that this site supports annual grassland and developed land. Ruderal species such as short-pod mustard and Russian thistle were observed during the site visit. Grasses had been recently mowed and were not identifiable beyond being annual non-native grasses.

Site 2 – Community Park Overflow: This site is graded and only supports disturbed and developed land. Common ruderal species such as horseweed and puncture vine were observed during the site visit where there was a soil surface. One small *Eucalyptus* tree was also observed.

Site 3 – Los Serranos Golf Course: This site is largely developed with non-native ornamental vegetation. However, the site includes an incised channel that supports disturbed southern riparian scrub co-dominated by black willow and arroyo willow along with non-native trees such as Mexican fan palm and edible fig. The understory largely comprises non-native species such as castor bean, umbrella plant, and small tamarisk individuals, but did include cattail along the margins of the channel. Other plant species observed include eucalyptus, Shamel ash (*Fraxinus uhdei*), buffalo gourd (*Cucurbita foetidissima*), Italian thistle (*Carduus pycnocephalus*), western ragweed (*Ambrosia psilostachya*), tree tobacco (*Nicotiana glauca*), Peruvian pepper tree (*Schinus molle*), western jimsonweed (*Datura wrightii*), pecan (*Carya illinoinensis*), horehound (*Marrubium vulgare*), white alder, and tall flatsedge (*Cyperus eragrostis*).

Site 4 – Western Hills Golf Course: This site is largely developed and supports predominantly non-native ornamental vegetation. However, there are also scattered native trees such as coast live oak, southern California black walnut, and arroyo willow. The site contains a small channel that bisects the maintained grass but supports few wetland species. Small areas of undeveloped slopes support remnants of native habitat with coast live oak, southern California black walnut, mule-fat, and toyon. Other plant species observed include southern magnolia (*Magnolia grandiflora*), Italian cypress (*Cupressus sempervirens*), blue jacaranda (*Jacaranda mimosifolia*), and Chinese elm (*Ulmus parvifolia*).

Site 5 – Wang (High Density): The site supports agriculture and walnut woodland. Domestic cows were observed grazing onsite, supporting the designation of agriculture instead of annual grassland. The non-native grasses that dominate much of the site consist of ripgut brome and oats. Native species were scattered throughout the site, including fiddleneck, doveweed, and pine-bush.

Site 6 – The Shoppes: The site is entirely developed and supports ornamental species. No native habitat remains.

Site 7 – The Commons: The site is entirely developed and supports ornamental species. No native habitat remains.

Site 8 – Canyon Estates (Medium Density): This site was evaluated by desktop only and supports annual grassland and a blueline stream. Plant species occurring on this site would be expected to be similar to Sites 1 and 5.

Site 9 – Wang (Medium Density): The site was evaluated by desktop only and supports agriculture. Plant species occurring on this site would be expected to be similar to Sites 1 and 5, but perhaps with lower diversity due to grazing.

Site 10 – Canyon Estates (Low Density): The site was evaluated by desktop only. The site supports agriculture and walnut woodland. This site is dominated by disturbed/ruderal lands dominate, possibly previously grazed. A dense woodland occupies the north- and southwest portion of the site, along Old Woodview Road. The NWI maps this area are Freshwater Forested/Shrub Wetland, with several smaller channels draining into the main branch. These are mapped as intermittent Riverine Streambed. Review of aerial photos identified dense stands of gum trees (*Eucalyptus sp.*). Numerous walnut (*Juglans sp.*) trees and a few willows (*Salix sp.*) are present. Although positive identification cannot be made from an aerial photo, the walnuts appear to be Southern California Black Walnut (*J. californica*).

Site 11 – Los Serranos Golf Course (Low Density): The site was evaluated by desktop only. This site is entirely within the existing golf course and as such is dominated by manicured lawn (fairway) and scattered mature landscape trees (e.g., gums, pines, peppers) with little to no understory. Native plants are not expected to occur on this site and surface water resources are absent. Wildlife movement across the golf course (intra-site) is unrestricted; however, fencing is present adjacent to the western side of this site along Pipeline Avenue which would limit inter-site movement.

Undeveloped open space is present contiguous to the western side of this site, west of the paved cart path. The area appears to be disturbed/ruderal with few trees, likely the result of regular mowing and/or discing for fire safety fuel modification. A pond is present approximately 25 feet west of the western border of this site. The U.S. Fish and Wildlife Service on-line National Wetlands Inventory (NWI) identifies this site as a freshwater pond, which drains to the west and southwest into an intermittent riverine streambed.[3]

7.3.6 Wildlife

Open spaces areas within the built environment of the city provide refugia for some wildlife species, particularly birds and small animals such as lizards and butterflies. The southern and western regions of the city with connectivity to Chino Hills State Park have the potential to support larger wildlife such as mule deer (*Odocoileus hemionus*). Golf courses and parks typically have mature trees and water features, both important elements providing food and cover for wildlife. Orchards and other forms of agricultural land uses may also offer some habitat value. Wildlife species detected at the RHNA sites are described below.

Site 1 – The Shoppes II: This site supports annual grassland and developed land. Wildlife observed include American crow (*Corvus brachyrhynchos*), common raven (*Corvus corax*), lesser goldfinch (*Spinus psaltria*), and California ground squirrel (*Otospermophilus beecheyi*).

Site 2 – Community Park Overflow: This site is graded and only supports disturbed and developed land. No wildlife was observed on-site.

[3] USFWS on-line Wetlands Mapper available at https://www.fws.gov/program/national-wetlands-inventory/wetlands-mapper.

Site 3 – Los Serranos Golf Course: This site is largely developed with non-native ornamental vegetation. However, the site includes an incised channel that supports disturbed southern riparian scrub. Two male least Bell's vireos were heard singing along the channel during the field survey. Other wildlife detected on-site include Canadian goose (*Branta canadensis*), red-shouldered hawk (*Buteo lineatus*), Anna's hummingbird (*Calypte anna*), house finch (*Haemorhous mexicanus*), acorn woodpecker (*Melanerpes formicivorus*), cliff swallow (*Petrochelidon pyrrhonota*), bushtit (*Psaltriparus minimus*), black phoebe (*Sayornis nigricans*), lesser goldfinch, Cassin's kingbird (*Tyrannus vociferans*), Bewick's wren (*Thryomanes bewickii*), mourning dove (*Zenaida macroura*), California ground squirrel, monarch butterfly, mourning cloak (*Nymphalis antiopa*), and western tiger swallowtail (*Papilio rutulus*).

Site 4 – Western Hills Golf Course: This site is largely developed and supports predominantly non-native ornamental vegetation. However, there are also scattered native trees. The site contains a small channel that bisects the maintained grass but supports few wetland species. Small areas of undeveloped slopes support remnants of native habitat. Wildlife species detected on-site include red-shouldered hawk, Anna's hummingbird, house finch, black phoebe, Bewick's wren, and Cassin's kingbird.

Site 5 – Wang (High Density): The site supports agriculture and walnut woodland. Wildlife species detected on-site include red-shouldered hawk, Anna's hummingbird, common raven, house finch, hooded oriole (*Icterus cucullatus*), cliff swallow, Cassin's kingbird, domestic cow, and tarantula hawk wasp (*Pepsis* sp.).

Site 6 – The Shoppes: The site is entirely developed and supports ornamental species. No native habitat remains. Wildlife species detected on-site include red-shouldered hawk, killdeer (*Charadrius vociferus*), American crow, common raven, and house finch.

Site 7 – The Commons: The site is entirely developed and supports ornamental species. No native habitat remains. Wildlife species detected on-site consist of turkey vulture (*Cathartes aura*), American crow, house finch, northern mockingbird (*Mimus polyglottos*), and mourning dove.

Site 8 – Canyon Estates (Medium Density): This site was evaluated by desktop only and supports annual grassland and a blueline stream. Wildlife would be expected to be similar to Sites 1 and 5, and would likely include typical animals found in grasslands such as raptors, passerines, small mammals, snakes, lizards, and arthropods.

Site 9 – Wang (Medium Density): The site was evaluated by desktop only and supports agriculture. This is mapped as agriculture because the cows observed at Site 5 also have access to this site. Wildlife would be expected to be similar to Sites 1 and 5, but perhaps with less diversity due to grazing.

Site 10 – Canyon Estates (Low Density): The site was evaluated by desktop only. The site supports agriculture and walnut woodland. A dense woodland occupies the north- and southwest portion of the site, along Old Woodview Road. Wildlife using this site would be expected to be similar to Sites 1, 5, and 8 with the addition of species found in riparian habitats; species would likely include raptors, passerines, small mammals, snakes, lizards, and arthropods.

Site 11 – Los Serranos Golf Course (Low Density): The site was evaluated by desktop only. This site is entirely within the existing golf course and as such is dominated by manicured lawn (fairway) and scattered mature landscape trees (e.g., gums, pines, peppers) with little to no understory. Wildlife using this site would be expected to be similar to Sites 1, 5, 8 and 10; species would likely include raptors, passerines, small mammals, snakes, lizards, and arthropods.

7.3.7 Wildlife Movement and Migratory Corridors

There are large areas of open space within and adjacent to the city boundaries, including the Chino Hills State Park located within the southwest portion of the city, Puente Hills to the west, Prado Regional Park to the east, the Santa Ana Mountains and Cleveland National Forest to the south, and the San Gabriel Mountains and Angeles National Forest to the north.

Together, the Santa Ana Mountains and the Puente-Chino Hills encompass approximately 511,000 acres of wildlands supporting natural resources of statewide significance. To preserve the long-term ecological health of this linkage, Chino Hills State Park and the Santa Ana Mountains were connected via a critical habitat linkage known as the Coal Canyon wildlife underpass at SR-91 (Penrod 2001). Portions of the study area fall within the Puente-Chino Hills Wildlife Corridor, which provides connectivity to Coal Canyon to the south, Puente Hills to the north, and the Prado Basin to the east. The mid-section of the corridor system, known as the "Missing Middle," stretches from Tonner Canyon within the city limits further west to Harbor Boulevard within Los Angeles County (Spencer 2005). The Puente-Chino Hills Wildlife Corridor has become fragmented by urban development, particularly within the mid-section of the system. Future development could further degrade or even sever wildlife movement within the corridor. Therefore, preserving connectivity is essential for sustaining genetic diversity and maintaining the long-term integrity of metapopulations. Furthermore, it provides inter-range travel opportunities for terrestrial vertebrates, habitat specialists, and seeds and other propagules that depend on wildlife for dispersal.

Additionally, there are areas of open space throughout the city limits that include various community parks. Areas such as orchards, parklands, and drainage systems may convey movement between open spaces and throughout surrounding development for a broader suite of wildlife species. Additionally, perennial streams flowing throughout the city, including Little Chino Creek, provide habitat for sensitive species such as the arroyo chub and least Bell's vireo.

There are no known migratory fish routes or wildlife nursery sites that support migratory bird routes within the city.

8 RECOMMENDED IMPACT AVOIDANCE AND MITIGATION MEASURES

This section provides general measures geared to avoid, reduce, or mitigate potential impacts resulting from build out under the City's General Plan.

8.1 Mitigation Measures Applying to Development Projects in the General Plan Study Area

The following measures should apply to all development projects within the General Plan study area. Depending on the City's approach to the General Plan policy documents and their accompanying CEQA environmental review, these measures could be incorporated as policies or implementation programs within the General Plan Update policy document itself or, alternatively, they could be incorporated as mitigation measures within the CEQA document on the General Plan Update.

Mitigation Measure GP-BR-1. Biological Resources. The following measures shall be required for all development projects within the city limits where biological resources are present or maybe impacted by development.

a. Applicants for future development projects should include a biological resources assessment to determine where biological resources are present or could be adversely impacted by individual project development. The biological resources survey shall be conducted by a qualified biologist and should include, but not be limited to:
    - A desktop analysis of available literature and biological databases, such as the CNDDB, to determine sensitive biological resources that have been reported historically from the vicinity of the proposed development project area;
    - A review of current and recent land uses within and in the vicinity of the proposed development project area;
    - An assessment of vegetation communities present on the proposed development project area, specifically to identify special-status habitats and land cover types with moderate to high potential to support special-status flora and/or fauna;
    - An evaluation of potential impacts to local and regional wildlife movement corridors; and
    - A general assessment of potential jurisdictional aquatic areas, including wetlands and riparian habitats.

b. If the proposed development site supports vegetation communities that may provide habitat for plant or wildlife species, a focused habitat assessment shall be conducted by a qualified biologist to determine the potential for special-status plant and/or animal species to occur within or adjacent to the proposed development project area.

c. If one or more special-status species has the potential to occur within the proposed development project area, focused species surveys shall be conducted to determine the presence/absence of these species to adequately evaluate potential direct and/or indirect impacts to these species.

d. If construction activities are not initiated immediately after focused surveys have been completed, additional pre-construction special-status species surveys may be required to ensure impacts are avoided or minimized to the extent feasible. If pre-construction activities are required, a qualified biologist would perform these surveys as required for each special-status species that is known to occur or has a potential to occur within or adjacent to the proposed development project area.

e. The results of the biological survey for proposed development projects with less than significant impacts may be presented in a biological survey letter report. For proposed development projects with significant impacts that require mitigation to reduce the impacts to below a level of significance, the results of the biological survey shall be presented in a biological technical report.

f. If special-status biological resources are identified within or adjacent to the proposed development project area, the construction limits shall be clearly flagged to ensure impacts to sensitive biological resources are avoided or minimized to the extent feasible. Prior to implementing construction activities, a qualified biologist shall verify that the flagging clearly delineates the construction limits and sensitive resources to be avoided.

g. If sensitive biological resources are known to occur within or adjacent to the proposed development project area, a project-specific worker environmental awareness training program shall be developed and implemented to educate project contractors on the sensitive biological resources within and adjacent to the proposed development project area and measures being implemented to avoid and/or minimize impacts to these species. A qualified biologist shall develop and implement the contractor training program.

h. If sensitive biological resources are present within or adjacent to the proposed development project area and impacts may occur from implementation of construction activities, a qualified biological monitor may be required during a portion or all of the construction activities to ensure impacts to the sensitive biological resources are avoided or minimized to the extent feasible. The specific biological monitoring requirements shall be evaluated on a project-by-project basis. The qualified biological monitor shall be approved by the City on a project-by-project basis based on applicable experience with the sensitive biological resources that may be impacted by the proposed development project activities.

i. For construction schedule to occur during the nesting bird season (generally February 1 to September 1), preconstruction nesting bird surveys shall be conducted by a qualified biologist within all suitable nesting habitat on the project site and a surrounding 300-foot buffer area for birds covered by the MBTA. The term 'construction' includes all ground-disturbing activity such as vegetation removal, trimming, mowing, equipment/vehicle movement/storage, etc. Pre-construction surveys shall be conducted no more than 3 days prior to initiation of construction. If no active bird nests are identified within the proposed development project area or a 300-foot buffer of the proposed development project area, no further mitigation is necessary. If active bird nests are detected within the proposed development project area or t buffer zone, construction shall be halted until the young have fledged (left the nest), no new nesting activity is witnessed, the nest determined to be inactive, or until appropriate mitigation measures that respond to the specific situation have been developed and implemented in consultation with the regulatory agencies. The monitoring buffer area may be reduced based on the judgement of a qualified biologist.

Mitigation Measure GP-BR-2. Jurisdictional Waters. Future development projects within the city limits could result in significant impacts to jurisdictional aquatic resources depending on the location, extent, and proposed development and activities associated with the future project(s). Protected jurisdictional aquatic resources include wetlands, streams, vernal pools and/or lakes. The following survey requirements and measures shall apply to future projects within the city limits to address potential impacts to jurisdictional areas.

a. If the proposed development project has the potential to affect jurisdictional resources, a qualified wetland scientist shall conduct a jurisdictional delineation following the methods outlined in the most current state and federal guidance. The extent of potentially regulated aquatic resources (wetlands and non-wetland waters) and limits of jurisdiction shall be mapped and described. Potential impacts to each type of aquatic resource shall be quantified.

b. If a proposed project would impact jurisdictional features, permits and authorizations may be required from the USACE, CDFW, and/or RWQCB. Appropriate project-specific avoidance and minimization measures shall be implemented to reduce impacts to jurisdictional resources to less-than-significant levels consistent with permitting agency guidance. Such mitigation for impacts to jurisdictional resources could include habitat creation, restoration, enhancement, or offsite compensatory mitigation.

8.2 Mitigation Measures for RHNA Sites

Because there is no current plan pending for the development for Sites 1, and 5-11, and because resources can and do change over time, site-specific studies should be performed only once the plan for development for the particular site is known and entitlements are sought. Engaging in speculative analysis at this early stage before a specific development proposal is brought forth would not further CEQA's underlying purposes and would not serve to ensure maximum protection of site-specific environmental resources. Having said, the results of the more detailed assessment of the RHNA sites

indicate that the following requirements should apply. Mitigation Measure RNHA-BR-1 applies to all sites, while Mitigation Measure RNHA-BR-2 only applies to the site noted within the measure.

Mitigation Measure RHNA-BR-1. Requirements to Avoid Impacts to Nesting Birds Protected Trees. The following measures apply to all eleven RHNA sites:

a. If vegetation trimming, vegetation removal, and/or ground-disturbing activities are proposed to occur during the nesting bird season (generally February 1 to September 1) preconstruction nesting bird surveys shall be conducted by a qualified biologist within all suitable nesting habitat on the project site and a surrounding 300-foot buffer area for birds covered by the MBTA. The term 'construction' shall include all ground-disturbing activities such as vegetation removal, trimming, mowing, equipment/vehicle movement/storage, etc. Pre-construction surveys shall be conducted no more than 3 days prior to initiation of construction. If no active bird nests are identified within the proposed development project area or a 300-foot buffer of the proposed development project area, no further mitigation is necessary. If active bird nests are detected within the proposed development project area or t buffer zone, construction shall be halted until the young have fledged (left the nest), no new nesting activity is witnessed, the nest determined to be inactive, or until appropriate mitigation measures that respond to the specific situation have been developed and implemented in consultation with the regulatory agencies. The monitoring buffer area may be reduced based on the judgement of a qualified biologist.

b. RHNA sites that contain trees shall be surveyed by a City-approved certified arborist to determine if trees proposed for removal or trimming are protected under the City's tree preservation ordinance (Municipal Code in Chapter 16.90). Appropriate preservation, mitigation, and replacement measures shall be implemented consistent with City code.

Mitigation Measure RHNA-BR-2. Additional Requirements for RHNA Sites with Potentially Significant Resource Potential. In addition to Mitigation Measure RHNA-BR-1, the following measures shall be implemented for each of the RHNA sites that have the potential to affect additional biological resources, as specified:

Site 1 – The Shoppes II: Impacts to biological resources within the grasslands at Site 1 could occur because the vegetation could potentially support special-status species that inhabit or forage within grasslands (e.g., burrowing owls [*Athene cunicularia*] and raptors). Impacts to developed land would not be significant. Prior to site development, formal surveys are required to determine the presence of protected and/or special-status species and habitats to determine potential impacts and to formulate appropriate measures to mitigate any potentially significant impacts identified.

Site 3 – Los Serranos Golf Course: Impacts to developed land would not be significant. Impacts to potential jurisdictional aquatic resources could be significant. Prior to site development, formal surveys are required to determine the presence of least Bell's vireo, southern riparian scrub and other protected and/or special-status species and habitats to determine potential impacts and formulate appropriate mitigation measures, if necessary. An aquatic resource determination (wetland delineation) is required to determine potential impacts to regulated aquatic resources and to formulate appropriate measures, if necessary.

Site 4 – Western Hills Golf Course: Impacts to developed land would not be significant. Impacts to potential jurisdictional aquatic resources could be significant. Prior to site development, formal surveys would be required to determine the presence of protected and/or special-status species and habitats to determine potential impacts and formulate appropriate mitigation measures, if necessary. An aquatic resource determination (wetland delineation) would be required to determine potential impacts to regulated aquatic resources and to formulate appropriate mitigation measures, if necessary.

Site 5 – Wang (High Density): Impacts to agriculture could be significant as the site closely resembles annual grassland (except the presence of cattle) and could potentially support special-status species that inhabit or forage within grasslands (e.g., raptors). Impacts to walnut woodland could be significant. Prior to site development, formal surveys are required to determine the presence protected and/or special-status species and habitats to determine potential impacts and formulate appropriate mitigation measures. An aquatic resource determination (wetland delineation) could be required to determine impacts to regulated aquatic resources and formulate appropriate mitigation measures, if necessary.

Site 8 – Canyon Estates (Medium Density): Impacts to annual grassland could be significant. Impacts to potential jurisdictional aquatic resources could be significant. Prior to site development, formal surveys are required to determine the presence protected and/or special-status species and habitats to determine potential impacts and formulate appropriate mitigation measures. An aquatic resource determination (wetland delineation) could be required to determine impacts to regulated aquatic resources and formulate appropriate mitigation measures, if necessary.

Site 9 – Wang (Medium Density): Impacts to agriculture could be significant because this site closely resembles annual grassland (except the presence of cattle) and could potentially support special-status species that inhabit or forage within grasslands (e.g., raptors). Prior to site development, formal surveys are required to determine the presence of protected and/or special-status species and habitats to determine potential impacts and formulate appropriate mitigation measures. An aquatic resource determination (wetland delineation) could be required to determine impacts to regulated aquatic resources and formulate appropriate mitigation measures, if necessary.

Site 10 – Canyon Estates (Low Density): Impacts to annual grassland could be significant. Impacts to walnut woodland would be significant. Impacts to potential jurisdictional aquatic resources could be significant. Prior to site development, formal surveys are required to determine the presence of protected and/or special-status species and habitats to determine potential impacts and formulate appropriate mitigation measures. An aquatic resource determination (wetland delineation) could be required to determine impacts to regulated aquatic resources and formulate appropriate mitigation measures, if necessary.

Site 11 – Los Serranos Golf Course (Low Density): Impacts to developed land would not be significant. Special attention should be paid to the off-site pond during site-specific planning such that no direct or indirect impacts occur.

APPENDIX A

Special-Status Plants

Table A.1. Special-Status Plants

Species Name	Habitat[1]	Status	CRPR
Abronia villosa var. *aurita* chaparral sand-verbena	Chaparral, coastal scrub, desert dunes. Sandy areas. 60-1,570 m.	-	1B.1
Allium marvinii Yucaipa onion	Openings in chaparral on clay soils. 850-1070 m.	-	1B.2
Astragalus brauntonii Braunton's milk-vetch	Chaparral, coastal scrub, valley and foothill grassland. Recent burns or disturbed areas; usually on sandstone with carbonate layers. Soil specialist; requires shallow soils to defeat pocket gophers and open areas, preferably on hilltops, saddles or bowls between hills. 3-640 m.	FE	1B.1
Atriplex coulteri Coulter's saltbush	Coastal bluff scrub, coastal dunes, coastal scrub, valley and foothill grassland. Ocean bluffs, ridgetops, as well as alkaline low places. Alkaline or clay soils. 2-460 m.	-	1B.2
Baccharis malibuensis Malibu baccharis	Coastal scrub, chaparral, cismontane woodland, riparian woodland. In Conejo volcanic substrates, often on exposed roadcuts. Sometimes occupies oak woodland habitat. 150-320 m.	-	1B.1
Berberis nevinii Nevin's barberry	Chaparral, cismontane woodland, coastal scurb, riparian scrub. On steep, north-facing slopes or in low grade sandy washes. 90-1,590 m.	FE, SE	1B.1
Calochortus plummerae Plummer's mariposa-lily	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest. Occurs on rocky and sandy sites, usually of granitic or alluvial material. Can be very common after fire. 60-2,500 m.	-	4.2
Calochortus weedii var. *intermedius* intermediate mariposa-lily	Coastal scrub, chaparral, valley and foothill grassland. Dry, rocky open slopes and rock outcrops. 60-1,575 m.	-	1B.2
Calystegia felix lucky morning-glory	Meadows and seeps, riparian scrub. Sometimes alkaline, alluvial. 30-215 m.	-	1B.1
Centromadia pungens ssp. *laevis* smooth tarplant	Valley and foothill grassland, chenopod scrub, meadows and seeps, playas, riparian woodland. Alkali meadow, alkali scrub; also in disturbed places. 5-1,170 m.	-	1B.1
Chorizanthe parryi var. *fernandina* San Fernando Valley spineflower	Coastal scrub, valley and foothill grassland. Sandy soils. 15-1,015 m.	PT, SE	1B.1
Chorizanthe polygonoides var. *longispina* long-spined spineflower	Chaparral, coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools. Gabbroic clay. 30-1,540 m.	-	1B.2
Cladium californicum California saw-grass	Meadows and seeps, marshes and swamps (alkaline or freshwater). Freshwater or alkaline moist habitats. -40-2150 m.	-	2B.2
Dodecahema leptoceras slender-horned spineflower	Chaparral, cismontane woodland, coastal scrub (alluvial fan sage scrub). Flood deposited terraces and washes; associates include *Encelia*, *Dalea*, *Lepidospartum*, etc. Sandy soils. 200-765 m.	FE, SE	1B.1
Dudleya multicaulis many-stemmed dudleya	Chaparral, coastal scrub, valley and foothill grassland. In heavy, often clayey soils or grassy slopes. 15-790 m.	-	1B.2
Eriastrum densifolium ssp. *sanctorum* Santa Ana River woollystar	Coastal scrub, chaparral. In sandy soils on river floodplains or terraced fluvial deposits. 180-700 m.	FE, SE	1B.1
Hesperocyparis forbesii Tecate cypress	Closed-cone coniferous forest, chaparral. Primarily on north-facing slopes; groves often associated with chaparral. On clay or gabbro. 60-1,650 m.	-	1B.1
Horkelia cuneata var. *puberula* mesa horkelia	Chaparral, cismontane woodland, coastal scrub. Sandy or gravelly sites. 15-1,645 m.	-	1B.1

Species Name	Habitat[1]	Status	CRPR
Juglans californica Southern California black walnut	Hillsides and canyons, usually with alluvial substrates in chaparral, cismontane woodland, coastal scrub, and riparian woodland. 50-900 m.	-	4.2
Lepechinia cardiophylla heart-leaved pitcher sage	Closed-cone coniferous forest, chaparral, cismontane woodland. 520-1,370 m.	-	1B.2
Lepidium virginicum var. *robinsonii* Robinson's pepper-grass	Chaparral, coastal scrub. Dry soils, shrubland. 4-1,435 m.	-	4.3
Monardella australis ssp. *jokerstii* Jokerst's monardella	Lower montane coniferous forest, chaparral. Steep scree or talus slopes between breccia. Secondary alluvial benches along drainages and washes. 1,350-1,750 m.	-	1B.1
Monardella hypoleuca ssp. *intermedia* intermediate monardella	Chaparral, cismontane woodland, lower montane coniferous forest (sometimes). Often in steep, brushy areas. 195-16,750 m.	-	1B.3
Muhlenbergia californica California muhly	Coastal scrub, chaparral, lower montane coniferous forest, meadows and seeps. Usually found near streams or seeps. 100-2000 m.	-	4.3
Muhlenbergia utilis aparejo grass	Meadows and seeps, marshes and swamps, chaparral, coastal scrub, cismontane woodland. Sometimes alkaline, sometimes serpentinite. 25-2325 m.	-	2B.2
Navarretia prostrata prostrate vernal pool navarretia	Coastal scrub, valley and foothill grassland, vernal pools, meadows and seeps. Alkaline soils in grassland, or in vernal pools. Mesic, alkaline sites. 3-1235 m.	-	1B.2
Nolina cismontana chaparral nolina	Chaparral, coastal scrub. Primarily on sandstone and shale substrates; also known from gabbro. 140-1,275 m.	-	1B.2
Penstemon californicus California beardtongue	Chaparral, lower montane coniferous forest, pinyon and juniper woodland. Stony slopes and shrubby openings; sandy or granitic soils. 1,170-2,300 m.	-	1B.2
Pentachaeta aurea ssp. *allenii* Allen's pentachaeta	Valley and foothill grasslands, coastal scrub. Openings in scrub or grassland. 75-520 m.	-	1B.1
Pseudognaphalium leucocephalum white rabbit-tobacco	Riparian woodland, cismontane woodland, coastal scrub, chaparral. Sandy, gravelly sites. 35-515 m.	-	2B.2
Sagittaria sanfordii Sanford's arrowhead	Standing or slow-moving freshwater ponds, marshes, swamps, and ditches. 0-605 m.	-	1B.2
Senecio aphanactis chaparral ragwort	Occurs in dry open rocky areas in chaparral, cismontane woodland, and coastal scrub. Sometimes occurs in alkaline flats. 15-800 m.	-	2B.2
Sidalcea neomexicana salt spring checkerbloom	Playas, chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub. Alkali springs and marshes. 3-2,380 m.	-	2B.2
Symphyotrichum defoliatum San Bernardino aster	Meadows and seeps, cismontane woodland, coastal scrub, lower montane coniferous forest, marshes and swamps, valley and foothill grassland. Vernally mesic grassland or near ditches, streams and springs; disturbed areas. 2-2,040 m.	-	1B.2

Species Name	Habitat[1]	Status	CRPR
Thysanocarpus rigidus rigid fringepod	Pinyon and juniper woodland. Dry, rocky slopes and ridges of oak and pine woodland in arid mountain ranges. 425-2165 m.	-	1B.2

1. Habitat descriptions sourced from the general and microhabitat descriptions listed in CNDDB as well as CNPS Rare Plant Inventory and Jepson eFlora.

Note: Species included in this table have at least one CNDDB occurrence in San Dimas, Ontario, Yorba Linda, Prado Dam, and/or Black Star Canyon quads.

FE = Federally Endangered

FT = Federally Threatened

PT = Federally Proposed Threatened

SE = State Endangered

ST = State Threatened

CRPR = California Rare Plant Rank.

1A: Presumed extinct in California

1B: Rare, threatened, or endangered in California and elsewhere.

2: Rare, threatened, or endangered in California, but more common elsewhere.

3: More information needed (Review List)

4: Limited distribution (Watch List)

0.1: Seriously threatened in California.

0.2: Fairly threatened in California.

0.3: Not very threatened in California.

APPENDIX B

Special-Status Wildlife

Table B.1. Special-Status Wildlife Species in the Study Area

Species Name	Habitat[1]	Status
Invertebrates		
Bombus crotchii Crotch bumble bee	Coastal California east to the Sierra-Cascade crest and south into Mexico. Food plant genera include *Antirrhinum*, *Phacelia*, *Clarkia*, *Dendromecon*, *Eschscholzia*, and *Eriogonum*.	SA
Gonidea angulate Western ridged mussel	Primarily creeks and rivers and less often lakes. Originally in most of state, now extirpated from Central and Southern California.	SA
Branchinecta sandiegonensis San Diego fairy shrimp	Endemic to San Diego and Orange County mesas. Vernal pools.	FE
Diplectrona californica California diplectronan caddisfly	No information has been published on the larva of this species, but other larvae in the genus live in fast-flowing, cool streams.[2]	SA
Euphydryas editha quino quino checkerspot butterfly	Sunny openings within chaparral and coastal sage shrublands in parts of Riverside and San Diego counties. Hills and mesas near the coast. Need high densities of food plants *Plantago erecta*, *P. insularis*, and *Castilleja exserta*.	FE
Neolarra alba white cuckoo bee	Known only from localities in Southern California.	SA
Fish		
Catostomus santaanae Santa Ana sucker[3]	Endemic to Los Angeles Basin south coastal streams. Habitat generalists, but prefer sand-rubble-boulder bottoms, cool, clear water, and algae.	FT
Gila orcuttii arroyo chub	Native to streams from Malibu Creek to San Luis Rey River basin. Introduced into streams in Santa Clara, Ventura, Santa Ynez, Mojave & San Diego river basins. Slow water stream sections with mud or sand bottoms. Feeds heavily on aquatic vegetation and associated invertebrates.	SSC
Oncorhynchus mykiss irideus pop. 10 steelhead - southern California Distinct Population Segments (DPS)	Federal listing refers to populations from Santa Maria River south to southern extent of range (San Mateo Creek in San Diego County). Southern steelhead likely have greater physiological tolerances to warmer water and more variable conditions.	FE, CE
Amphibians		
Spea hammondii western spadefoot	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands. Vernal pools are essential for breeding and egg-laying.	SSC
Taricha torosa Coast Range newt	Coastal drainages from Mendocino County to San Diego County. Lives in terrestrial habitats and will migrate over 1 km to breed in ponds, reservoirs and slow moving streams.	SSC
Reptiles		
Anniella stebbinsi Southern California legless lizard	Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County. Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.	SSC
Arizona elegans occidentalis California glossy snake	Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California. Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	SSC
Aspidoscelis hyperythra orange-throated whiptail	Inhabits low-elevation coastal scrub, chaparral, and valley-foothill hardwood habitats. Prefers washes and other sandy areas with patches of brush and rocks. Perennial plants necessary for its major food: termites.	WL

Species Name	Habitat[1]	Status
Aspidoscelis tigris stejnegeri coastal whiptail	Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland & riparian areas. Ground may be firm soil, sandy, or rocky.	SSC
Crotalus ruber red-diamond rattlesnake	Chaparral, woodland, grassland, & desert areas from coastal San Diego County to the eastern slopes of the mountains. Occurs in rocky areas and dense vegetation. Needs rodent burrows, cracks in rocks or surface cover objects.	SSC
Emys marmorata western pond turtle	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6,000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	SSC
Phrynosoma blainvillii coast horned lizard	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	SSC
Salvadora hexalepis virgultea coast patch-nosed snake	Brushy or shrubby vegetation in coastal Southern California. Require small mammal burrows for refuge and overwintering sites.	SSC
Thamnophis hammondii two-striped gartersnake	Coastal California from vicinity of Salinas to northwest Baja California. From sea to about 7,000 feet elevation. Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth.	SSC
Birds		
Accipiter cooperii *Cooper's hawk*	Woodland, chiefly of open, interrupted or marginal type. Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	WL
Agelaius tricolor tricolored blackbird	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	ST, SSC
Aimophila ruficeps canescens southern California rufous-crowned sparrow	Resident in Southern California coastal sage scrub and sparse mixed chaparral. Frequents relatively steep, often rocky hillsides with grass and forb patches.	WL
Ammodramus savannarum grasshopper sparrow	Dense grasslands on rolling hills, lowland plains, in valleys and on hillsides on lower mountain slopes. Favors native grasslands with a mix of grasses, forbs and scattered shrubs. Loosely colonial when nesting.	SSC
Aquila chrysaetos golden eagle	Rolling foothills, mountain areas, sage-juniper flats, and desert. Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	FP
Asio otus long-eared owl	Riparian bottomlands grown to tall willows and cottonwoods; also, belts of live oak paralleling stream courses. Require adjacent open land, productive of mice and the presence of old nests of crows, hawks, or magpies for breeding.	SSC
Athene cunicularia burrowing owl	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	SSC
Buteo swainsoni Swainson's hawk	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, & agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	ST
Campylorhynchus brunneicapillus sandiegensis coastal cactus wren	Southern California coastal sage scrub. Wrens require tall opuntia cactus for nesting and roosting.	SSC

Species Name	Habitat[1]	Status
Coccyzus americanus occidentalis western yellow-billed cuckoo	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	FT, SE
Coturnicops noveboracensis yellow rail	Summer resident in eastern Sierra Nevada in Mono County. Freshwater marshlands.	SSC
Elanus leucurus white-tailed kite	Rolling foothills and valley margins with scattered oaks & river bottomlands or marshes next to deciduous woodland. Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	FP
Empidonax traillii extimus southwestern willow flycatcher	Riparian woodlands in Southern California.	FE, SE
Eremophila alpestris actia California horned lark	Coastal regions, chiefly from Sonoma County to San Diego County. Also, main part of San Joaquin Valley and east to foothills. Short-grass prairie, "bald" hills, mountain meadows, open coastal plains, fallow grain fields, alkali flats.	WL
Falco columbarius merlin	Seacoast, tidal estuaries, open woodlands, savannahs, edges of grasslands and deserts, farms and ranches. Clumps of trees or windbreaks are required for roosting in open country.	WL
Falco peregrinus anatum American peregrine falcon	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	FP
Haliaeetus leucocephalus bald eagle	Ocean shore, lake margins, and rivers for both nesting and wintering. Most nests within 1 mile of water. Nests in large, old-growth, or dominant live tree with open branches, especially ponderosa pine. Roosts communally in winter.	SE, FP
Icteria virens yellow-breasted chat	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses. Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 feet of ground.	SSC
Laterallus jamaicensis coturniculus California black rail	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	ST, FP
Polioptila californica coastal California gnatcatcher[3]	Obligate, permanent resident of coastal sage scrub below 2500 feet in Southern California. Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	FT, SSC
Setophaga petechia yellow warbler	Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada. Frequently found nesting and foraging in willow shrubs and thickets, and in other riparian plants including cottonwoods, sycamores, ash, and alders.	SSC
Vireo bellii pusillus least Bell's vireo[3]	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 feet. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, *Baccharis*, and mesquite.	FE, SE
Mammals		
Antrozous pallidus pallid bat	Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	SSC
Chaetodipus fallax ssp. fallax northwestern San Diego pocket mouse	Coastal scrub, chaparral, grasslands, sagebrush, etc. in western San Diego County. Sandy, herbaceous areas, usually in association with rocks or coarse gravel.	SSC
Dipodomys merriami parvus San Bernardino kangaroo rat	Alluvial scrub vegetation on sandy loam substrates characteristic of alluvial fans and flood plains. Needs early to intermediate seral stages.	FE, CE SSC

Species Name	Habitat[1]	Status
Eumops perotis californicus western mastiff bat	Many open, semi-arid to arid habitats, including conifer & deciduous woodlands, coastal scrub, grasslands, chaparral, etc. Roosts in crevices in cliff faces, high buildings, trees and tunnels.	SSC
Lasiurus xanthinus western yellow bat	Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats. Roosts in trees, particularly palms. Forages over water and among trees.	SSC
Neotoma lepida intermedia San Diego desert woodrat	Coastal scrub of Southern California from San Diego County to San Luis Obispo County. Moderate to dense canopies preferred. They are particularly abundant in rock outcrops, rocky cliffs, and slopes.	SSC
Nyctinomops femorosaccus pocketed free-tailed bat	Variety of arid areas in Southern California; pine-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc. Rocky areas with high cliffs.	SSC
Nyctinomops macrotis big free-tailed bat	Low-lying arid areas in Southern California. Need high cliffs or rocky outcrops for roosting sites. Feeds principally on large moths.	SSC
Taxidea taxus American badger	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	SSC

1**:** Habitat descriptions sourced from the general and microhabitat descriptions listed in CNDDB.

2: Shanks, S. Undated. *Diplectrona californica*. California Department of Fish and Game, Natural Diversity Database

3: Critical Habitat for this species is present within or immediately adjacent to the study area.

Note: Species included in this table have at least one CNDDB occurrence in San Dimas, Ontario, Yorba Linda, Prado Dam, and/or Black Star Canyon quads.

FE = Federally Endangered

FT = Federally Threatened

SE = State Endangered

ST = State Threatened

CE = State Candidate for Endangered Listing

FP = CDFW Fully Protected

SA = CDFW Special Animals

SSC = CDFW Species of Special Concern

SWCA Project No. 66884
SWCA Cultural Resources Report No. 22-633

November 2023

EXECUTIVE SUMMARY

Purpose and Scope: On behalf of the City of Chino Hills (City), EcoTierra Consulting, Inc. (EcoTierra) retained SWCA Environmental Consultants (SWCA) to conduct a cultural resources assessment for the Chino Hills General Plan Update (project) in the city of Chino Hills, San Bernardino County, California. A major component of the General Plan Update is to implement the City's 6th Cycle Housing Element for the 2021-2029 planning period (Housing Element). The project also includes updates to the existing Land Use, Circulation, Safety, Conservation, Parks/Recreation/Open Space, Noise and Economic Development Elements. The project also includes rezoning of the Housing Element opportunity sites to meet the City's Regional Housing Needs Assessment (RHNA) allocations, and revisions to the General Plan Land Use Map and Zoning map. The Housing Element identifies 19 RHNA sites to meet the City's "lower income," "moderate income," and "above moderate income" RHNA allocation. Of those sites, 11 require a General Plan Land Use Map change accomplished through the General Plan Update process. These 11 sites also require a rezoning or specific plan amendment to ensure consistency with the changed General Plan Land Use Map designations.

The City requires this study to consider potential impacts this project may have on significant cultural resources to comply with the California Environmental Quality Act (CEQA) and California State and local regulations. The City prepared an update to its General Plan in 2015 and a General Plan Environmental Impact Report (EIR), which was certified in 2015. With the current update process, the City is preparing a Subsequent EIR (SEIR). A SEIR is required as the General Plan Update proposes substantial changes to the City's 2015 General Plan. The SEIR will consider whether this current Update would result in new significant impacts not identified in the 2015 Chino Hills General Plan Update EIR.

This cultural resources assessment, which also serves as baseline information for the City General Plan update, analyzes the Chino Hills city limits at a program-level. This program-level analysis included a confidential records search of the California Historical Resources Information System (CHRIS) and a Sacred Lands File (SLF) search through the California Native America Heritage Commission (NAHC).

Of the 11 RHNA sites requiring General Plan Land Use Map amendments, two are designated for low density residential use (Site 10 - Canyon Estates [Low Density] and Site 11 - Los Serranos Golf Course [Low Density]), two are designated for medium density residential use (Site 8 - Canyon Estates [Medium Density], and Site 9 - Wang] Medium Density]), and seven of the sites are suitable for high density and/or lower income housing (Site 1 - The Shoppes II, Site 2 - Community Park Overflow, Site 3 - Los Serranos Golf Course, Site 4 - Western Hills Golf Course, Site 5 - Wang [High Density], Site 6 - The Shoppes, and Site 7 - The Commons).

At the request of the City, the two RHNA sites designated for low density residential use (Sites 10 and 11) are included in the program-level analysis. The remaining nine RHNA sites are examined at a more detailed, site-specific level (Sites 1 through 9). Building on the program-level analysis outlined above, the site-specific assessment included review of pertinent local reports, detailed property-specific research, and archaeological and built environment field surveys.

Dates of Investigation: At SWCA's request, the South Central Coastal Information Center (SCCIC) at California State University, Fullerton conducted a CHRIS records search for the General Plan Update area on August 4, 2022. SWCA received the results of the SLF search from the NAHC on June 13, 2022. A built environment survey was conducted on July 5, 2022, of two RHNA sites containing buildings or structures over 45 years old (Sites 3 and 4). On August 17 to 19, 2022, an intensive and reconnaissance archaeological resources survey was completed for seven of the 11 proposed RHNA sites (Sites 1 through 5, 8, and 9). Two RHNA sites (Sites 6 and 7) are fully developed, so archaeological pedestrian survey was not warranted.

Summary of Findings: The CHRIS records search indicates 105 previous cultural resource studies were conducted within the study area, and 142 previously recorded cultural resources were identified within the study area. Of those resources, 70 are prehistoric archaeological resources, 33 are historic-period archaeological resources, 14 are multicomponent resources, 34 are historic-period built environment resources, and two resources cannot be categorized due to insufficient information.

Native American coordination conducted in support of the 2015 General Plan Update concluded that the entire city is sensitive for prehistoric resources. As a result of this finding, Goal CN-2 of the 2015 General Plan was established. Specifically, consultation with local Native American tribes is required for each project within the General Plan study area.

On May 10, 2022, SWCA requested a records search of the SLF and a list of Native American contacts for the study area from the NAHC. SWCA received a response letter from the NAHC dated June 13, 2022, which indicated that a record of a sacred site had been identified within the study area. The NAHC recommended contacting the Gabrieleno (Tongva) San Gabriel Band of Mission Indians for additional information. The NAHC also provided a list of 16 Native American groups and individuals who may have knowledge of cultural resources in the study area.

Of the 16 Native American groups and individuals identified in response to the SLF search, two had previously requested Assembly Bill (AB 52) consultation for all projects with the city: the Gabrieleño Band of Mission Indians – Kizh Nation and the Soboba Band of Luiseño Indians. On May 16, 2022, the City mailed letters to the two Tribes. Pursuant to the requirements of AB 52, each letter included a description of the City's efforts to update the General Plan (project description) and notified each contact that requests for formal consultation were required to be sent within 30 days. On May 25, 2022, the Gabrieleño Band of Mission Indians – Kizh Nation responded, acknowledging the project's intent. The letter stated that they are not pursuing AB 52 consultation for the General Plan Update but requested consultation status for all future projects. To date, no additional requests for consultation have been received in response to the AB 52 notification letters.

On September 13, 2022, the City mailed letters to all 15 interested Native American groups and individuals included on the county-wide consultation list. Pursuant to the requirements of SB 18, each letter included a description of the City's efforts to update the General Plan (project description) and notified each contact that requests for formal consultation were required to be sent within 90 days. On September 19, 2022, the Gabrieleño Band of Mission Indians – Kizh Nation responded, acknowledging the project's intent. The letter stated that they are not pursuing AB 52 consultation for the General Plan Update but requested consultation status for all future projects. To date, no additional requests for consultation have been received in response to the AB 52 notification letters.

The program-level analysis concluded that implementation of the City's existing General Plan Policies would reduce any potential impacts to archaeological resources to less-than-significant levels, pursuant to CEQA. Therefore, the requirements established in the 2015 Chino Hills General Plan would still be applicable to the current General Plan Update SEIR for all future development.

The archaeological site-specific analysis concluded that no archaeological resources would be directly impacted by implementation of the development plans for the nine RHNA sites. Any ground disturbance, however, has the potential to expose and/or displace archaeological resources, constituting a potentially significant impact requiring the consideration of mitigation measures. Accordingly, Mitigation Measure (MM) RHNA-CUL-11, requiring the retention of a qualified archaeologist, development of an archaeological resources monitoring plan, and archaeological monitoring, shall be implemented.

Future development or improvements related to changes in land use could potentially cause significant adverse impacts to historical resources. The General Plan study area contains properties that are 50 years

or older, and it is possible that future development in the General Plan area will result in the identification of additional historical resources. As the 8-year cycle for the Housing element spans 2021 through 2029, properties that were developed before 1984 will meet the age criterion for assessment to determine if they qualify as historical resources pursuant to CEQA. Therefore, adoption of the General Plan could result in significant adverse impacts and material impairment to historical resources, and mitigation is required. As a result, MM GP-CR-1, requiring a historical resources assessment and evaluation, shall be implemented.

Two properties that are over 45 years old were identified on RHNA sites: the Los Serranos Golf Club (RHNA Site 3 and Site 11) and Western Hills Country Club (RHNA Site 4). The two properties were recorded on California Department of Parks and Recreation (DPR) 523 series forms, and evaluated for eligibility for listing in the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR). Both properties are recommended not eligible for the NRHP and CRHR under all criteria as they lack association with significant events and individuals (Criteria A/1 and B/2), and do not embody the distinctive characteristics of a type, period, or method of construction, or represent the work of a master architect or engineer (Criterion C/3). Therefore, neither the Los Serranos Golf Club nor Western Hills Country Club are considered historical resources for the purposes of CEQA.

The remaining RHNA sites identified by the City are either undeveloped (Sites 1, 5, 8, and 9) or contain properties that are less than 45 years old (Sites 6, 7 and 10). Those properties within the RHNA sites that are presently developed, but are not yet 45 years old, contain buildings and/or structures that were constructed between 1999 and 2014, therefore, will not come of age until 2044 at the earliest. Therefore, no additional analysis is required for historical resources.

Disposition of Data: The final cultural resources assessment report and any subsequent related reports will be filed with City of Chino Hills; the SCCIC at California State University, Fullerton; and with SWCA's Pasadena, California, office. All field notes, photographs, and records related to the current study are on file at the SWCA Pasadena office.

1 INTRODUCTION

On behalf of the City of Chino Hills (City), EcoTierra Consulting, Inc. (EcoTierra) retained SWCA Environmental Consultants (SWCA) to conduct a cultural resources assessment for the Chino Hills General Plan Update (project) in the city of Chino Hills, San Bernardino County, California (Figure 1). A major component of the General Plan Update is to implement the City's 6th Cycle Housing Element for the 2021-2029 planning period (Housing Element). The project also includes updates to the existing Land Use, Circulation, Safety, Conservation, Parks/Recreation/Open Space, Noise and Economic Development Elements. The project also includes rezoning of the Housing Element opportunity sites to meet the City's Regional Housing Needs Assessment (RHNA) allocations, and revisions to the General Plan Land Use Map and Zoning map. The Housing Element identifies 19 RHNA sites to meet the City's "lower income," "moderate income," and "above moderate income" RHNA allocation. Of those sites, 11 require a General Plan Land Use Map change accomplished through the General Plan Update process. These 11 sites also require a rezoning or specific plan amendment to ensure consistency with the changed General Plan Land Use Map designations.

The City requires this study to consider potential impacts this project may have on significant cultural resources to comply with the California Environmental Quality Act (CEQA) and California State and local regulations. The City prepared a comprehensive update to its General Plan in 2015 and a General Plan Environmental Impact Report (EIR), which was certified in 2015. With this current update process, the City is preparing a Subsequent EIR (SEIR). A SEIR is required, as the General Plan Update proposes substantial changes to the City's 2015 General Plan. The SEIR will consider whether this current General Plan Update would result in new significant impacts not identified in the 2015 Chino Hills General Plan Update EIR.

This cultural resources assessment, which also serves as baseline information for the City General Plan update, analyzes the Chino Hills city limits at a program-level. This program-level analysis included a confidential records search of the California Historical Resources Information System (CHRIS) and a Sacred Lands File (SLF) search through the California Native America Heritage Commission (NAHC).

Of the 11 RHNA sites requiring General Plan Land Use Map amendments, two are designated for low density residential use (Canyon Estates [Low Density] and Los Serranos Golf Course [Low Density]), two are designated for medium density residential use (Canyon Estates [Medium Density], and Wang]Medium Density]), and seven of the sites are suitable for high density and/or lower income housing [The Shoppes II, Community Park Overflow, Los Serranos Golf Course, Western Hills Golf Course, Wang [High Density], The Shoppes, and The Commons). Each project site is described in Section 3.2.

At the request of the City, the two RHNA sites designated for low density residential use ([Canyon Estates (Low Density) and Los Serranos Golf Course (Low Density]) are included in the program-level analysis. The remaining nine RHNA sites are examined at a more detailed, site-specific level. Building on the program-level analysis outlined above, the site-specific assessment included review of pertinent local reports, detailed property-specific research, and archaeological and built environment field surveys. This technical report presents the results of the CHRIS and SLF searches, archival research, and a discussion of potential impacts to significant cultural resources that could result from total build-out. The report also includes mitigation recommendations to reduce potential impacts to less-than-significant levels, pursuant to CEQA.

The property-specific research will facilitate development of the sites to meet the City's share of regional housing needs and streamline their subsequent development review. Seven of the nine RHNA sites contain undeveloped land, so an archaeological survey was completed. The two remaining sites (The Shoppes and The Commons) are fully developed, so archaeological pedestrian survey was not warranted.

SWCA Project Manager Susan Zamudio-Gurrola, M.H.P., conducted the desktop-level analysis, oversaw the field reconnaissance survey, and authored the built environment study. SWCA Senior Team Lead, Liz Denniston, M.A., Registered Professional Archaeologist (RPA), conducted the desktop-level analysis, oversaw the field reconnaissance survey, and authored the archaeological resources study. Senior Architectural Historian Debi Howell-Ardila, M.H.P., and Principal Investigator Chris Millington, M.A., RPA, provided senior technical-level review of the report. SWCA Senior Environmental Planner Bobbette Biddulph served as overall project manager and provided additional quality assurance/quality control. Figures were generated by SWCA Geographic Information System (GIS) Specialists Matthew DeFreese, B.S., and Marty Kooistra, M.A. Copies of the report are on file with SWCA's Pasadena office.

2 PROJECT LOCATION

The overall study area for the General Plan Update includes the city of Chino Hills' incorporated boundary and sphere of influence, which encompasses approximately 45 square miles in southwestern San Bernardino County (Figure 2; see Figure 1). The city is bounded by the cities of Diamond Bar and Pomona to the north, the city of Chino to the east, the city of Corona and the Fremont Canyon Nature Preserve to the south, and the cities of Yorba Linda and Brea to the west.

The study area is within the following grid units projected from the Public Land Survey System: Township 2 South, Range 9 West; Township 2 South, Range 8 West; Township 3 South, Range 9 West; Township 3 South, Range 8 West; and Township 3 South, Range 7 West, San Bernardino Baseline and Meridian, and can be found on the San Dimas, Ontario, Yorba Linda, Prado Dam, and Black Star Canyon, California, U.S. Geological Survey 7.5-minute quadrangles (Figure 3 through Figure 10).

3 PROJECT DESCRIPTION

3.1 General Plan Update Overview

The project consists of updates to the City's 2015 General Plan, which incorporates the City of Chino Hills adopted 2021–2029 Housing Element, and updates the existing Land Use, Circulation, Safety, Conservation, Parks/Recreation/Open Space, Noise and Economic Development Elements. The project also includes rezoning of the Housing Element opportunity sites to meet the City's RHNA allocations, and revisions to the City's Zoning Code and Zoning Map.

3.2 Housing Element, RHNA Sites, and Related Project Actions

The Housing Element is one of the seven mandated elements of the General Plan. State law requires that all cities adopt a Housing Element and describes in detail the necessary contents of the Housing Element. This Housing Element responds to those requirements within the context of the physical and socio-economic conditions unique to the City and covers the eight-year planning cycle from 2021–2029, identified by the state as the 6th Cycle Housing Element. A major component of the Housing Element is the identification of sites for future housing development and evaluation of the adequacy of these sites for fulfilling the City's fair share of regional housing needs, which is based on the Southern California Association of Governments' RHNA. The RHNA represents the minimum number of housing units for which each community is required to provide "adequate sites" through planning and zoning and is one of the primary threshold criteria necessary to achieve California Department of Housing and Community Development Department approval of the Housing Element.

The City plans to fulfill its share of regional housing needs by using a combination of current project entitlements or applications for sites currently zoned for residential development, increasing density on property currently zoned for residential development, and rezoning of vacant and underutilized non-residential properties to allow for residential or mixed-use development.

The City's total RHNA for the 2021–2029 planning period is 3,729 units, allocated to specific income levels (2,209 units classified as Extremely Low/Very Low/Low, 789 units classified as Moderate, and 814 units classified as Above Moderate). Because the City does not have sufficient zoned sites to accommodate its full 789-unit "Moderate" income allocation and its full 2,209-unit "Lower" income allocation, there is a shortfall requiring a program to rezone additional sites. The City has identified 11 RHNA sites within its boundaries that could have the potential for new residential development within the eight-year timeframe of this planning period.

As part of the project, the Land Use Element of the General Plan would be updated to reflect new opportunity sites to meet the RHNA allocation as identified in the Housing Element. This would include four new land use categories: Low Density Housing Overlay, Medium Density Housing Overlay, Very High Density Housing Overlay, and Mixed Use Housing Overlay. These new residential categories would accommodate the RHNA allocation and would include rezoning seven sites to Very High Density Housing Overlay or Mixed Use Housing Overlay or equivalent to provide the necessary very high density sites to accommodate units affordable to lower-income households; two properties to Medium Density Housing Overlay or equivalent to provide medium density sites to accommodate units affordable to moderate- income households; and two properties to Low Density Housing Overlay. Lower income sites that require rezoning, new land use categories, and/or land use designation adjustments include:

> **Site 1 – The Shoppes II:** This site is City owned and zoned for high-density residential use. The current specific plan caps the site at 295 units; therefore, the site would need to be rezoned to increase the unit cap amount to meet the Housing Element. The small southern portion of the Shoppes II site was included in previous RHNA cycles and remained vacant. The site is flat and situated between the existing Shoppes commercial center to the north, Chino Valley Fire District Station 62 to the south, City Hall and parking structure to the west, and Boys Republic to the east. The entire site will be rezoned to Mixed Use Housing Overlay.
>
> **Site 2 – Community Park Overflow:** The site is City owned and was intended to accommodate overflow parking for the Community Park; however, the site is vacant and

underutilized. The City has focused this site on an affordable senior housing development for several years and committed to applying its Housing In-Lieu fee and available funds to help finance the development of this site. The site is located between Community Park to the north and west, and single-family residential development to the east and south. The site will be rezoned to Very High Density Housing Overlay.

Site 3 – Los Serranos Golf Course: This site is privately owned and consists of a 9-hole area of an existing 36-hole golf course. The golf course is surrounded by single-family residential development which serves local and regional communities and includes a driving range and country club. The golf course has been underperforming in recent years, and the property owner has been actively pursuing converting the southernmost 9-hole area into housing. Although the property is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The high density portion of this property would be rezoned to Very High Density Housing Overlay to allow for owner-occupied and rental multifamily uses by-right.

Site 4 – Western Hills Golf Course: This site is privately owned and consists of an 18-hole golf course established in the early 1960s to serve the local and regional communities and includes a country club. The golf course is located within Carbon Canyon and is surrounded by single-family residential development. In recent years, the golf course has underperformed, and the owner seeks to redevelop the south section of the golf course (which includes clubhouse, parking, and large open grass areas) to residential development and redesign the balance of the golf course for continued golf use. Although the golf course is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated housing portion of the site will be rezoned to Very High Density Housing Overlay.

Site 5 – Wang (High Density): The site is privately owned and is a vacant, residentially zoned property surrounded by single-family residential to the north and west, vacant property to the south, and Los Serranos Golf Course to the east. Although the site contains areas of steep topography, the mild slope portions can accommodate development for high-density residential. Development of this site would realign Woodview Road to enhance public safety and traffic circulation. Although the property is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated very high density residential portion of the site will be rezoned to Very High Density Housing Overlay.

Site 6 – The Shoppes: The site is privately owned and consists of an existing 391,863-square foot commercial center surrounded by the Shoppes II site and City Hall to the south, Boys Republic to the east, commercial center and single-family residential to the west, and commercial center to the north. The property owner intends to redevelop the underutilized southeastern section of the commercial center to a mixed-use development that would retain retail space and include high-density residential. Although the commercial center is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated housing portion of the site will be rezoned to Mixed Use Housing Overlay.

Site 7 – The Commons: The site is privately owned and consists of an existing 443,272-square foot commercial center surrounded by a mobile home park to the east,

single-family and multi-family residential to the west, an existing commercial center to the south, and vacant land to the north, across Chino Hills Parkway. The Chino Hills city limits is contiguous with Chino Hills Parkway directly north of the Commons site. The vacant parcel to the north of Chino Hills Parkway is within the city limits of Chino and is currently zoned for commercial office uses. The property owner intends to redevelop the underutilized portion of the commercial center by developing a mixed-use project to retain retail square footage and include high-density residential. Although the commercial center is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated housing portion of the site will be rezoned to Mixed Use Housing Overlay.

Moderate-income sites requiring rezoning, new land use categories, and/or land use designation adjustments include:

Site 8 – Canyon Estates (Medium Density): The site is privately owned and located at the terminus of Soquel Canyon Parkway and is surrounded by single-family residential and the vacant Wang site to the north, single-family residential to the west and east, and Chino Hills State Park to the south. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate medium density development. Development of the property would also include key infrastructure as part of the City's circulation element. The designated medium density housing portion of the site will be rezoned to Medium Density Housing Overlay.

Site 9 – Wang (Medium Density): The site is privately owned and consists of a vacant residentially zoned property surrounded by single-family residential to the north and west, vacant property to the south, and Los Serranos Golf Course to the east. Although the site contains areas of steep topography, the mild slope portions can accommodate development for high density residential. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate high density development. Development of this site would re-align Woodview Road to enhance public safety and traffic circulation. The designated medium density housing portion of the site will be rezoned to Medium Density Housing Overlay.

Low density sites requiring rezoning, new land use categories, and/or land use designation adjustments include:

Site 10 – Canyon Estates (Low Density): The Canyon Estates property is located at the terminus of Soquel Canyon Parkway and is surrounded by single-family residential and the vacant Wang site to the north, single-family residential to the west and east, and Chino Hills State Park to the south. The site includes steep topography on the north and south sections of the property and centered with slopes less than ten percent where development can occur. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate medium density development. Development of the property would also include key infrastructure as part of the City's circulation element. An approximate 31-acre portion of the site would be designated for low density residential with an anticipated density of 6.0 dwelling units per acre.

Site 11 – Los Serranos Golf Course (Low Density): The Los Serranos Golf Course site is approximately 79.9 acres and part of a 9-hole area of an existing 36-hole golf course, zoned for commercial recreation, and owned by Greening Family LLC. The golf course is surrounded by single-family residential development which serves local and regional

communities and includes a driving range and country club. The golf course has been underperforming in recent years and the property owner has been actively pursuing converting the southernmost 9-hole area into housing, which is located southeast of Country Club Drive and Pipeline Avenue. An approximate 6.9-acre portion of the site would be designated for low density residential with an anticipated density of 6.0 dwelling units per acre.

In addition to the broader General Plan Update study area and two properties designated to low density residential use, nine RHNA sites are considered in this technical analysis at a greater level of detail to facilitate development of the sites to meet the City's share of regional housing needs. Seven of the nine RHNA sites contain undeveloped land, so an archaeological survey was completed. The two remaining sites (The Shoppes and The Commons) are fully developed, so archaeological pedestrian survey was not warranted. The remaining two sites are fully developed, so pedestrian survey was not warranted.

4 REGULATORY FRAMEWORK

A complex network of federal, state, and local regulations governs the cultural resources of California. This section is intended as an overview of these regulations rather than an in-depth review. This section reviews the federal, state, and local regulations and policies that may be pertinent to the update of the City's General Plan.

4.1 Federal

4.1.1 *National Historic Preservation Act of 1966*

Enacted in 1966 and amended most recently in 2014, the National Historic Preservation Act (NHPA; 54 United States Code [USC] 300101 et seq.) instituted a multifaceted program, administered by the Secretary of the Interior, to encourage sound preservation policies of the nation's cultural resources at the federal, state, and local levels. The NHPA authorized the expansion and maintenance of the National Register of Historic Places (NRHP), established the position of State Historic Preservation Officer, and provided for the designation of State Review Boards. The NHPA also set up a mechanism to certify local governments to carry out the goals of the NHPA, assisted Native American tribes to preserve their cultural heritage, and created the Advisory Council on Historic Preservation.

4.1.2 *National Register of Historic Places*

The NRHP was established by the NPHA as "an authoritative guide to be used by Federal, State, and local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment" (36 Code of Federal Regulations [CFR] 60.2). The NRHP recognizes properties that are significant at the national, state, and local levels. To be eligible for the NRHP, a property must be significant in American history, architecture, archaeology, engineering, or culture under one or more of the following criteria (36 CFR 60.4):

- **Criterion A:** It is associated with events that have made a significant contribution to the broad patterns of our history;
- **Criterion B:** It is associated with the lives of persons who are significant in our past;
- **Criterion C:** It embodies the distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic values, or

represents a significant and distinguishable entity whose components may lack individual distinction; and/or

- **Criterion D:** It has yielded, or may be likely to yield, information important in prehistory or history.

Ordinarily cemeteries, birthplaces or graves of historic figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, and properties that are primarily commemorative in nature are not considered eligible for the NRHP, unless they satisfy certain conditions. In general, a resource must be 50 years of age to be considered for the NRHP, unless it satisfies a standard of exceptional importance.

Integrity

In addition to meeting these criteria, a property must also retain historic integrity, which is defined in National Register Bulletin 15 as the ability of a property to convey its significance (National Park Service 1995). To assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several, if not all, of these seven qualities:

1. Location – the place where the historic property was constructed or the place where the historic event occurred
2. Design – the combination of elements that create the form, plan, space, structure, and style of a property
3. Setting – the physical environment of a historic property
4. Materials – the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property
5. Workmanship – the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory
6. Feeling – a property's expression of the aesthetic or historic sense of a particular period of time
7. Association – the direct link between an important historic event or person and a historic property

4.1.3 *Native American Graves Protection and Repatriation Act*

The Native American Graves Protection and Repatriation Act (NAGPRA) of 1990 (25 USC 3001 et seq.) protects human remains, funerary objects, sacred objects, and items of cultural patrimony of Indigenous peoples on federal lands. NAGPRA stipulates priorities for assigning ownership or control of such cultural items excavated or discovered on federal or Tribal lands, or in the possession and control of an agency that has received federal funding.

NAGPRA also provides for the repatriation of human remains and associated items previously collected from federal lands and in the possession or control of a federal agency or federally funded repository. Implementing regulations are codified in 43 CFR Part 10. In addition to defining procedures for dealing with previously collected human remains and associated items, these regulations outline procedures for

negotiating plans of action or comprehensive agreements for treatment of human remains and associated items encountered in intentional excavations, or inadvertent discoveries on federal or Tribal lands.

4.2 State

The California Office of Historic Preservation (OHP), a division of the California Department of Parks and Recreation, is responsible for carrying out the duties described in the California Public Resources Code (PRC) and for maintaining the California Historic Resources Inventory and California Register of Historical Resources (CRHR). The state-level regulatory framework also includes CEQA, which requires the identification and mitigation of substantial adverse impacts that may affect the significance of eligible historical and archaeological resources.

4.2.1 *California Environmental Quality Act*

CEQA requires a lead agency to analyze whether historic and/or archaeological resources may be adversely impacted by a proposed project. Under CEQA, a "project that may cause a substantial adverse change in the significance of a historic resource is a project that may have a significant effect on the environment" (PRC Section 21084.1). Analysis is a two-part process: first, a determination must be made whether historical resources are present in the project area. Second, if such resources are present, the proposed project must be analyzed for its potential to cause a "substantial adverse change in the significance" of the resources.

4.2.1.1 HISTORICAL RESOURCES

According to the CEQA Guidelines, California Code of Regulations (CCR) Section 15064.5, for the purposes of CEQA, historical resources are:

1. A resource listed in, or formally determined eligible . . . for listing in the CRHR (PRC Section 5024.1, 14 CCR 4850 et seq.).

2. A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historic resources survey meeting the requirements of PRC Section 5024.1(g).

3. Any object, building, structure, site, area, place, record, or manuscript that the lead agency determines to be eligible for national, state, or local landmark listing; generally, a resource shall be considered by the lead agency to be historically significant (and therefore a historic resource under CEQA) if the resource meets the criteria for listing on the CRHR (as defined in PRC Section 5024.1, 14 CCR 4852).

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity (as defined above) does not meet NRHP criteria may still be eligible for the CRHR.

According to CEQA, the fact that a resource is not listed in or determined eligible for the CRHR or is not included in a local register or survey shall not preclude the lead agency from determining that the resource may be a historical resource (PRC 5024.1). Pursuant to CEQA, a project with an effect that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (CEQA Guidelines, 14 CCR 15064.5[b]).

4.2.1.2 ARCHAEOLOGICAL RESOURCES

In terms of archaeological resources, PRC Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.

3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If it can be demonstrated that a proposed project will cause damage to a unique archaeological resource, the lead agency may require that reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC 21083.2[a]–[c]). CEQA notes that if an archaeological resource is neither a unique archaeological resource nor a historical resource, the effects of the project on those resources shall not be considered to be a significant effect on the environment (CEQA Guidelines, 14 CCR 15064.5[c][4]).

4.2.1.3 CALIFORNIA STATE SENATE BILL 18

Signed into law in 2004, Senate Bill (SB) 18 requires that cities and counties notify and consult with California Native American tribes about proposed local land use planning decisions for the purpose of protecting traditional Tribal cultural sites. Cities and counties must provide general and specific plan amendment proposals to California Native American tribes that have been identified by the NAHC as having traditional lands within the city's boundaries. If requested by the Native American tribes, the City must also conduct consultations with the Tribes prior to adopting or amending their general and specific plans.

4.2.1.4 CALIFORNIA STATE ASSEMBLY BILL 52

Assembly Bill 52 of 2014 (AB 52) amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. Section 4 of AB 52 adds Section 21074(a)(b)(c) to the PRC, which address Tribal cultural resources, cultural landscapes, and historical resources.

Tribal Cultural Resources

PRC Section 21074(a) defines Tribal cultural resources as one of the following:

(1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

   A. Included or determined to be eligible for inclusion in the California Register of Historical Resources.

   B. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

(2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Additionally, PRC Section 21074(b) and (c) include in the definition of a Tribal cultural resource the following:

(3) A cultural landscape that meets the criteria of subdivision (s)…to the extent that the landscape is geographically defined in terms of the size and scope of the landscape (PRC Section 21074 [b])

(4) A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2…if it conforms with the criteria of subdivision (a) (PRC Section 21074 [c]).

Impacts to Tribal cultural resources should be considered under CEQA. PRC Section 21080.3.2 states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to Tribal cultural resources, the consultation shall include those topics (PRC Section 21080.3.2[a]). The environmental document and the mitigation monitoring and reporting program (where applicable) shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

Consultation with Native Americans

California Native American tribes are defined in AB 52 as any Native American tribe located in California that is on the contact list maintained by the NAHC, whether or not they are federally recognized. AB 52 specifies that California Native American tribes traditionally and culturally affiliated with a geographic area may have expertise concerning their Tribal cultural resources. Once an application for a project is completed or a public agency makes a decision to undertake a project, the lead agency has 14 days to send formal notification to Native American tribes designated by the NAHC as having traditional and cultural affiliation with a given project area and that had previously requested in writing to be notified by the lead agency (PRC Section 21082.3.1[b][d]). The notification shall include a brief description of the proposed project, the location, contract information for the agency contact, and notice that the Tribe has 30 days to request, in writing, consultation (PRC Section 21082.3.1[d]). Consultation must be initiated by the lead agency within 30 days of receiving any California Native American tribe's request for consultation. Furthermore, consultation must be initiated prior to the release of a negative declaration, mitigated negative declaration, or EIR for a project (PRC Section 21082.3.1[b][e]).

Consultation may include discussion concerning the type of environmental review necessary, the significance of the project's impacts on the Tribal cultural resources, and, if necessary, project alternatives or the appropriate measures for preservation and mitigation that the California Native American tribe may recommend to the lead agency. The consultation shall be considered concluded when either the parties agree to measures to mitigate or avoid a significant effect, if one exists, on a Tribal cultural resource; or a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached (PRC Section 21082.3.2[b]).

Pursuant to Government Code Sections 6254 and 6254.10, and PRC Section 21082.3(c), information submitted by a California Native American tribe during consultation under AB 52 shall not be included in the environmental document or otherwise disclosed to the public by the lead agency, project applicant, or

the project applicant's agent, unless written permission is given. Exemptions to the confidentiality provisions include any information already publicly available, in lawful possession of the project applicant before being provided by the Tribe, independently developed by the project applicant or the applicant's public agent, or lawfully obtained by a third party (PRC Section 21082.3[c]).

4.2.2 California Register of Historical Resources

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Sections 21083.2 and 21084.1). Certain properties, including those listed in or formally determined eligible for the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys, or designated by local landmarks programs may be nominated for listing in the CRHR. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

- **Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- **Criterion 2:** It is associated with the lives of persons important to local, California or national history.
- **Criterion 3:** It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values.
- **Criterion 4:** It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

Resources nominated for the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for the CRHR.

4.2.3 Treatment of Human Remains

The disposition of burials falls first under the general prohibition on disturbing or removing human remains under Section 7050.5 of the California Health and Safety Code (CHSC). More specifically, remains suspected to be Native American are treated under CEQA (14 CCR 15064.5); PRC Section 5097.98 illustrates the process to be followed if remains are discovered. If human remains are discovered during construction, no further disturbance to the site shall occur, and the county coroner must be notified (14 CCR 15064.5; PRC Section 5097.98).

4.3 Local

4.3.1 *City of Chino Hills General Plan*

The current Conservation Element of the Chino Hills General Plan (adopted February 24, 2015) provides general guidance for the protection of cultural resources within the city. Below are the relevant goal and related policies concerning cultural resources:

Goal CN-2: Protect Chino Hills' Cultural Resources

Policy CN-2.1: Protect Chino Hills' archaeological resources

Action CN-2.1.1: Require appropriate archaeological surveys as part of the environmental review process where archaeological resources may be present.

Action CN-2.1.2: Require on-site inspections by a qualified archaeologist during grading activities where archaeological resources may be present.

Action CN-2.1.3: Where archaeological resources are found during development activities, require identified archaeological materials to be preserved, restored, cataloged, and/or transmitted to the appropriate repository or as otherwise directed by a qualified professional archaeologist.

Action CN-2.1.4: Consult with local Native American tribes as required to avoid impacts on archaeological resources.

Policy CN-2.3: Protect Chino Hills' archaeological resources

Action CN-2.3.1: Prior to a change of land use or other action on the Boys Republic property that could disturb a potential historic resource, require a historic resource survey of the property by a qualified historic resource consultant, and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.2: Prior to a change of land use or other action on the Tres Hermanos property that could disturb a potential historic resource, require a historic resource survey of the property by a qualified historic resource consultant, and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.3: Prior to grading on-site of the original clubhouse of the 1925 Los Serranos Country Club, require an appropriate archaeological survey to determine the presence of artifacts associated with the former Bridger/Gird Adobe site and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.4: Consider placement of markers to acknowledge the local importance to Chino Hills' history of the Carbon Canyon and English Road equestrian communities.

Action CN-2.3.5: For structures over 45 years old, review available City building records and make a determination regarding the structure's potential historical significance prior to permitting its demolition or substantial alteration.

The City does not have a historic preservation ordinance or specific significance criteria that must be met to designate local historical resources (Gust and Valasik 2011:36).

5 SETTING

5.1 Environmental Setting

Located in southwest San Bernardino County, the city of Chino Hills covers a land area of 44.7 square miles (U.S. Census Bureau 2022). Its landscape includes hillsides, canyons, ridges, streams, and floodplains (City of Chino Hills 2015a). Elevations range between approximately 500 feet (152 m) and 1,600 feet (488 m) above mean sea level (Glenn Lukos Associates 2010). The city is situated within the eastern Puente-Chino Hills, which are at the northern end of the Peninsular Ranges geomorphic province, and are bound by the San Gabriel Valley to the northwest, the San Bernardino Valley to the northeast, and by the Santa Ana River Canyon and Los Angeles Basin to the south (Glenn Lukos Associates 2010). The city consists primarily of a mix of agricultural, residential, commercial, office, and institutional uses, with state park lands occupying much of the southern portion of the city.

Geological maps of the San Dimas and Ontario Quadrangles indicate the city is located primarily on the Monterey Formation in the northwestern half of the city, and primarily on the Sycamore Canyon Formation in the southeastern half. Quaternary alluvial deposits dating to the Pleistocene Epoch are mapped primarily at the northwestern and northeastern edges of the city at areas of creeks and canyons (Dibblee and Minch 2002, 2010). A paleontological analysis was completed by Carson et al. (2022).

The regional climate is characterized by warm summers, mild winters, and infrequent rainfall. The normal daily minimum temperature ranges from 5 degrees Celsius (C) (41 degrees Fahrenheit [F]) in December to 17 degrees C (62 degrees F) in August. The normal daily maximum temperature ranges from 20 degrees C (67 degrees F) in December to 34 degrees C (93 degrees F) in August. The region averages approximately 39 cm (15.4 inches) of precipitation annually (Sperlings BestPlaces 2022).

5.2 Cultural Setting

5.2.1 *Prehistoric Overview*

Numerous chronological sequences have been devised to aid in understanding cultural changes in southern California. Building on early studies and focusing on data synthesis, Wallace (1955, 1978) developed a prehistoric chronology for the southern California coastal region that is still widely used today and is applicable to near-coastal and many inland areas. Four periods are presented in Wallace's prehistoric sequence: Early Man, Milling Stone, Intermediate, and Late Prehistoric. Although Wallace's (1955) synthesis initially lacked chronological precision due to a paucity of absolute dates (Moratto 1984), this situation has been alleviated by the availability of thousands of radiocarbon dates that have been obtained by southern California researchers in the last three decades (Byrd and Raab 2007:217). Several revisions have been made to Wallace's (1955) synthesis using radiocarbon dates and projectile point assemblages (e.g., Koerper and Drover 1983; Koerper et al. 2002; Mason and Peterson 1994).

5.2.2 *Horizon I (Early Man) (ca. 10,000–6000 B.C.)*

When Wallace defined the Horizon I (Early Man) period in the mid-1950s, there was little evidence of human presence on the southern California coast prior to 6000 B.C. Archaeological work in the intervening years has identified numerous pre–8000 B.C. sites, both on the mainland coast and the Channel Islands (e.g., Erlandson 1991; Johnson et al. 2002; Moratto 1984). The earliest accepted dates for occupation are from two of the northern Channel Islands, located off the coast of Santa Barbara. On San Miguel Island, Daisy Cave clearly establishes the presence of people in this area approximately 10,000 years ago (Erlandson 1991). On Santa Rosa Island, human remains have been dated from the Arlington Springs site to approximately 13,000 years ago (Johnson et al. 2002). Present-day Orange and San Diego Counties contain several sites dating to 9,000 to 10,000 years ago (Byrd and Raab 2007; Macko 1998; Mason and Peterson 1994; Sawyer and Koerper 2006). Known sites dating to the Early Man period are rare in western Riverside County. One exception is the Elsinore site (CA-RIV-2798-B), which has deposits dating as early as 6630 calibrated B.C. (Grenda 1997).

Recent data from Horizon I sites indicate that the people's economy was a mixture of hunting and gathering, with a major emphasis on aquatic resources in many coastal areas (e.g., Jones et al. 2002) and on Pleistocene lakeshores in eastern San Diego County (Moratto 1984). Although few Clovis-like or Folsom-like fluted points have been found in southern California (e.g., Dillon 2002), it is generally thought that the emphasis on hunting may have been greater during Horizon I than in later periods. Common elements in many sites from this period, for example, include leaf-shaped bifacial projectile points and knives, stemmed or shouldered projectile points, scrapers, engraving tools, and crescents (Wallace 1978). Subsistence patterns shifted around 6000 B.C. coincident with the gradual desiccation associated with the onset of the Altithermal climatic regime, a warm and dry period that lasted for approximately 3,000 years. After 6000 B.C., a greater emphasis was placed on plant foods and small animals.

5.2.3 *Horizon II (Milling Stone) (6000–3000 B.C.)*

The Milling Stone Horizon of Wallace (1955, 1978) and Encinitas Tradition of Warren (1968) (6000–3000 B.C.) are characterized by subsistence strategies centered on collecting plant foods and small animals. Food procurement activities included hunting small and large terrestrial mammals, sea mammals, and birds; collecting shellfish and other shore species; near-shore fishing with barbs or gorges; the processing of yucca and agave; and the extensive use of seed and plant products (Kowta 1969). The importance of the seed processing is apparent in the dominance of stone grinding implements in

contemporary archaeological assemblages, namely milling stones (metates and slabs) and hand stones (manos and mullers). Milling stones occur in large numbers for the first time during this period, and are more numerous near the end of this period. Recent research indicates that Milling Stone Horizon food procurement strategies varied in both time and space, reflecting divergent responses to variable coastal and inland environmental conditions (Byrd and Raab 2007).

Milling Stone Horizon sites are common in the southern California coastal region between Santa Barbara and San Diego, and at many inland locations, including the Prado Basin in western Riverside County and the Pauma Valley in northeastern San Diego County (e.g., Langenwalter and Brock 1985; Sawyer and Brock 1999; Sutton 1993; True 1958). Wallace (1955, 1978) and Warren (1968) relied on several key coastal sites to characterize the Milling Stone Horizon and Encinitas Tradition, respectively. These include the Oak Grove Complex in the Santa Barbara region, Little Sycamore in southwestern Ventura County, Topanga Canyon in the Santa Monica Mountains, and La Jolla in San Diego County. The well-known Irvine site (CA-ORA-64) has occupation levels dating between ca. 6000 and 4000 B.C. (Drover et al. 1983; Macko 1998).

Stone chopping, scraping, and cutting tools made from locally available raw material are abundant in Milling Stone/Encinitas deposits. Less common are projectile points, which are typically large and leaf shaped, and bone tools such as awls. Items made from shell, including beads, pendants, and abalone dishes, are generally rare. Evidence of weaving or basketry is present at a few sites. Kowta (1969) attributes the presence of numerous scraper-planes in Milling Stone sites to the preparation of agave or yucca for food or fiber. The mortar and pestle, associated with pounding foods such as acorns, were first used during the Milling Stone Horizon (Wallace 1955, 1978; Warren 1968).

Characteristic mortuary practices of the Milling Stone Horizon or Encinitas Tradition include extended and loosely flexed burials, some with red ochre, and few grave goods such as shell beads and milling stones interred beneath cobble or milling stone cairns. “Killed” milling stones, exhibiting holes, may occur in the cairns. Reburials are common in the Los Angeles County area, with north-oriented flexed burials common in Orange and San Diego counties (Wallace 1955, 1978; Warren 1968).

5.2.4 *Horizon III (Intermediate) (3000 B.C.–A.D. 500)*

Following the Milling Stone Horizon, Wallace’s Intermediate Horizon and Warren’s Campbell Tradition in Santa Barbara, Ventura, and parts of Los Angeles Counties, date from approximately 3000 B.C. to A.D. 500 and are characterized by a shift toward a hunting and maritime subsistence strategy, along with a wider use of plant foods. The Campbell Tradition (Warren 1968) incorporates David B. Rogers’ (1939) Hunting Culture and related expressions along the Santa Barbara coast. In the San Diego region, the Encinitas Tradition (Warren 1968) and the La Jolla Culture (Moriarty 1966; Rogers 1939, 1945) persisted with little change during this time.

During the Intermediate Horizon and Campbell Tradition, there was a pronounced trend toward greater adaptation to regional or local resources. For example, an increasing variety and abundance of fish, land mammal, and sea mammal remains are found in sites along the California coast during this period. Related chipped stone tools suitable for hunting are more abundant and diversified, and shell fishhooks became part of the tool kit during this period. Larger knives, a variety of flake scrapers, and drill-like implements were common during this period. Projectile points include large side-notched, stemmed, and lanceolate or leaf-shaped forms. Koerper and Drover (1983) consider Gypsum Cave and Elko Series points, which have a wide distribution in the Great Basin and Mojave deserts between ca. 2000 B.C. and A.D. 500, to be diagnostic of this period. Bone tools, including awls, were more numerous than in the preceding period, and the use of asphaltum adhesive was common.

Mortars and pestles became more common during this period, gradually replacing manos and metates as the dominant milling equipment. Hopper mortars and stone bowls, including steatite vessels, appeared in the tool kit at this time as well. This shift appears to correlate with the diversification in subsistence resources. Many archaeologists believe this change in milling stones signals a shift away from the processing and consuming of hard seed resources to the increasing importance of the acorn (e.g., Glassow et al. 1988; True 1993). It has been argued that mortars and pestles may have been used initially to process roots (e.g., tubers, bulbs, and corms associated with marshland plants), with acorn processing beginning at a later point in prehistory (Glassow 1997) and continuing to European contact.

Characteristic mortuary practices during the Intermediate Horizon and Campbell Tradition included fully flexed burials, placed facedown or face-up, and oriented toward the north or west (Warren 1968). Red ochre was common, and abalone shell dishes were infrequent. Interments sometimes occurred beneath cairns or broken artifacts. Shell, bone, and stone ornaments, including charmstones, were more common than in the preceding Encinitas Tradition. Some later sites include *Olivella* shell and steatite beads, mortars with flat bases and flaring sides, and a few small points. The broad distribution of steatite from the Channel Islands and obsidian from distant inland regions, among other items, attest to the growth of trade, particularly during the later part of this period. Recently, Raab and others (Byrd and Raab 2007) have argued that the distribution of *Olivella* grooved rectangle beads marks "a discrete sphere of trade and interaction between the Mojave Desert and the southern Channel Islands."

5.2.5 *Horizon IV (Late Prehistoric) (A.D. 500–Historic Contact)*

In the Late Prehistoric Horizon (Wallace 1955, 1978), which lasted from the end of the Intermediate Horizon (ca. A.D. 500) until European contact, there was an increase in the use of plant food resources in addition to an increase in land and sea mammal hunting. There was a concomitant increase in the diversity and complexity of material culture during the Late Prehistoric, demonstrated by more classes of artifacts. The recovery of a greater number of small, finely chipped projectile points, usually stemless with convex or concave bases, suggests an increased usage of the bow and arrow rather than the atlatl (spear thrower) and dart for hunting. Other items include steatite cooking vessels and containers, the increased presence of smaller bone and shell circular fishhooks, perforated stones, arrow shaft straighteners made of steatite, a variety of bone tools, and personal ornaments made from shell, bone, and stone. There is also an increased use of asphalt for waterproofing and as an adhesive.

By A.D. 1000, fired clay smoking pipes and ceramic vessels were in use at some sites, but pottery was not as common in western Riverside County because it was closer to the Colorado River (Drover 1971, 1975; Meighan 1954; Warren and True 1984). The lack of widespread pottery manufacture is usually attributed to the high quality of tightly woven and watertight basketry that functioned in the same capacity as ceramic vessels. Mortuary customs were elaborate and included cremation and interment with abundant grave goods. The seemingly abrupt changes in material culture, burial practices, and subsistence focus at the beginning of the Late Prehistoric horizon are thought to be the result of a migration of Takic-speaking (or Numic) people, from eastern desert regions, toward the coast. In addition to the small triangular and triangular side-notched points similar to those found in the desert regions in the Great Basin and along the Lower Colorado River, the introduction of Colorado River–style pottery and the practice of cremation suggest a strong influence from the Colorado Desert region.

5.2.6 *Ethnographic Overview*

As depicted in Figure 11, the project site is in an area historically occupied by the Gabrielino (Bean and Smith 1978:538; Kroeber 1925: Plate 57). Surrounding Native groups included the Chumash and Tatataviam/Alliklik to the north, the Serrano to the east, and the Luiseño/Juaneño to the south. There was

well-documented interaction between the Gabrielino and many of their neighbors in the form of intermarriage and trade.

The name "Gabrielino" (also spelled Gabrieleno or Gabrieleño) denotes those people who were administered by the Spanish from Mission San Gabriel. This group is now considered a regional dialect of the Gabrielino language, along with the Santa Catalina Island and San Nicolas Island dialects (Bean and Smith 1978:538). In the post-European contact period, Mission San Gabriel included Natives of the greater Los Angeles area, as well as members of surrounding groups such as Kitanemuk, Serrano, and Cahuilla. There is little evidence that the people we call Gabrielino had a broad term for their group (Dakin 1978:222); rather, they identified themselves as an inhabitant of a specific community with locational suffixes (e.g., a resident of Yaanga was called a Yabit, much the same way that a resident of New York is called a New Yorker; Johnston 1962:10).

Native words suggested as labels for the broader group of Native Americans in the Los Angeles region include Tongva (or Tong-v; Merriam 1955:7–86) and Kizh (Kij or Kichereno; Heizer 1968:105), although there is evidence that these terms originally referred to local places or smaller groups of people within the larger group that we now call Gabrielino. Nevertheless, many present-day descendants of these people have taken on Tongva as a preferred group name because it has a Native rather than Spanish origin (King 1994:12). Thus, the term Gabrielino is used in the remainder of this setting section to designate Native people of the Los Angeles Basin and their descendants.

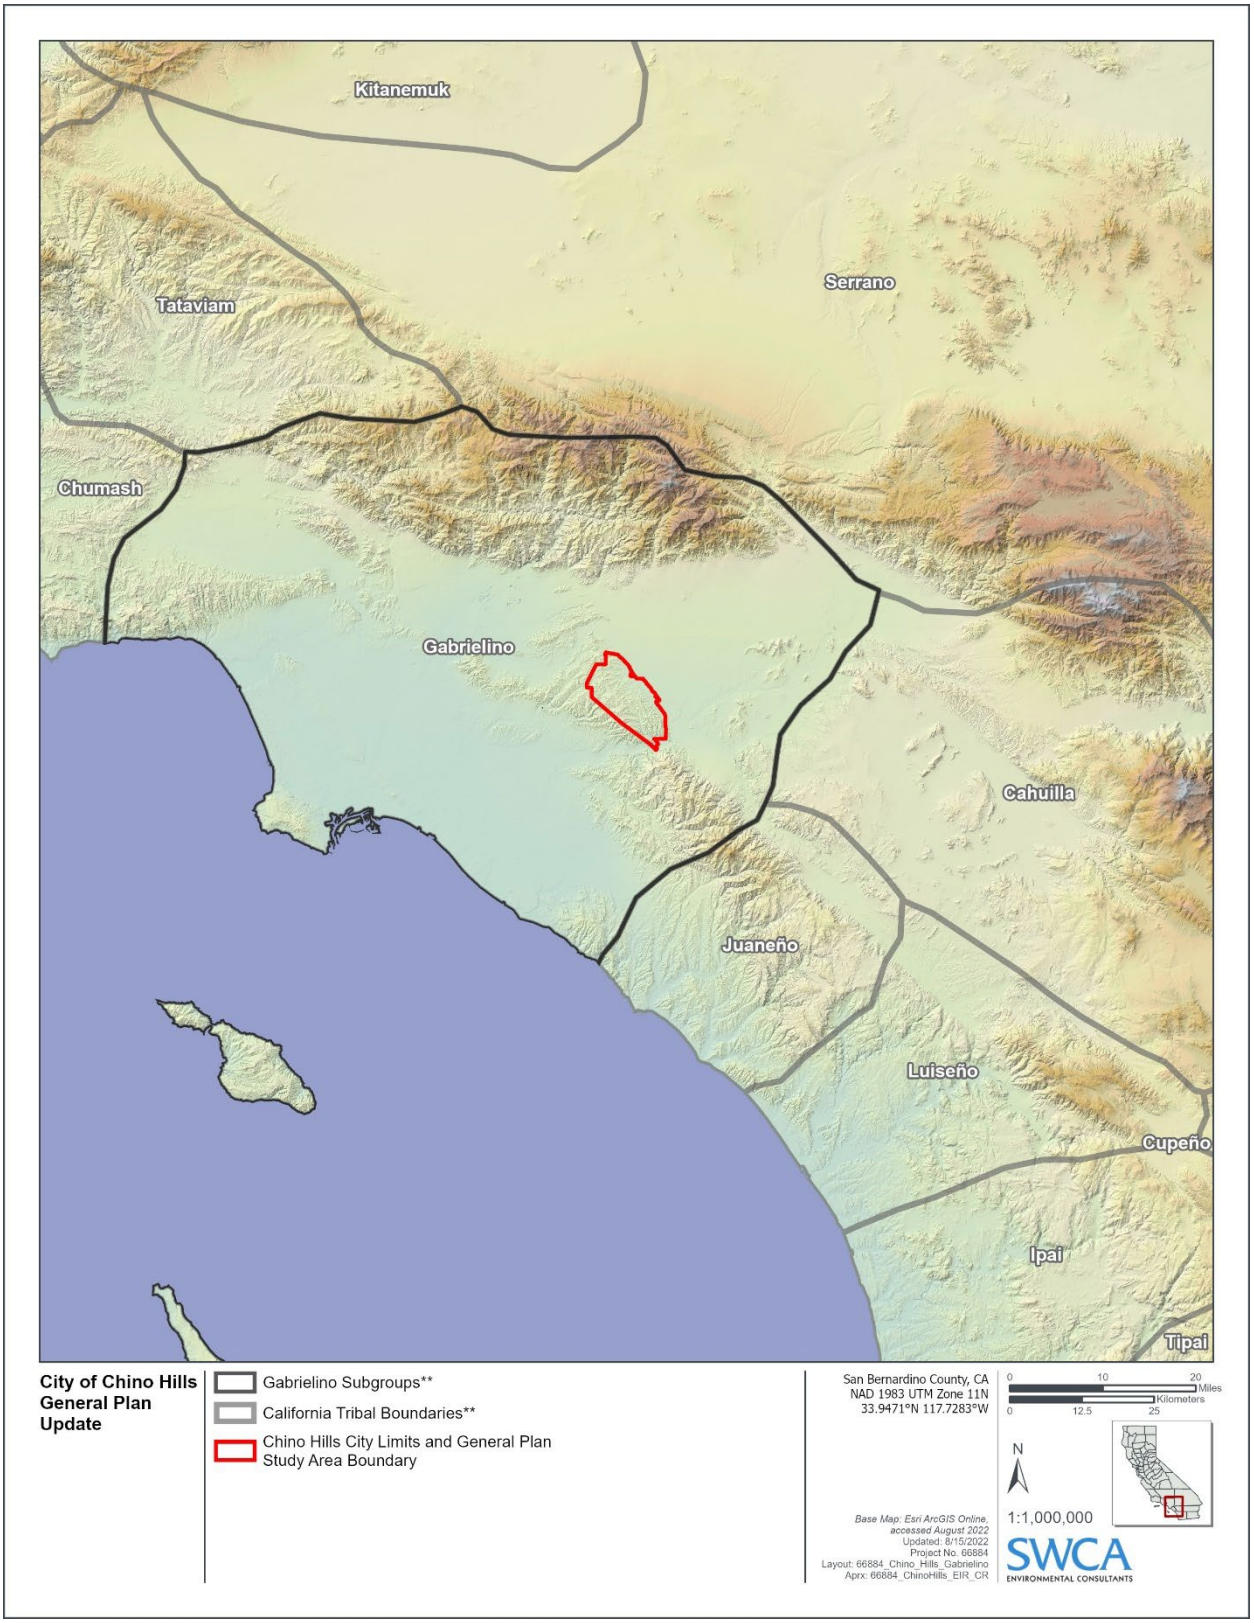

Figure 11. Native American territorial boundaries based on ethnographic and Tribal sources.

The Gabrielino subsistence economy was centered on gathering and hunting. The surrounding environment was rich and varied, and the Tribe exploited mountains, foothills, valleys, deserts, riparian, estuarine, and open and rocky coastal eco-niches. Like for most Native Californians, acorns were the staple food (an established industry by the time of the Early Intermediate period). Inhabitants supplemented acorns with the roots, leaves, seeds, and fruits of a variety of flora (e.g., islay [hollyleaf cherry], cactus, yucca, sages, and agave). Freshwater and saltwater fish, shellfish, birds, reptiles, and insects, as well as large and small mammals, were also consumed (Bean and Smith 1978:546; Kroeber 1925:631–632; McCawley 1996:119–123, 128–131).

The Gabrielino used a variety of tools and implements to gather and collect food resources. These included the bow and arrow, traps, nets, blinds, throwing sticks and slings, spears, harpoons, and hooks. Groups residing near the ocean used oceangoing plank canoes and tule canoes for fishing, travel, and trade between the mainland and the Channel Islands (McCawley 1996:7). Gabrielino people processed food with a variety of tools, including hammer stones and anvils, mortars and pestles, manos and metates, strainers, leaching baskets and bowls, knives, bone saws, and wooden drying racks. Food was consumed from a variety of vessels. Catalina Island steatite was used to make cooking vessels (Blackburn 1963; Kroeber 1925:629; McCawley 1996:129–138).

At the time of Spanish contact, the basis of Gabrielino religious life was the Chinigchinich cult, centered on the last of a series of heroic mythological figures. Chinigchinich gave instruction on laws and institutions, and also taught the people how to dance, the primary religious act for this society. He later withdrew into heaven, where he rewarded the faithful and punished those who disobeyed his laws (Kroeber 1925:637–638). The Chinigchinich religion seems to have been relatively new when the Spanish arrived. It was spreading south into the southern Takic groups even as Christian missions were being built and may represent a mixture of Native and Christian belief and practices (McCawley 1996:143–144).

Deceased Gabrielino were either buried or cremated, with inhumation more common on the Channel Islands and the neighboring mainland coast, and cremation predominating on the remainder of the coast and in the interior (Harrington 1942; McCawley 1996:157). Remains were buried in distinct burial areas, either associated with villages or without apparent village association (Altschul et al. 2007). Cremation ashes have been found in archaeological contexts buried within stone bowls and in shell dishes (Ashby and Winterbourne 1966:27), as well as scattered among broken ground stone implements (Cleland et al. 2007). Archaeological data such as these correspond with ethnographic descriptions of an elaborate mourning ceremony that included a variety of offerings, including seeds, stone grinding tools, otter skins, baskets, wood tools, shell beads, bone and shell ornaments, and projectile points and knives. Offerings varied with the gender and status of the deceased (Dakin 1978:234–365; Johnston 1962:52–54; McCawley 1996:155–165).

5.2.7 *Native American Communities Adjacent to the Study Area*

The settlement of Native American communities in Southern California during the prehistoric period has been studied extensively by archaeologists over time, including Chace (1969) who argued that coastal areas were used mainly for food procurement while villages were located inland; Hudson (1969, 1971) who argued that Native Americans moved seasonally between villages, located in sheltered coastal areas, inland prairies, and mountain areas, and temporary camps, located on the exposed coast; and Mason and Petersen (1994) who argued that major estuaries in the region were territory centers for clan-based groups in Rancherias, which were occupied year-round while several smaller sites were used to gather resources during various times of the year (Douglass et al. 2016:61–62). Generally, all models share the assumption that Native American groups in the region utilized various habitats, moving throughout the region at different times throughout the year. These prehistoric subsistence and settlement patterns are generally

believed to have remained the same until the first permanent Native American settlement was established at Mission San Gabriel (Douglass et al. 2016:385).

The precise location of most Native American villages in Southern California is subject to much speculation; however, maps depicting villages throughout the area show these sites located along rivers or streams, and several maps have been produced throughout the twentieth century depicting this settlement pattern. Native American place names referred to at the time of Spanish contact did not necessarily represent a continually occupied settlement within a discrete location, rather in at least some cases, the communities were represented by several smaller camps scattered throughout an approximate geography, shaped by natural features that were subject to change over generations (Johnston 1962:122). Further complicating any efforts to pinpoint the location of a given village site is the fact that many of the villages had long since been abandoned by the time ethnographers, anthropologists, and historians attempted to document any of their locations.

By the time any such effort was made, Native American lifeways had been irrevocably changed and the former village sites or areas were impacted by urban and agricultural development. In some cases, Spanish-era Rancho grants may have bounded Indian villages, and in others the Spanish ranchos adopted Native American place names, such as Kaweenga, Tujunga, Topanga, and Cucamonga. Alternative names and spellings for communities, and conflicting reports on their meaning or locational reference further complicate efforts at determining the locations of actual village sites. McCawley quotes Kroeber for his remarks on the difficulty of reliably locating former village sites, writing that "the opportunity to prepare a true map of village locations 'passed away 50 years ago'" (Kroeber 1925:616 as cited in McCawley 1996:32). Thus, even with ethnographic, historical, and archaeological evidence, it can be difficult to conclusively establish whether any given assemblage represents the remains of the former village site.

The nearest named villages to the study area are *Pasinongna, Wajijangna, Paxauxa*, and an unnamed village site to the north of the city boundary (Figure 12 and Figure 13). *Wajijangna* is mapped by Johnston (1962) immediately northeast of the study area, however, does not appear on Kirkman's 1937 map. Likewise, *Paxauxa* and the unnamed site, are mapped by Johnston (1962) but not by Kirkman (1937). *Pasinongna* is mapped by Johnston (1962) within the city boundary and immediately adjacent to Site 7 – The Commons, but mapped outside the city boundary to the east by Kirkman (1937). *Pasinongna* has been described as having been located on a rise above Chino Creek and would likely have had smaller villages and seasonal camps surrounding its vicinity (Gust and Valasik 2011).

Smaller habitation sites were not typically noted by early ethnographers and Spanish colonizers; therefore, the lack of explicit data pointing to a site in the area does not indicate a lack of Native American activity in the area.

5.2.8 *Historic Overview*

Post-contact history for the state of California is generally divided into three periods: the Spanish period (1769–1822), Mexican period (1822–1848), and American period (1848–present). Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Spanish period in California begins with the establishment in 1769 of a settlement at San Diego and the founding of Mission San Diego de Alcalá, the first of 21 missions constructed between 1769 and 1823. Independence from Spain in 1821 marks the beginning of the Mexican period, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican–American War, signals the beginning of the American period, when California became a territory of the United States.

5.2.9 *Spanish Period (1769–1821)*

Spanish explorers made sailing expeditions along the coast of California between the mid-1500s and mid-1700s. Juan Rodríquez Cabrillo stopped in 1542 at present-day San Diego Bay; over the next half-century, much of the present California and Oregon coastline was mapped and recorded by Spanish naval officer Sebastián Vizcaíno. The Spanish crown laid claim to California based on the surveys conducted by Cabrillo and Vizcaíno (Bancroft 1886). More than 200 years passed before Spain began the colonization and inland exploration of Alta (Upper) California. The 1769 overland expedition by Captain Gaspar de Portolá marks the beginning of California's historic period, occurring just after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a military outpost, as the first Spanish settlement in Alta California in 1769. Franciscan missionary Junípero Serra founded Mission San Diego de Alcalá, the first of the 21 missions that would be established in Alta California between 1769 and 1823. Mission San Gabriel Arcángel in the present-day Los Angeles area was founded in 1771 (Mission San Gabriel Arcangel 2022). By the end of the eighteenth century, Mission San Fernando was founded also in the Los Angeles area, Mission San Juan Capistrano in present-day Orange County, and Mission San Luis Rey in present-day northern San Diego County (California Missions Foundation 2022).

A major emphasis during the Spanish period was the construction of missions and associated presidios to integrate the Native American population into Christianity and communal enterprise. Incentives were also provided to bring settlers to pueblos or towns, but just three pueblos were established during the Spanish period, only two of which were successful and remain as California cities (San José and Los Angeles).

It is reported that Spanish military commander Pedro Fages entered the San Bernardino Valley in 1772 following deserting soldiers from San Diego. However, the valley was not named as such until 1810 when Father Francisco Dumetz, a priest from Mission San Gabriel Arcángel, visited the area (Belden 1960). In 1819, an estancia (sometimes referred to as an asistencia) was established in the present-day Redlands area as part of Mission San Gabriel's Rancho San Bernardino. This functioned as an outpost for cattle grazing activities (County of San Bernardino 2007).

5.2.10 *Mexican Period (1821–1848)*

Several factors had kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the Indigenous population. After more than a decade of intermittent rebellion and warfare, Mexico won its independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants. Extensive land grants were established in the interior during the Mexican period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated their colonization efforts. The

Mexican government's secularization of the missions resulted in the subdivision of former mission lands and establishment of many additional ranchos. During the supremacy of the ranchos (1834–1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. As many as seven ranchos were established in what is now San Bernardino County (Perez 1982). Cattle hides became a primary southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of non-Native inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities.

5.2.11 *American Period (1848–Present)*

In 1846, war between Mexico and the United States began at the Battle of Chino, a clash between resident Californios and Americans in the San Bernardino area. This battle was a defeat for the Americans and bolstered the Californios' resolve against American rule, emboldening them to continue the offensive in later battles at Dominguez Field and in San Gabriel (Beattie 1942). However, this early skirmish was not a sign of things to come and the Americans were ultimately the victors of this 2-year war. The Mexican–American War officially ended with the Treaty of Guadalupe Hidalgo in 1848, which resulted in the annexation of California and much of the present-day Southwest, ushering California into its American period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as U.S. territories. Horticulture and livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the southern California economy through 1850s. The Gold Rush began in 1848; with the influx of people seeking gold, cattle were no longer desired mainly for their hides, but also as a source of meat. During the 1850s cattle boom, rancho vaqueros drove large herds from southern to northern California to feed that region's burgeoning mining and commercial boom. Cattle were at first driven along major trails or roads such as the Gila Trail or Southern Overland Trail, then were transported by trains when available. The cattle boom ended for southern California as neighbor states and territories drove herds to northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 2005).

5.2.12 *City of Chino Hills*

The city of Chino Hills was established on the lands of the Spanish-era Rancho Santa Ana del Chino. With the establishment of the nearby Mission San Gabriel Arcángel in 1771, the area encompassing present-day Chino Hills and Chino was claimed by the Spaniards and used as grazing land for the mission's cattle. The Rancho Santa Ana del Chino remained under Spanish control for the next 40 years until Mexican Independence was gained in 1821. Following the secularization of the missions, Governor Juan Batista Alvarado granted the rancho to Don Antonio María Lugo in 1841. Lugo later turned over the approximately 22,000-acre rancho to his son-in-law Isaac Williams, who had married Lugo's daughter María de Jesús in 1839, converted to Roman Catholicism, and adopted the name Julián. He and Maria had three children, Francisca, Merced, and Antonio, but María died in childbirth and their son Antonio passed away in his youth. In 1843, Williams was granted an additional 13,000 acres. He lived in the adobe house that Lugo had built (near the present-day location of the Boys Republic facility) (Hoover et al. 2002; Spitzzeri 2018a).

The route of present-day State Route (SR) 71, along the eastern edge of Chino Hills, was part of a nineteenth century thoroughfare used by countless travelers, gold seekers, and migrants passing through the area. Williams was said to have hosted many of them at his rancho, at times providing assistance in

the form of provisions and money (Spitzzeri 2018b). He is also known for being entangled in the Battle of Chino, which took place at Williams' home in September 1846 and involved Williams defending his home with other Americans and Europeans against Californios, including his Lugo brothers-in-law. Williams' home was burned down and he was taken prisoner and held until January 1847 (Spitzzeri 2018c).

Williams died in 1856, leaving the rancho to his two daughters. By the 1860s, Francisca was in control of the rancho, and hired Joseph Bridger, her brother-in-law, to run it, as she lived in Los Angeles. Bridger built an adobe house for himself at the ranch headquarters (referred to as the "Home Place"). Bridger died in 1880; in 1881, Francisca sold the ranch to mining tycoon Richard Gird. He and his wife Nellie moved into Bridger's former home. Gird later acquired another 9,000 acres, and raised horses and cattle, many of which grazed in the Chino Hills. In 1887, Gird subdivided 640 acres of the ranch to create the Chino townsite (Figure 14. By the early 1890s, Gird was financially overextended, took out a loan, and sought to sell portions of the ranch. Ultimately, the Chino Land and Water Company bought out Gird's mortgage, and later marketed and sold large portions of the ranch (Spitzzeri 2018d, 2019a, 2019b).

Figure 14. Chino Hills area southwest of the town of Chino depicted on an 1887 map by H.B. Martin (Source: Huntington Library).

Some oil exploration was conducted at the turn of the nineteenth to twentieth century in the hills where the Chino Hills State Park exists today (California State Parks 2018). An early and substantial development in Chino Hills was the Boys Republic, constructed in 1909 on an approximately 200-acre site. Originally called the California Junior Republic, the organization was founded to provide support to troubled teenagers to help them avoid incarceration as adults. Margaret Fowler of Pasadena purchased the

farmland in the Chino Hills area to develop the extant facility (Boys Republic 2022). At the time of its establishment, the Boys Republic was surrounded by undeveloped hills to the west and agricultural uses on the flatter land to the east (Figure 15).

Figure 15. Nearly 20 years after opening, in 1928, the Boys Republic (lower right corner) was still surrounded by primarily undeveloped hilly and agricultural land (Source: University of California, Santa Barbara Library 1928a).

In 1914, three Los Angeles–area businessmen purchased land in the western Chino Hills, which they named Tres Hermanos Ranch. These men were Harry Chandler (whose family owned the *Los Angeles Times*), Tom Scott (an attorney who was involved in oil exploration and real estate), and William Rowland (a former Los Angeles County Sheriff and descendant of wealthy rancher John Rowland). The property functioned as a working cattle ranch, a weekend getaway, and a place to host private parties for their elite guests (City of Chino Hills 2015b). In 1978, the City of Industry's Redevelopment Agency (RDA) bought the ranch. It was then acquired by the City of Industry in 2012 when the RDA dissolved. The 2,445-acre property is now owned by the Tres Hermanos Conservation Authority. It lies partially in Chino Hills and partially in Diamond Bar (City of Chino Hills 2022a).

By the 1920s, as the Los Angeles region underwent a population and building boom, some residential subdivisions began to appear in the Chino Hills area. The neighborhood known as Sleepy Hollow began forming ca. 1920 in the rural Carbon Canyon (Figure 16). It primarily served as a summer recreational destination for Angelinos, with small cabins built on small lots; these were later enlarged or rebuilt and became a more permanent community (City of Chino Hills 2022b; Lee 2006). The Los Serranos Country

Club, developed by a group of out-of-town investors, opened to the public in 1925. It was heavily marketed to individuals in the Los Angeles and Long Beach area, and featured a variety of recreational activities including golf, swimming, boating and other watersports, horseback riding, and polo (*Long Beach Press-Telegram* 1924c). Members of the golf club were also able to purchase small lots adjacent to the course. It appears the homes were modest in scale, as they were locally referred to as bungalows (*Chino Champion* 1927a, 1937; City of Chino Hills 2022b). Early homes built in this area, along with Sleepy Hollow in Carbon Canyon, were some of the earliest in what would later become the city of Chino Hills (City of Chino Hills 2022c). However, the lots adjacent to the club developed slowly. In 1935, only a handful of homes had been built. Club members planned for the construction of 10 bungalows between 1936 and 1937. As seen in Figure 17, in 1946, the area was still sparsely developed (University of California, Santa Barbara [UCSB] Library 1935, 1946). They gradually filled in over the subsequent decades. By the end of the 1950s, residential construction had expanded to the north and east of the country club, although large agricultural or dairy establishments were still located along Eucalyptus Avenue and Chino Hills Parkway (NETROnline 1938–2020).

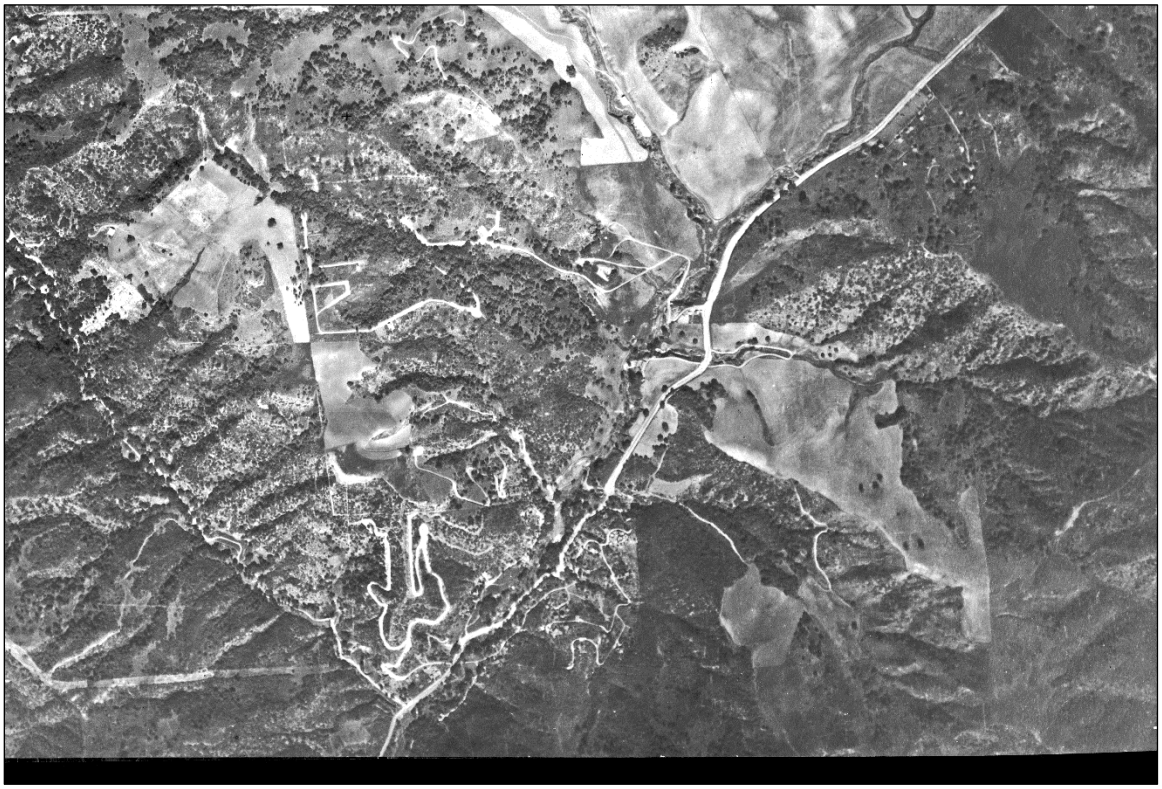

Figure 16. The rural Sleepy Hollow area showed sparse development in 1928 (Carbon Canyon Road is the prominent thoroughfare) (Source: UCSB Library 1928b).

Figure 17. In 1946, more than 20 years after Los Serranos Country Club opened, the adjacent residential lots to the north were still sparsely developed (Source: UCSB Library 1946).

Carbon Canyon Road was developed starting in the 1910s, with a key goal of providing a shorter route to the coast. The road was integrated into the state highway system in the 1930s. Major transportation and access improvements such as these supported the establishment of a correctional facility in the area in 1941 (the California Institution for Men), sited near the eastern terminus of Carbon Canyon Road. As Paul Spitzzeri—local historian and director of the Workman & Temple Family Homestead Museum—asserts, the prison's presence is one of the primary reasons for delayed suburban development in the area (Spitzzeri 2020a).

In the second half of the twentieth century, suburban, manufacturing and business development increased in the nearby city of Chino, and the area to the southwest that had remained primarily rural saw a number of new suburban housing tracts by the 1970s as it expanded towards the Chino Hills (Cal Poly Pomona University Library 2021; NETROnline 1938–2020).

In 1963, a large cattle ranch on Carbon Canyon Road gave way to the construction of the Western Hills Country Club. The lots north of Los Serranos Country Club were more densely filled in by the mid-1960s, and by the early 1970s, additional homes were constructed nearby to the west and north of Lake Los Serranos and on the east side of SR 71. By about 1980, the lots adjacent to Los Serranos Country Club were nearly built out, and the community had further expanded to areas northwest of the lake between Eucalyptus Avenue and Chino Hills Parkway. Large residential tracts were built in the hills along Carbon Canyon Road. The northernmost end of the city began filling in, and commercial properties were built along Chino Hills Parkway. By the late 1980s, home construction pushed into more hilly areas

to the west between Peyton Drive and Carbon Canyon Road, and the northern area of the city near SR 60 saw increased density. Additionally, residential tracts were constructed in the southern end of the city near SR 71 and Butterfield Ranch Road. Commercial development continued through the 1990s and 2000s, with new shopping centers such as the Chino Hills Marketplace, The Shoppes, and The Commons constructed to support the area's increased population (NETROnline 1938–2020).

Concerns about the loss of natural open space led to the formation of a group called Hills for Everyone in 1977, which worked closely with the California State Parks department to create a protected open space area that eventually became Chino Hills State Park (Hills for Everyone 2022). The original land acquisition was 2,237 acres, which was officially declared a unit of the State Park System in 1984. Additional land acquisitions expanded the park over the following years to over 14,000 acres (California State Parks 2018).

In 1979, the County of San Bernardino began working on a specific plan for approximately 26 square miles in what is today Chino Hills. It was a unique endeavor—the first specific plan created in the state of California for an unincorporated area. Following much involvement from local property owners, the county finalized and approved the specific plan in 1982, at which time there were approximately 12,000 residents and 4,000 homes in the community. The specific plan called for commercial development along SR 71, and clustered residential development in "village cores," with the highest density in the core and decreasing density moving away from the core. Area residents explored the pros and cons of cityhood during the late 1980s, and the city of Chino Hills formally incorporated in 1991 (City of Chino Hills 2022b). As of the last census, the city has a population of approximately 78,400 residents (U.S. Census Bureau 2022).

6 NATIVE AMERICAN CONSULTATION

6.1 Sacred Lands File Search

The NAHC is charged with identifying, cataloging, and protecting Native American cultural resources and manages the state's SLF database. These sacred lands resources include places of special religious or social significance to Native Americans and known Native American graves and cemeteries on private and public lands in California. The contents of the SLF are strictly confidential and the results are simply reported as "positive" or "negative." In addition to the SLF, the NAHC maintains a list of tribal contacts affiliated with various geographic regions of California and provides recommendations for contacting tribes and representatives for any additional or unrecorded information.

Native American coordination conducted in support of the 2015 General Plan Update concluded that the entire city is sensitive for prehistoric resources (Gust and Valasik 2011). As a result of this finding, Goal CN-2 of the 2015 General Plan, as outlined above in Section 4.3.1, was established. Specifically, consultation with local Native American tribes is required for each project within the General Plan study area.

On May 10, 2022, SWCA requested a record search of the SLF along with a list of Native American contacts for the study area from the NAHC and the City requested a Tribal Consultation List for San Bernardino County. SWCA received a response letter from the NAHC dated June 13, 2022, which indicated that a record of a sacred site had been identified within the study area. The NAHC recommended contacting the Gabrieleno (Tongva) San Gabriel Band of Mission Indians for additional information. The NAHC also provided a list of 16 Native American groups and individuals who may have knowledge of cultural resources in the study area. The NAHC also provided the City with the Tribal

Consultation List for San Bernardino County, which listed 15 interested Native American groups and individuals (Appendix B).

6.2 Assembly Bill 52 and Senate Bill 18 Notification

Of the 16 Native American groups and individuals identified in response to the SLF search, two had previously requested AB 52 consultation for all projects with the city: the Gabrieleño Band of Mission Indians – Kizh Nation and the Soboba Band of Luiseño Indians. On May 16, 2022, the City mailed letters to the two Tribes. Pursuant to the requirements of AB 52, each letter included a description of the City's efforts to update the General Plan (project description) and notified each contact that requests for formal consultation were required to be sent within 30 days.

On September 13, 2022, the City mailed letters to all 15 interested Native American groups and individuals included on the county-wide Tribal Consultation List. Pursuant to the requirements of SB 18, each letter included a description of the City's efforts to update the General Plan (project description) and notified each contact that requests for formal consultation were required to be sent within 90 days. The results of AB 52 and SB 18 outreach are outlined in Section 7.2 and Section 8.2.

7 PROGRAM-LEVEL ANALYSIS OF THE CITY LIMITS AND TWO RHNA SITES

The proposed General Plan Update includes policies under the Housing and Land-Use elements that have particular relevance for cultural resources. Continued implementation of the General Plan will allow the City to evaluate and encourage development projects that are consistent with the City's priorities, including the preservation of existing archaeological and built environment resources when such resources meet the minimum age criterion to be considered historical resources. The Chino Hills city limits and, at the request of the City, two of the eleven RHNA sites (Canyon Estates [Low Density] and Los Serranos Golf Course [Low Density]) are analyzed herein at a program-level.

The program-level analysis included a confidential search of the CHRIS records and a SLF search through the California NAHC.

7.1 California Historical Resources Information System Records Search

7.1.1 *Methods*

On August 4, 2022, SWCA requested a confidential search of the CHRIS records from the South Central Coastal Information Center (SCCIC) on the campus of California State University, Fullerton, to identify previously documented cultural resources and investigations within the city limits, the Canyon Estates (Low Density), and Los Serranos Golf Course (Low Density) RHNA sites. The SCCIC maintains records of previously documented confidential archaeological resources and technical studies. This information includes specifics as to the nature and location of sensitive archaeological sites, which is not to be disclosed to the public or unauthorized persons and are exempt from the Freedom of Information Act.

In addition to reviewing prior studies and previously recorded cultural resources, SWCA reviewed the California OHP's Built Environment Resources Directory (BERD) which includes listings of the NRHP, CRHR, California Historical Landmarks, and California Points of Historical Interest. SWCA also

examined historical maps and aerial photographs and reviewed the previous City of Chino Hills General Plan (adopted February 24, 2015), and the cultural resources assessment prepared by Cogstone (Gust and Valasik 2011) in support of the 2015 General Plan.

Geographic information has not been digitized for San Bernardino County; therefore, no GIS data were received. Rather, data pertaining to the reports and resources are based on the SCCIC database of text information. These data include categories for previously conducted studies. Data provided by the SCCIC may also include slight errors, particularly where the geographic extent is based on poor resolution in the original sources.

7.1.2 *Results*

7.1.2.1 PREVIOUS CULTURAL RESOURCE STUDIES

Results of the cultural resources records search indicate that 105 previous cultural resource studies have been conducted within the study area between 1973 and 2016. Details of these studies are included in Appendix A, Table A-1. Of the 105, 49 incorporated some fieldwork component, nine included site testing, four summarized the results of construction monitoring, and 35 were desktop-only reports (e.g., literature searches, existing conditions reports). The remaining eight studies cannot be categorized due to insufficient information.

7.1.2.2 PREVIOUSLY RECORDED CULTURAL RESOURCES

The CHRIS records search indicates that 142 cultural resources have been previously recorded within the General Plan study area (Appendix A, Table A-2). A review of the California OHP's BERD identified an additional 11 built environment resources in the study area. The 153 resources include 70 prehistoric archaeological resources, 33 historic-period archaeological resources, 14 multicomponent resources, 34 historic-period built environment resources, and two resources which cannot be categorized due to insufficient information. The 34 previously recorded built environment resources included transmission towers, single-family and commercial properties, and a bridge, among others (details are summarized in Appendix A, Table A-2). Designated or eligible built environment resources are discussed below.

7.1.2.3 PROPERTIES DESIGNATED AT THE FEDERAL, STATE OR LOCAL LEVEL

Federal

No built environment resources in Chino Hills are listed on or have been determined eligible for the NRHP.

State

The Site of the Rancho Chino Adobe is a California Historical Landmark and is identified by a marker at a former fire station at 4040 Eucalyptus Avenue (California OHP 2022a; Gust and Valasik 2011).

The Site of the Battle of Chino, a California Point of Interest, is identified by a marker at the same property, 4040 Eucalyptus Avenue (California OHP 2022a; Gust and Valasik 2011).

Local

There is no local register of historical resources for the city of Chino Hills; therefore, no properties in the city are formally designated as historical resources. However, the General Plan Conservation Element (adopted February 2015) identified five areas in the city that had the potential for historical significance. A summary of findings is provided below:

Boys Republic

Developed in 1909, the Boys Republic facility is considered locally significant as a built environment historical resource and as a potential archaeological district with both prehistoric and Mexican periods of significance. The property is believed to be the probable location of the prehistoric village of Pashiinonga and the former location of Isaac Williams' adobe house and ranch, which was the site of the Battle of Chino. Subsurface remnants of these previous occupations are highly likely to be present.

The Boys Republic property was recommended as a potential historic district with a period of significance of 1909 to 1959 when the facility used agricultural training as the primary method of helping troubled youth and during which most of the buildings on the property were constructed. The property has not been formally designated.

Tres Hermanos Ranch

Partially in Chino Hills and partially in Diamond Bar, the Tres Hermanos Ranch was developed starting around 1910 by well-known businessmen and public figures Harry Chandler, Tom Scott, and William Rowland. An adobe house on the property was built ca. 1914. A multiple-arch dam was built in 1918 to detain water for what is now known as the Arnold Reservoir. The property is potentially significant for associations with important persons in local history, architecture/engineering, and information potential; however, the property has not been formally designated.

Carbon Canyon

The Sleepy Hollow area was developed starting in the 1920s with modest buildings that functioned primarily as weekend getaway cabins. It is believed that few of the original cabins remain; consequently, there is a low probability that Sleepy Hollow would qualify as a historic district. The designation has not been formally applied; however, it was recommended that a marker acknowledge the local importance of the distinctive neighborhood.

Los Serranos Neighborhood

The Los Serranos neighborhood was formally evaluated for potential historical significance. It was found that only 5 percent of the homes predate 1945, while over 50 percent were built after 1970. The neighborhood was not found to be a significant example of suburban residential development, or have an association with important events, persons, developers, or designers. In addition to not qualifying as a historic district, none of the individual homes recorded – which were the best preserved – were found eligible for federal or state designation. However, it was noted that an archaeological district could be considered for the vicinity of the original clubhouse, which was previously the Bridger/Gird adobe residence.

Laband

The local importance of equestrian properties in the development of the city is recognized through an Equestrian Overlay Zone that recognizes the English Road area in the village of Laband as a unique

equestrian area. Establishment of a conservation area has been suggested to recognize the local importance of horse properties in the development of the city. The designation has not been formally applied.

7.2 Native American Consultation

Of the 16 Native American groups and individuals identified in response to the SLF search, two had previously requested AB 52 consultation for all projects with the city: the Gabrieleño Band of Mission Indians – Kizh Nation and the Soboba Band of Luiseño Indians. On May 16, 2022, the City mailed letters to the two Tribes. Pursuant to the requirements of AB 52, each letter included a description of the City's efforts to update the General Plan (project description) and notified each contact that requests for formal consultation were required to be sent within 30 days. On May 25, 2022, the Gabrieleño Band of Mission Indians – Kizh Nation responded, acknowledging the project's intent. The letter stated that they are not pursuing AB 52 consultation for the General Plan Update but requested consultation status for all future projects. To date, no additional requests for consultation have been received in response to the AB 52 notification letters.

On September 13, 2022, the City mailed letters to all 15 interested Native American groups and individuals included on the county-wide Tribal Consultation List. Pursuant to the requirements of SB 18, each letter included a description of the City's efforts to update the General Plan (project description) and notified each contact that requests for formal consultation were required to be sent within 90 days. On September 19, 2022, the Gabrieleño Band of Mission Indians – Kizh Nation responded, acknowledging the project's intent. The letter stated that they are not pursuing SB 18 consultation for the General Plan Update but requested consultation status for all future projects. To date, no additional requests for consultation have been received in response to the SB 18 notification letters.

7.3 Impact Assessment

The proposed General Plan Update itself will not result in significant adverse impacts to any known cultural resources. However, any future development or changes in existing land use within the city or site-specific development of Canyon Estates (Low Density) and Los Serranos Golf Course (Low Density) has the potential to result in impacts to cultural resources as surface-level and subsurface archaeological sites and deposits can be present and affected.

Historic built environment resources can be directly affected by demolition activities or extensive remodeling, and indirectly affected by noise, vibration, and changes to setting and viewshed. As such, any development or change in existing land use within the city and the two RHNA sites analyzed at a program-specific level will require a site-specific analysis.

7.3.1 *Significance Thresholds*

7.3.1.1 ARCHAEOLOGICAL RESOURCES

Under CEQA, archaeological resources may meet the definition of a historical resource or unique archaeological resource. Any project that may cause a substantial adverse change in the significance of a historical resource would also have a significant effect on the environment. Substantial adverse change to the significance of a historical resource is defined as physical demolition, destruction, alteration, or relocation of the resource or immediate surroundings such that its significance would be materially impaired. CEQA states that when a project would cause damage to a unique archaeological resource, reasonable efforts must be made to preserve the resource in place or leave it in an undisturbed state.

General or specific measures are required to the extent that the resources could be damaged or destroyed by a proposed project. Implementation of the general measures in the following section would mitigate to the greatest extent feasible the potential for future projects to impact archaeological resources.

7.3.1.2 BUILT ENVIRONMENT HISTORICAL RESOURCES

Under CEQA, any project that may cause a substantial adverse change in the significance of a historical resource would also have a significant effect on the environment. Substantial adverse change to the significance of a historical resource is defined as physical demolition, destruction, alteration, or relocation of the resource or immediate surroundings such that its significance would be materially impaired. CEQA states that when a project will cause damage to a historical resource, reasonable efforts must be made to mitigate, avoid, or otherwise lessen the impact, through the adoption of enforceable mitigation measures, and to consider feasible alternatives capable of achieving project objectives while avoiding significant adverse impacts. . Under CEQA, projects that comply with the *Secretary of the Interior's Standards for the Treatments of Historic Properties* are typically considered to be projects that would not cause a significant adverse impact to historical resources.

7.4 Recommended Impact Avoidance and Mitigation Measures

7.4.1 *General Plan Policies*

The following sections summarize the existing General Plan policies that are applicable to the cultural resources. These policies and actions should carry forward to the General Plan Update.

7.4.1.1 ARCHAEOLOGICAL RESOURCES

Implementation of the City's existing General Plan Policy CN-2.1 and Actions CN-2.1.1 through CN-2.1.4 would reduce any potential impacts to less-than-significant levels, pursuant to CEQA. Therefore, the requirements established in the 2015 Chino Hills General Plan would still be applicable to the current General Plan Update SEIR. Implementation of appropriate cultural resource surveys (CN-2.2.1) and Native American consultation (CN-2.1.4) may result in the development of project-specific archaeological and/or tribal cultural resources mitigation measures that will need to be applied. The existing General Plan (City of Chino Hills 2015a) policy and actions are listed below for reference.

Policy CN-2.1: Protect Chino Hills' archaeological resources

Action CN-2.1.1: Require appropriate archaeological surveys as part of the environmental review process where archaeological resources may be present.

Action CN-2.1.2: Require on-site inspections by a qualified archaeologist during grading activities where archaeological resources may be present.

Action CN-2.1.3: Where archaeological resources are found during development activities, require identified archaeological materials to be preserved, restored, cataloged, and/or transmitted to the appropriate repository or as otherwise directed by a qualified professional archaeologist.

Action CN-2.1.4: Consult with local Native American tribes as required to avoid impacts on archaeological resources.

7.4.1.2 BUILT ENVIRONMENT RESOURCES

Future development or improvements related to changes in land use could potentially cause significant adverse impacts to historical resources. The General Plan study area contains properties that are 50 years or older, and it is possible that future development in the General Plan area will result in the identification of additional historical resources. As the 8-year cycle for the Housing element spans 2021 through 2029, properties that were developed before 1984 will meet the age criterion for assessment to determine if they qualify as historical resources pursuant to CEQA. Therefore, adoption of the General Plan could result in significant adverse impacts and material impairment to historical resources, and mitigation is required.

The 2015 Chino Hills General Plan contains a policy and actions to protect the City's potential historical resources. This includes required measures for changes in land use or other actions on properties that may qualify as historical resources. The measures include requiring historic resource surveys by a qualified historic resource consultant and incorporation of any recommendations as part of development approvals for any change in land use or other actions on the Boys Republic property and Tres Hermanos property. Also, prior to grading on the site of the original Los Serranos Country Club clubhouse, an archaeological survey is required and any recommendations are required to be incorporated into development approvals. Lastly, according to the City's 2015 General Plan, for structures over 45 years old, a review of available City building records is required to make a determination regarding a structure's potential historical significance prior to permitting its demolition or substantial alteration.

The existing General Plan (City of Chino Hills 2015a) policy and actions are listed below for reference.

Policy CN-2.3: Protect Chino Hills' archaeological resources

Action CN-2.3.1: Prior to a change of land use or other action on the Boys Republic property that could disturb a potential historic resource, require a historic resource survey of the property by a qualified historic resource consultant, and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.2: Prior to a change of land use or other action on the Tres Hermanos property that could disturb a potential historic resource, require a historic resource survey of the property by a qualified historic resource consultant, and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.3: Prior to grading on-site of the original clubhouse of the 1925 Los Serranos Country Club, require an appropriate archaeological survey to determine the presence of artifacts associated with the former Bridger/Gird Adobe site and consider incorporating any recommendations as requirements into subsequent development approval.

Action CN-2.3.4: Consider placement of markers to acknowledge the local importance to Chino Hills' history of the Carbon Canyon and English Road equestrian communities.

Action CN-2.3.5: For structures over 45 years old, review available City building records and make a determination regarding the structure's potential historical significance prior to permitting its demolition or substantial alteration.

7.4.2 *Mitigation Measures*

As noted above, adoption of the General Plan could result in significant adverse impacts and material impairment to historical resources; these mitigation measures are designed to reduce impacts to less than significant. The following mitigation measures should apply to all development projects within the General Plan study area, including the Canyon Estates (Low Density) and Los Serranos Golf Course (Low Density) RHNA sites. These measures should be incorporated as mitigation measures within the CEQA document on the General Plan Update.

Mitigation Measure GP-CR-1. Historic Resources. The following measures shall be required for all development projects within the city limits where construction activities may impact potential or previously identified historical resources.

a. The project proponent shall provide a historical resources assessment performed by an architectural historian or historian who meets the Secretary of the Interior's Professional Qualification Standards for architectural history or history (as defined in 48 CFR 44716) to the City of Chino Hills Planning Division for review and approval. The historical resources assessment shall include a records search at the SCCIC and a survey in accordance with California OHP guidelines to identify any previously unrecorded potential historical resources that may be potentially affected by the proposed project.

b. If a project requires the alteration, rehabilitation, or relocation of a historical resource, the project proponent shall use *the Secretary of the Interior's Standards for the Treatment of Historic Properties* to ensure the historical significance of the resource is not impaired. The application of the standards shall be overseen by an architectural historian or historian meeting the Secretary of the Interior's Professional Qualification Standards. Prior to any construction activities that may affect the historical resource, an analysis, meeting industry standards, shall identify and specify the treatment of character-defining features and construction activities and be provided to the City of Chino Hills Planning Division for review and approval. A project proponent, its construction personnel, and all subcontractors shall comply with the procedures outlined in the resulting analysis.

Additional review may be required should historical resources be identified and should the proposed project not comply with the *Secretary's Standards for the Treatment of Historic Properties*.

8 PROJECT-SPECIFIC ANALYSIS OF THE REGIONAL HOUSING NEEDS ASSESSMENT SITES

As previously discussed, the current General Plan Update consists of an update to the Housing Element and related updates to the Land Use, Safety, and Circulation Elements. As part of the Housing Element update, the City identified 11 sites for future housing development, referred to as the RHNA sites: Site 1 – The Shoppes II, Site 2 – Park Overflow, Site 3 – Los Serranos Golf Club, Site 4 – Western Hills Country Club, Site 5 – Wang (High Density), Site 6 – The Shoppes, Site 7 – The Commons, Site 8 – Canyon Estates (Medium Density), Site 9 – Wang (Medium Density), Site 10 – Canyon Estates (Low Density), and Site 11 – Los Serranos Golf Course (Low Density).

At the request of the City, the two RHNA sites designated for low density residential use (Site 10 - Canyon Estates [Low Density] and Los Serranos Golf Course [Low Density]) were included in the program-level analysis and not addressed herein. The remaining nine RHNA sites are examined at a more detailed, site-specific level. Building on the program-level analysis, the site-specific assessment included review of pertinent local reports, property-specific research, and archaeological and/or built environment field surveys.

8.1 California Historical Resources Information System Records Search

8.1.1 *Methods*

The site-level analysis of the RHNA sites utilized data obtained during the SCCIC records search and additional source information outlined above. The locational information for each resource identified during the General Plan Update record search was compared to each of the RHNA sites to determine if any resources overlapped.

Additional research completed specifically for the RHNA sites that contain properties over 45 years old included property-specific research such as, but not limited to, a review of historical maps, aerial photographs, building permit records, newspaper articles, and other archival documents obtained through various public sources, including the U.S. Geological Survey, Environmental Data Resources, UCSB Library, Calisphere, California State Library, Huntington Library, Newspapers.com, and Ancestry.com.

Four RHNA sites identified by the City are undeveloped (Sites 1, 5, 8, and 9), and three contain properties that are less than 45 years old (Sites 6, 7 and 10). Those properties within the RHNA sites that are presently developed, but are not yet 45 years old, contain buildings and/or structures that were constructed between 1999 and 2014, therefore, will not come of age until 2044 at the earliest.

8.1.2 *Results*

8.1.2.1 ARCHAEOLOGICAL RESOURCES

Results of the cultural resources records search indicate that 105 previous cultural resource studies have been conducted within the study area between 1973 and 2016. Seven of the 105 studies, completed between 1976 and 2011, overlapped one or more of the RHNA sites: one overlapped Site 1 – The Shoppes II, two overlapped Site 6 – The Shoppes, one overlapped Site 4 – Western Hills Country Club, one overlapped Site 7 – The Commons, one overlapped Site 8 – Canyon Estates (Medium Density), and one overlapped all 11 of the RHNA sites. Each previous study is detailed in Appendix A, Table A-1.

The CHRIS records search indicates that 142 cultural resources have been previously recorded within the General Plan study area (Appendix A, Table A-2). None of the 142 resources, however, are located within or intersect any of the 11 RHNA sites. A review of the California OHP's BERD identified an additional 11 built environment resources in the study area. None of the archaeological resources overlap any of the RHNA sites.

8.2 Native American Consultation

The Native American consultation for the site-specific analysis was encompassed by that completed at the program-specific analysis. In summary, two Native American groups had previously requested AB 52 consultation for all projects with the city: the Gabrieleño Band of Mission Indians – Kizh Nation and the Soboba Band of Luiseño Indians. On May 16, 2022, the City mailed letters to the two Tribes. On May 25, 2022, the Gabrieleño Band of Mission Indians – Kizh Nation responded, acknowledging the project's intent. The letter stated that they are not pursuing AB 52 consultation for the General Plan Update but requested consultation status for all future projects. To date, no additional requests for consultation have been received in response to the AB 52 notification letters.

On September 13, 2022, the City mailed letters to all 15 interested Native American groups and individuals included on the county-wide Tribal Consultation List. On September 19, 2022, the Gabrieleño Band of Mission Indians – Kizh Nation responded, acknowledging the project's intent. The letter stated that they are not pursuing SB 18 consultation for the General Plan Update but requested consultation status for all future projects. To date, no additional requests for consultation have been received in response to the SB 18 notification letters.

8.3 Archaeological and Built Environment Field Surveys

8.3.1.1 ARCHAEOLOGICAL RESOURCES

On August 17, 18, and 19, 2022, SWCA archaeologists Olivia Romansik and Jaime Wojak conducted an intensive and reconnaissance archaeological resources survey of seven of the 11 proposed RHNA sites. The archaeological survey included both intensive pedestrian survey consisting of walking over the project site using parallel transects spaced no more than 15 meters apart and reconnaissance survey, which consisted of examining accessible portion or areas of exposed ground surface, such as cut roads and pedestrian trails. Two RHNA sites (The Shoppes and The Commons) are fully developed, so pedestrian survey was not warranted. Additionally, two of the RHNA sites (Canyon Estates [Low Density] and Los Serranos Golf Course [Low Density]) are being analyzed at the program-level, therefore, no archaeological survey was completed at this time.

A Samsung computer tablet paired with a Geode global positioning system (GPS) antenna was used to locate the RHNA sites and maintain transect accuracy. The ground surface was examined for the presence of prehistoric artifacts (e.g., flaked stone tools, tool-making debris, or stone milling tools), ecofacts (e.g., shell, fire-affected rock, or bone), historic-era artifacts (e.g., metal, glass, or ceramics), sediment discoloration that might indicate the presence of a midden, depressions, and other features that might indicate the former presence of structures or buildings (e.g., post holes or foundations) or occupations (e.g., hearths or bedrock milling features).

Ground surface visibility within the seven RHNA sites subject to archaeological survey varied from fair to excellent (approximately 20 to 80 percent) (Figure 18 through Figure 24). No archaeological resources were identified within any of the RHNA sites as a result of the archaeological survey.

Figure 22. Site 5 – Wang (High Density), view east.

Figure 23. Site 8 – Canyon Estates (Medium Density), view southwest.

Figure 24. Site 9 – Wang (Medium Density), view northwest.

8.3.1.2 ARCHAEOLOGICAL RESOURCES SENSITIVITY

The CHRIS records search did not reveal any previously recorded archaeological resources within or overlapping any of the 11 RHNA sites. The SLF results returned by the NAHC indicated that a record of a sacred site was identified within the study area. To date, no sensitive resources have been identified specific to the RHNA sites; however, Native American coordination conducted in support of the 2015 General Plan concluded that the entire city is sensitive for prehistoric resources (Gust and Valasik 2011). Although no archaeological sites have been previously or newly identified within the RHNA sites, the RHNA site areas are located in the vicinity of known Native American villages, and the area was occupied and developed throughout the historic period.

8.3.1.3 BUILT ENVIRONMENT RESOURCES

In the assessment of built environment resources, the threshold of 45 years of age is typically used to comply with CEQA due to the typical length of time a project takes to complete the environmental review process prior to approvals and construction.

Of the 11 RHNA sites, two contain properties over 45 years old: Los Serranos Golf Club (RHNA Site 3 and Site 11) and Western Hills Country Club (RHNA Site 4). These two properties underwent an intensive-level built environment survey, and were recorded and evaluated for potential historic significance using the criteria of the NRHP and CRHR. In summary, neither the Los Serranos Golf Club nor the Western Hills Country Club appear eligible for listing at the federal or state level under the applicable criteria. Summaries of the evaluations are provided in the sections below.

(RHNA Site 2 – Community Park Overflow is adjacent to and north of a property that is over 45 years old: 14566 Peyton Drive, an agricultural property that was developed in 1920. The property was evaluated for potential historic significance in 2005 and assigned California Historical Resource Status Code 6Y meaning it was determined not eligible for the NRHP by consensus through the Section 106 process, but was not evaluated for the CRHR or for local listing (California OHP 2022b). As it is outside the project area, the property was not reevaluated for this report.)

The remaining RHNA sites identified by the City are either undeveloped (Sites 1, 5, 8, and 9) or contain properties that are less than 45 years old (Sites 6, 7 and 10). Those properties within the RHNA sites that are presently developed, but are not yet 45 years old, contain buildings and/or structures that were constructed between 1999 and 2014, therefore, will not come of age until 2044 at the earliest.

On July 5, 2022, SWCA Architectural Historian Susan Zamudio-Gurrola, M.H.P. conducted a built environment survey of the proposed RHNA sites containing built environment resources: the Los Serranos Golf Club and Western Hills Country Club. The field survey consisted of an inspection of all built environment features within the site boundaries. Photographs and notes were collected to document the existing conditions and observations on the properties' construction, materials, alterations, overall integrity, and potential character-defining features.

8.3.1.4 LOS SERRANOS GOLF CLUB

Current Status

Based on a review of records search results, the BERD, and additional background research, the Los Serranos Golf Club is not listed in the NRHP or the CRHR. The property was not identified as a potential cultural resource in the City's 2015 General Plan or the associated cultural resources study. It appears the property has not been previously evaluated for potential historic significance.

Physical Description

The Los Serranos Golf Club is situated on multiple parcels totaling approximately 312 acres. Generally L-shaped, the golf club includes a section oriented north-south parallel to Yorba Avenue, and a section oriented east-west. The facility includes two 18-hole courses—the 6,691-yard north course, and the 7,628-yard south course (Los Serranos Golf Club 2018a, 2018b)—a driving range; putting green; clubhouse; golf cart, starter, maintenance, ancillary, and two snack bar buildings; sand traps; a large water hazard near the southwest end of the property; and numerous paved paths. A paved parking lot is adjacent to and north of the clubhouse, and is enclosed by a low concrete block wall that is painted white. A wooden sign located near the curb announces, "Jack Kramer's Los Serranos Country Club" and displays a man on horseback. The golf course terrain is undulating, and features many mature trees (Figure 25). The surrounding setting includes residential development in all directions, as well as an area of open space to the west.

Clubhouse

The clubhouse was constructed in 1996. Built in a contemporary Mission Revival style, the clubhouse is one story with high ceilings (Figure 26 and Figure 27). It rests on a concrete foundation and has an irregular footprint. A hipped, tiled roof with markedly protruding rafter rails covers the majority of the building, while the center is flat roofed to support mechanical equipment and is edged at the north façade with a stepped, stuccoed parapet. The building exterior is sheathed in smooth stucco. Projecting from the north façade is a porte cochere supported by large, smooth columns and topped by a short tower. The tower is capped by a hipped, tiled roof with protruding rafter tails, and displays arched openings with metal bells suspended from wooden beams. Accessed via the porte cochere, the primary entrance consists

of wooden double doors with glazing and is surrounded by a transom and wide sidelights. The north façade and east elevation display broad blind arches with no or minimal windows, concealing the view to the parking lot. Fenestration is concentrated on the west and south elevations facing the golf course, and consists of large expanses of metal-framed windows.

Starter Building

Located southwest of the clubhouse is a small wood-frame building where the starter (a staff person) directs players to the first tee at the appropriate time. The building has a square footprint and rests on a concrete foundation (Figure 28). It has a hipped, tiled roof with widely overhanging eaves and closed soffits. The lower half of the building exterior is covered with textured stucco, and is topped by metal-framed fixed and sliding windows on all sides. Th entry door on the south elevation appears to be wooden with a single-hung aluminum-framed window. The starter building's construction date was not ascertained but is believed to be ca. 1975.

Snack Bar Buildings

There are two small snack bar buildings on the golf course, one within the north course, and one within the south course. The small buildings have rectangular plans and are clad with smooth river rock. These buildings were not documented in detail. Their construction date was not ascertained but is believed to be ca. 1990.

Maintenance Building

Constructed ca. 1960, the maintenance building is located southwest of the clubhouse, near the southeastern edge of the golf club property. Sited around a maintenance yard, the building has a U-shaped footprint (Figure 29). It is similar in design to the clubhouse, displaying a contemporary Mission Revival style. The building is topped by a gable-on-hip roof clad with red barrel tile. Its exterior is sheathed in textured stucco and displays blind arches with wide engaged pilasters on the north elevation. The elevations facing inward towards the maintenance yard display numerous metal roll-up garage doors. Wide engaged pilasters separate each garage door.

The maintenance building was constructed between 1959 and 1966 with a L-shaped footprint, and the eastern wing was built between 1987 and 1994, making the U-shaped footprint (NETROnline 1938–2020).

Ancillary Building

Constructed ca. 2000, the ancillary building is located north of the parking lot near Yorba Avenue. Although not clearly visible due to fencing and foliage, it has a rectangular footprint and walls composed of light gray textured brick or block (Figure 30). It is topped by a gabled roof clad with red barrel tile. There is a decorative metal vent screen under the gable peak.

Figure 30. Los Serranos Golf Club ancillary building, east elevation, view west.

Development History

The Los Serranos Country Club was conceived in 1923 by a group of investors headed by Harlow C. Davidson, a Long Beach real estate developer. In December 1923, the group purchased approximately 750 acres of the former Rancho Santa Ana del Chino, a Mexican-period land grant, from the Chino Land and Water Company (*Long Beach Press-Telegram* 1924a; Spitzzeri 2020b).

Rancho Santa Ana del Chino was granted in 1841 to Antonio Maria Lugo, a former soldier under the King of Spain (Barrows 1914; Shumway 2007). Soon thereafter, he turned over management of the rancho to Isaac Williams, who had married Lugo's daughter María de Jesús in 1839. Williams eventually purchased the rancho from Lugo for $10,000 (*Long Beach Press-Telegram* 1924a). After Williams' death in 1856, his daughter Francisca Williams MacDougall hired her brother-in-law Joseph Bridger to manage the ranch, as she lived in Los Angeles. Bridger was married to Francisca's half-sister, Victoria Regina Williams, who was Isaac Williams' daughter with María Antonia Apis. Bridger built an adobe house on a portion of the property called the "Home Ranch" (on which the Los Serranos Golf Club is located today). He managed the ranch from 1865 until his death in 1880 (Spitzzeri 2018a, 2018d, 2020b). The following year, Francisca sold the ranch to the mining tycoon Richard Gird, who moved with his wife Nellie into Bridger's adobe house. Gird raised horses and cattle, many of which grazed in the Chino Hills; expanded agricultural crops; and established the Chino townsite. By the early 1890s, Gird was financially overextended, took out a loan, and assertively sought to sell portions of the ranch. Ultimately, a group of investors (which included Phoebe Apperson Hearst, mother of William Randolph Hearst) formed the Chino Land and Water Company and took over Gird's mortgage. A subsidiary company liquidated the ranch's assets. In late 1923, the company sold a large portion of the ranch to Davidson and the group of investors who developed the Los Serranos Country Club (Spitzzeri 2019a, 2019b, 2020b).

As described in local newspapers at the time, the investors acquired 750 acres that included a 40-acre lake, waterfall, and a 20-acre park area with exotic trees planted in the late 1800s. California redwood trees and a Japanese garden were noted. The planned country club was to include two 18-hole golf courses; a polo field; and facilities for swimming, boating, and other outdoor sports (*Long Beach Press-Telegram* 1924a, 1924c).

The country club was "named after the peaceful Serranos Indians that lived there long before white men with beards and lances trod upon California's garden lands." (*Long Beach Press-Telegram* 1924b). Directing the club's development was W.G. Hamilton, who had been involved in several other country clubs in the Southern California area. John Duncan Dunn was hired to design the golf courses (*Long Beach Press-Telegram* 1924a).

Los Serranos Country Club officially opened April 25, 1925 (*Colton Daily Courier* 1925). The former Bridger/Gird adobe house, described as a "large, aristocratic mansion," was enlarged and remodeled to repurpose it as a clubhouse (*Long Beach Press-Telegram* 1924c; *San Bernardino Daily Sun* 1925) (Figure 31). An announcement of the grand opening stated the "Feature event of the day will be the dedication of the 18-hole championship links" indicating the second planned 18-hole course was not built (*Colton Daily Courier* 1925). The original driving range was located where the parking lot is today (Miranda 2022). Rental cabanas were built south of the clubhouse (Figure 32), although their exact construction date was not determined. The country club property also included present-day Lake Serranos to the north.

Figure 31. The original clubhouse and former Bridger/Gird adobe building (no longer extant) (Source: Spitzerri 2020b; California State Library, n.d).

Figure 32. Clubhouse off the entry drive (near top) and what appear to be the cabanas to the southwest in 1935 (Source: UCSB Library 1935).

Only a year after its opening, in 1926, H.C. Davidson's investment company sold the country club to a syndicate composed of club members described as out-of-towners. The sale included 350 acres of the club property and 350 acres of surrounding land. In this way, members would participate in the club's administration and financial management. Participating memberships were sold to those who desired them. It was also announced at the time that nearby land would be developed as a community of country homes (*Chino Champion* 1926a, 1926b). Members of the club were able to purchase small lots adjacent to the course (City of Chino Hills n.d.). Streets were named after historical figures and places such as Lugo and Gird Avenues and Los Serranos Boulevard. It appears the homes were modest in scale, as they were locally referred as bungalows (*Chino Champion* 1927a, 1937). Early homes built in this area, along with Sleepy Hollow in Carbon Canyon, were some of the earliest in what would later become the City of Chino Hills (City of Chino Hills 2015a). However, the lots adjacent to Los Serranos Golf Course were developed rather slowly. In 1935, only a handful of homes had been built, and in 1946, the area was still very sparsely developed ((Figure 33 and Figure 34). The lots gradually filled in and it was not until about 1980 that the area appeared nearly built out (NETROnline 1938–2020).

Figure 33. Only a handful of homes had been built in the lots adjacent to the Los Serranos Golf Club by 1935 (Source: UCSB Library 1935).

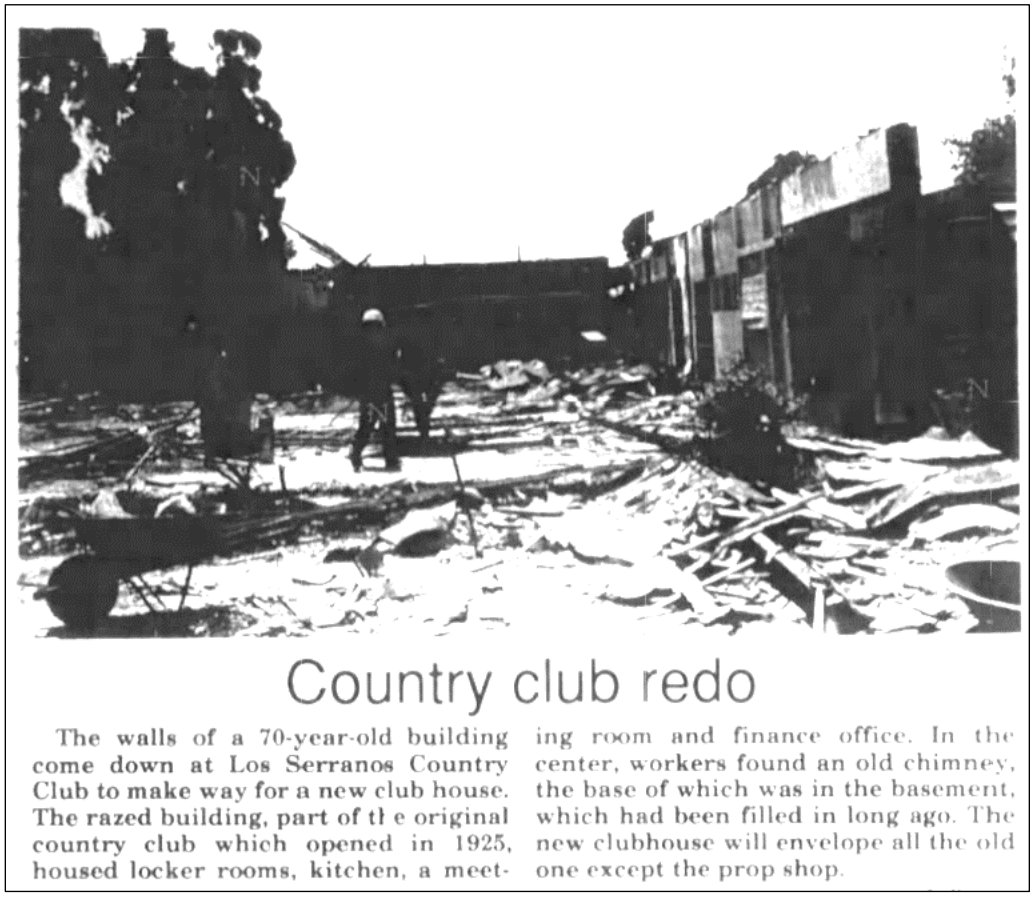
Figure 34. The lots adjacent to the Los Serranos Golf Club were still sparsely developed in 1946 (Source: UCSB Library 1946).

With the ownership change, several improvements were planned, including rearranging Holes 1 and 9 to be closer to the clubhouse, and construction of a swimming pool, a new golf house, and an ornamental gate and lodge at the entrance (*Chino Champion* 1926c). However, it appears some of these improvements were not immediately started, and just 1 year later, a new owner for the country club was announced. O.W. Heinz and associates, based in Los Angeles, acquired the country club by November 1927. It was then that major improvements seemed to get underway. The contract was authorized for a 60 by 125-foot swimming pool (although research to date has not determined its location on the property), an outdoor dance pavilion was constructed, and a 2,000-foot-long swimming beach on the lake was developed. Additionally, a toboggan slide and water wheel were installed at the beach, and water was fed into the arroyos to allow for canoeing and to create water hazards for the golf course (*Chino Champion* 1927b).

The country club changed hands many times through the mid-century, and was referred to by different names, including Rancho Don Lugo Golf Course, and Pomona Valley Country Club. While the details of each transaction and owner were not definitively ascertained, research to date revealed that a syndicate headed by Gordon Bell bought the property in 1946 for $155,000. The syndicate was composed of Mr. and Mrs. Gordon Bell, Mr. and Mrs. Gray Phelps, Mr. and Mrs. John W. Dawson, Kersey Kinsey, and R. Glenn Daugherty. By 1948, the property was sold to either Mel and Connie Rogers or Mel's brother Ken Rogers (depending on the source). Ken, who was a retired Army officer and golfer, was originally from Dallas but moved around extensively during his time in the military. It is not clear if Ken's brother Mel served as manager of the golf club, was a co-owner, or outright owner with Connie (*Chino Champion*

1948a, 1948b; *San Bernardino County Sun* 1953; Spitzzeri 2021). Mel and Connie Rogers experienced legal issues with the California Public Utilities Commission, and in addition, Ken Rogers and realtor Clara Blum Bartlett sued Mel and Connie, resulting in a judgment in late 1948 that gave Ken Rogers and Clara Bartlett control of the club. Subsequently, Bartlett acquired Ken's half-interest and gained full control of the club (*Chino Champion* 1953a; *San Bernardino County Sun* 1953; Spitzzeri 2021).

Not long after the Rogers acquired the club, they sought to sell the property, and in mid-1949, it was announced that a group of African-American investors were seeking to purchase it. Headed by Lemuel Pratt Grant, the group was reported to include boxer Joe Lewis, actor Eddie Anderson, and athlete Woody Strode. Grant owned a brick and tile business and was a pioneer golfer in the African-American community. Opposition quickly rose in the community—an organization was formed called "Los Serranos Business Club," which worked to block the sale. Despite a well-attended event to publicize the club and sign up new members, the property sale fell apart (*San Bernardino County Sun* 1953; Spitzzeri 2021).



During her tenure, Bartlett completed at least $50,000 in improvements and remodeling to the clubhouse, and had plaques installed on trees that she discovered were not indigenous and were rare to the area. However, problems with the water system and related water shortage resulted in the golf course being maintained in less than ideal conditions (*Chino Champion* 1950, 1953a, 1953c). In June 1953, Bartlett sold the country club—which had been reduced to 320 acres—and its water system to Paul Greening, who owned the adjacent approximately 2,500-acre ranch (referred to as Rolling Ridge or Rolling Hills). Greening was a rancher with a number of other financial interests who had recently relocated to the area from Newport Beach (*Chino Champion* 1953a; *Pomona Progress Bulletin* 1953; *San Bernardino County Sun* 1953). Shortly after the purchase, Greening closed the golf course, but began making improvements to the water system (*Chino Champion* 1953b). He offered the golf course and clubhouse for lease, and indicated that if a lease was not arranged, the course would be converted to agricultural purposes and the clubhouse would be torn down (*Los Angeles Times* 1953a).

By late 1953, a lease was arranged with a group composed of tennis professional Jack Kramer, golf professional Zell Eaton, and Pasadena businessman W.E. Cranston (*Los Angeles Times* 1953b). The men updated the golf course and reopened it for public use in February 1954 with nine holes. A temporary grouping of holes was created to put the course into operation, but they were not meant to be a permanent front or back nine. Additional changes were made to the course with the goal "to make it appeal more to the average golfer" (*Pomona Progress Bulletin* 1954). It was designed to be easier and shorter than the previous course, and several new greens were constructed (*Pomona Progress Bulletin* 1954). The *Los Angeles Times* provided a summary of the state of Los Serranos at the time:

> The course was in horrible condition, almost abandoned…It has been redesigned, eliminating several of the less interesting holes at the southwest end of the course…and building some new holes including an 18th which will be directly in front of the clubhouse. Overall length is considerably shorter than the old course. Nine holes were opened a short time ago…Fairways are pretty rough now but an entirely new watering system…should begin to pay off. We'd say the net result of the changes will be to make it an easier course for high handicappers but just as interesting as the old layout. (Curtis 1954)

By 1961, Jack Kramer became sole owner of the club (Los Serranos Country Club 2021). He developed a second golf course, called the south course, in 1962. It became known as "Jack's Blacks" and held the record for the longest golf course in California until surpassed by Torrey Pines and Martis Camp in the 2000s (Youngman 2020). The maintenance building was constructed around this time with a L-shaped footprint, and the eastern wing was built between 1987 and 1994, creating the building's current U-shaped footprint (NETROnline 1938–2020). Building permit records show that a permit was issued in

1994 that included an addition and remodel of the clubhouse, as well as demolition work (Figure 35). While the building permit does not provide details on the demolition, a local newspaper account indicates the original clubhouse was razed (*Chino Hills Champion* 1994). Los Serranos Golf Club staff also indicates the current clubhouse is all new construction (Miranda 2022). The project included 3,800 square feet of office space, 4,645 square feet of clubhouse space, and 8,100 square feet of kitchen space and patios. The architect for the project was Schneider Architects and Associates, and the contractor was Charles Licha (City of Chino Hills 1994 – 2016).

Country club redo

The walls of a 70-year-old building come down at Los Serranos Country Club to make way for a new club house. The razed building, part of the original country club which opened in 1925, housed locker rooms, kitchen, a meeting room and finance office. In the center, workers found an old chimney, the base of which was in the basement, which had been filled in long ago. The new clubhouse will envelope all the old one except the prop shop.

Figure 35. Demolition of the original clubhouse in a 1994 photograph (Source: *Chino Hills Champion* 1994).

The Greening family (Jay Greening) continues to own the property, and while Jack Kramer died in 2009, the Kramer family continues to own and operate the golf club business, leasing the land from Mr. Greening (Goldstein 2009; Napoles 2018).

The changes and alterations that have taken place at the property over the decades have resulted in a nearly 50 percent reduction of its size, from the original 750 acres to approximately 320. In addition, the property's features have been affected by the substantial changes in the function and amenities provided at the course. Original features that were removed or are no longer part of the property include the lake, beach, and water toboggan; equestrian facilities; rental cabanas; and the original clubhouse. The golf facility has changed from a single 18-hole golf course to two 18-hole golf courses, with the second course developed 37 years after the original. Additionally, the configuration and features of the original north course have been altered, notably the locations of Holes 1, 2, 5, 6, 16, 17, and 18, and the driving range

(Google Earth 2022; Miranda 2022; UCSB Library 1937). New buildings were constructed on the property through ca. 2000.

Golf Course Architect/Designer

John Duncan Dunn, a native of Scotland, came from a well-known golfing family of which his father, uncle, grandfather, mother, and brother were all involved in golf—either as players, professionals, or designers. Dunn established a club-making business with his brother in 1892, and laid out many early golf courses in the Netherlands. In 1895, he took a trip to America, and later returned to join his uncle at the Ardsley-on-Hudson Country Club. Among his various golf-related business endeavors, Dunn opened a shop in Manhattan, and took over his uncle's position as the manager of the BGI Company. Dunn began making a name for himself in golf course design after working on several courses in Florida. In 1902, he moved to California, and served as a golf professional at Los Angeles Country Club. Dunn left for some time to work in France, but returned to the United States, after which he designed courses in Lake Tahoe and at Los Serranos. Dunn also wrote articles and instructional books about the sport (Antique Golf Clubs from Scotland 2021; Mckinnon, n.d.). Dunn designed the original (north course) at Los Serranos; however, the second planned course was not constructed (Golf Club Atlas 2004–2016). Dunn died in 1951 (GolfPass 2022a).

As part of the research undertaken for this study, several sources were consulted to review rankings of golf course architects/designers, including Top 100 lists (Top 100 Golf Courses 2019), and those identifying influential golf course architects/designers. These sources included the American Society of Golf Course Architects Architect's Gallery database (2022), Golf magazine (2020), Golf Digest (2013), Golf Link (2022a, 2022b), and Golfweek (2021). John Duncan Dunn was not identified in any of the sources consulted. A discussion of Dunn's work in another source indicated that, while Dunn appears to have been involved in the creation of more golf courses in California than he has been given credit for, his work may not measure up to some of the other work in Southern California around the same period (Golf Club Atlas 2004–2016).

Courses attributed to a golf course architect/designer are typically categorized by solo designs, collaborations with other designers, new courses, and remodels of existing courses. Table 1 presents known information on John Duncan Dunn's work. Research to date does not indicate that Dunn is considered a master in his field.

Table 1. Known Golf Courses Associated with John Duncan Dunn

Santa Ana Country Club	Santa Ana, California	1923	Designer	GolfPass 2022a

NRHP and CRHR Evaluation

Criteria A/1 (Events)

The Los Serranos Golf Club (aka Los Serranos Country Club) was originally developed in 1924 as a private country club with expansive recreational facilities, including one 18-hole golf course, facilities for fishing and water sports, a private lake with a beach, rental cabanas, and equestrian facilities. Changing hands many times from its opening in 1925 through the 1950s, the property and its owners appear to have struggled to maintain a successful business. Although the Los Serranos Golf Club property is associated with the development of early recreational facilities in the Chino Hills, the country club was not remarkable as a business, as evidenced by the frequent ownership changes, known maintenance issues, and elimination over the years of amenities such as the rental cabanas and equestrian and water sports. In the course of the various sales of the property, the country club was also reduced in size such that the lake feature is no longer part of the current club property. The club's use changed so that it is now focused only on the sport of golf.

The golf club property is associated with the development of early residential properties in the Chino Hills area on the lots adjacent to the golf course, which were originally purchased by club members. However, the lots were developed very slowly over the course of several decades. The sale of land for the development of homes was announced in 1926, but the neighborhood was less than half built 20 years later in 1946. It was not until about 1980 that the neighborhood appeared to be nearly built out. As stated in the Chino Hills General Plan (adopted February 2015), only 5 percent of the homes in the Los Serranos neighborhood predate 1945, and over 50 percent were built after 1970. Furthermore, the city of Chino Hills did not incorporate until 1991 following a period of extensive growth in the 1970s and 1980s. Therefore, while the country club made lots available for residential development early in the twentieth century, it cannot be said that the country club was a strong catalyst for the growth and establishment of the city of Chino Hills.

Lastly, research to date does not indicate that any events significant in our history have occurred at the property.

Consequently, the Los Serranos Golf Club does not appear eligible for listing in the NRHP under Criterion A or the CRHR under Criterion 1.

Criteria B/2 (Individuals)

Research to date has not demonstrated that the Los Serranos Golf Club is associated with the lives of persons important to local, state, or national history. The golf club property does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criteria C/3 (Design/Construction)

The Los Serranos Golf Club does not appear to be eligible under Criteria C/3 as it does not embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of a master, or possess high artistic values. Due to numerous changes to the property, the club does not have a cohesive design. The extant clubhouse and maintenance building represent a contemporary Spanish Revival style from the buildings' remodeling in the early 1990s. Other buildings on the property such as the ancillary and snack bar buildings do not have a clearly discernible style. As previously discussed, research to date does not indicate that Dunn, the golf course designer, is considered a master in his field. The original north course's configuration and features have been considerably altered as described above—the locations of Holes 1, 2, 5, 6, 16, 17, and 18 and the driving range have been changed, and a second course was built adjacent approximately 37 years after the original course was developed.

Coupled with the changes to the golf course–related buildings, the north course does not retain integrity to convey its original design, construction, materials, workmanship, or feeling.

Criteria D/4 (Information Potential)

The potential to yield information important to prehistory or history is typically applied to archaeological resources and these criteria were not applied to this evaluation of the Los Serranos Golf Club.

In summary, the Los Serranos Golf Club is not considered a historical resource pursuant to CEQA.

8.3.1.5 WESTERN HILLS COUNTRY CLUB

Current Status

Based on a review of records search results, the BERD, and additional background research, the Western Hills Country Club is not listed in the NRHP or the CRHR. The property was not identified as a potential cultural resource in the City's 2015 General Plan or the associated cultural resources study. It appears the property has not been previously evaluated for potential historic significance.

Physical Description

The Western Hills Country Club is situated on multiple parcels totaling approximately 312 acres. Generally L-shaped, the country club includes a section oriented northeast-southwest parallel to Carbon Canyon Road, and a section oriented north-south. The southwestern end of the golf course extends to the west side of Canon Lane. The club includes an 18-hole course that is just over 6,700 yards long (Golf Link 2022a), a driving range, putting green, clubhouse, golf cart and maintenance buildings, a swimming pool, and numerous paved paths. A paved parking lot, adjacent to and south of the clubhouse, is accessed from Fairway Drive where the entrance is marked by four brick pillars with black iron gates, and a post-mounted sign announcing the Western Hills Country Club. The golf course terrain is undulating, and features many mature trees and a small lake northwest of the clubhouse. The surrounding setting includes Eucalyptus Avenue and residential development to the north; Fairway Drive, residential development, and open space to the east; Carbon Canyon Road, Chino Valley Fire Station No. 4, a golf cart shop, and residential development to the south; and residential development to the west.

Clubhouse

The clubhouse was originally built as a stock show and sales barn in 1961, remodeled in 1963 to use as a clubhouse, and partially demolished and remodeled again in 1988. Designed in a contemporary Spanish Revival style, the clubhouse is one story with high ceilings. It rests on a concrete foundation and generally has a rectangular footprint. The southern half of the building is covered by a flat roof edged by a hipped, tiled roof that conceals mechanical equipment. The northern half of the building is covered by a very low-pitched gabled roof which appears to be clad with composite shingles. The building exterior is sheathed in smooth stucco. An arcade with wide square piers spans the southern façade. At the eastern end of the façade, a gabled roof shelters the primary entrance, which consists of steel arched double doors flanked by sidelights. Secondary doors are located on the west and north elevations. Fenestration consists of large steel-framed fixed windows, smaller sliding windows, and possibly awning or fixed windows on the north elevation (Figure 36 and Figure 37).

Golf Cart Building

Constructed in 1990, the golf cart building is located north of the clubhouse near Fairway Drive. It has a rectangular footprint and a flat roof with composite shingles and numerous skylights. A concrete path surrounds the building on all sides.

Pool House/Shower Building

Constructed ca. 1964, this small ancillary building is located north of the pool. It has a rectangular plan and a medium-pitched, side-gabled roof clad with composite shingles. Although not clearly visible due to the pool security fencing, it appears to be sheathed in stucco, and has at least one vinyl-frame sliding window. The south elevation displays a recessed niche with a shower (Figure 38).

Swimming Pool

Constructed ca. 1964, the swimming pool is located east of the clubhouse, near Fairway Drive. It is an irregularly shaped swimming pool surrounded by a concrete path and patio, and grass lawn. The pool facility is enclosed by an iron rail fence (Figure 39).

Restroom Building

The restroom building's construction date is unknown. This small building is located on the west side of Canon Lane, near the western end of the country club. The building has a rectangular footprint and a very low-pitched gabled roof. Wide wooden fascia boards show considerable deterioration. The exterior walls are masonry blocks painted tan. Privacy screening walls shield the doorways to the restroom facilities inside (Figure 40).

Development History

The Western Hills Country Club was opened in March 1963 on the lands of a former cattle ranch. Known as the "Double S Ranch," the property was owned by Shelley Martin Stoody and his wife Corrine Stoody. Mr. Stoody was known for his prized, expensive Hereford cattle (one of which he purchased in 1958 for $55,000); he also was said to have held a quarter interest in a bull valued at $320,000. In 1960, Stoody constructed a show ring and barn in which to display his cattle stock for sale.

His property also included a landing strip, which was subsequently related to his cause of death in June 1961, when he died in a plane crash near his home. Three other passengers were also killed, and several damage suits were filed against Stoody's estate. The court authorized the sale of the ranch, and in 1963, it was purchased for $600,000 by a group of investors from surrounding cities who planned the development of a country club on a portion of the 380-acre property (*Chino Champion* 1961, 1963a, 1963c).

Figure 36. Clubhouse, south façade and east elevation, view looking northwest.

Figure 37. Clubhouse, north elevation, view looking southwest.

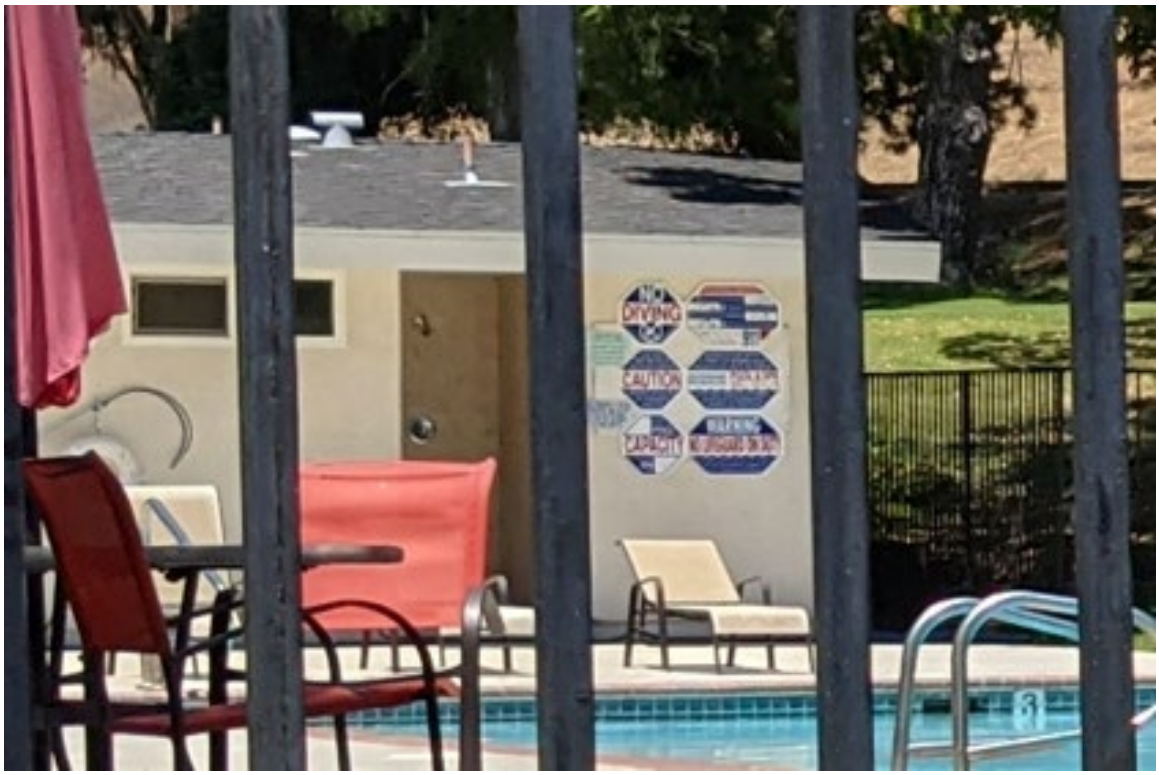

Figure 38. Swimming pool building, view looking north.

Figure 39. Swimming pool, view looking northeast.

Figure 40. Restroom building, west and north elevations, view looking east.

The group of investors included Delmar Pebley, president; William G. Claussen, vice president and acting manager; Dr. G. Barton Heuler, treasurer; and Dr. L. Kenneth Heuler, secretary. Opening in March 1963, the Western Hills Country Club included an 18-hole golf course, a driving range, and a practice green near the clubhouse. Nine holes were sited along the canyon beside Carbon Canyon Road, and nine were sited in the valley running northward from the property entrance. Between the No. 10 and No. 18 fairways was a small lake. Stoody's approximately 14,500-square-foot cattle sale barn was renovated and converted into a clubhouse with a pro shop, control room, bar, kitchen, dining, banquet and locker rooms, and offices. Two hangars on the ranch property were also repurposed. A 40 foot by 40–foot hangar located near the clubhouse was used to store golf carts; a second 40 foot by 60–foot hangar was relocated near Carbon Canyon Road across from the Mountain View tract to store maintenance equipment. The landing strip and several buildings were removed, including a barn and two smaller buildings near the entrance. Additional amenities planned for the property included tennis, badminton, and ping pong courts in support of the family-focused program of the country club (*Chino Champion* 1961, 1963a, 1963b, 1978). It is unknown if these features were built. A swimming pool was constructed east of the clubhouse shortly after the club opened (NETROnline 1938–2020).

It appears the investor group later developed the Western Hills Mobile Homes Estates on the east side of Fairway Drive (*Chino Champion* 1978). A portion of the undeveloped ranch property to the north and west of the country club was sold for construction of a housing tract (Spitzzeri 2014).

Sparse data was available to trace the ownership history of the property over the decades—city building permit records redact owner information for privacy reasons. A general partnership was identified in association with the Western Hills Country Club in 1986, which consisted of T.W. Dutton and George D. Voigt of Upland, Jacob Y. Terner of Beverly Hills, and Robert D. Dutton of Ontario (*Chino Champion* 1986).

Jacob Y. Terner was born in New York in 1934. He married Sandra Wolloch, obtained his M.D. in 1961, and practiced in New York until 1966 when he entered the military, serving until 1968. Afterwards, Terner and his family moved to Los Angeles where he founded a private pathology practice. He also founded and ran several business entities and taught at the University of Southern California School of Medicine (Legacy 2022). Terner's partners, George D. Voigt and T.W. Dutton, were born in 1932 in Upland, California and 1930 in Rancho Cucamonga, California, respectively. Born in 1950, partner Robert D. Dutton was originally from Ontario, California. No consequential information was found on Voigt or either Dutton.

The country club was acquired in March 1987 by Western Hills Golf Associates, who completed improvements to the property and remodeled the clubhouse (*Chino Champion* 1988). The clubhouse was partially demolished by removing the pro shop, restaurant, bar, and banquet room, then enlarged by approximately 1,000 square feet. The kitchen was moved, a larger bar and grill room was created, the locker rooms and banquet room were refurbished, and views to the outdoors were improved. Additionally, as part of the remodel, the building exterior was redesigned to give it a "California Spanish look" (*Chino Champion* 1988).

Further improvements were completed shortly thereafter. A garage building near the clubhouse (likely the former ranch building near the clubhouse that had been repurposed to store golf carts) was demolished in 1989. A new golf cart storage building was constructed by the following year at the same location north of the clubhouse. Other work conducted on the property in the 1990s included walls built at the perimeter of the property, remodeling of the locker area, and installation of a new fuel tank at the maintenance building. Work conducted in the 2000s included repairs to a damaged portion of the north locker room wall, electrical work for the pond and irrigation system, installation of a prefabricated structure to house cell-site equipment, and installation of a sewer line (City of Chino Hills, var.).

In ca. 2001, West Hills Golf Associates, Ltd., coordinated with the City to have Fairway Drive accepted into the city-maintained street system in exchange for waterline easements through the country club property, and a 1.2-acre parcel given to the City for a park at Carbon Canyon Road and Cannon Lane (City of Chino Hills 2018). It appears the property owner has remained the same; the San Bernardino County Assessor lists the present owner as West Hills Golf Associates, Ltd., which was formed in 1987 (Dun & Bradstreet 2022; San Bernardino County Assessor-Recorder-Clerk 2022).

Golf Course Architect/Designer

Harry Rainville, a golf course architect based out of Yorba Linda, designed the country club's 18-hole golf course (*Chino Champion* 1963b). Rainville was born in 1905 in St. Onge, South Dakota. Research conducted for this study did not uncover consequential information on Rainville. He worked on the design of golf courses in various California cities, as well as on several projects with his son David Rainville, who continued practicing golf course architecture into the 2000s (American Society of Golf Course Architects 2022). Harry died in 1982 (GolfPass 2022b).

As part of the research undertaken for this study, several sources were consulted to review rankings of golf course architects/designers, including Top 100 lists, and those identifying influential golf course architects/designers. These sources included the American Society of Golf Course Architects Architect's Gallery database, Golf magazine, Golf Digest, Golf Link, and Golfweek. Harry Rainville was not identified in any of the sources consulted. Courses attributed to a golf course architect/designer are typically categorized by solo designs, collaborations with other designers, new courses, and remodels of existing courses. Table 2 presents known information on Harry Rainville's work. Research to date does not indicate he was associated with any significant golf course designs or considered a master in his field.

NRHP and CRHR Evaluation

Criteria A/1 (Events)

Developed in the early 1960s, Western Hills Country Club was relatively late in the trend of recreational development in the Chino Hills area. Research to date does not indicate that any significant events in national, state or local history have taken place on the property, nor is the property associated with any significant trends or patterns of national, state, regional, or local history. The property is not a significant example of a golf course in the context of golf courses across the state or nation. Therefore, the country club does not appear eligible for listing under NRHP Criterion A or CRHR Criterion 1.

Criteria B/2 (Individuals)

Research to date has not identified any significant people to be directly associated with the Western Hills Country Club. It is recommended not eligible under Criteria B/2.

Criteria C/3 (Design/Construction)

The Western Hills Country Club was developed in 1963 on the lands of a former cattle ranch. While a few of the ranch buildings were repurposed for the country club, the majority of the ranch's buildings and

features were removed and altered. Those former ranch buildings reused at the country club (the clubhouse and golf cart building) were later demolished in the 1980s. The extant clubhouse reflects a contemporary Spanish Revival style from its latest remodel in the 1980s, and other buildings such as the masonry restroom building and pool house building are utilitarian with no clearly discernible style. Research to date on Harry and David Rainville did not indicate that they are considered masters in the field of golf course architecture, and the golf course itself is not representative of a significant or distinctive golf course design. Consequently, the property does not appear eligible for listing under Criteria C/3.

Criteria D/4 (Information Potential)

The potential to yield information important to prehistory or history is typically applied to archaeological resources and is not applied to this evaluation of the Western Hills Country Club.

In summary, the Western Hills Country Club is not considered a historical resource pursuant to CEQA.

8.4 Impact Assessment and Mitigation Measure for RHNA Sites

8.4.1 *Significance Thresholds*

8.4.1.1 ARCHAEOLOGICAL RESOURCES

Under CEQA, archaeological resources may meet the definition of a historical resource or unique archaeological resource. Any project that may cause a substantial adverse change in the significance of a historical resource would also have a significant effect on the environment. Substantial adverse change to the significance of a historical resource is defined as physical demolition, destruction, alteration, or relocation of the resource or immediate surroundings such that its significance would be materially impaired. CEQA states that when a project would cause damage to a unique archaeological resource, reasonable efforts must be made to preserve the resource in place or leave it in an undisturbed state. General or specific measures are required to the extent that the resources could be damaged or destroyed by a proposed project.

8.4.1.2 BUILT ENVIRONMENT HISTORICAL RESOURCES

Under CEQA, any project that may cause a substantial adverse change in the significance of a historical resource would also have a significant effect on the environment. Substantial adverse change to the significance of a historical resource is defined as physical demolition, destruction, alteration, or relocation of the resource or immediate surroundings such that its significance would be materially impaired. CEQA states that when a project will cause damage to a historical resource, reasonable efforts must be made to mitigate, avoid, or otherwise lessen the impact, through the adoption of enforceable mitigation measures, and to consider feasible alternatives capable of achieving project objectives while avoiding significant adverse impacts. Under CEQA, projects that comply with the *Secretary of the Interior's Standards for the Treatments of Historic Properties* are typically considered to be projects that would not cause a significant adverse impact to historical resources. Under CEQA, archaeological resources may meet the definition of a historical resource or unique archaeological resource. Any project that may cause a substantial adverse change in the significance of a historical resource would also have a significant effect on the environment. Substantial adverse change to the significance of a historical resource is defined as physical demolition, destruction, alteration, or relocation of the resource or immediate surroundings such that its significance would be materially impaired. CEQA states that when a project would cause damage

to a historical resource or unique archaeological resource, reasonable efforts must be made to preserve the resource in place or leave it in an undisturbed state.

8.4.2 *Mitigation Measures*

The site-specific analysis concluded that no archaeological resources would be directly impacted by implementation of the development plans for the nine RHNA sites. Any ground disturbance, however, has the potential to expose and/or displace archaeological resources, constituting a potentially significant impact requiring the consideration of mitigation measures. Accordingly, the following avoidance or minimization recommendation is applicable to all nine RHNA sites.

Mitigation Measure RHNA-CUL-1. Requirements to Avoid Impacts to Cultural Resources

a. Prior to the issuance of a demolition permit, the project proponent will retain a qualified archaeologist, defined as an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for historical archaeology, along with a Native American Monitor from a local culturally affiliated Tribe to carry out and ensure proper implementation of the regulatory compliance measures for archaeological resources.

b. Prior to the commencement of project activities, an archaeological resources monitoring plan (Monitoring Plan) will be prepared in compliance with PRC Section 5024.1, 14 CCR 15064.5 of the CEQA Guidelines, and PRC Sections 21083.2 and 21084.1. To satisfy these regulations, the Monitoring Plan will include, but not be limited to, monitoring protocol for ground-disturbing activities, a construction worker training program, and discovery and processing protocol for inadvertent discoveries of archaeological resources. The Monitoring Plan will identify the process for contacting Tribal groups in the event of inadvertent discovery of archaeological resources or human remains potentially affiliated with Native Americans.

c. Before the commencement of initial demolition or excavation at the project area, the retained qualified archaeologist or their designee will provide Worker Environmental Awareness Program training to on-site project personnel responsible for supervising demolition and excavation (i.e., foreman or supervisor) and machine operators.

d. The qualified archaeologist will be present during demolition and excavation activities, as to be stipulated in the Monitoring Plan. The qualified archaeologist will have the authority to temporarily halt or redirect construction activities in soils that are likely to contain archaeological resources. In the event that archaeological resources are exposed during construction, work in the immediate vicinity of the find (within 8 m [25 feet]) shall stop until the qualified archaeologist can evaluate the significance of the find. Construction activities may continue in other areas. If the discovery is determined by the qualified archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines in 14 CCR 15064.5(a) or a "unique archaeological resource" pursuant to PRC Section 21083.2(g), the qualified archaeologist will coordinate with the project proponent and lead agency to develop a formal treatment plan that would reduce impacts to the resource(s). The treatment plan established for the resource(s) will be prepared in accordance with CEQA Guidelines in 14 CCR 15064.5(f) for historical resources and PRC Section 21083.2(b) for unique archaeological resources. At the conclusion of monitoring, a technical report will be prepared that summarizes the results and findings. The format and content of the report shall follow the California OHP's Archaeological Resource Management Reports (ARMR): Recommended Contents and Format (California OHP 1990). Any archaeological resources identified will be

documented on appropriate DPR 523 series forms. The final draft of the report will be submitted to the SCCIC.

With the implementation of the measures outlined in Mitigation Measure RHNA-CUL-1, impacts to archaeological resources at the nine RHNA sites analyzed at a site-specific level would be reduced to less than significant levels.

As stated previously, no historical resources would be directly impacted by implementation of the development plans for the nine RHNA sites examined at a site-specific level. Additionally, there are no other properties within the RHNA sites that would come of age during the Housing Element cycle. Those properties within the RHNA sites that are presently developed, but are not yet 45 years old, contain buildings and/or structures that were constructed between 1999 and 2014, therefore, will not come of age until 2044 at the earliest. Therefore, no significant adverse impacts to historical resources would result from project implementation and no further analysis is needed pursuant to CEQA for the RHNA sites.

CONFIDENTIAL – NOT FOR PUBLIC RELEASE

Table A-1. Previous Cultural Resource Studies within the Study Area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-00186	Archeologic Values: Carbon Canyon Tracking Station	San Bernardino County Museum Association / San Bernardino County Museum Association	1973	Reconnaissance	Overall study area
SB-00208	Environmental Impact Analysis: (Archaeological Values), Western Hills Mobile Home Estates	San Bernardino County Museum Association / San Bernardino County Museum Association	1974	Reconnaissance	Overall study area
SB-00230	Archaeological Impact Report: Preliminary Report, Surface Survey, Saint Joseph's Hill of Hope	San Bernardino County Museum Association / San Bernardino County Museum Association	1974	Reconnaissance	Overall study area
SB-00246	Archaeological Portion of Environmental Impact Report for Carbon Canyon Specific Plan	San Bernardino County Museum Association / San Bernardino County Museum Association	1975	Reconnaissance	Overall study area
SB-00301*	**Archaeological - Historical Resources Assessment, Tentative Tracts 9282 – 9284**	**Harris, Ruth D. / San Bernardino County Museum Association**	**1976**	**Reconnaissance**	**The Shoppes**
SB-00416	Archaeological - Historical Resources Assessment of Existing Reservoir Site at The Northeast End of Hillside Road and The Existing Water Main at Oakway Lane in The Chino Area	Hearn, Joseph E. / San Bernardino County Museum Association	1976	Reconnaissance	Overall study area
SB-00430	Archaeological - Historical Resources Assessment of Sec. 31, T2S R8W, Chino Area	Hearn, Joseph E. / San Bernardino County Museum Association	1976	Reconnaissance	Overall study area
SB-00484	Environmental Impact Report: Palaeontologic Resources, Tentative Tract 9620, Carbon Canyon, Chino Hills, California	San Bernardino County Museum Association / San Bernardino County Museum Association	1977	Reconnaissance	Overall study area
SB-00505	Archaeological - Historical Resources Assessment of Sec. 17, T2S R8W, Chino Hills	Hearn, Joseph E. / San Bernardino County Museum Association	1977	Reconnaissance	Overall study area
SB-00616	Archaeological - Historical Assessment of Tentative Tract 10313, Chino Area	Hearn, Joseph E. / San Bernardino County Museum Association	1978	Reconnaissance	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-00627	Archaeological - Historical Resources Assessment, Tentative Tract 10379, Chino	Hearn, Joseph E. / San Bernardino County Museum Association	1978	Reconnaissance	Overall study area
SB-00943	Environmental Impact Report on The Proposed General Plan Amendments for The Rolling Ridge Estates, County of San Bernardino	Tadlock, Jean and W. Lewis / Leighton and Associates	1978	Reconnaissance	Overall study area
SB-00945	Archaeological Survey Report: Drainage Improvement	Hammond, Stephen R.	1980	Field Survey	Overall study area
SB-00954	Paleontological, Archaeological, And Historical Resources, Chino Hills, County of San Bernardino, California	Mabry, Theo N. And Ronald D. Douglas (Editors) / Archaeological Planning Collaborative	1980	Field Survey	Overall study area
SB-00992	Archaeological Survey Report: The 2,575-Acre Tres Hermanos Ranch in San Bernardino and Los Angeles Counties, California	Van Horn, David M. / Archaeological Associates	1980	Field Survey	Overall study area
SB-01451	Inventory of Features, Cultural Resources, Chino Hills State Park	McGuire, Pamela J. And Nancy Evans / Resource Protection Division	1984	Reconnaissance	Overall study area
SB-01612	Cultural Resources Assessment of The Laband Ranch, Chino Hills, San Bernardino County, California	Brock, James and Richard J. Wall / Archaeological Advisory Group	1986	Reconnaissance	Overall study area
SB-01760	Test Excavations at CA-SBR-5694, Laband Ranch, Chino Hills, San Bernardino County, California	Brock, James / Archaeological Advisory Group	1988	Site Testing	Overall study area
SB-01863	An Intensive Archaeological Survey of The Chino Hills Residential Project Area, Near Sleepy Hollow, San Bernardino County, California	Mckenna, Jeanette A. And Roger G. Hatheway / Hatheway & Mckenna	1989	Reconnaissance	Overall study area
SB-01888	A Cultural Resources Investigation of The Valley Springs Equestrian Estates Property, Carbon Canyon, San Bernardino County, California	Mckenna, Jeanette A. / Hatheway & Mckenna	1989	Reconnaissance	Overall study area
SB-01900	A Cultural Resources Assessment of The Trout Ranch, Chino Hills, San Bernardino County, California	Brock, James and John F. Elliott / Archaeological Advisory Group	1989	Reconnaissance	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-01931	Interim Statement on Potential Significance of CA-SBR-5694, Laband Ranch, Chino Hills, San Bernardino County, California	Brock, James / Archaeological Advisory Group	1987	Site Testing	Overall study area
SB-02059	Compendium Of Results of Obsidian Studies for Study Area Sites: Appendix to Prehistoric Sites in The Prado Basin, California: Regional Context and Significance Evaluation	Infotec Research / Infotec	1990	Site Testing	Overall study area
SB-02076	Cultural Resources Survey Report: The Harvest-Greening Property, San Bernardino County, California	Mason, Roger D. And Roger G. Hatheway / Keith Companies	1990	Reconnaissance	Overall study area
SB-02111	Supplemental Archival Study for Tract 14161, Chino Hills, San Bernardino County, California	Elliott, John F. And James Brock / Archaeological Advisory Group	1990	Field Survey	Overall study area
SB-02246	Results Of a Test Program Conducted at Archaeological Site Sbr-5096, San Bernardino County, California	Mason, Roger D. / Keith Companies	1990	Site Testing	Overall study area
SB-02892	Draft EIR for Carbon Creek Ranch and Tt9781 County of San Bernardino	Drover, Christopher / Environmental Impact Profiles	1977	Field Survey	Overall study area
SB-03012	Cultural Resources Survey and Impact Assessment for The Cajon/EPTC Pipeline Project Located in Portions of Los Angeles, San Bernardino, And Orange Counties, CA	Owen, Shelley Marie / EIP Associates	1995	Field Survey	Overall study area
SB-03073	Cultural Resources & Restraints, General Plan Considerations for The City of Chino, Sphere of Influence, Subarea 1, San Bernardino County, CA	Chace, Paul G. / The Keith Companies	1995	Field Survey	Overall study area
SB-03233	Cultural Resources Inventory Testing & Evaluation for The Proposed Edison Pipeline & Terminal Company (EPTC), Tonner Canyon Pipeline Modification Project, San Bernardino County, CA	Mckenna, Jeanette A. And Shelley M. Owen / EIP Associates	1996	Site Testing	Overall study area
SB-03563	Cultural Resource Assessment for PBMS Facility Cm 421-02, County of San Bernardino, CA	Lapin, Phillipe / LSA	2000	Reconnaissance	Overall study area
SB-03569	Cultural Resource Assessment for PBMS Facility La 473-02, City of Chino Hills, County of San Bernardino, CA	Lapin, Phillipe / LSA	2000	Field Survey	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-03680	Cultural Resource Survey of the 161 Acre Fairfield Ranch & Results of Archaeological Testing at CA-SBR-4212 and CA-SBR-5245, Chino Hills, San Bernardino County, CA	Strudwick, Ivan / LSA	1999	Monitoring	Overall study area
SB-03681	Archaeological Monitoring Report: Missions at Chino Hills Project	Love, Bruce, Harry Quinn, And Miriam Dahdul / CRM Tech	2002	Field Survey	Overall study area
SB-03682	Archaeological Test Excavation of Site CA-SBR-5097 for the Proposed Leach Field Expansion, Chino Hills State Park	Carver,Larryn / Cal Parks	2002	Site Testing	Overall study area
SB-03683	Excavation Of a Small Archaeological Deposit & Monitoring of Grading on The Higgans Ranch Property for Polygon Communities, Inc, Chino Hills, CA	Maxon, Patrick O. / RMW Paleo	1998	Field Survey	Overall study area
SB-03684	Cultural Resource Assessment: Cingular Wireless Facility #Sb107-01, San Bernardino County, CA	Duke, Curt / LSA	2001	Reconnaissance	Overall study area
SB-03685	Archaeological Test Excavations of a Prehistoric Cultural Deposit at Butterfield Ranch, Tract 14425, Chino Hills, San Bernardino County, CA	Maxon, Patrick O. / RMW Paleo	1997	Field Survey	Overall study area
SB-03691	Final Test Investigation Report for CA-SBR-5096, Caltrans Project Title: Highway 71 Improvement Project	De Barros, Philip / Chambers Group, Inc	1992	Field Survey	Overall study area
SB-03692	Cultural Resource Survey for The Proposed Inland Empire Utilities Agency Water Treatment Plant-Regional Plant #5	Slawson, Dana N. / Albert A. Webb Associates	1998	Field Survey	Overall study area
SB-03693	Supplemental Historic Property Survey Report for Proposed Improvements to SR 71 Between I-10 & SR 91-CA-SBR-4212	Hammond, Stephen R. / Caltrans	1987	Site Testing	Overall study area
SB-03694	Historic Property Survey Report for Proposed Improvements to Sr 71 Between I-10 & SR 91-07/08 La, SBD, Riv-71-Various	Hammond, Stephen R. / Caltrans	1986	Field Survey	Overall study area
SB-03960	A Cultural Resource Assessment for Sb-040, Cox Cellular, 2050 Carbon Canyon, Chino Hills, CA	Drover, Christopher E. / Keith Companies	1998	Reconnaissance	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-04385	Cultural Resources Survey of The Proposed Vila Borba Development Property, City of Chino Hills, San Bernardino County, CA	Paige, Peter F. / SWCA	2004	Field Survey	Overall study area
SB-04388	Historic Resources Evaluation of The Los Serranos Neighborhood, City of Chino Hills, San Bernardino County, CA	Tibbet, Casey / CRM Tech	2004	Field Survey	Overall study area
SB-04390	Cultural Resource Assessment for Cingular Wireless Facility Sb 189-02, City of Chino Hills, San Bernardino County, CA	Kyle, Carolyn / Kyle Consulting	2002	Reconnaissance	Overall study area
SB-04391	Archaeological Monitoring for The Crestwood Corporation Project on Eucalyptus Ave Between Maplewood and Chino Hills Parkway, San Bernardino County, CA	Maxon, Patrick / RMW Paleo	2001	Monitoring	Overall study area
SB-04393	Cultural Resource Assessment & Monitoring of Grading for The Chino Hills (Tt 14551-1) Proposed Development, Chino Hills, San Bernardino County, CA	Sikes, Nancy / SWCA	2003	Field Survey	Overall study area
SB-04395	Results of Archaeological Monitoring on the Fairfield Ranch Project Area, Chino Hills, San Bernardino County, CA	LSA Associates, Inc / LSA	2002	Field Survey	Overall study area
SB-04397	Record Search Results for Cingular Wireless Site Sb-191-01 (Village Oaks Reservoir Site) Located At 15527 Live Oak Rd, Chino Hills, San Bernardino County, CA	Bonner, Wayne / Alaris Group	2002	Reconnaissance	Overall study area
SB-04400	Cultural Resource Assessment for Cingular Wireless Facility Cm 329-05, City of Chino Hills, San Bernardino County, CA	Kyle, Carolyn / Kyle Consulting	2002	Reconnaissance	Overall study area
SB-04403	Archaeological Monitoring Report: Cingular Wireless Facility No. Cm 329-05, Chino Hills, San Bernardino County, CA	Duke, Curt / LSA	2003	Field Survey	Overall study area
SB-04409	Field Survey & Records Check of Tentative Tracts 8998 & 8999	Cottrell, Marie G. / Archaeological Research, Inc	1975	Reconnaissance	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-04515	Cultural Resource Assessment: Cingular Wireless Facility No. Sb 288-04, Chino Hills, San Bernardino County, CA	Harper, Caprice D. / LSA	2004	Reconnaissance	Overall study area
SB-04516	CA-8515 (Western Hills)	Mckenna, Jeanette A. / Mckenna Et al	2004	Reconnaissance	Overall study area
SB-04517	Cellular Communications Tower Site-Grand 1, 1301 Grand Ave, Chino Hills, CA	O'Connell, Keith / URS	2004	Reconnaissance	Overall study area
SB-04518	Verizon Site: Peyton	Budinger, Fred E. / Tetra Tech, Inc	2002	Reconnaissance	Overall study area
SB-04533	Historic Resources Report: Ca8820B/Juniper, 11650 Sierra Ave, Fontana, San Bernardino County, CA	Gordon, Beth / Rescom Environmental	2004	Reconnaissance	Overall study area
SB-04661	Cultural Resource Records Search and Site Visit Results for Cingular Telecommunications Facility Candidate Es-049-01 (Village Oaks Reservoir), 15532 Live Oaks Road, Chino Hills, San Bernardino County, California	Bonner, Wayne H. And Aislin-Kay, Marnie	2005	Reconnaissance	Overall study area
SB-04662	Archaeological Monitoring Report, Chino Hills Corporate Park, City of Chino Hills, San Bernardino County, California	Carmack, Shannon, Brooks Smith, And Deborah Mclean	2006	Monitoring	Overall study area
SB-04754	Cultural Resource Records Search and Site Visit Results for Cingular Telecommunications Facility Candidate Es-0007-01 (Peyton Drive SCE Tower), South of Lost Trail Drive, Chino Hills, San Bernardino County, California	Bonner, Wayne H.	2005	Reconnaissance	Overall study area
SB-04755	Cultural Resource Records Search Results for Cingular Telecommunications Facility Candidate Es-0016-02 (Abacherli Silo), 17954 Euclid Avenue, Chino Hills, San Bernardino County, California	Bonner, Wayne H.	2005	Field Survey	Overall study area
SB-05189	Cultural Resource Records Search and Site Visit Results for Cingular Telecommunications Facility Candidate 2050 Carbon Canyon Road, Chino Hills, San Bernardino County, California 91709	Bonner, Wayne H., Aislin-Kay, Marnie, And Loupe, Alynne	2005	Field Survey	Overall study area
SB-05416	Unknown	Unknown	Unknown	Unknown	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-05703	Records Search Results for The Proposed Nextel Wireless Communications Site (CA-5338B “Jurassic”) Located At 16150 Pomona Rincon Road, Chino Hills, California.	Wlodarski, Robert J.	2005	Field Survey	Overall study area
SB-05709*	**Cultural Resources Assessment: The Shoppes at Chino Hills, San Bernardino County, California.**	**Ewers, Daniel**	**2004**	**Field Survey**	**The Shoppes; The Shoppes II**
SB-06095	Confidential Cultural Resources Specialist Report for The Tehachapi Renewal Transmission Project.	Applied Earthworks / Applied Earthworks	2009	Field Survey	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-06425	Addendum To Historical/Archaeological Survey Report: Recycled Water Reservoirs R-41, R-42 And R-43, City of Chino Hills, San Bernardino County, California.	Tang, Bai "Tom" / CRM Tech	2009	Field Survey	Overall study area
SB-06426	Wo 6234-4800; 9-4868 Butterfield 12Kv Deteriorated Pole Replacement Project, Prado Flood Control Basin, Army Corps of Engineers, San Bernardino County, California.	Schmidt, June A. / Compass Rose	2009	Field Survey	Overall study area
SB-06428	DWO 6034-4800; 9-4868- San Bernardino County Deteriorated Pole Replacement Project, Quinto 12Kv, Del Carbon 12Kv And Verde 12Kv Distribution Circuits, San Bernardino County, California.	Schmidt, June	2009	Field Survey	Overall study area
SB-06665	Identification And Evaluation of Historic Properties: 930 Zone Recycled Water Project, Cities of Chino Hills, Chino and Ontario, San Bernardino County, California.	Hogan, Michael, Deirdre Encarnacion, Harry M. Quinn, Daniel Ballester, And Laura Hensley Shaker / CRM Tech	2009	Field Survey	Overall study area
SB-06734	Archaeological Survey Report for Southern California Edison's Pole Replacement Project: Chino Hills, San Bernardino County, California, Wo 6034-4800, 0-4887.	Sander, Jay K. / Chambers Group	2010	Field Survey	Overall study area
SB-06735	Archaeological Survey Report for The Chino-Villa Park (Aka) Chino-Barre 220Kv Transmission Line Lst2 and Lst1 Removal Project, Chino Hills, San Bernardino County, California.	Glentis, Dionisios / Southern California Edison	2010	Field Survey	Overall study area
SB-06787	Historical/Archaeological Resources Survey Report: Chino Groundwater Basin Dry-Year Yield Program Expansion, Los Angeles, Riverside and San Bernardino Counties, California.	Tang, Bai “Tom”, Deirdre Encarnacion, And Daniel Ballester / CRM Tech	2008	Field Survey	Overall study area
SB-06972	Archaeological Literature Review for The Los Serranos Hills Project, San Bernardino County, California.	Gust, Sherri, Sandra Pentney, And Steven Mccormick / Cogston	2004	Reconnaissance	Overall study area
SB-06973	Evaluation Of Archaeological Site Significance for The Vila Borba Project, City of Chino Hills, San Bernardino County, California.	Puckett, Heather, Sherri Gust, And Brian Glenn / Cogstone	2005	Site Testing	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-06974	Archaeological Resources Mitigation and Monitoring Report for The Casenave Project, Chino Hills, California.	Gust, Sherri and Veronica Harper / Cogstone	2009	Monitoring	Overall study area
SB-06977	Archaeological Records Search Results, Chino Hills High School.	Mckenna, Jeanette A. / Mckenna et al	2010	Reconnaissance	Overall study area
SB-07083*	**Paleontological And Cultural Resources of Chino Hills for The General Plan Update, City of Chino Hills, California.**	**Gust, Sherri and Molly Valasik / Cogstone**	**2011**	**Reconnaissance**	**All**
SB-07122	Archaeological Survey Report, Tehachapi Renewable Transmission Project Segment 8 Telecommunications Route, Los Angeles and San Bernardino Counties, California.	Panich, Lee and John Holson	2010	Field Survey	Overall study area
SB-07123*	**Supplemental Archaeological Survey Report, 66Kv Transmission Lines Access Roads, Tehachapi Renewable Transmission Project Segments & And 8, Los Angeles and San Bernardino Counties, California.**	**Panich, Lee and John Holson**	**2010**	**Field Survey**	**The Commons**
SB-07180	Cultural Resources Records Search and Site VISJ Results for T-Mobile USA Candidate Ie24628-B (Medical Condo Bldg), 15944 Los Serranos Country Club Drive, Chino Hills, San Bernardino County, California.	Bonner, Wayne H. And Sarah A. Williams / Michael Brandman Associates	2011	Field Survey	Overall study area
SB-07203	Unknown	Unknown	Unknown	Unknown	Overall study area
SB-07318	Archaeological Survey Report for Southern California Edison Company's Replacement of Three Deteriorated Power Pole Structures: Interpace 33Kv/Ceramic 4Kv; Blanco 12Kv; and Del Carbon 12Kv Circuits Riverside and San Bernardino Counties	Schmidt, James / Compass Rose	2012	Field Survey	Overall study area
SB-07441	Phase I Cultural Resources Survey for The Overton Butterfield Ranch Apartments Project, Chino Hills, San Bernardino County, CA	Hannah Haas, Kevin Hunt, And Robert Ramirez / Rincon	2013	Field Survey	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-07445	Chino Hills State Park Entrance Road Facilities	Newland, Jim / Ca Dept of Parks & Recreation	2012	Field Survey	Overall study area
SB-07903	City Of Chino Hills Trumark Homes Mixed Use Development Project	Haas, Hannah, Breana Campbell, And Christopher Duran / Rincon Consultants	2015	Field Survey	Overall study area
SB-07904	City Of Chino Hills Indus Light Industrial Building Project	Campbell, Breana and Christopher Duran / Rincon Consultants	2015	Field Survey	Overall study area
SB-07925	Chino Hills Underground, Segment 8 Supplemental Survey For 17 Areas for The Tehachapi Renewable Transmission Project, Los Angeles County, California	Greenberg, Marc / Pacific Legacy	2014	Field Survey	Overall study area
SB-07926	Chino Hills Underground, Segment 8 Supplemental Survey for Vegetation Removal for The Tehachapi Renewable Transmission Project, San Bernardino County, California	Greenberg, Marc / Pacific Legacy	2014	Field Survey	Overall study area
SB-07928	Supplemental Survey for Two Water Stand Tanks in Support of the 500 Kv Underground, Segment 8, SCE Tehachapi Renewable Transmission Project, San Bernardino County, California	Greenberg, Marc / Pacific Legacy	2014	Field Survey	Overall study area
SB-07931	NRHP / CRHRE Legibility Evaluation 14575 Pipeline Avenue, Chino Hills, CA 91709	Tinsley, Wendy L. / Urbana Preservation & Planning	2013	Site Testing	Overall study area
SB-07949	An Archaeological Survey Report for The San Bernadino Unit 2015 Preparedness Exercise, San Bernadino County, California	Velasquez, Stephanie / Cal Fire	2015	Field Survey	Overall study area
SB-07981	TRTP Cultural Report with Negative Findings; Segment 8 Transmission Line Chino Hills (Phase 1)	Panich, Lee / Pacific Legacy, Inc.	2010	Field Survey	Overall study area
SB-08258	Cultural Resources Analysis for The Coptic Orthodox Church Project, City of Chino Hills, San Bernardino County, California	Szromba, Meagan and Christopher A. Duran / Rincon Consultants, Inc.	2016	Field Survey	Overall study area

SCCIC Report Number	Title of Study	Author and Affiliation	Year	Type	Location
SB-08272	Cultural Resources Assessment, Santa Ana River Parkway Project, County of Orange, California	Gibson, Heather, Marc A. Beherec, Patrick Mcginnis, And Mark Roeder / AECOM	2014	Field Survey	Overall study area

* Study overlaps one or more of the RHNA sites.

Table A-2. Previously Recorded Cultural Resources within the Study Area

Primary Number	Trinomial	Age	Type of Resource	Description	Recorded by and Year
P-36-002319	CA-SBR-002319	Prehistoric	Archaeological	Old Casa Colina Hospital Site	1980 (Douglas)
P-36-002374	CA-SBR-002374	Prehistoric	Archaeological	Carbon Creek Ranch #1	1977 (Drover)
P-36-003690	CA-SBR-003690/H	Prehistoric, historic	Multi-component	Aliso Canyon Site	1975 (E. Ritter); 1980 (Douglas); 2008 (LINDER)
P-36-004033	CA-SBR-004033H	Prehistoric, Historic	Multi-component	Soquel Canyon Site; McDermont Ranch	1980 (Douglas)
P-36-004212	CA-SBR-004212	Prehistoric	Archaeological	Los Serranos Site	1980 (Breece); 1999 (I. Strudwick, LSA); 1999 (I. Strudwick, LSA)
P-36-005096	CA-SBR-005096	Prehistoric	Archaeological	Prado Flood Control Basin Site; PA-S-P-01	1980 (Douglas, LSA); 1982 (M. Macko); 2017 (R. Droessler, ICF)
P-36-005097	CA-SBR-005097/H	Prehistoric, historic	Multi-component	Rolling M Ranch	1982 (Macko); 2002 (Carver)
P-36-005245	CA-SBR-005245	Prehistoric	Archaeological	Lusk Site	1983 (Langenwalter / Brock, ECOS); 1999 (I. Strudwick, LSA); 1999 (I. Strudwick, LSA)
P-36-005280	CA-SBR-005280	Prehistoric	Archaeological	CH-7	1984 (Evans / Hood); 1987 (Moran)
P-36-005282	CA-SBR-005282	Prehistoric	Archaeological	CH-9	1984 (Evans / Hood)
P-36-005283	CA-SBR-005283	Prehistoric	Archaeological	FC-5	1983 (Alcorn / Norris)
P-36-005284	CA-SBR-005284	Prehistoric	Archaeological	FC-13	1983 (Alcorn / Dean / Crum)
P-36-005285	CA-SBR-005285	Prehistoric	Archaeological	FC-14	1983 (Alcorn / Dean / Crum)
P-36-005287	CA-SBR-005287	Prehistoric	Archaeological	FC-15	1982 (Alcorn / Dean)
P-36-005689	CA-SBR-005689H	Historic	Built environment	The Adobe	1980 (Van Horn)
P-36-005690	CA-SBR-005690	Prehistoric	Archaeological	None	1980 (Murray / Brock)
P-36-005691	CA-SBR-005691	Prehistoric	Archaeological	None	1980 (Murray / Brock)
P-36-005692	CA-SBR-005692	Prehistoric	Archaeological	None	1980 (Murray / Brock)
P-36-005693	CA-SBR-005693	Prehistoric	Archaeological	None	1980 (Murray / Brock)
P-36-005694	CA-SBR-005694	Prehistoric	Archaeological	None	1986 (Brock)
P-36-006236	CA-SBR-006236	Prehistoric	Archaeological	None	1988 (Jang)
P-36-006239	CA-SBR-006239H	Prehistoric, historic	Multi-component	None	1981 (McKenna et al.)

Primary Number	Trinomial	Age	Type of Resource	Description	Recorded by and Year
P-36-006241	CA-SBR-006241H	Historic	Archaeological	H & M Temp. B	1989 (McKenna et al.)

Re: City of Chino Hills General Plan Update EIR Project, San Bernardino County

Dear Ms. Denniston:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Gabrieleno/Tongva San Gabriel Band of Mission Indians on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

SUBJECT: ASSEMBLY BILL (AB) 52 CONSULTATION
- **CITYWIDE GENERAL PLAN UPDATE (22GPA01)**

Dear Mr. Salas,

The City of Chino Hills is conducting a CEQA review for the above referenced Project, which includes a comprehensive General Plan Update for the entire City of Chino Hills.
This letter is sent to inform you about the proposed project and to request your consultation pursuant to AB 52.

The proposed project must comply with California Public Resources Code § 21080.3.1 (Assembly Bill [AB] 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated.

Your tribe's input is important to the City's planning process. We request that you advise us as early as possible if you wish to consult on the proposed project. Under AB 52, you have 30 days from the date of receipt of this notice to advise the City if you are interested in further consultation.

Attached is project location information and location maps. If you require any additional information or have any questions, please contact me at:

Re: Native American Consultation, Pursuant to Senate Bill 18, Government Code §65352.3 and §65352.4, General Plan Update Project, San Bernardino County

Dear Mr. Hofflinger:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties.

Government Code §65352.3 and §65352.4 require local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans.

The law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction. The NAHC believes that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

The NAHC also believes that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

    - A listing of any and all known cultural resources that have already been recorded or are adjacent to the APE, such as known archaeological sites;
    - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
    - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the APE; and
    - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

    - Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code §6254.10.

3. The result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission. The request form can be found at http://nahc.ca.gov/wp-content/uploads/2015/08/Local-Government-Tribal-Consultation-List-Request-Form-Update.pdf.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event, that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we are able to assure that our consultation list remains current.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

SUBJECT: SENATE BILL (SB) 18 CONSULTATION - CITYWIDE GENERAL PLAN UPDATE (22GPA01)

Dear Mr. Salas,

The City of Chino Hills is conducting a CEQA review for the above referenced Project, which includes a comprehensive General Plan Update for the entire City of Chino Hills. This letter is sent to inform you about the proposed project and to request your consultation pursuant to SB 18.

Because the proposed project includes a General Plan Land Use Map change, it must comply with California Public Resources Code § 65352.3 – 65352.4 (Senate Bill 18), which requires local governments to conduct meaningful consultation with California Native American tribes on the contact list maintained by the Native American Heritage Commission prior to the adoption or amendment of a city or county general plan for the purpose of protecting cultural places on lands affected by the proposal.

Your tribe's input is important to the City's planning process. We request that you advise us as early as possible if you wish to consult on the proposed project. Under SB 18, you have 90 days from the date of receipt of this notice to advise the City if you are interested in further consultation.

Sandonne Goad, Chairperson
Gabrielino /Tongva Nation
106 1/2 Judge John Aiso St, #231
Los Angeles, CA, 90012

SUBJECT: SENATE BILL (SB) 18 CONSULTATION - CITYWIDE GENERAL PLAN UPDATE (22GPA01)

Dear Mr. Goad,

The City of Chino Hills is conducting a CEQA review for the above referenced Project, which includes a comprehensive General Plan Update for the entire City of Chino Hills. This letter is sent to inform you about the proposed project and to request your consultation pursuant to SB 18.

Because the proposed project includes a General Plan Land Use Map change, it must comply with California Public Resources Code § 65352.3 – 65352.4 (Senate Bill 18), which requires local governments to conduct meaningful consultation with California Native American tribes on the contact list maintained by the Native American Heritage Commission prior to the adoption or amendment of a city or county general plan for the purpose of protecting cultural places on lands affected by the proposal.

Your tribe's input is important to the City's planning process. We request that you advise us as early as possible if you wish to consult on the proposed project. Under SB 18, you have 90 days from the date of receipt of this notice to advise the City if you are interested in further consultation.

Attached is project location information and location maps. If you require any additional information or have any questions, please contact me at:

SUBJECT: SENATE BILL (SB) 18 CONSULTATION - CITYWIDE GENERAL PLAN UPDATE (22GPA01)

Dear Mr. Mazzetti,

The City of Chino Hills is conducting a CEQA review for the above referenced Project, which includes a comprehensive General Plan Update for the entire City of Chino Hills. This letter is sent to inform you about the proposed project and to request your consultation pursuant to SB 18.

Because the proposed project includes a General Plan Land Use Map change, it must comply with California Public Resources Code § 65352.3 – 65352.4 (Senate Bill 18), which requires local governments to conduct meaningful consultation with California Native American tribes on the contact list maintained by the Native American Heritage Commission prior to the adoption or amendment of a city or county general plan for the purpose of protecting cultural places on lands affected by the proposal.

Your tribe's input is important to the City's planning process. We request that you advise us as early as possible if you wish to consult on the proposed project. Under SB 18, you have 90 days from the date of receipt of this notice to advise the City if you are interested in further consultation.

Attached is project location information and location maps. If you require any additional information or have any questions, please contact me at:

***P3a. Description:**
The Los Serranos Golf Club is situated on multiple parcels totaling approximately 312 acres. Generally L-shaped, the golf club includes a section oriented north-south parallel to Yorba Avenue, and a section oriented east-west. The facility includes two 18-hole courses: the 6,691-yard north course, and the 7,628-yard south course (Los Serranos Golf Club 2018a, 2018b), driving range, putting green, and clubhouse, golf cart, starter, maintenance, ancillary, and two snack bar buildings, sand traps, a large water hazard near the southwest end of the property, and numerous paved paths. A paved parking lot is adjacent to and north of the clubhouse, and is enclosed by a low concrete block wall that is painted white. A wooden sign located near the curb announces, "Jack Kramer's Los Serranos Country Club" and displays a man on horseback. The golf course terrain is undulating and features many mature trees. The surrounding setting includes residential development in all directions, as well as an area of open space to the west. Continued on page 4.

B1. Historic Name: Los Serranos Country Club
B2. Common Name:
B3. Original Use: Country club B4. Present Use: Golf club

***B5. Architectural Style:** The clubhouse, maintenance, and starter buildings portray a contemporary Mission Revival style; other buildings such as the two snack bars and ancillary building near Yorba Ave have no discernible style.

***B6. Construction History:** The country club was originally developed between 1924 and 1925. The former Bridger adobe was enlarged and remodeled as the clubhouse. Rental cabanas were developed at the southeast end of the property but were removed in ca. 1950. The country club has been greatly reduced in size and original features were eliminated. The maintenance building was built ca. 1960 and enlarged ca. 1990; the current clubhouse was built in 1996; and ancillary buildings were built between the 1970s and ca. 2000. The north course's original configuration and features have been altered, and a south course was added in 1962 (*Colton Daily Courier* 1925; *Long Beach Telegram* 1924b; *San Bernardino Daily Sun* 1925; Los Serranos Golf Club 1997; NETRonline 1938-2020; Miranda 2022; UCSB Library 1935, 1937; Google Earth 2022).

Period of Significance: N/A **Property Type:** N/A **Applicable Criteria:** N/A

The Los Serranos Country Club was conceived in 1923 by a group of investors headed by Harlow C. Davidson, a Long Beach real estate developer. In December 1923, the group purchased approximately 750 acres of the former Rancho Santa Ana del Chino, a Mexican-period land grant, from the Chino Land and Water Company (*Long Beach Telegram* 1924a; Spitzzeri 2020).

Rancho Santa Ana del Chino was granted in 1841 to Antonio Maria Lugo, a former soldier under the king of Spain (Barrows 1914; Shumway 2007). Soon thereafter, he turned over management of the rancho to his son-in-law Isaac Williams, who had married María de Jesús Lugo in 1839. Williams eventually purchased the rancho from Lugo for $10,000 (*Long Beach Telegram* 1924d). After Williams' death in 1856, his daughter Francisca Williams MacDougall hired her brother-in-law Joseph Bridger to manage the property as she lived distant from the ranch in Los Angeles. Bridger was married to Francisca's half-sister, Victoria Regina Williams, who was Isaac Williams' daughter with María Antonia Apis. Bridger built an adobe house on a portion of the property called the "Home Ranch" (on which the Los Serranos Golf Club is located today). He managed the ranch from 1865 until his death in 1880 (Spitzzeri 2018a, 2018d, 2020). The following year, Francisca sold the ranch to the mining tycoon Richard Gird, who moved with his wife Nellie into Bridger's adobe. Gird raised horses and cattle, many of which grazed in the Chino Hills, expanded agricultural crops, and established the Chino townsite. By the early 1890s, Gird was financially overextended, took out a loan, and assertively sought to sell portions of the ranch. Ultimately, a group of investors formed the Chino Land and Water Company, and took over Gird's mortgage. A subsidiary company liquidated the ranch's assets. In late 1923, the company sold a large portion of the ranch to Davidson and the group of investors who developed the Los Serranos Country Club (Spitzzeri 2019a, 2019b, 2020).

As described in local newspapers at the time, the investors acquired 750 acres that included a 40-acre lake, waterfall, and a 20-acre park area with exotic trees planted in the late 1800s. California redwood trees and a Japanese garden were noted. The country club was planned to include two 18-hole golf courses, a polo field, swimming, boating, and other outdoor sports (*Long Beach Telegram* 1924a, 1924c). Continued on page 4.

P3a. Description, continued:

Clubhouse – The clubhouse was constructed in 1996 (Los Serranos Golf Club 1997). Designed in a contemporary Mission Revival style, the building is one story with high ceilings. It rests on a concrete foundation and has an irregular footprint. A hipped, tiled roof with markedly protruding rafter rails covers the majority of the building, although the center of the roof is flat to support mechanical equipment and is edged at the north façade with a stepped, stuccoed parapet. The building exterior is sheathed in smooth stucco. Projecting from the north façade is a porte cochere supported by large, smooth columns and topped by a short tower. The tower is capped by a hipped, tiled roof with protruding rafter tails, and displays arched openings with metal bells suspended from wooden beams. Accessed via the porte cochere, the primary entrance consists of wooden double doors with glazing and is surrounded by a transom and wide sidelights. The north façade and east elevation display broad blind arches with no or minimal windows, concealing the view to the parking lot. Fenestration is concentrated on the west and south elevations facing the golf course, and consists of large expanses of metal-framed windows (Photos 1 and 2).

Starter Building – The starter building was constructed in circa 1975 (NETRonline 1938-2020). Located southwest of the clubhouse is a small wood-frame building where the starter (a staff person) directs players to the first tee at the appropriate time. The building has a square footprint and rests on a concrete foundation. It has a hipped, tiled roof with widely overhanging eaves and closed soffits. The lower half of the building exterior is covered with textured stucco, and is topped by metal-framed fixed and sliding windows on all sides. Th entry door on the south elevation appears to be wooden with a single-hung aluminum-framed window (Photo 3)

Snack Bar Buildings – The snack bar buildings were constructed in circa 1990 (NETRonline 1938-2020). There are two small snack bar buildings on the golf course, one within the north course, and one within the south course. The small buildings have rectangular plans and are clad with smooth river rock. These buildings were not documented in detail.

Maintenance building – The maintenance building was constructed between 1959 and 1966 southwest of the clubhouse, near the southeastern edge of the golf club property. It originally had an L-shaped footprint (NETRonline 1938-2020). An addition consisting of the eastern wing was built between 1987 and 1994, creating a U-shaped footprint surrounding a maintenance yard (NETRonline 1938-2020). The building displays a contemporary Mission Revival style similar to the clubhouse, indicating it has been remodeled since its original construction. The building is topped by a gable-on-hip roof clad with red barrel tile. Its exterior is sheathed in textured stucco and displays blind arches with wide engaged pilasters on the north elevation. The elevations facing inward towards the maintenance yard display numerous metal roll-up garage doors. Wide engaged pilasters separate each garage door (Photo 4).

Ancillary Building – An ancillary building was constructed in circa 2000 north of the parking lot near Yorba Avenue (NETRonline 1938-2020). Although not clearly visible due to fencing and foliage, it appears to have a rectangular footprint and walls composed of light gray textured brick or block. It is topped by a gabled roof clad with red barrel tile. There is a decorative metal vent screen under the gable peak (Photo 5).

B10. Significance, continued:

Architect/Designer

John Duncan Dunn, a native of Scotland, came from a well-known golfing family of which his father, uncle, grandfather, mother, and brother were all involved in golf – either as players, professionals, or designers. Dunn established a club-making business with his brother in 1892, and laid out many early golf courses in the Netherlands. In 1895, he took a trip to America, and later returned to join his uncle at the Ardsley-on-Hudson Country Club.

Among his various golf-related business endeavors, Dunn opened a shop in Manhattan, and took over his uncle's position as the manager of the BGI Company. Dunn began making a name for himself in golf course design after working on several courses in Florida. In 1902, he moved to California, and served as a golf professional at Los Angeles Country Club. Dunn left for some time to work in France, but returned to the U.S., after which he designed courses in Lake Tahoe and at Los Serranos. Dunn also wrote articles and instructional books about the sport (Mckinnon, n.d.; Antique Golf Clubs from Scotland 2021). Dunn designed the original (north course) at Los Serranos; however, the second planned course was not constructed (GolfClubAtlas 2004-2016). Dunn died in 1951 (Golf Pass 2022).

B10. Significance, continued:

The country club was "named after the peaceful Serranos Indians that lived there long before white men with beards and lances trod upon California's garden lands." (*Long Beach Press* 1924). Directing the club's development was W.G. Hamilton, who had been involved in several other country clubs in the Southern California area. John Duncan Dunn was hired to design the golf courses (*Long Beach Telegram* 1924a).

Los Serranos Country Club officially opened April 25, 1925 (*Colton Daily Courier* 1925). The former Bridger/Gird adobe, described as a "large, aristocratic mansion," was enlarged and remodeled to repurpose it as a clubhouse (*Long Beach Telegram* 1924c; *San Bernardino Daily Sun* 1925) (Figure 1). An announcement of the grand opening stated the "Feature event of the day will be the dedication of the 18-hole championship links" indicating the second planned 18-hole course was not built (*Colton Daily Courier* 1925). The original driving range was located where the parking lot is today (Miranda 2022). Rental cabanas were built south of the clubhouse, although their exact construction date was not determined (Figure 2). The country club property also included present-day Lake Serranos to the north.

B10. Significance, continued:

Only a year after its opening, in 1926, H.C. Davidson's investment company sold the country club to a syndicate composed of club members described in the local newspaper as out-of-towners. The sale included 350 acres of the club property and 350 acres of surrounding land. In this way, members would participate in the club's administration and financial management. Participating memberships were sold to those who desired them. It was also announced at the time that nearby land would be developed as a community of country homes (*Chino Champion* 1926a, 1926b). Members of the club were able to purchase small lots adjacent to the course (City of Chino Hills, n.d.). Streets were named after historical figures and places such as Lugo and Gird Avenues and Los Serranos Boulevard. It appears the homes were modest in scale, as they were locally referred as bungalows (*Chino Champion* 1927b, 1937). Early homes built in this area, along with Sleepy Hollow in Carbon Canyon, were some of the earliest in what would later become the City of Chino Hills (City of Chino Hills 2022). However, the lots adjacent to Los Serranos Golf Course were developed rather slowly. In 1938, only a handful of homes had been built, and in 1946, the area was still very sparsely developed. The lots gradually filled in and it was not until about 1980 that the area appeared nearly built out (NETRonline 1938-2020).

Figure 3. A handful of homes had been built adjacent to the club by 1935 (left); lots were still sparsely developed in 1946 (right)

Source: UCSB Library

Source: UCSB Library

With the ownership change, several improvements were planned, including rearranging holes one and nine to be closer to the club house, and construction of a swimming pool, a new golf house, and an ornamental gate and lodge at the entrance (*Chino Champion* 1926c). However, it appears some of these improvements were not immediately started, and just one year later, a new owner for the country club was announced. O.W. Heinz and associates, based in Los Angeles, acquired the country club by November 1927. It was then that major improvements seemed to get underway. The contract was authorized for a 60-foot by 125-foot swimming pool (although research to date has not determined its location on the property), an outdoor dance pavilion was constructed, and a 2,000-foot-long swimming beach on the lake was developed. Additionally, a toboggan slide and water wheel were installed at the beach, and water was fed into the arroyos to allow for canoeing and to create water hazards for the golf course (*Chino Champion* 1927b).

The country club changed hands many times through the mid-century, and was referred to by different names, including Rancho Don Lugo Golf Course, and Pomona Valley Country Club. While the details of each transaction and owner were not definitively ascertained, research to date revealed that a syndicate headed by Gordon Bell bought the property in 1946 for $155,000. The syndicate was composed of Mr. and Mrs. Gordon Bell, Mr. and Mrs. Gray Phelps, Mr. and Mrs. John W. Dawson, Kersey Kinsey, and R. Glenn Daugherty. By 1948, the property was sold to either Mel and Connie Rogers or Mel's brother Ken Rogers (depending on the source). Ken, who was a retired Army officer and golfer, was originally from Dallas but moved around extensively during his time in the military. It is not clear if Ken's brother Mel served as manager of the golf club, was a co-owner, or outright owner with Connie (*Chino Champion* 1948a, 1948b; *San Bernardino County Sun* 1953; Spitzzeri 2021). Mel and Connie Rogers experienced legal issues with the California Public Utilities Commission, and in addition, Ken Rogers and realtor Clara Blum Bartlett sued Mel and Connie, resulting in a judgment in late 1948 that gave Ken Rogers and Clara Bartlett control of the club. Subsequently, Bartlett acquired Ken's half-interest and gained full control of the club (Chino Champion 1953a; San Bernardino County Sun 1953; Spitzzeri 2021). Continued on page 7.

Recorded By: Susan Zamudio-Gurrola ***Date:** July 14, 2022 ■ Continuation ☐Update

B10. Significance, continued:

Not long after the Rogers acquired the club, they sought to sell the property, and in mid-1949, it was announced that a group of African American investors were seeking to purchase it. Headed by Lemuel Pratt Grant, the group was reported to include boxer Joe Lewis, actor Eddie Anderson, and athlete Woody Strode. Grant owned a brick and tile business, and was a pioneer golfer in the African American community. Opposition quickly rose in the community - an organization was formed called "Los Serranos Business Club" which worked to block the sale. Despite a well-attended event to publicize the club and sign up new members, the property sale fell apart.

During her tenure, Bartlett completed improvements to the clubhouse, and had plaques installed on trees that she discovered were not indigenous and were rare to the area. However, problems with the water system and related water shortage resulted in the golf course being maintained in less than ideal conditions (*Chino Champion* 1950, 1953c). In June 1953, Bartlett sold the country club - which had been reduced to 320 acres - and its water system to Paul Greening, who owned the adjacent approximately 2,500-acre ranch (referred to as Rolling Ridge or Rolling Hills). Greening was a rancher with a number of other financial interests who had recently relocated to the area from Newport Beach (*Pomona Progress Bulletin* 1953; *Chino Champion* 1953a; *San Bernardino County Sun* 1953). Shortly after the purchase, Greening closed the golf course, but began making improvements to the water system (*Chino Champion* August 6, 1953). He offered the golf course and clubhouse for lease, and indicated that if a lease was not arranged, the course would be converted to agricultural purposes and the clubhouse would be torn down (*Los Angeles Times* 1953a).

By late 1953, a lease was arranged with a group composed of tennis professional Jack Kramer, golf professional Zell Eaton, and Pasadena businessman W.E. Cranston (*Los Angeles Times* 1953b). The men updated the golf course layout, and reopened it for public use in February 1954 with nine holes. A temporary grouping of holes was created to put the course into operation, but they were not meant to be a permanent front or back nine. Additional changes were made to the course with the goal "to make it appeal more to the average golfer." (*Pomona Progress Bulletin* 1954). It was designed to be easier and shorter than the previous course, and several new greens were constructed (*Pomona Progress Bulletin* 1954). The *Los Angeles Times* provided a summary of the state of Los Serranos at the time, stating:

> "The course was in horrible condition, almost abandoned…It has been redesigned, eliminating several of the less interesting holes at the southwest end of the course…and building some new holes including an 18th which will be directly in front of the clubhouse. Overall length is considerably shorter than the old course. Nine holes were opened a short time ago…Fairways are pretty rough now but an entirely new watering system…should begin to pay off. We'd say the net result of the changes will be to make it an easier course for high handicappers but just as interesting as the old layout." (Curtis 1954).

By 1961, Jack Kramer became sole owner of the club (Los Serranos Country Club 2021). He developed a second golf course, called the south course, in 1962. It became known as “Jack’s Blacks” and held the record for the longest golf course in California until surpassed by Torrey Pines and Martis Camp in the 2000s (Youngman 2020). The maintenance building was constructed around this time with a L-shaped footprint, and the eastern wing was built between 1987 and 1994, creating the building’s current U-shaped footprint (NETRonline 1938-2020). Building permit records for the property show that a permit was issued in 1994 which included an addition and remodel of the clubhouse, as well as demolition work. While the building permit does not provide details on the demolition, local newspaper account indicates the original clubhouse was razed (*Chino Hills Champion* 1994) (Figure 4). Los Serranos Golf Club staff also indicates the current clubhouse is all new construction (Miranda 2022). The project included 3,800 sq. ft. of office space, 4,645 sq. ft. of clubhouse space, 8,100 sq. ft. of kitchen space and patios. The architect for the project was Schneider Architects and Associates, and the contractor was Charles Licha (City of Chino Hills, var.).

The Greening family (Jay Greening) continues to own the property, and the Kramer family continues to own and operate the golf club business, leasing the land from Mr. Greening. Jack Kramer died in 2009 (Goldstein 2009; Napoles 2018).

Continued on page 8.

Figure 4. Demolition of the original clubhouse in a 1994 photo

Country club redo

The walls of a 70-year-old building come down at Los Serranos Country Club to make way for a new club house. The razed building, part of th e original country club which opened in 1925, housed locker rooms, kitchen, a meeting room and finance office. In the center, workers found an old chimney, the base of which was in the basement, which had been filled in long ago. The new clubhouse will envelope all the old one except the prop shop.

Source: *Chino Hills Champion* 1994.

The changes and alterations that have taken place at the property over the decades have resulted in a nearly 50 percent reduction of its size, from the original 750 acres to approximately 320. In addition, the property's features have been affected by the substantial changes in the function and amenities provided at the club. Original features that were removed or are no longer part of the property include: the lake, beach and water toboggan; equestrian facilities; rental cabanas; and the original clubhouse. The golf facility has changed from a single 18-hole golf course to two 18-hole golf courses, with the second course developed 37 years after the original. Additionally, the configuration and features of the original north course have been altered, notably the locations of holes 1, 2, 5, 6, 16, 17, and 18, and the driving range (UCSB Library 1935, 1937; Google Earth 2022; Miranda 2022). New buildings were constructed on the property through circa 2000.

National Register of Historic Places/California Register of Historical Resources Evaluation:

Criteria A/1 (Events)

The Los Serranos Golf Club (aka Los Serranos Country Club) was originally developed in 1924 as a private country club with expansive recreational facilities, including one 18-hole golf course, facilities for fishing and water sports, a private lake with a beach, rental cabanas, and equestrian facilities. Changing hands many times from its opening in 1925 through the 1950s, the property and its owners appear to have struggled to maintain a successful business. Although the Los Serranos Golf Club property is associated with the development of early recreational facilities in the Chino Hills, the country club was not remarkable as a business, as evidenced by the frequent ownership changes, known maintenance issues, and elimination over the years of amenities such as the rental cabanas and equestrian and water sports. In the course of the various sales of the property, the country club was also reduced in size such that the lake feature is no longer part of the current club property. The club's use changed so that it is now focused only on the sport of golf.

The golf club property is associated with the development of early residential properties in the Chino Hills area on the lots adjacent to the golf course, which were originally purchased by club members. However, the lots were developed very slowly over the course of several decades. The sale of land for the development of homes was announced in 1926, but the neighborhood was less than half built 20 years later in 1946. It was not until about 1980 that the neighborhood appeared to be nearly built out. As stated in the Chino Hills General Plan (adopted February 2015), only 5 percent of the homes in the Los Serranos neighborhood predate 1945, and over 50 percent were built after 1970. Continued on page 9.

B10. Significance, continued:

Furthermore, the city of Chino Hills did not incorporate until 1991 following a period of extensive growth in the 1970s and 1980s. Therefore, while the country club made lots available for residential development early in the twentieth century, it cannot be said that the country club was a strong catalyst for the growth and establishment of the city of Chino Hills.

Lastly, research to date does not indicate that any events significant in our history have occurred at the golf club.

Consequently, the Los Serranos Golf Club does not appear eligible for listing in the NRHP under Criterion A or the CRHR under Criterion 1.

Criteria B/2 (Individuals)

Research to date has not demonstrated that the Los Serranos Golf Club is associated with the lives of persons important to local, state, or national history. The golf club property does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criteria C/3 (Design/Construction)

The Los Serranos Golf Club does not appear to be eligible under Criteria C/3 as it does not embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of a master, or possess high artistic values. Due to numerous changes to the property, the club does not have a cohesive design. The extant clubhouse and maintenance building represent a contemporary Spanish Revival style from the buildings' remodeling in the early 1990s. Other buildings on the property such as the ancillary and snack bar buildings (constructed between circa the 1970s and 2000) do not have a clearly discernible style. As previously discussed, research to date does not indicate that Dunn, the golf course designer, is considered a master in his field. The original north course's configuration and features have been considerably altered as described above—the locations of Holes 1, 2, 5, 6, 16, 17, and 18 and the driving range have been changed, and a second course was built adjacent approximately 37 years after the original course was developed. Coupled with the changes to the golf course–related buildings, the north course does not retain integrity to convey its original design, construction, materials, workmanship, or feeling.

Criteria D/4 (Information Potential)

The potential to yield information important to prehistory or history is typically applied to archaeological resources, and these criteria were not applied to this evaluation of the Los Serranos Golf Club.

***P3a. Description:**

The Western Hills Country Club is situated on multiple parcels totaling approximately 312 acres. Generally L-shaped, the country club includes a section oriented northeast-southwest parallel to Carbon Canyon Road, and a section oriented north-south. The southwestern end of the golf course extends to the west side of Canon Lane. The club includes an 18-hole course that is 6,746 yards long (Golf Link 2022), a driving range, putting green, clubhouse, golf cart and maintenance buildings, a swimming pool, and numerous paved paths. A paved parking lot, adjacent to and south of the clubhouse, is accessed from Fairway Drive where the entrance is marked by four brick pillars with black iron gates, and a post-mounted sign announcing the Western Hills Country Club. The golf course terrain is undulating, and features many mature trees and a small lake northwest of the clubhouse. The surrounding setting includes Eucalyptus Avenue and residential development to the north; Fairway Drive, residential development and open space to the east; Carbon Canyon Road, Chino Valley Fire Station No. 4, a golf cart shop, and residential development to the south; and residential development to the west. Period of Significance: N/A **Property Type:** N/A **Applicable Criteria:** N/A

The Western Hills Country Club was opened in March 1963 on the lands of a former cattle ranch. Known as the "Double S Ranch," the property was owned by Shelley Martin Stoody and his wife Corrine Stoody. Mr. Stoody was known for his prized, expensive Hereford cattle (one of which he purchased in 1958 for $55,000); he also had a quarter interest in a bull valued at $320,000. In 1960, Stoody constructed a show ring and barn in which to display his cattle stock for sale. His property also included a landing strip, which was subsequently related to his cause of death in June 1961 when he died in a plane crash near his home. Three other passengers were also killed, and several damage suits were filed against Stoody's estate. The court authorized the sale of the ranch, and in 1963, it was purchased for $600,000 by a group of investors from surrounding cities who planned the development of a country club on a portion of the 380-acre property (*Chino Champion* 1961, 1963a, 1963c).

The group of investors included Delmar Pebley, president, William G. Claussen, vice president and acting manager, Dr. G. Barton Heuler, treasurer, and Dr. L. Kenneth Heuler, secretary. Opening in March 1963, the Western Hills Country Club included an 18-hole golf course, a driving range and a practice green near the clubhouse. Nine holes were sited along the canyon beside Carbon Canyon Road, and nine were sited in the valley running northward from the property entrance. Between the no. 10 and no. 18 fairways was a small lake. Stoody's approximately 14,500 sq. ft. cattle sale barn was renovated and converted into a clubhouse with a pro shop, control room, bar, kitchen, dining, banquet and locker rooms, and offices. Two hangars on the ranch property were also repurposed. A 40 ft. by 40 ft. hangar located near the clubhouse was used to store golf carts; a second 40 ft. by 60 ft. hangar was relocated near Carbon Canyon Road across from the Mountain View tract to store maintenance equipment. The landing strip and several buildings were removed, including a barn and two smaller buildings near the entrance. Additional amenities planned for the property included tennis, badminton and ping pong courts in support of the family-focused program of the country club (*Chino Champion* 1961, 1963a, 1963b, 1978). It is unknown if these features were built. A swimming pool was constructed east of the clubhouse shortly after the club opened (NETRonline 1938-2020). Continued on page 5.

(This space reserved for official comments.)

Recorded By: Susan Zamudio-Gurrola ***Date:** July 14, 2022 ■ Continuation ☐Update

P3a. Description, continued:

Clubhouse – The clubhouse was originally built as a stock show and sales barn in 1961, but was remodeled in 1963 to use as a clubhouse, and was partially demolished and remodeled again in 1988. Presently designed in a contemporary Spanish Revival style, the clubhouse is one story with high ceilings. It rests on a concrete foundation and generally has a rectangular footprint. The southern half of the building is covered by a flat roof edged by a hipped, tiled roof that conceals mechanical equipment. The northern half of the building is covered by a very low-pitched gabled roof which appears to be clad with composite shingles. The building exterior is sheathed in smooth stucco. An arcade with wide square piers spans the southern façade. At the eastern end of the façade, a gabled roof shelters the primary entrance which consists of steel arched double doors flanked by sidelights. Secondary doors are located on the west and north elevations. Fenestration consists of large steel-framed fixed windows, smaller sliding windows, and possibly awning or fixed windows on the north elevation (Photos 1 and 2).

Golf cart building – The golf cart building was constructed in 1990 north of the clubhouse near Fairway Drive. It has a rectangular footprint and a flat roof with composite shingles and numerous skylights. A concrete path surrounds the building on all sides.

Swimming pool – The swimming pool was constructed in circa 1964 east of the clubhouse, near Fairway Drive. It is an irregularly shaped swimming pool surrounded by a concrete path and patio, and grass lawn. The pool facility is enclosed by an iron rail fence (Photo 3).

Pool house/showers – The shower/pool house building was constructed in circa 1964 north of the pool. It has a rectangular plan and a medium-pitched, side-gabled roof clad with composite shingles. Although not clearly visible due to the pool security fencing, it appears to be sheathed in stucco, and has at least one vinyl-frame sliding window. The south elevation displays a recessed niche with a shower (Photo 4).

Restroom Building – The restroom building's construction date was not ascertained. The small building is located on the west side of Canon Lane, near the western end of the country club. The building has a rectangular footprint and a very low pitched gabled roof. Wide wooden fascia boards show considerable deterioration. The exterior walls consist of masonry blocks painted tan. Privacy screening walls shield the doorways to the restroom facilities inside (Photo 5).

Interior view of Stoody's show and sales barn which was converted into the country club's clubhouse in 1963

B10. Significance, continued:

It appears the investor group later developed the Western Hills Mobile Homes Estates on the east side of Fairway Drive (*Chino Champion* March 24, 1978). A portion of the undeveloped ranch property to the north and west of the country club was sold for construction of a housing tract (Spitzzeri 2014).

Sparse data was available to trace the ownership history of the property over the decades – city building permit records redact owner information for privacy reasons. A general partnership was identified in association with the Western Hills Country Club in 1986 which consisted of T.W. Dutton and George D. Voigt of Upland, Jacob Y. Terner of Beverly Hills, and Robert D. Dutton of Ontario (*Chino Champion* 1986).

Jacob Y. Terner was born in New York in 1934. He married Sandra Wolloch, obtained his M.D. in 1961, and practiced in New York until 1966 when he entered the military, serving until 1968. Afterwards, Jacob and his family moved to Los Angeles where he founded a private practice pathology group. He also founded and ran several business entities, and taught at the University of Southern California School of Medicine (Legacy.com 2022). George D. Voigt was born in 1932 in Upland, California. T.W. Dutton was born in 1930 in Rancho Cucamonga, California. Robert D. Dutton was born in 1950 in Ontario. No consequential information was found on Voigt or either Dutton.

The country club was acquired in March 1987 by Western Hills Golf Associates, who completed improvements to the property and remodeled the clubhouse (*Chino Champion* 1988). The clubhouse was partially demolished by removing the pro shop, restaurant, bar, and banquet room, then enlarged by approximately 1,000 square feet. The kitchen was moved, a larger bar and grill room was created, the locker rooms and banquet room were refurbished, and views to the outdoors were improved. Additionally, as part of the remodel, the building exterior was redesigned to give it a "California Spanish look" (*Chino Champion* 1988).

Additional improvements were completed at the property shortly thereafter. A garage near the clubhouse (likely the former ranch building near the clubhouse that had been repurposed to store golf carts) was demolished in 1989. A new golf cart storage building was constructed by the following year at the same location north of the clubhouse. Other work conducted on the property in the 1990s included: walls built at the perimeter of the property; remodeling of the locker area; and installation of a new fuel tank at the maintenance building. Work conducted in the 2000s included: repairs to a damaged portion of the north locker room wall; electrical work for the pond and irrigation system; installation of a prefabricated structure to house cell-site equipment; and installation of a sewer line (City of Chino Hills, var.).

The clubhouse undergoing partial demolition for its expansion and remodel in 1988

Source: Chino Champion 1988

Continued on page 6.

B10. Significance, continued:

In circa 2001, West Hills Golf Associates Ltd. coordinated with the City of Chino Hills to have Fairway Drive accepted into the city-maintained street system in exchange for waterline easements through the country club property, and a 1.2-acre parcel given to the city for a park at Carbon Canyon Road and Cannon Lane (City of Chino Hills 2018). It appears the property owner has remained the same; the San Bernardino County Assessor lists the present owner as West Hills Golf Associates, Ltd. which was formed in 1987 (San Bernardino County Assessor-Recorder-Clerk 2022; Dun & Bradstreet 2022).

Architect/Designer

Harry Rainville, a golf course architect based out of Yorba Linda, designed the country club's 18-hole golf course (*Chino Champion* March 21, 1963). Rainville was born in 1905 in St. Onge, South Dakota. Research conducted for this study did not uncover consequential information on Rainville. He worked on the design of golf courses in various California cities, as well as on several projects with his son David Rainville who continued practicing golf course architecture into the 2000s (American Society of Golf Course Architects 2022). Harry died in 1982 (GolfPass 2022).

As part of the research undertaken for this study, several sources were consulted to review rankings of golf course architects/designers, including Top 100 lists, and those identifying influential golf course architects/designers. These sources included the American Society of Golf Course Architects Architect's Gallery database, Golf magazine, Golf Digest, Golf Link, and Golfweek. Harry Rainville was not identified in any of the sources consulted. Research to date does not indicate he was associated with any significant golf course designs or considered a master in his field.

National Register of Historic Places/California Register of Historical Resources Evaluation:

Criteria A/1 (Events)

Developed in the early 1960s, Western Hills Country Club was relatively late in the trend of recreational development in the Chino Hills area. Research to date does not indicate that any significant events in national, state or local history have taken place on the property, nor is the property associated with any significant trends or patterns of national, state, regional or local history. The property is not a significant example in the context of golf courses across the city, state or nation. Therefore, the country club does not appear eligible for listing under Criteria A/1.

Criteria B/2 (Individuals)

Research to date has not indicated the Western Hills Country Club is associated with persons that are important to local, state or national history. The property does not appear eligible under Criteria B/2.

Criteria C/3 (Design/Construction)

The Western Hills Country Club was developed in 1963 on the lands of a former cattle ranch. While a few of the ranch buildings were repurposed for the country club, the majority of the ranch's buildings and features were removed and altered. Those former ranch buildings reused at the country club (the clubhouse and golf cart building) were later demolished in the 1980s. The extant clubhouse reflects a contemporary Spanish Revival style from its latest remodel (and partial demolition) in the 1980s, and other buildings such as the masonry restroom building and pool house building are utilitarian with no clear discernible style. Research to date on Harry and David Rainville did not indicate that they are considered masters in the field of golf course architecture, and the golf course itself is not representative of a significant or distinctive golf course design. Consequently, the property does not appear eligible for listing under Criteria C/3.

Criteria D/4 (Information Potential)

The potential to yield information important to prehistory or history is typically applied to archaeological resources and is not applied to this evaluation of the Western Hills Country Club.

INTRODUCTION

PURPOSE

This geotechnical report is intended to provide a baseline geotechnical conditions update to be used in the preparation of the planned City of Chino Hills General Plan update.

LOCATION

The City of Chino Hills is located in the southwestern portion of San Bernardino County, California. The City is bordered by Riverside County to the southeast and Orange County on the west.

SCOPE

The scope of our geotechnical studies, as outlined in our proposal dated October 29, 2022, was as follows:

1. Reviewed and analyzed published regional seismic and geologic maps, reports, and documents published after 2011 for seismic and geologic hazard potential within the City of Chino Hills. The data and conclusions obtained during our research and analysis have been used to update pertinent sections of the General Plan including:

    a. Seismic Safety Overlay for the Land Use Element;
    b. Mineral Resources Discussion for the Conservation Element;
    c. Safety Element (including seismic hazards, geologic hazards, flooding, and oil and mineral production).

2. Prepared this geotechnical report as a summary of our research and analysis for inclusion into the planned City of Chino Hills General Plan update.

It should be noted that this report is limited to a generalized overview of the geotechnical conditions within the City of Chino Hills. No field exploration or laboratory testing was performed, nor research pertaining to the possible presence of toxic or hazardous materials within the limits of the City of Chino Hills.

EXISTING GENERAL PLAN

PREVIOUS GEOTECHNICAL STUDIES

The most recent update of the City of Chino Hills General Plan was adopted in February 2015. The relevant sections reviewed and updated as part of this report include Chapter 1 - Land Use Element, Chapter 4 - Conservation Element; and Chapter 5 - Safety Element. Applicable portions of the General Plan that require updating are presented below.

GENERAL PLAN UPDATE CHAPTER 1: LAND USE ELEMENT

CHAPTER 1: LAND USE ELEMENT

Overlay Classifications

Seismic Safety Overlay

A Seismic Safety overlay was previously identified adjacent to the trace of the Chino Hills fault, as described in detail within the Safety Element, Chapter 5.

CHAPTER 4: CONSERVATION ELEMENT

Mineral Resources

The Chino Hills area has produced oil since the late 1800s and minor oil production continues in the Chino-Soquel Oil Field and the Mahala Oil Field as discussed in the Safety Element.

According to the California Geological Survey (CGS), no significant mineral deposits are known to exist in Chino Hills. Outside the corporate boundary in the southeastern portion of the city, CGS has classified the sand and gravel resources along the Santa Ana River Wash as Mineral Resource Zone 2 (MRZ-2), which is defined as an area where adequate information indicates that significant mineral deposits exist or are highly likely. The majority of this area lies within Chino Hills State Park.

CHAPTER 5: SAFETY ELEMENT

INTRODUCTION

The geological environment of Southern California and the Chino Hills area present a number of natural hazards that could potentially endanger the safety of the public. Numerous active and potentially active earthquake faults traverse Southern California, causing seismic hazards such as ground shaking to be potentially hazardous events. The city also contains a number of hillsides with slopes in excess of 25 percent. This steep topography, combined with area soil conditions, makes landslides and other slope instabilities potential geologic hazards. Additional natural hazards that could affect the city include flooding due to natural disasters or dam inundation.

BACKGROUND INFORMATION AND ISSUES IDENTIFICATION

This section describes in detail the hazards that might affect the City of Chino Hills as well as the resources that are available in the event of an emergency. This element examines seismic, geologic, flood and inundation, fire and hazardous material hazards. This background information provided the base data to create the goals and policies which direct decision makers on how to manage safety concerns.

The following sections discuss potential seismic hazards that might influence development of building or other civil works within the City of Chino Hills. The figures that are provided are intended as a guide to assist in determining if a particular geologic hazard may impact a site within the City. The figures are not intended to be a substitute for site-specific geologic and engineering investigations for planning, design, or construction of a particular project.

Seismic Hazards

Earthquakes occur when planes of weakness, called faults, in the Earth's crust move past one another. Southern California is located on a boundary of two tectonic plates, the North American Plate and the Pacific Plate, causing the area to be considered seismically active. Numerous faults considered active or potentially active have been mapped in Southern California, including in the vicinity of and within the City of Chino Hills (Petersen et. al, 1996). Earthquakes on faults can trigger several geologic phenomena that can cause severe property damage and loss of life. These hazards include ground shaking, fault rupture, liquefaction and associated hazards, subsidence, and seiches (waves in enclosed bodies of water). Earthquakes can also cause a variety of localized, but not less destructive hazards, such as urban fires, dam failures, and release of toxic chemicals. The City of Chino Hills could be impacted by any or all of these hazards.

Earthquakes are normally classified as to the severity of their magnitude or their seismic intensity. Magnitude is defined as a measure of the amount of energy released when a fault ruptures: it is generally measured using seismographs. Seismic intensity is defined as a qualitative estimate of the damage caused by an earthquake at a given location. Because the amount of destruction generally decreases with increasing distance away from the epicenter (a point at the ground surface directly above the origin of an earthquake), earthquakes are assigned several intensities. The most commonly used seismic intensity scale, called the Modified Mercalli Intensity (MMI) Scale, has 12 levels of damage. Higher numbers on the MMI Scale indicate greater damage at the area of interest (see attached Table S-1). The intensity of seismic ground shaking at any given site is a function of several factors, but primarily the magnitude of the earthquake, the distance from the epicenter to the area of concern, the type of geologic material between the epicenter and the site, and the topographic conditions of the site. The amount of damage is also controlled to a certain extent by the size, shape, age, and engineering characteristics of the affected structures. Most buildings in Chino Hills are of wood-frame construction, which while not immune to structural damage, is notably resilient to earthquake shaking, particularly when designed per current Building Codes.

Ground Shaking

The City of Chino Hills is located within close proximity of several active and potentially active faults that are capable of generating moderate to strong ground motions during earthquakes (Hart, 1999). These moderate to strong ground motions could result in damage to buildings and other civil works within the City. The location of active and potentially active earthquake faults capable of generating moderate to strong earthquake ground motions are illustrated in Figure S-1. The seismologic characteristics of these faults are summarized in Table S-2. The Uniform California Earthquake Rupture Forecast version 2 (UCERF2) utilizes two different earthquake magnitudes to model various fault rupture scenarios and earthquake ground motions (WGCEP, 2008). These two magnitudes are presented in Table S-2. Data presented in version 3 of the Uniform California Earthquake Rupture Forecast (Field et. a., 2015), does not revise the magnitudes presented in Version 2. The location of historical earthquakes with magnitudes greater than 4.0 within the zone of influence of the City are illustrated on Figure S-2 and presented in Table S-2 where the causative fault is known.

The geologic and seismologic characteristics of major faults anticipated to influence performance of buildings and other civil works within the City are discussed below.

<u>Chino Fault</u>

The Chino fault is considered a northern splay of the Elsinore Fault Zone (Treiman, 2002). The Chino fault extends approximately 21 kilometers southeast through the City of Chino Hills toward the City of Corona where it joins the Elsinore Fault Zone near the southern terminus of Main Street in Corona. Available geologic mapping, paleoseismic studies and oil well data

indicate the Chino fault trends northwest to southeast and dips approximately 50 to 70 degrees toward the southwest. The sense of fault displacement along the Chino fault is predominantly right-lateral, strike-slip: however, some early geologic mapping and recent paleoseismic studies suggest a reverse sense of movement at some locations. Several recent geologic studies of the Chino fault have revealed Holocene fault displacement (i.e., during the last 11,000 years). The California Geological Survey re-evaluated the Chino fault in 2002 as a result of these recent findings and has zoned the Chino fault as active pursuant to the guidelines of the Alquist-Priolo Earthquake Fault Zone Act. Two historic earthquakes are attributed to the Chino fault: the February 16, 1989 magnitude 3.2 strike-slip earthquake that occurred at a depth of approximately 4.3 kilometers and the December 14, 2001 magnitude 3.9 strike-slip earthquake that occurred at a depth of approximately 13.8 kilometers (Hauksson and Jones, 1991; Treiman, 2002).

The Elsinore Fault Zone

The Elsinore fault extends for approximately 200 kilometers from near the border with Mexico to its northern terminus near Whittier Narrows (Figure S-1). The Uniform California Earthquake Rupture Forecast version 3 (UCERF 3) lists four fault segments within the Elsinore fault zone. These segments are the Whittier, Glen Ivy, Temecula and Julian segments, from north to south (Field et. al, 2013). The Uniform California Earthquake Rupture Forecast version 2 (UCERF 2) identifies a fifth segment, the Coyote Mountains segment. The Whittier segment exhibits a reverse, right-lateral oblique sense of movement while the Glen Ivy, Temecula, Julian, and Coyote Mountains segments exhibit a right-lateral, strike-slip sense of movement (Cao et al., 2003).

Whittier Segment (W)

The Whittier segment of the Elsinore fault extends approximately 25 to 30 kilometers from the Whittier Narrows south to the Santa Ana River. Changes in fault geometry between the Whittier segment and the Glen Ivy segment to the southeast define the boundary between these two segments. The changes in fault geometry include a gradual 20 degree bend to the northwest from approximately N50W along the Glen Ivy segment to approximately N70W and a change in dip of the fault plane from approximately 80° southwest along the Glen Ivy segment to 70-75° northeast along the Whittier segment (Wills et. al., 2008). Radiocarbon dating of charcoal collected during paleoseismic trenching studies of the Whittier segment of the Elsinore fault estimate the most recent earthquake event occurred between approximately 1400-2200 years ago (Patterson and Rockwell, 1993).

Glen Ivy Segment (GI)

The Glen Ivy segment of the Elsinore fault is located between the southern end of the Whittier segment near Corona and Lake Elsinore where a releasing stepover separates the Glen Ivy segment from the Temecula segment to the south. The Glen Ivy segment of the Elsinore fault is

approximately 40 kilometers in length. The most recent earthquake event along the Glen Ivy segment occurred May 15, 1910 and produced approximately 25 cm of slip along the Glen Ivy segment based on offset of a cultural feature (Rockwell, 1989). Paleoseismic studies along the Glen Ivy segment suggest that some earthquake events prior to the May 15, 1910 earthquake have produced larger amounts of fault slip.

Temecula Segment (T)

The Temecula segment extends for a distance of approximately 50 kilometers between the stepover at the southern end of the Glen Ivy segment to a compressional uplift at Agua Tibia Mountain. This compressional uplift occurs at a bend in the Elsinore fault geometry. The bend at Agua Tibia Mountain forms the boundary between with the Julian segment to the south. The most recent earthquake event along the Temecula segment occurred between A.D. 1655 and A.D. 1810 (Dawson et al., 2008). Radiocarbon dating of samples collected from fault trenches and the historic record at the Pala Mission reveal four paleoseismic events occurred between 2,700 years ago and just before 4,500 years ago along the Temecula segment of the Elsinore fault at Agua Tibia (Vaughan et al., 1999).

Julian Segment (J)

The Julian segment extends for a distance of approximately 65-75 kilometers south from the compressional uplift at Agua Tibia Mountain to an extensional left step between the Julian and Coyote Mountains segments near the Tierra Blanca Mountains. The Julian segment is the longest segment of the Elsinore Fault Zone. Although the paleoseismic record along the Julian segment is limited to two earthquake events, the available data suggest the most recent earthquake event along the Julian segment occurred approximately 1,500 years ago to 2,000 years ago based on the results of trenching at Lake Henshaw and near Julian (Magistrale and Rockwell, 1996; Thorup, 1997). The available paleoseismic data suggest earthquake events occur less frequently along the Julian segment than other segments of the Elsinore fault (Dawson et al., 2008).

Coyote Mountains Segment (CM)

The Coyote Mountains segment extends approximately 30-35 kilometers south from the extensional left step between the Julian and Coyote Mountains segments near the Tierra Blanca Mountains. The southern end of the fault is defined by a releasing step with several northeast-trending cross faults that separate it from the Laguna Salada fault (Dawson et al., 2008). Paleoseismic studies of the Coyote Mountains segment suggest that three earthquake events have occurred within the last 2,000 years (Rockwell, 1990; Dawson et al., 2008).

San Jose Fault

The San Jose fault is located north of the City and extends approximately 20 kilometers from south side of the San Jose Hills northeast to near Claremont (Figure S-1). Available data suggests the fault dips steeply to the north with a reverse sense of fault displacement (i.e., north side up). The California Department of Water Resources indicates that the San Jose fault is well defined based on the presence of a groundwater barrier and suggests that the San Jose fault offsets "older alluvium" approximately 100 meters in the subsurface. However, Holocene deposits are not offset by the fault (CA DWR, 1970), indicating there has not been any Holocene activity.

Puente Hills Blind Thrust (PHT)

The Puente Hills Blind Thrust (PHT) is a north dipping thrust that extends approximately 40 kilometers east across the Los Angeles basin from downtown Los Angeles to Brea. A blind thrust fault is a buried fault, the surface of which does not break the surface. The fault is manifested at the surface by series of folds above the fault surface including the Montebello Hills and west and east Coyote Hills. The fault is subdivided into three segments: Los Angeles, Santa Fe Springs, and Coyote Hills (Shaw et al., 2002). Dolan et al. (2003) document at least four large earthquakes (i.e., magnitude 7.2 to 7.5) in the past 11,000 years. The 1987 M6.0 Whittier Narrows earthquake occurred on the Puente Hills Thrust (Shaw and Shearer, 1999).

Sierra Madre-Cucamonga Fault Zone

The Sierra Madre-Cucamonga Fault Zone is located along the boundary between the southern margin of the San Gabriel Mountains and the northern portions of the San Fernando and San Gabriel valleys (Figure S-1). The Sierra Madre-Cucamonga Fault Zone extends approximately 95 kilometers from near Interstate 405 in the San Fernando Valley to Lytle Creek. The Sierra Madre-Cucamonga Fault Zone is a major reverse fault in southern California. Historic fault rupture occurred along approximately 19 kilometers of the Sierra Madre-Cucamonga Fault Zone between about Big Tujunga Canyon and Dunsmore Canyon during the February 9, 1971 M6.4 San Fernando Earthquake (Crook et al., 1987; Rubin et al., 1998). Holocene fault rupture has been documented along the eastern portion of the fault zone from approximately San Antonio Creek to Lytle Creek.

San Jacinto Fault Zone

The San Jacinto fault zone is located east of the City of Chino Hills and is one of the most seismically active faults in California. The fault zone extends approximately 250 kilometers from the area near Cajon Pass where the San Jacinto fault joins the San Andreas fault south to the Imperial Valley. This fault has a right-lateral, strike-slip sense of movement (Cao et al., 2003).

The San Jacinto fault zone is divided into eight segments based on fault geometry, historical seismicity, and slip rate data. The segments of the San Jacinto fault zone are: San Bernardino Valley, San Jacinto Valley, Anza/Clark, Coyote Creek, Borrego Mountain, and the sub-parallel Superstition Mountain and Superstition Hills segments (WGCEP, 1988; Dawson et al., 2008).

San Bernardino Valley Segment (SBV)

The San Bernardino Valley segment extends approximately 35 to 40 kilometers from the northern terminus of the San Jacinto fault zone at the San Andreas fault to the northern San Jacinto Valley. Paleoseismic studies of the San Bernardino Valley segment at the Walnut trench site suggest that six earthquake events have occurred within the approximately 1,000 year long interval between 3,000 and 4,000 years ago. Fault trenches excavated at a site near Colton, California suggest that two earthquakes have occurred within about the last 300 years (Fumal and Kendrick, 2008).

San Jacinto Valley Segment (SJV)

The San Jacinto Valley segment begins at a restraining bend at the northern end of the San Jacinto Valley and extends approximately 40 to 45 kilometers from along the east side of the Hemet releasing stepover. The Casa Loma fault located on the west side of the releasing stepover is part of the Anza segment. There are no paleoseismic data available to identify paleo-earthquake events or the age of the most recent surface rupture event on this segment of the San Jacinto fault. However, the fault has been a source of significant earthquakes during the historic period (Dawson et al., 2008). Two significant earthquakes occurred in 1899 (M6.9) and 1918 (M 7.1) that were located on or near the San Jacinto Valley segment (Bakun, 2006). The timing of the most recent event is uncertain for this segment of the fault because surface rupture was not documented for either of these earthquakes. However, surface rupture could have occurred along the Claremont section of the fault because this fault strand was not investigated following the 1918 earthquake (Rasmussen, 1982).

Anza/Clark Segment (A)

The Anza/Clark segment extends south from the Hemet releasing stepover for a distance of approximately 110 kilometers. The southern 50 kilometers of the Anza segment is also known as the Clark fault. This section of the fault parallels the Coyote Creek segment to the west. The area between the Clark section and the Coyote Creek segment includes numerous cross faults and other structures that accommodate slip between these two segments of the San Jacinto fault. Paleoseismic data obtained from the Hog Lake trench site reveals at least 16 paleo-earthquake events have occurred during the past 3,500 to 4,000 years ago. The most recent earthquake event along the Anza/Clark segment occurred between approximately 1750 and 1800 A.D. (Rockwell et al., 2006).

Coyote Creek Segment (CC)

The Coyote Creek segment is approximately 40 kilometers long and is located west of and parallel to the Clark section of the Anza/Clark segment discussed above. The southern end of the Coyote Creek segment is located at the northern terminus of the rupture zone associated with the 1968 Mw 6.5 Borrego Mountain earthquake. No paleoseismic data regarding paleo-earthquakes or recurrence interval are available for this segment (Dawson et al., 2008).

Borrego Mountain Segment (BM)

The Borrego Mountain segment is defined by the extent of faulting rupture observed after the 1968 Mw6.5 Borrego Mountain earthquake. The 1968 Mw6.5 Borrego Mountain earthquake ruptured approximately 31 kilometers of the San Jacinto fault. A maximum of 38 cm of right-lateral surface offset was recorded after this earthquake.

Superstition Mountain Segment (SM)

The Superstition Mountain segment of the San Jacinto fault zone extends south for a distance of approximately 24 kilometers from the southern end of the 1968 Borrego Mountain rupture to the end of the mapped trace (Gurrola and Rockwell, 1996; Cao et al., 2003). The Superstition Hills fault is located east of and sub-parallel to the Superstition Mountain fault and extends approximately 13 kilometers farther south than the Superstition Mountain segment. The Superstition Hills fault is the southern-most mapped trace of the San Jacinto fault zone (Dawson et al., 2008). No paleoseismic data regarding paleo-earthquakes or recurrence interval are available for this segment (Dawson et al., 2008).

<u>San Andreas Fault Zone</u>

The San Andreas fault extends southeast from where the fault joins the Kings Range Thrust and Mendocino Fault Zone approximately 1,300 kilometers to the Gulf of California. The San Andreas fault is one on the most active faults and has the highest measured slip rate in California. The San Andreas fault is the only known source of Magnitude 8 earthquakes in southern California. The predominant sense of movement along the San Andreas fault is right-lateral, strike-slip (Weldon et. al., 2008). The San Andreas fault has been subdivided into the northern and southern sections. In southern California, the fault zone has been divided into 10 segments: the Parkfield (PK), Cholame (CH), Carrizo (CC), Big Bend (BB), Mojave north (NM), Mojave south (SM), San Bernardino north (NSB), San Bernardino south (SSB), San Gorgonio- Garnet Hill (BG), and Coachella (CO) (Wills, et al., 2008). Only the southern nine fault segments from the Cholame segment south have a significant influence on seismic hazards in the city.

Ground Shaking Discussion

The city is located within a seismically active area of southern California and may be subject to future strong ground shaking on near- and/or far-field sources. Earthquake shaking is likely the seismic hazard with the greatest potential risk to loss of life and/or property within the city. The loss of life and/or property can be reduced by designing projects in accordance with the most recent versions of building codes and standards like the California Building Code (CBC) and the American Society of Civil Engineers Standard (ASCE) No. 7-Latest Adoption.

Although a great deal is known about where earthquakes are likely to occur, there is currently no reliable way to predict when an earthquake will occur in any specific location. Scientists study the past frequency of large earthquakes in order to determine the future likelihood of similar large earthquakes. Based on the number of historic earthquakes and known active faults in the vicinity of the city, ground shaking will affect the city again in the future (WGCEP, 1995). The eastern portion of the city is underlain by alluvial sediments that may be saturated. These sediments would likely be subject to ground amplification (ground shaking is typically less severe on rock than on alluvium) in the event of an earthquake occurring on one of the major active faults in the vicinity of the city including the Elsinore, Chino, Puente Hills, San Jacinto, San Andreas, or Cucamonga faults.

The historic record of moderate to strong earthquakes in southern California extends back to the Mission era (late 18th century). There have been approximately 10 historic earthquakes with magnitudes greater than approximately 5 that have resulted in moderate to strong damaging earthquake ground motions in the vicinity of the city. Historical earthquakes are described in the following paragraphs.

1812 Wrightwood Earthquake

An estimated magnitude 7.5 earthquake occurred on the morning of December 8, 1812, along the San Andreas fault in the Wrightwood area. The earthquake ruptured approximately 105 miles of the ground surface. Forty Native Americans were killed at Mission San Juan Capistrano while attending mass when the church collapsed.

1857 Fort Tejon Earthquake

One on the largest earthquakes ever recorded in the United States occurred on January 9, 1857, along the southern San Andreas fault. The 1857 Fort Tejon earthquake was estimated at a magnitude of 8.0. The earthquake ruptured approximately 220 miles of the San Andreas fault from Cholame on the north to the Cajon Pass area on the south. Offset along the fault rupture resulted in an average fault offset of approximately 15 feet and a maximum of approximately 30 feet near Wallace Creek on the Carrizo Plain. Strong ground shaking caused by the earthquake was reported to have lasted for more than one minute.

1899 Cajon Pass Earthquake

An estimated magnitude 5.7 earthquake occurred on July 22, 1899 in the area of Cajon Pass. The earthquake occurred on an unknown fault somewhere near Lytle Creek and Cajon Pass. This earthquake triggered landslides that blocked Lytle Creek Canyon Road and the road through Cajon Pass. Damage to buildings was reported in San Bernardino and Highland.

1987 Whittier Narrows Earthquake

The magnitude 6.0 Whittier Narrows earthquake occurred at approximately 7:42 AM on October 1, 1987. The Whittier Narrows earthquake occurred along the Puente Hills Blind thrust (Shaw and Shearer, 1999). The earthquake caused three direct fatalities and over $358 million in damage (Hauksson et al., 2008). The ShakeMap data reveal Modified Mercalli Intensity (MMI) shaking up to approximately MMI VII or VIII in the epicentral region (Hauksson, 1994). ShakeMap data generated by the United States Geological Survey (USGS) indicate MMI shaking between approximately MMI V to MMI VI in the vicinity of the City of Chino Hills.

1988 and 1990 Upland Earthquakes

On June 26, 1988, a magnitude 4.6 earthquake occurred along the San Jose fault, about 2 miles (3 kilometers) northwest of the City of Upland. The earthquake caused minor damage in the epicentral area. On February 28, 1990, a magnitude 5.2 earthquake occurred along the San Jose fault in the same area. This earthquake caused landsliding in the Mount Baldy area, and it caused some damage to the San Antonio dam. Thirty-eight people sustained minor injuries and damage was considerable near the epicenter (Hauksson and Jones, 1991).

1991 Sierra Madre Earthquake

On June 28, 1991, a magnitude 5.8 earthquake occurred along a 4 kilometers segment of the Clamshell-Sawpit fault north of the City of Monrovia, approximately 26 miles (41 kilometers) northwest of the City of Chino Hills. The earthquake caused substantial damage in communities of the northern San Gabriel Valley. The ShakeMap data generated by the USGS reveal Modified Mercali Intensity (MMI) shaking up to approximately MMI VII in the epicentral region (Hauksson, 1994). ShakeMap data in the vicinity of the City of Chino Hills indicate MMI shaking between approximately MMI V to MMI VI.

1992 Landers and Big Bear Earthquakes

At 4:57 AM on June 28, 1992, the magnitude 7.3 Landers earthquake struck in the Desert Region near the communities of Yucca Valley, Joshua Tree, and Landers. The earthquake produced a 53-mile (85 kilometer) long surface rupture extending from about 9 miles (15 kilometers) south of Yucca Valley to about 25 miles (40 kilometers) north of Landers. Ground surface

rupture occurred along several faults including the Johnson Valley fault, the Landers fault, the Homestead Valley fault, and the Camp Rock-Emerson faults. The average slip on the ground surface rupture was 10 to 13 feet (3 to 4 meters) with a maximum slip of about 20 feet (6 meters). The epicenter of the earthquake was located about 3.5 miles (6 kilometers) north of the community of Yucca Valley. ShakeMap data in the vicinity of the City of Chino Hills indicate MMI shaking between approximately MMI V to MMI VI.

Approximately 3 hours later, at 8:05 a.m., the magnitude 6.4 Big Bear earthquake struck in the mountains near Big Bear. The Big Bear earthquake occurred on a separate, previously unknown northeast trending left-lateral strike-slip fault that intersects the Camp Rock-Emerson faults. It appears that the Big Bear earthquake was triggered by movement on the Camp Rock-Emerson faults during the Landers Earthquake. The Big Bear earthquake did not produce a surface rupture and no trace of the fault with the proper orientation has been found. Collectively the quakes caused one death, over 400 injuries, and around $100 million in damage to property, roads, and water systems.

1994 Northridge Earthquake

The magnitude 6.7 Northridge earthquake occurred at approximately 4:30 AM on January 17, 1994. The Northridge earthquake occurred along the Northridge Blind Thrust located beneath the San Fernando Valley (Huftile and Yeats, 1996). The earthquake caused $35 billion in damage (Shaw and Shearer, 1999). ShakeMap data in the vicinity of the City of Chino Hills indicate MMI shaking up to approximately MMI VI.

1999 Hector Mine Earthquake

On October 16, 1999, a magnitude 7.1 earthquake ruptured portions of the Lavic Lake and the Bullion faults. The earthquake rupture was approximately 25 miles long and produced approximately 16 feet of right-lateral offset. The earthquake was centered approximately 34 miles northwest of Twentynine Palms, California. The ShakeMap data generated by the USGS reveal MMI shaking between approximately MMI IV to MMI V in the vicinity of the City of Chino Hills.

July 29, 2008 Unnamed Earthquake

A magnitude 5.4 earthquake occurred on July 29, 2008, with an epicenter located approximately 3.9 miles southwest of Chino Hills City Hall. Although damage was minimal, strong ground shaking was felt widely throughout southern California. The earthquake occurred at a depth of approximately 15 kilometers. Two aftershocks with M>3 occurred in the following two hours. The mainshock and aftershock sequence occurred at a depth between 13 to 16 kilometers between the Whittier and Chino faults. It is unclear from the available data which fault is the causative fault due to the limited aftershock distribution (Hauksson et al., 2008). The earthquake

intensity data available at the ShakeMap website indicate the strongest shaking was recorded in the Diamond Bar area north of the City of Chino Hills. The ShakeMap data reveal MMI shaking varied between approximately MMI V to MMI VI in the City of Chino Hills.

Surface Fault Rupture

The potential for surface fault rupture exists in the city along the trace of an active or potentially active fault. The potential for surface fault rupture to impact life or property in the city is associated with the Chino fault (Figure S-3). Although the Chino fault has not ruptured within historic time, the paleoseismic studies reveal the fault has experienced surface fault rupture within the Holocene period (i.e., approximately the last 11,000 years). The California Geological Survey (CGS) established an Alquist-Priolo Earthquake Fault Zones around the Chino fault on May 1, 2003. A generalized map illustrating the Chino fault and Alquist-Priolo Earthquake Fault Zone is presented on Figure S-3. The Alquist-Priolo Earthquake Fault Zone map for the Chino fault is only intended to serve as a guide in determining the general locations of earthquake fault zones and is not suitable for local planning and site selection. It should be noted that the Alquist-Priolo Earthquake Fault Zone map may not be up-to-date since the CGS frequently updates maps as new data becomes available.

The Alquist-Priolo Earthquake Fault Zones map can be reviewed at:

- Department of Conservation/California Geological Survey, Southern California Regional Office, 320 West 4th St., Suite 850, Los Angeles, CA 90013, Phone: 213-239-0878
- City of Chino Hills Community Development Department, 14000 City Center Drive, Chino Hills, CA91709
- https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps

Electronic versions of Alquist-Priolo Earthquake Fault Zones maps in both PDF or GIS formats can be requested from:

- Department of Conservation/California Geological Survey, Southern California Regional Office, 320 West 4th St., Suite 850, Los Angeles, CA 90013, Phone: 213-239-0878
- https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps

Liquefaction

Liquefaction is a soil strength and stiffness loss phenomenon that typically occurs in loose, saturated cohesionless soils as a result of strong ground shaking during earthquakes (Pradel, 1998; Pyke, 2003; Youd et. al, 2001). The potential for liquefaction at a site is usually determined based on the results of a subsurface geotechnical investigation and the groundwater conditions beneath the site. Hazards to buildings associated with liquefaction include bearing capacity failure, lateral spreading, and differential settlement of soils below foundations, which can contribute to structural damage or collapse (Seed, 1979; Seed and Idriss, 1971; Tokimatsu and Seed, 1987).

The California State Legislature passed the Seismic Hazards Mapping Act (SHMA) in 1990 (Public Resources Code Division 2, Chapter 7.8) as a result of earthquake damage caused by the 1987 Whittier Narrows and 1989 Loma Prieta earthquakes. The purpose of the SHMA is to protect public safety from the effects of strong ground shaking, liquefaction, landslides, or other ground failure, and other hazards caused by earthquakes (CGS SP117). The majority of the City of Chino Hills is not mapped within a seismic hazard zone based on review of currently published maps available on the CGS website. However, review of the CGS website indicates that seismic hazard zone mapping of the City of Chino Hills is planned in the future.

Portions of the city may be underlain by loose, saturated alluvial materials subject to liquefaction. Areas considered most susceptible to liquefaction include the low-lying areas in the eastern portion of the city within the Chino Basin and canyon areas in Chino and eastern Puente Hills, as shown on Figures S-4 and S-5. Development of sites within these areas should include site-specific liquefaction studies as part of a geotechnical engineering investigation. At a minimum, the liquefaction studies should be performed in accordance with the most recent versions of CGS SP117 and the Southern California Earthquake Center Guidelines for Implementation of SP117.

Vulnerability of the City of Chino Hills to Seismic Hazards

Most injuries and property damage from a major earthquake impacting the city will be caused by strong ground motion, especially structural and non-structural damage to buildings. The City of Chino Hills is developed mostly into low-density and medium-density residential zones. Less extensive areas are devoted to low-rise commercial development. Low-rise buildings (less than three stories) common in the city are more likely to be damaged by an earthquake on a nearby source, such as the Chino or Whittier fault segments.

Residential Development

The wood-frame construction used in the residential and some commercial development in the city generally performs well during earthquakes. These buildings may experience significant structural and non-structural damage, but rarely collapse. However, wood-frame structures with split-level or irregular floor plans can be subject to torsional racking of foundation and wall elements during earthquakes of intensities of MMI = VIII or greater. Split-level houses are also susceptible to damage caused by the weakness of pole platforms or structures used to support the structure. Vertical changes in strength are termed "soft-stories" and are also manifested in other types of construction.

Single-family residences built before the 1952 Building Code was implemented are more likely to slip off their foundations as a result of strong ground motion associated with near-field earthquakes. Mobile homes are also susceptible to slipping off their foundations and should be secured.

Commercial and/or Industrial Development

Buildings using tilt-up concrete walls are found in some commercial development in Chino Hills. Roof collapse has been observed in some pre-1971 commercial buildings using this type of construction. Concrete and steel-framed buildings are more earthquake-resistant forms of commercial construction and should be encouraged. Unusual architectural features such as long spans, minimal amount of interior shear walls, or irregular shapes may also be found in commercial development and should be viewed with caution as they may be more susceptible to damage during an earthquake.

Critical Facilities

Critical facilities must remain operational after an earthquake; facilities that pose unacceptable risks to public safety if severely damaged are also of critical concern. Essential facilities, such as hospitals, fire and police stations, emergency centers, and communication centers, are needed during an emergency. High-occupancy facilities, such as churches and multi-family residential complexes, as well as dependent care facilities, such as schools, and senior living facilities, are also considered critical facilities and should be designed and prepared as such.

It is important to ensure that critical facilities designed for human occupancy possess no structural weaknesses that can lead to collapse. It should be noted that the State of California has jurisdictional responsibility to ensure that public schools are adequately constructed to seismic standards (Field Act, 1933; Garrison Act, 1969).

Any multi-story development or development of critical facilities planned to be constructed in the city should be built to the latest Building Code specifications and any additional criteria

stipulated by pertinent governing agencies and should include site-specific seismic hazard analyses per current State requirements, particularly for areas identified as having moderate to high susceptibility to liquefaction, as shown on Figure S-4.

Unreinforced Masonry Buildings

There are no known unreinforced masonry structures in the City of Chino Hills (Winston Ward, personal communication, 2022).

Nonstructural Hazards

Nonstructural damage is perhaps the largest expected source of injury in an earthquake. Buildings with exterior non-structural details such as cornices and parapets pose hazards to the public if not properly secured. Toppled furniture, interior equipment and decor items pose additional hazards. In structures where continued function is necessary (i.e., critical facilities such as fire stations and City Hall), special efforts should be made to ensure that communication equipment and emergency generators are not damaged during an earthquake.

Issues and Opportunities – Seismic Hazards

1. The primary seismic hazard in the City of Chino Hills is severe ground shaking as a result of an earthquake on any of several nearby seismically active faults. The simultaneous occurrence of earthquake-induced landslides, fire, isolated structural damage and impaired utility service caused by strong ground motion require adequate emergency response plans.

2. A magnitude 6.8 earthquake on the Chino fault could generate seismic intensities in the VIII to IX range on the MMI Scale within the city. This earthquake would cause the most damage in the eastern parts of the city, adjacent to the Chino fault, and in other low-lying areas susceptible to liquefaction. This fault also poses a potential surface rupture hazard.

3. A magnitude 7.3 earthquake on the Whittier segment of the Elsinore fault zone could generate seismic intensities in the VII to VIII range in the city. This earthquake would impact the western portions of the city.

4. The San Jacinto fault is considered to be one of the most seismically active faults in the region. Ground accelerations generated by this fault zone should be considered in planning and design of future developments within the city. Additional faults listed in Table S-2 should also be considered in accordance with current Building Codes and industry standards for seismic hazard analyses.

5. The seismic design and constructions standards contained in the California Building Code (CBC) should be applied to any conventional development in the city. Site-specific geologic

and seismic studies need to be conducted prior to the design and construction of a critical facility.

6. New construction within the city should adhere to safe design practices. Coordination between the property owner, architect, and structural engineer should be ongoing during the design process to eliminate design flaws. City building inspectors should review critical facilities and high-occupancy residential and commercial projects with consideration to the following:

    a. Symmetrical, concrete, and steel-framed commercial buildings have greater resistance to earthquake damage and should be encouraged.
    b. Irregularly shaped buildings are more difficult to design to withstand strong ground motions and are therefore more susceptible to damage during an earthquake and should be discouraged.
    c. Buildings with adverse discontinuities in strength between major structural elements, such as soft-story buildings, have increased susceptibility to earthquake damage and should be discouraged.
    d. Commercial pore-cast tilt-up construction must have adequate diaphragms (the horizontal bracing system that transmits horizontal forces to vertical-resisting components) and adequate tie-ins or connections between structural components to prevent roof collapse.
    e. Non-structural elements must not block exit routes or constrain rescue operations if damaged or unseated during an earthquake.
    f. Stairways and elevators should be adequately strengthened and nonstructural components such as emergency generators, computers and furniture should be anchored or braced.

7. Earthquake damage to wood-frame, single-family residential structures from near-field sources is expected to be slight to moderate and limited to walls thrown out of plumb, fallen chimneys, and torsional racking of foundation and wall elements. Houses built prior to 1952 and mobile homes may not be adequately anchored and could experience shifting off their foundations during an earthquake. Information regarding the benefits and procedures for correcting structural and nonstructural hazards in private dwellings should be made available as part of a voluntary seismic upgrading program.

8. The city should consider conducting a structural inventory of pre-1973 commercial facilities in the city to identify possible design weaknesses such as soft-story structures or tilt-up concrete construction. It is understood that very few older commercial structures exist in the city (Winston Ward, personal communication, 2022).

9. The Chino fault along the eastern portion of the City of Chino Hills has been identified as an Alquist-Priolo Special Studies Zone (CGS, 2003). Any proposed development within the limits of the Special Studies Zone should comply with the requirements of the Alquist-Priolo Earthquake Fault Zoning Act. Other faults associated with the Chino fault, or the Whittier segment of the Elsinore fault zone, should also be considered active.

10. Fault zones should be clearly identified on parcel maps to increase public awareness of fault rupture hazards.

11. Several areas along Chino Creek and in the canyon bottoms that drain the city may have a moderate to high susceptibility to liquefaction. Site-specific studies to address the potential for liquefaction should be required for new construction projects in the city.

12. The Chino Valley Independent Fire District operates three fire stations in the City of Chino Hills. These are located at 5551 Butterfield Ranch Road, 16231 Canon Lane, and 13707 Peyton Avenue. It is possible only emergency response personnel on duty at the time of a significant earthquake will be available during the first 6 hours, with mission capability possible in 24 hours (San Bernardino County Fire, 2018). Simultaneous evacuation of high-occupancy structures and the occurrence of earthquake-induced fires in the city could tax the Fire District's manpower resources.

13. Water pipelines can be damaged by surface rupture, liquefaction, landslides, or high-frequency seismic waves if significant vertical or horizontal displacements of the ground occur (O'Rourke and Lane, 1989). Breaks in water distribution pipelines can result in significant reductions in water pressure that can negatively impact post-earthquake fire suppression efforts. Water reservoirs in the city are generally adequate to provide at least a two-day supply of water (City of Chino Hills, 2022). Lake Los Serranos, Arnold Reservoir, other smaller ponds and swimming pools in the city can also be used as water sources for fire-suppression if necessary.

14. Electricity for the City of Chino Hills is provided by Southern California Edison. High frequency ground motions associated with a near-source earthquake can seriously disrupt the electricity supply network (Hayes, 1987; Toppozada et al., 1988). In the event of a major earthquake in the area, residents should be prepared to be without electricity for at least 24 hours with service possibly not fully restored for thirty days or more (San Bernardino County Fire, 2018).

15. Damage to computer switchboards and disruption to electricity will impair emergency communications. Landline and cellular telephone systems may be overwhelmed after an earthquake. Emergency response facilities should be equipped with radio equipment capable of monitoring several frequencies. It is estimated that these radio systems will operate at about 80% effectiveness for the first 12 hours after an earthquake (City of Chino Hills,

2020). These can serve as temporary communication links with similarly equipped facilities in the area.

16. Damaged natural gas pipelines and connections may result in service disruption and possibly fire. Information about how to shut off domestic gas supply should be made available to residents. The City of Chino Hills offers Emergency Preparedness Tips on the website at https://www.chinohills.org/49/Preparedness-Tips.

17. The potential for earthquake-induced hazardous materials accidents in the city and adjacent areas must be addressed in disaster planning scenarios for the City of Chino Hills. Hazardous materials issues are discussed further in the City of Chino Hills Hazard Mitigation Plan (2020).

Geologic Hazards

The City of Chino Hills is located in the eastern Puente Hills, in the northern portion of the Peninsular Ranges geomorphic province. The Peninsular Ranges province is characterized by a series of northwest to southeast-oriented valleys, hills, and mountains separated by faults associated with, and parallel to, the San Andreas fault system (Norris and Webb, 1990). Two of these faults, the Chino fault and the Whittier segment of the Elsinore fault system, are located within or close to the city of Chino Hills. These faults and the geologic units that underlie the city of Chino Hills generally control the potential geologic impacts discussed below.

The hilly portions of Chino Hills are underlain primarily by bedrock of the Puente Formation (Morton and Miller, 2006). This bedrock formation was deposited between 6 to 11 million years ago during a period when the area was submerged under the ocean. Approximately 2 to 3 million years ago, the continent began to rise and the ocean dropped, while a complex process of faulting and folding caused the uplift of the Puente Hills area and the city of Chino Hills. The bedrock materials of the Puente Formation have been folded and faulted within the Puente Hills such that bedding inclinations now range from gentle to steeply dipping (i.e., 10 to 70 degrees) with numerous folds of varying scales and axis orientations. In its entirety, it is estimated the Puente Formation is approximately 13,000 feet thick within the Chino Hills area.

The Puente Formation is divided into three members within the city of Chino Hills: the Sycamore Canyon member, Yorba member, and Soquel member (Morton and Miller, 2006). The Sycamore Canyon member of the Puente Formation, the youngest member, generally consists of thickly bedded sandstone and pebbly conglomerate with lesser amounts of siltstone and siliceous siltstone. The Yorba member generally consists of predominately thinly bedded siltstone, sandy siltstone, and siliceous siltstone, with scattered to rare claystone beds. The Soquel member, the oldest member of the formation, generally consists of well-bedded graded sandstone with interbedded siltstone.

The Topanga Formation is exposed within the southeastern portion of the city, adjacent to the Horseshoe Bend area of the Santa Ana River, within the Chino Hills State Park. The Topanga Formation was deposited about 15 million years ago, and generally consists of massively bedded sandstone and conglomerate with interbeds of siltstone and minor claystone. In addition to outcropping in the southeastern portions of the city, the Topanga Formation generally underlies the Puente Formation in the Chino Hills area.

Surficial sediments overlie bedrock in the lower portions of the city, particularly within canyons and at the eastern base of the Chino Hills. These sediments include very old alluvial soils to recent alluvial soils, slopewash and channel deposits, as well as landslide deposits. These sediments have been deposited over the past 2 million years as ancient stream channels have eroded the Chino Hills to their current topographic expression. Generally, the older surficial deposits are semi-consolidated, and consist of sands and silts with some clay. Younger surficial deposits may consist of coarser materials and are generally unconsolidated. Landslide deposits are generally comprised of the source materials that failed, such as bedrock or weak surficial soils on slopes.

Landslides and Slope Instability

A landslide is defined as a mass of rock or soil that has been displaced downslope by sliding, flowing, or falling. Slope failures can occur very rapidly on steep slopes or imperceptibly slowly on gentle slopes. Very slow movement of slopes is often called “slope creep” and is common on manufactured slopes and natural steep slopes. Factors that influence the stability of a slope include the characteristics of the rock and soil materials that make up the slope, moisture conditions, rainfall intensity, steepness of the terrain, geologic structure, and human influences (such as irrigation, grading, etc.).

The bedrock of the Puente Formation is often intensely fractured and folded and, therefore, relatively weak. Most large landslides in the Puente Hills area are thought to have occurred between 10 to 20 thousand years ago, when the regional climate was significantly wetter than today (Fife, et al, 1976; Tan, 1988). These landslides can be in delicate equilibrium with their environment and can be reactivated during periods of intense rainfall, if subjected to strong ground motions during an earthquake, or as a result of slope modifications by either man-made or natural conditions.

Increased water content in a slope can contribute to slope instability by increasing the weight of the soil materials on the slope, by softening planes of weakness such as bedding planes or faults, or by increasing the pressure exerted by water in the pores of the soil (pore pressure). Excessive rainfall or irrigation can saturate the soils on a slope, contributing to slope failure. Water introduced to a slope as a result of broken water or sewer lines or natural flooding can also cause slope instability problems. In general, water is the dominant trigger of slope failures and landslides.

Slope modification as a result of road construction and urban development can also render slopes unstable due to adverse geologic conditions. Many of the slopes in the Chino Hills area could be rendered unstable during or after grading due to exposure of adverse geologic conditions including folded or faulted bedrock. Failures are particularly likely on slopes underlain by the Yorba and Sycamore Canyon members of the Puente Formation (Yerkes, 1972; Tan, 1988). In order to mitigate this potential hazard, detailed geotechnical studies must be conducted prior to development in hilly portions of the city. These geotechnical studies should be completed per applicable Code and State standards as well as current geotechnical industry standards.

The results of the geotechnical studies should be utilized to modify the grading plans to mitigate unstable slope conditions and stabilize any existing landslides or unstable slopes.

In order to identify and evaluate the potential for landsliding within the city, a relative landslide susceptibility map for Chino Hills is provided as Figure S-6, based on the work of Tan (1988). The slopes within the city are classified into four susceptibility areas, as described on the figure, ranging from least susceptible to most susceptible (Areas 1 through 4, Figure S-6), and are based on the following criteria:

1. The occurrence and distribution of landslides and features indicative of slope instability;
2. Geology of the area including bedrock type, engineering properties of the bedrock materials as they relate to slope instability, and data on bedding, folding, and faulting; and
3. The relative behavior of the slopes within the area based on a review of aerial photographs and field observations.

Given that these mapping classifications are based on regional data, site-specific investigations are still necessary to determine potential slope instability problems for proposed developments. Development projects must identify and address landslide susceptibility as a condition of project approval in landslide hazard areas or as required by the City Geologist, including site-specific stability analyses and reports for all slopes, staff review of slope instability areas shown on seismic or geologic maps or other in-house data, and/or staff field checks. Due to the potential relationship between seismic activity and landsliding effects, the City shall require that a seismic analysis be included as a part of landslide stability studies when required by the Engineering Department.

Earthquake-Induced Landsliding

Earthquake-generated strong ground motions can worsen existing unstable slope conditions. Typical earthquake-induced landslides in the terrain of the Chino Hills area could include rotational slumps, rock falls, shallow slumps, and slides commonly associated with moderate to steep road cuts and natural slopes. If the slope materials become saturated, strong ground

motions could also trigger mudslides and mudflows. Properly designed and constructed engineered slopes will generally perform well during an earthquake.

Storm-Induced Landsliding and Erosion

Heavy rainfall often triggers surficial sliding (debris flows and mudflows) along the sides of canyons and on steep slopes. Hill slopes composed of Puente Formation blanketed with topsoil and colluvium are more susceptible to erosion if not properly planted.

The current California Building Code (CBC, 2019) provides guidelines that may reduce the potential for erosion of cut and fill slopes, including appropriate plantings, slope maintenance and construction of erosion control devices. Older hillside areas of the city developed prior to implementation of the current CBC may not have benefited from such protection, and consequently could experience a greater likelihood of storm damage.

Natural canyons and other hillside undeveloped areas may be susceptible to storm-induced landsliding and erosion. Downslope developments or those that may be impacted by these events should be designed with appropriate erosion control and/or debris catchment devices in order to minimize damage to developments.

Subsidence from Groundwater Withdrawal

Ground subsidence resulting from groundwater extraction has been documented at several locations in California, including the Chino-Riverside, Bunker Hill-Yucaipa, and Temecula areas (Lofgren, 1971; Shlemon and Hakakian, 1992). Subsidence in these regions has typically occurred over broad areas where groundwater levels have declined as much as 150 feet over a period of decades. Ground subsidence generally occurs where deep alluvial valleys exist. Alluvium-filled canyons in the Chino Hills area generally contain less than 200 feet of alluvium overlying consolidated bedrock of the Puente Formation. Therefore future subsidence due to groundwater withdrawal is not anticipated to occur in the City of Chino Hills (Lofgren, 1971).

Collapsible and Expansive Soils

Soils can collapse or expand for a variety of reasons, including the type of soil or presence of water. Low-density soils such as recently deposited river sediments can settle if subjected to the heavy loads associated with building foundations. These soils may also settle if compacted during an earthquake when water is extruded from the soil as a result of strong ground-shaking, and the particles are compressed together.

Granular soils, such as sands and gravel held together by clay or another water-soluble binder, can compact or densify if the clay is washed away by infiltrating water. This process is called hydrocompaction. The change in volume that results when soils densify can cause extensive damage to building foundations, infrastructure (such as roads, bridges etc.) and utilities. Therefore, potentially compressible soils need to be identified during the preliminary geological investigations for a proposed project or development so that mitigation measures can be selected and applied. The sandy alluvial deposits located within the major drainages traversing the City of Chino Hills may be susceptible to consolidation and hydrocompaction. Bedrock of the Puente Formation generally has a low settlement potential.

Soil settlement can also occur in the eastern side of the city in the area where clay was previously mined. If the open pits left behind from the clay mining operation are backfilled with fill soils that are not compacted under the supervision of a geotechnical engineer, settlement could occur.

Expansive soils are soils with a significant amount of montmorillonitic clay, a mineral that has the ability to shrink and swell as the water content changes (Mathewson, 1981). When changes in the environment result in a change in the moisture content of these clays, the soils change volume. Changes in volume of these soils can be brought on by seasonal changes in rainfall or changes in irrigation. Vegetation, especially large trees planted near a foundation, can also cause significant changes in soil volume as the trees withdraw water from the surrounding soil. Poor drainage around a structure can also result in localized swelling. The change in soil volume brought about by these processes can cause extensive damage to structures built over these soils. Differential expansion or settlement along the edges of a building foundation can also cause extensive structural damage. In the United States, expansive soils cause more damage in dollars to highways, streets and buildings than other natural disasters such as earthquakes, floods, and tornadoes combined (Mathewson, 1981).

Most surface soils in the City of Chino Hills have a moderate to low shrink-swell potential (Woodruff and Brock, 1980). However, some soils formed in place from weathering of clay-rich units of the Puente Formation have a high shrink-swell potential. The distribution of these surface soils in the city is shown on Figure S-7. The Puente Formation locally contains layers of volcanic ash that weather to highly expansive clays. These ash layers could be exposed during grading. To mitigate the hazards posed by soils with a high shrink-swell potential, geotechnical studies should be conducted on a site-by-site basis to evaluate the expansion potential of the soils at or near the proposed grade of a project.

Reactive Soils

Reactive or corrosive soils have chemical properties that can disintegrate or corrode metal pipes and concrete. Corrosive soils include soils with either low (less than 3) or high (greater than 9) pH values and low resistivity, and soils rich in sulfates. Soils with high concentrations of sodium, magnesium, or calcium sulfate can react chemically with the hydrated lime in cement and

disintegrate permeable concretes that have a high water-to-cement ratio. Geotechnical engineers routinely conduct sulfate analyses of soils as part of geotechnical investigations. The impact of sulfate-rich soils on concrete can be mitigated by using special cement mixes that include additives to reduce the permeability of the concrete and by paying careful attention to the mix design, quality control, and curing of the concrete. Soils in the Chino Hills area generally are potentially corrosive to ferrous metals and severely corrosive to concrete (L. Bates, personal communication, 2022). The city currently (2020) requires a soils analysis for corrosion prior to installation of water lines, sewer mains, or storm drains. Special design and materials must be used where corrosive soils exist.

Issues and Opportunities – Geologic Hazards

This section summarizes principal issues and offers suggestions for future actions, as listed below:

1. Geologic hazards in the city of Chino Hills are controlled to a large extent by the types of rock that underlie the area. Bedrock of the Puente Formation comprises most of the hilly portions of the city. This formation has units within it that are characteristically weak and therefore prone to landsliding. Four landslide susceptibility zones have been identified within city limits.

2. In general, the landslides mapped within the city are, at present, in equilibrium with the surrounding environment. However, these landslides could be reactivated as a result of any natural or man-made processes, such as development of hillsides, earthquake-induced strong ground motion, and periods of intense rainfall.

3. Development projects that involve grading of hillsides should be planned so as to disturb the natural landforms as little as possible. It is City policy to control the overall shape, height, and grade of cut and fill slopes so that manufactured landforms are in concert with existing natural contours while preventing conditions that result in landsliding, runoff, or erosion.

4. Good grading design must balance safety and aesthetics to preserve the natural visual quality and community character. Mitigation of existing and/or potential slope problems at the site and tract level should be recommended by qualified and licensed geotechnical engineers and engineering geologists and should be based on detailed site-specific information and current grading codes.

5. Hillside management guidelines must provide for implementation along entire slope segments. To benefit from contour grading, slope cover, irrigation, and drainage/debris protection regulations, these guidelines must be applied across several properties adjoining a single slope segment. Designation of Geologic Hazard Abatement Districts (GHAD) is one

alternative for developing a comprehensive hillside plan along slope segments adjoining canyons and other hillsides in already developed areas.

6. Potentially active landslides, slopes with adverse geologic conditions, and engineered slopes can be destabilized by excessive water. Clay beds within the Puente Formation may be prone to slippage if excessive water is introduced into either an engineered slope or a natural landslide mass. To reduce the potential for activation or reactivation to occur, the introduction of water through landscaping or sewage septic systems must be minimized. This is especially true in areas underlain by either small landslides or deep-seated large landslide complexes that were too large to have been mitigated during smaller grading projects.

7. Expansive soils occur within the city of Chino Hills. Homeowners can improve long-term performance and reduce the potential damage that expansive soils can cause to houses and other improvements by maintaining or improving drainage on their properties, installing gutters, and properly landscaping their properties. Homeowners should be encouraged to plant drought-resistant vegetation on slopes, and around homes and other improvements, including replacing water-thirsty plants such as trees with more drought-tolerant varieties. In addition, irrigation of landscaped areas should be kept to a minimum where possible and care should be taken to avoid cyclic drying and wetting of expansive soils. The City of Chino Hills Municipal Code outlines the requirements for drainage and erosion control measures and expansive soils evaluation in Chapter 16.07, 16.54 and Appendix D, Article 11. Consistency in irrigation of landscaped areas is critical in areas of expansive soils, as the consistent moisture content of the soils will reduce shrinking and swelling of the materials and resultant damage to structures and improvements.

8. Recently deposited alluvial soils in canyon bottoms in the city may be susceptible to adverse settlement. Artificial fill placed without the supervision of a geotechnical engineer and not compacted to an adequate density can also settle if subjected to heavy loads, or as a result of strong ground shaking during an earthquake. These soils should be identified during preliminary geological investigations for a proposed development. In most cases, settlement of these soils can be mitigated by removing and recompacting these settlement-prone materials.

9. Natural slopes are highly vulnerable to shallow soil slippage due to saturation from heavy rains. It is vital for property owners at the top of the slope to control surface drainage from their lot and not allow surface water to flow over the slope face. In addition, all drainage, such as area drain systems, should not be outletted onto any slope.

Flood and Inundation Hazards

California Government Code Section 65302(g) requires local governments to assess the potential impact that failure of a dam or other water retention structure may pose to the community. The Safety Element must also assess the impact of flooding from storm activity, such as 1% annual chance and 0.2% annual chance floods. The potential damage posed by more frequent, smaller-scale floods that occur when storm drain systems become overburdened during strong winter storms is also addressed. These floods can damage property and hinder emergency response activities, such as evacuation and fire department access to fire hydrants.

Storm Flooding

Most rainfall in the Chino Hills area occurs in the winter months between December and March. Runoff from the city generally drains east and south, toward Chino Creek and Prado Flood Control Basin, and on to the Santa Ana River Basin. Canyons on the west side of the city, including Tonner Canyon, Carbon Canyon, Soquel Canyon and Aliso Canyon drain westward toward Los Angeles and Orange Counties. With the exception of Tonner Canyon, which drains into the San Gabriel River watershed, the remaining canyons drain into the lower reaches of the Santa Ana River Basin. All the canyons in the city are prone to seasonal flooding.

Localized flooding has occurred historically in the Chino hills area, generally when drainage facilities are too small to convey the storm flows generated from increased urbanization and paved surfaces in the area. Severe erosion along many natural channels, and debris-clogged drainages, compound the problem. Localized flooding has been known to occur in some areas of the city, notably the lowlands bounded by Pipeline, Eucalyptus and Merrill Avenues and the Chino Creek Channel, also the section of Peyton Road between Eucalyptus Avenue and Carbon Canyon Road. Sheet flooding has also occurred in the Los Serranos area north of the golf course and along portions of English Road.

Portions of the City of Chino Hills have been mapped by the Federal Insurance Administration as part of the National Flood Insurance program. The Flood Insurance Rate Maps (FIRMs) show that most of the areas mapped were designated Zone X and D (National Flood Insurance Program, 2008). Zone X covers those areas of minimal flooding. Zone D is identified as an area where flood hazards are undetermined but possible. Areas on both sides of Carbon Canyon Creek and Little Chino Creek have been classified into Zones A, AE and X (shaded). Zone A is an area with a 1% annual chance of flooding. Those portions of Zone A where the base flood elevations have been determined are classified as Zone AE. Zone X (shaded) is defined as an area with an annual chance of flooding of between 1% and 0.2%; areas subject to a 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from the 1% annual chance flood. The basic flood Zones A, D and X mapped in the City of Chino Hills area are shown on Figures S-8 and S-9. For more

detail on the areas in the city zoned AE (where the base flood elevations have been determined), the Flood Insurance Rate Maps for Chino Hills should be consulted.

Private Drainage

Many of the soils in the Chino Hills area have a high erosion potential. Erosion is not only unsightly but can destabilize adjacent slopes. The importance of installing and maintaining adequate drainage devices on developed hillside lots cannot be overstated (refer to the section on Geologic Hazards). Channeling drainage away from slopes to maintained storm drains minimizes erosion potential on graded slopes.

Property owners should inspect drains and remove any debris on a regular basis. This prevents private drain systems from clogging or overflowing which could channel water and mud downslope with the potential for damage to adjacent properties and structures. Residential drainages often connect into the larger storm drain system which empty into natural drainages such as canyon areas. Paved concrete channels or flood velocity reduction structures are sometimes necessary in natural drainages to prevent erosion caused by channeled runoff. The City of Chino Hills offers Storm Preparedness Tips on their website at https://www.chinohills.org/1172/Storm-Preparedness.

Significant hillside erosion can also occur following a wildland fire. In October 2020, the Blue Ridge Fire burned close to 14,000 acres, mostly within the City of Chino Hills and Chino Hills State Park. Debris-laden floods emanating from recently burned slopes during rainstorms can result in large amounts of sediment deposited in the channels draining the area. To mitigate this hazard, runoff from unimproved areas should be controlled and channeled to adequate drainage facilities. Erosion on slopes can be minimized by covering them with drought-resistant vegetation. Other erosion control measures that can be used to control slope erosion include riprap, gabions and concrete lining. Locating structures in the flow path of hillside gullies or swales should be prohibited unless adequate drainage and debris protection is designed into the project. Section J110.2 of the California Building Code (2019) provides specific erosion control measures, "Where necessary, check dams, cribbing, riprap or other devices or methods shall be employed to control erosion and provide safety."

Seismically Induced Inundation

Seismically induced inundation refers to flooding as a result of water retention structures failing during an earthquake. There are two reservoirs within the city limits, Arnold Reservoir (Chino Ranch No. 1 Dam) and Lake Los Serranos (Rancho Cielito Dam), and two reservoirs adjacent to or upstream from the city that could fail during an earthquake and impact the city. In addition, culverts, levees, stock ponds, and other flood control structures may crack and suffer some structural damage during an earthquake especially in areas susceptible to ground failure. These

facilities could pose an inundation hazard if they contain water at the time of the seismic event, or if they are not repaired soon after an earthquake and prior to the next rain season.

Dam Inundation

California Government Code requires reservoir owners to develop and maintain an emergency plan to be implemented in the event that the dam is catastrophically breached. Each dam-specific emergency plan includes a map that shows the potential limits of the flood that would result if the dam failed while the reservoir is at full capacity. These flooding maps are a worst-case scenario since most reservoirs and flood control structures in Southern California are rarely filled to capacity. Reservoir owners are also required to regularly inspect their dams for safety under supervision from the Department of Water Resources, Division of Safety of Dams. The possibility of inundation in the event of a catastrophic dam failure is therefore remote.

There are two small dams within the City of Chino Hills; Rancho Cielito Dam (retaining Lake Los Serranos) and Chino Ranch No. 1 Dam (retaining Arnold Reservoir) which could cause localized flooding if damaged. San Antonio Dam is located about 10 miles north of the city in San Antonio Canyon in the San Gabriel Mountains. If this dam failed while filled to capacity, the lowlands of the city could be impacted by flooding. A small portion of the city along the southeastern border would also be flooded if Prado Dam, located to the southeast of the city, failed catastrophically while full.

Each of these reservoirs is discussed in more detail below.

- Rancho Cielito Dam (or Lake Los Serranos) is an earthen dam located in the Los Serranos area. The dam was reportedly built between 1880 and 1901 (J. Greening, Jr., personal communication, 2010) although the Department of Water Resources (2021) lists it as having been completed in 1912. The 9-foot-high dam is owned by Rolling Ridge Ranch and was reportedly built to store well water for agricultural purposes. The reservoir has a capacity of 110 acre-feet (acre-foot is a measure of volume equal to 1 acre of land covered with water to a depth of 1 foot) and a dam crest elevation of 644.6 feet above Mean Sea Level (MSL) (Department of Water Resources, 2021). Water in the reservoir is generally kept to within 3 feet of the dam crest (J. Greening, Jr., personal communication, 2010). In the past, the stored water has been used to irrigate the golf course at the Los Serranos Country Club. The dam is inspected yearly by the Division of Safety of Dams (DSOD). The dam inundation map (CADWR, 2019) indicates that in the event of a breach of the dam, the area downgradient from the dam with an elevation below about 642 feet MSL would likely be inundated. Inundation waters would flow east to southeast toward the Chino Valley Freeway, where water would pond behind the freeway and subsequently flow southeastward into Chino Creek and the Prado Dam Flood Control Basin. Inundation depths are predicted to be less than 5 feet.

- Arnold Reservoir is located behind the Chino Ranch No. 1 dam. This dam is located in Tonner Canyon, in the northwest corner of the city. The 22-foot-high dam was completed in 1918 with a crest elevation of 959.5 feet MSL and a storage capacity of 137 acre-feet (Department of Water Resources, 2021). The dam is owned by the Tres Hermanos Conservation Authority (Authority), a joint powers agency with representatives from the cities of Chino Hills, Diamond Bar, and Industry, and the stored water is used for livestock. The dam inundation map (CADWR, 2020) indicates that in the event of a breach of the dam, portions of Tonner Canyon that are presently undeveloped would be inundated to depths of up to 10 feet.

Seiches

Seismically induced flooding can also occur as a result of seiches. Strong ground motion generated by an earthquake may trigger standing wave oscillation, or seiches, in enclosed or semi-enclosed bodies of water, such as lakes or reservoirs. If these seiches generate large enough amplitude, water may overflow the body of water, causing localized flooding of adjacent or downslope areas. Seiches could occur within the two reservoirs within the city, or in other enclosed bodies of water, such as swimming pools. In addition, small private reservoirs or ponds used for livestock water, wildlife management, and natural habitat preservation may be located within Chino Hills in the State Park or other ranching areas. These enclosed bodies of water may be susceptible to seiches, with resultant localized flooding.

Tank Reservoirs

There are currently 16 water tanks in the city (City of Chino Hills Urban Water Management Plan, dated June 2021) used to store water for domestic purposes. These tanks vary in storage capacity between 0.25 and 5.0 million gallons. Five of these tanks are located within the Alquist-Priolo Special Studies Zone of the Chino fault. If a moderate to strong earthquake were to occur on the Chino fault or other nearby fault, these tanks could be damaged releasing the stored water and flooding adjacent developments downslope. Strong ground motions generated by earthquakes can cause water inside the tank to slosh back and forth with great force. Historically this has been known to lift water tanks off their foundations, causing the stored water to drain out of the tank in a matter of minutes and flood the downslope area.

Above ground storage tanks should be adequately attached to the foundation and baffled to reduce the incidence of earthquake-induced structural damage. Water tanks should remain operational after an earthquake as the stored water may be necessary to suppress earthquake-induced fires in the city. Residents may also have to depend on the water stored in these tanks if the city water supply system is damaged.

Issues and Opportunities – Flood and Inundation Hazards

1. A 1% and 0.2% annual chance flood zone has been designated in portions of Little Chino Creek. Flooding in this area can impact traffic on portions of Pipeline, Eucalyptus and Merrill Avenues, Carbon Canyon Road, Peyton Drive, and the Chino Valley Freeway (State Highway 71).

2. New development or expansion of existing development adjacent to canyons increases runoff and erosion. Environmental damage and/or slope instability may result. Increased erosion of hillsides, with consequent sedimentation along natural drainages generally occurs after wildland fires such as the Freeway Complex Fire of 2008 and Blue Ridge Fire of 2020. Erosion control measures such as planting of drought-resistant, fire- retardant vegetation can be used to reduce this hazard. Environmental impact reports must address the impact that development may pose on canyon drainages. Provisions should be made to finance the installation of adequate connectors to the existing storm drain system, and to improve the existing drainage system to accommodate the increased storm flows generated by increased urbanization. The City of Chino Hills has requirements in the Municipal Code, Title 15, Buildings and Construction, and Title 16, Development, for the design and construction of these improvements.

3. Proper drainage is necessary to ensure adequate access for emergency response, fire fighting, or evacuation activities. The city should encourage correction of sheet flow or channel flow problems along existing single access routes or in areas where the existing drainage devices are inadequate. The City of Chino Hills has requirements in the Municipal Code, Title 15, Buildings and Construction, and Title 16, Development, for the design and construction of these improvements.

   Protection of structures from the threat of upslope generated debris flows should be mandated for all new developments and encouraged for all existing structures through community education and awareness. The City of Chino Hills has requirements in the Municipal Code, Title 15, Buildings and Construction, and Title 16, Development, for the design and construction of these improvements.

4. Seismically induced flooding poses a potential hazard to portions of the City of Chino Hills. If the dam forming Lake Los Serranos failed during an earthquake, the water released would flood those areas to the east and southeast of the lake at elevations below 642 feet above mean sea level. Failure of the dam impounding Arnold Reservoir would result in flooding along the presently undeveloped Tonner Canyon. The lowlands in the eastern portion of the city could be flooded if San Antonio Dam failed during an earthquake. If Prado Dam failed during an earthquake, the southeastern corner of the city could also be flooded.

5. Localized, seismically induced flooding could also occur if an earthquake generates seiches in Lake Los Serranos or Arnold Reservoir. Sloshing water may also damage many of the water tanks in the city if they are not adequately anchored to their foundations and internally baffled. The majority of water tanks in the city satisfy these requirements. Development downslope from water tanks could be flooded if water is released during an earthquake.

Hazardous Materials

Oil and Gas Wells

Petroleum and natural gas have been produced from oil fields in the eastern Puente Hills since the late 1880s. The Chino-Soquel oil field is located in the rugged area around Soquel Canyon, to the east of Sleepy Hollow (see Figure S-10). The Mahala oil field is located south of the Butterfield Ranch development in the eastern portion of the city. The Well Finder Map issued by the California Geologic Energy Management Division (CalGEM) (accessed February 2022) indicate there are many plugged oil and gas wells in the city.

Most of these wells were likely not abandoned to current CalGEM regulations. If development is planned for an area known to have plugged and/or abandoned oil wells, these wells should be inspected and if necessary re-abandoned to meet current regulations. If the property is planned for development, all wells must be slurry filled to minimize future problems. The City Planning Department is required to submit building permit applications to the Long Beach office of CalGEM if an oil well is known to have occurred in the area planned for development. If according to the CalGEM records, the wells in the area were not abandoned properly, it is the responsibility of the property owner to do so. Most wells plugged after the late 1970s were abandoned to current standards. However all applicable building permit applications still should be submitted to the CalGEM for review.

Geological investigations that address environmental issues associated with oil field operations should be conducted prior to such areas being developed. Hazards that may require remediation and mitigation could include venting of gases, petroleum-saturated soils and soils contaminated with diesel, heavy metals or other hazardous substances.

Goals, Objectives and Policies

Seismic Hazards

Many of the active faults in Southern California have the potential to generate strong ground motions in the City of Chino Hills. The San Andreas and San Jacinto faults are generally thought to have the highest probabilities of generating a moderate to large earthquake in the near future. However, the Chino fault is delineated as an active fault pursuant to the guidelines of the Alquist-Priolo Earthquake Fault Zone Act, and must be considered as the probable worst-case

scenario for the city of Chino Hills, posing the greatest seismic threat to public safety and economic welfare. It is estimated the Chino fault could generate near-field, high-frequency ground motions on the order of approximately 0.35 to 0.6g, with MMI Scale values ranging from VIII to IX. Such an earthquake would cause extensive damage to buildings and infrastructure as a result of strong ground motions, ground rupture, and possibly liquefaction and other secondary seismic hazards.

Potential impacts from seismic hazards are best mitigated through advance planning, special analyses, and code enforcement. In addition, residents should be encouraged to prepare for earthquakes by reinforcing inadequate structures, compiling earthquake kits, and developing emergency plans. The City of Chino Hills website provides emergency preparedness tips at https://www.chinohills.org/77/Emergency-Preparedness.

Geologic Hazards

Geologic hazards of greatest concern in the city of Chino Hills include slope instability, expansive soils, compressible soils, and erosion. A large portion of the city has been mapped as generally susceptible to landsliding (Figure S-6). Recently deposited stream sediments in canyon bottoms are susceptible to settling if subject to heavy loads, such as from building foundations. Some of the soils and bedrock units that underlie Chino Hills have a moderate to high expansion potential. Structures sited on untreated, highly expansive materials can experience substantial structural damage as a result of shrinking and/or swelling of these soils. Rationally designed stiffened foundations should be utilized in these areas.

Grading and construction operations are necessary to mitigate expansive and compressible soils, erosion, landsliding, and flooding in hillside areas. The City of Chino Hills Municipal Code outlines the requirements for grading and mitigation of geologic hazards in Chapters 16.50, 16.52, and 16.54. Efforts should be made to balance grading and construction to minimize geologic hazards with aesthetics and the preservation of natural, existing topography.

Flood and Inundation Hazards

Potential seismically induced inundation hazards in Chino Hills include flooding of the eastern portions of the city as a result of failure of San Antonio Dam while its reservoir is full, and localized flooding if the dams for Lake Los Serranos or Arnold Reservoir fail during an earthquake. Strong ground motions generated by an earthquake could also damage the water tanks in the city, especially if these are not baffled or braced. Localized storm flooding has occurred historically in Chino Hills, the result of inadequately sized drainage facilities that cannot convey the storm flows generated from increased urbanization of the area.

CLOSURE

We appreciate this opportunity to be of service to the City of Chino Hills. Supporting data, including tables and figures, are located at the rear of this text.

Respectfully submitted,

Lisa Bates, PG, CEG 2293
Associate Engineering Geologist

Gregory Silver, M.Sc., PE, GE 2336
Principal Geotechnical Engineer

TABLE S-1
Modified Mercalli Intensity Scale

Intensity	Description	Average Peak Acceleration
I.	Not felt except by a very few under especially favorable circumstances.	-
II.	Felt by only a few persons at rest, especially on upper floors of buildings. Delicately suspended objects may swing.	-
III.	Felt quite noticeably indoors, especially on upper floors of buildings but many people do not recognize it as an earthquake. Standing automobiles may rock slightly. Vibration like passing of truck. Duration estimated.	-
IV.	During the day felt indoors by many, outdoors by few. At night some awakened. Dishes, windows, doors disturbed; walls make creaking sound. Sensation like heavy truck striking building. Standing automobiles rocked noticeably.	0.015-0.02g
V.	Felt by nearly everyone, many awakened. Some dishes, windows and so on broken; cracked plaster in a few places; unstable objects overturned. Disturbances of trees, poles and other tall objects sometimes noticed. Pendulum clocks may stop.	0.03-0.04g
VI.	Felt by all, many frightened and run outdoors. Some heavy furniture moved; a few instances of fallen plaster and damaged chimneys. Damage slight.	0.06-0.07g
VII.	Everyone runs outdoors. Damage negligible in buildings of good design and construction; slight to moderate in well-built ordinary structures; considerable in poorly built or badly designed structures; some chimneys broken. Noticed by persons driving in cars.	0.10-0.15g
VIII.	Damage slight in specially designed structures; considerable in ordinary substantial buildings with partial collapse; great in poorly built structures. Panel walls thrown out of frame structures. Fall of chimneys, factory stack, columns, monuments and walls. Heavy furniture overturned. Sand and mud ejected in small amounts. Changes in well water. Persons driving cars disturbed.	0.25-0.30g
IX.	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb; great in substantial buildings, with partial collapse. Buildings shifted off foundations. Ground cracked conspicuously. Underground pipes broken.	0.50-0.55g
X.	Some well built wooden structures destroyed; most masonry and frame structures destroyed with foundations; ground badly cracked. Rails bent. Landslides considerable from river banks and steep slopes. Shifted sand and mud. Water splashed, slopped over banks.	More than 0.60g
XI.	Few (if any) masonry structures remain standing. Bridges destroyed. Broad fissures in ground. Underground pipelines completely out of service. Earth slumps and land slips in soft ground. Rails bent greatly.	More than 0.60g
XII.	Damage total. Waves seen on ground surface. Lines of sight and level distorted. Objects thrown in air.	More than 0.60g

TABLE S-2
Earthquake Faults and Magnitudes

Fault Name/Zone	Fault Segments	Displacement Style[4]	Approx. Fault Length (km)	Estimated Maximum Magnitude[1,3]	Estimated Maximum Magnitude[2,3]	Historical Earthquakes
Chino	n/a	rl-r-o	28.7	6.80	6.60	2/16/1989, M3.2 12/14/2001, M3.9
Elsinore	W+GI+T+J+CM	rl-ss	249.2	7.78	7.85	5/15/1910, M6
San Jose	n/a	ll-r-o	19.6	6.70	6.50	6/26/1988, M4.7
Puente Hills Blind Thrust	n/a	r	44.1	7.10	7.00	10/1/1987, M6.0
Sierra Madre	n/a	r	56.9	7.20	7.10	2/9/1971, M6.4
Cucamonga	n/a	r	28.0	6.70	6.50	
San Jacinto	SBV+SJV+A+C	rl-ss	205.7	7.73	7.78	4/21/1918, M6.8 4/9/1968, M6.5 12/25/1899, M6.7
San Andreas	PK+CH+CC+BB+NM+SM+NSB+SSB+BG+CO	rl-ss	546.1	8.04	8.18	12/8/1812, M7.5 1/9/1857, M7.9

1: Magnitude calculated method of Ellsworth
2: Magnitude calculated method of Hanks and Bakun (2002)
3: Estimated maximum magnitude for largest “likely” earthquake rupture presented in UCERF2

EXPLANATION

Fault traces on land are indicated by solid lines where well located, by dashed lines where approximately located or inferred, and by dotted lines where concealed by younger rocks or by lakes or bays. Fault traces are queried where continuation or existence is uncertain.

2010 FAULT ACTIVITY MAP OF CALIFORNIA,
State of California
Department of Conservation

FAULT CLASSIFICATION COLOR CODE
(Indicating Recency of Movement)

Fault along which historic (last 200 years) displacement has occurred.

Holocene fault displacement (during past 11,700 years) without historic record.

Late Quaternary fault displacement (during past 700,000 years).

Quaternary fault (age undifferentiated).

Pre-Quaternary fault (older that 1.6 million years) or fault without recognized Quaternary displacement.

ADDITIONAL FAULT SYMBOLS

Bar and ball on downthrown side (relative or apparent).

Arrows along fault indicate relative or apparent direction of lateral movement.

Arrow on fault indicates direction of dip.

Low angle fault (barbs on upper plate).

FAULT HAZARD ZONE

AREAS OF HIGH LIQUEFACTION POTENTIAL
SHALLOW GROUNDWATER CONDITIONS WITHIN 30 FEET OF THE GROUND SURFACE ARE KNOWN OR SUSPECTED, INCLUDING MARSHY AREAS PRESENT IN THE LATE 1800'S. AREAS ARE UNDERLAIN BY UNCONSOLIDATED SANDY ALLUVIAL SOILS.

AREAS OF MODERATE LIQUEFACTION POTENTIAL
SHALLOW GROUNDWATER CONDITIONS BETWEEN 30 AND 50 FEET BELOW THE GROUND SURFACE ARE KNOWN OR SUSPECTED. INCLUDES ALLUVIUM-FILLED CANYONS THAT MAY HAVE SEASONAL, PERCHED GROUNDWATER.

AREAS OF LOW LIQUEFACTION POTENTIAL
GROUNDWATER IS 50 FEET BELOW GROUND SURFACE AND DEEPER. AREAS ARE UNDERLAIN BY CONSOLIDATED SEDIMENTS OR BEDROCK.

Source: Leighton & Associates, Inc., USGS

NOTE:
This is an interpretive map based on the distribution of susceptible alluvial sediments and known or suspected shallow or perched goundwater. The map presents a regional interpretation of liquefiable areas for general land planning purposes only. Site-specific liquefaction studies should be conducted for development purposes.

INCREASING LANDSLIDE SUSCEPTIBILITY

1 Least Susceptible Area
Landslides and features related to slope instability are rare to non-existent within this area. Includes low-lying valley bottoms and floodplains, and broad, relatively level areas along the tops of ridges underlain by resistant bedrock.

2 Margionally Susceptible Area
Includes gentle to moderate slopes, and ridgetops underlain by relatively competent material but flanked by steep, potentially unstable slopes. The stability of slopes in this area may change in response to future natural or man-induced alteration of the adjacent terrain.

3 Generally Susceptible Area
Slopes are at or near their stability limits due to a combination of weak materials and steep slopes. Most slopes in this area do not currently contain landslides deposits; however, the materials that underlie them can be expected to fail locally when modified by natural processess or activities of man.

4 Most Susceptible Area
Characterized by steep slopes; includes most landslides in upslope areas, whether apparently active or not, and slopes with substantial evidence of downslope creep of surface materials. Land in this area should by considered unstable and subject to failure, even in the absence of the activities of man.

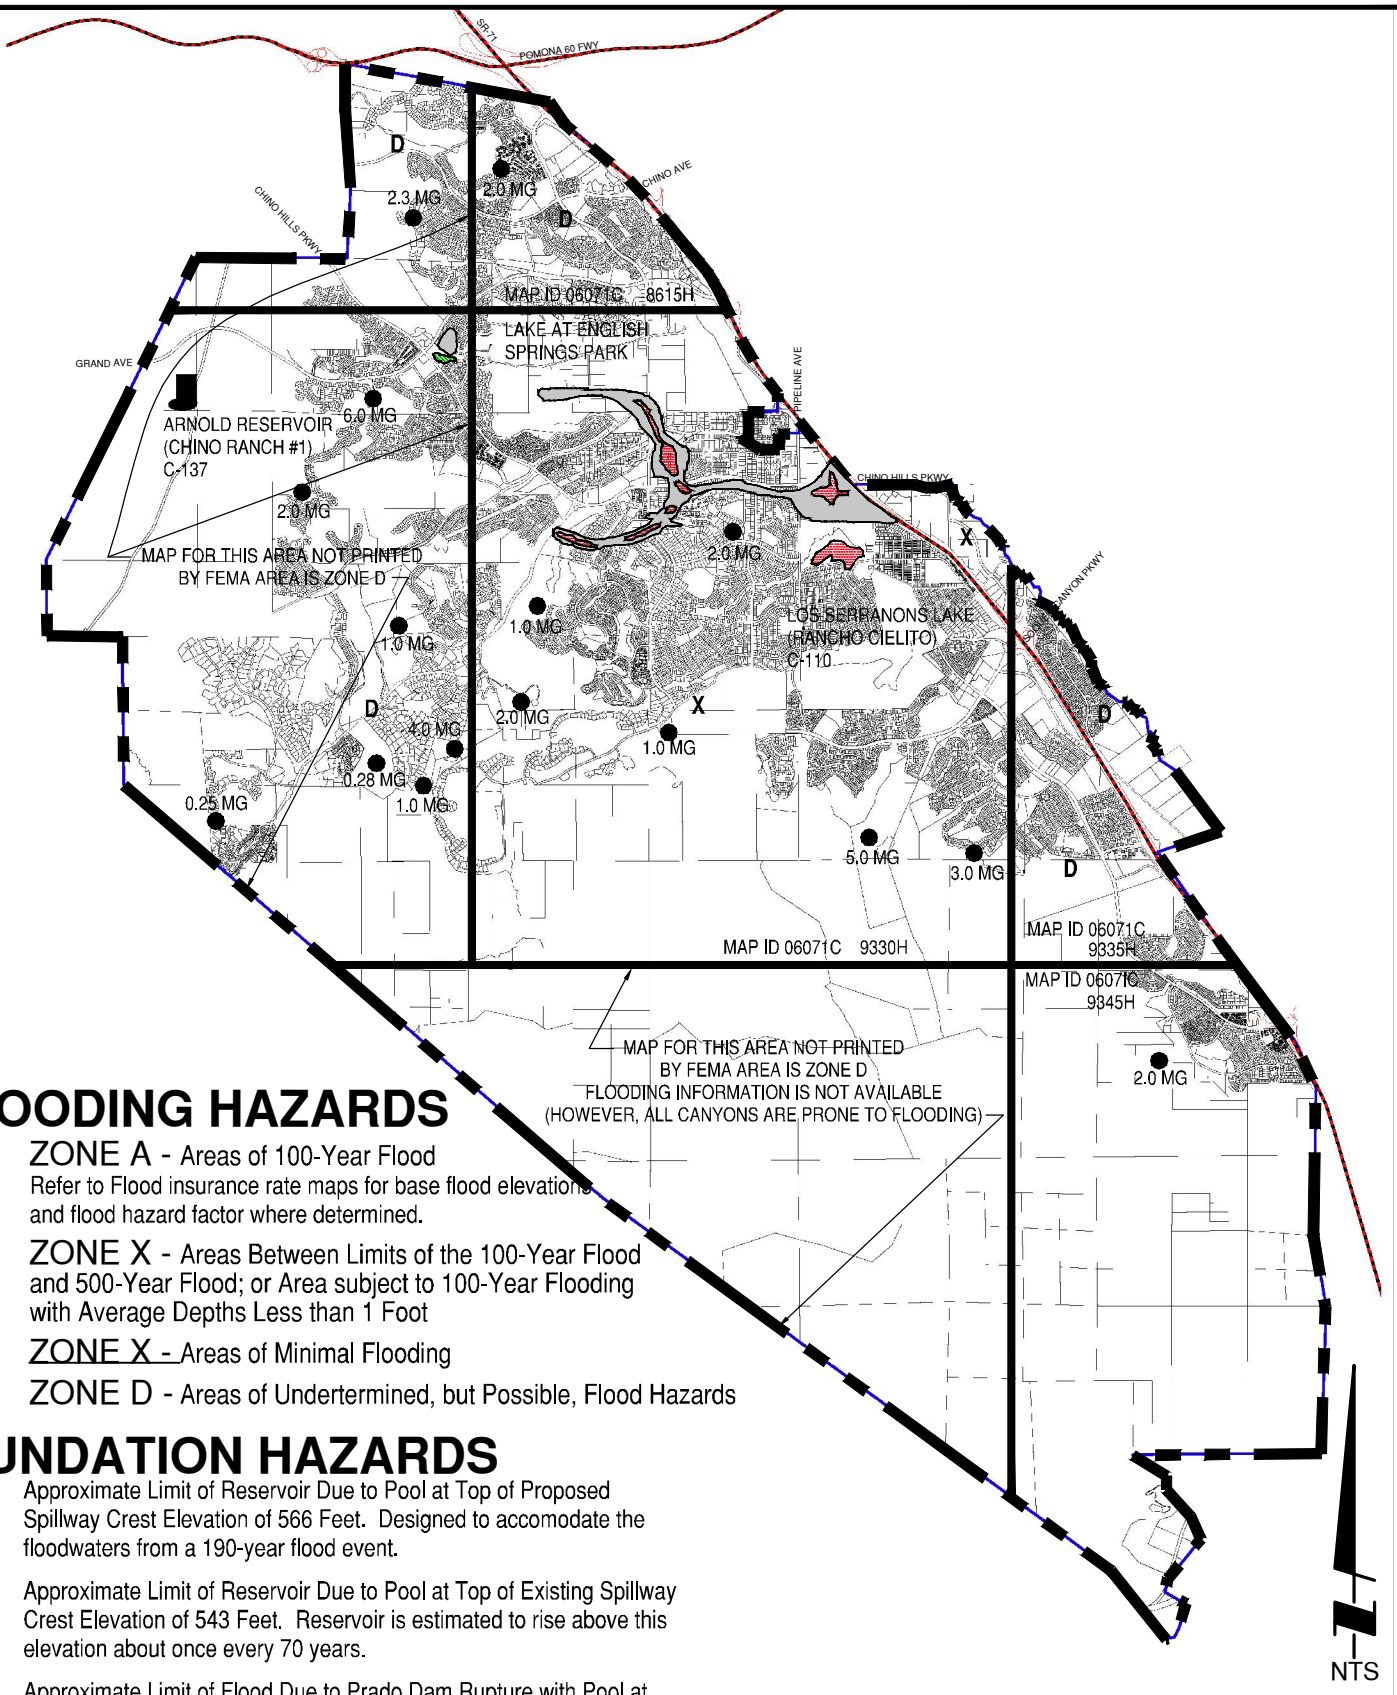
Near Surface Soils with a High Shrink-Swell Potential
These soils developed primarily from weathered claystone and sandstone of the Yorba Member of the Puente Formation.

Near Surface Soils with a Moderate Shrink-Swell Potential
These soils developed from weathered sandstone and siltstone of the Puente Formation, and from clay-rich older alluvium.

Near Surface Soils with a Low Shrink-Swell Potential
These soils developed primarily from sandy alluvial deposits in the valley, and along the major drainages that transcent the City.



NTS

NOTE: This figure shows the relative shrink-swell potential of the soils that occur at the surface in the City of Chino Hills. Volcanic Ash layers within the Puente Formation generally weather to clay with a high shrink-swell potential. These ash layers may uncovered during grading operations, affecting the proposed development at final grade. Site-specific soil studies need to be conducted to evaluate the expansion potential of the soil materials at grade prior to construction. Those ash layers could occur in other areas than those identified herein as having soils with a high expansion potential.

Expansive Soils

FLOODING HAZARDS

ZONE A - Areas of 100-Year Flood
Refer to Flood insurance rate maps for base flood elevations and flood hazard factor where determined.

ZONE X - Areas Between Limits of the 100-Year Flood and 500-Year Flood; or Area subject to 100-Year Flooding with Average Depths Less than 1 Foot

X ZONE X - Areas of Minimal Flooding

D ZONE D - Areas of Undertermined, but Possible, Flood Hazards

INUNDATION HAZARDS

Approximate Limit of Reservoir Due to Pool at Top of Proposed Spillway Crest Elevation of 566 Feet. Designed to accomodate the floodwaters from a 190-year flood event.

Approximate Limit of Reservoir Due to Pool at Top of Existing Spillway Crest Elevation of 543 Feet. Reservoir is estimated to rise above this elevation about once every 70 years.

Approximate Limit of Flood Due to Prado Dam Rupture with Pool at Spillway Crest Elevation of 543 Feet.

Approximate Limit of Flood Due to San Antonio Dam Rupture with Pool at Spillway Crest Elevation of 2,238 Feet.

Water Tank (MG = capacity in millions of gallons)

6.0 MG Man-Made Lake (C = capacity in acre-feet)

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

	1% annual chance floodplain boundary
	0.2% annual chance floodplain boundary
	Floodway boundary
	Zone D boundary
	CBRS and OPA boundary

1 INTRODUCTION

On behalf of the City of Chino Hills (City), EcoTierra Consulting, Inc. (EcoTierra) retained SWCA Environmental Consultants (SWCA) to conduct a paleontological resources assessment for the Chino Hills General Plan Update (project) in the city of Chino Hills, San Bernardino County, California (Figure 1). A major component of the General Plan Update is to implement the City's 6th Cycle Housing Element for the 2021-2029 planning period (Housing Element). The project also includes updates to the existing Land Use, Circulation, Safety, Conservation, Parks/Recreation/Open Space, Noise and Economic Development Elements. The project also includes rezoning of the Housing Element opportunity sites to meet the City's Regional Housing Needs Assessment (RHNA) allocations, and revisions to the General Plan Land Use Map and Zoning map. The Housing Element identifies 19 RHNA sites to meet the City's "lower income," "moderate income," and "above moderate income" RHNA allocation. Of those sites, eleven require a General Plan Land Use Map change accomplished through the General Plan Update process. These eleven sites also require a rezoning or specific plan amendment to ensure consistency with the changed General Plan Land Use Map designations.

The City requires this study to consider potential impacts this project may have on significant biological resources to comply with the California Environmental Quality Act (CEQA) and California State (State) and local regulations. The City prepared a comprehensive update to its General Plan in 2015 and a General Plan Environmental Impact Program Report (PEIR), which was certified in 2015. With this current update process, the City is preparing a Subsequent Program EIR (SPEIR), which is required since the General Plan Update proposes substantial changes to the City's 2015 General Plan. The SPEIR will consider whether this current General Plan Update would result in new significant impacts not identified in the 2015 Chino Hills General Plan Update PEIR (City of Chino Hills 2015b).

This assessment, which also serves as baseline information for the City General Plan update, analyzes the Chino Hills city limits at a program level and the RHNA sites at a more detailed, site-specific level. As part of the overall study, SWCA reviewed geologic maps, scientific literature, and confidential fossil locality records from the San Bernardino County Museum (SBCM) and the Natural History Museum of Los Angeles County (NHMLA). As part of the project-level analysis of the RHNA sites, SWCA conducted a pedestrian- and windshield-level field reconnaissance survey for the high- and medium-density sites and site-specific desktop review for the two low-density sites. This technical report includes a discussion of potential impacts to paleontological resources that could result from total build-out and includes mitigation recommendations to reduce potential impacts to less-than-significant levels, pursuant to CEQA.

2 PROJECT LOCATION

The overall study area for the General Plan Update includes the city of Chino Hills' incorporated boundary and sphere of influence, which encompasses approximately 45 square miles in southwestern San Bernardino County (Figure 1 and Figure 2). The city is bounded by the cities of Diamond Bar and Pomona to the north, the city of Chino to the east, the city of Corona and the Fremont Canyon Nature Preserve to the south, and the cities of Yorba Linda and Brea to the west. The General Plan Update study area is found within the San Dimas, Ontario, Yorba Linda, Prado Dam, and Black Star Canyon, California, U.S. Geological Survey 7.5-minute quadrangles.

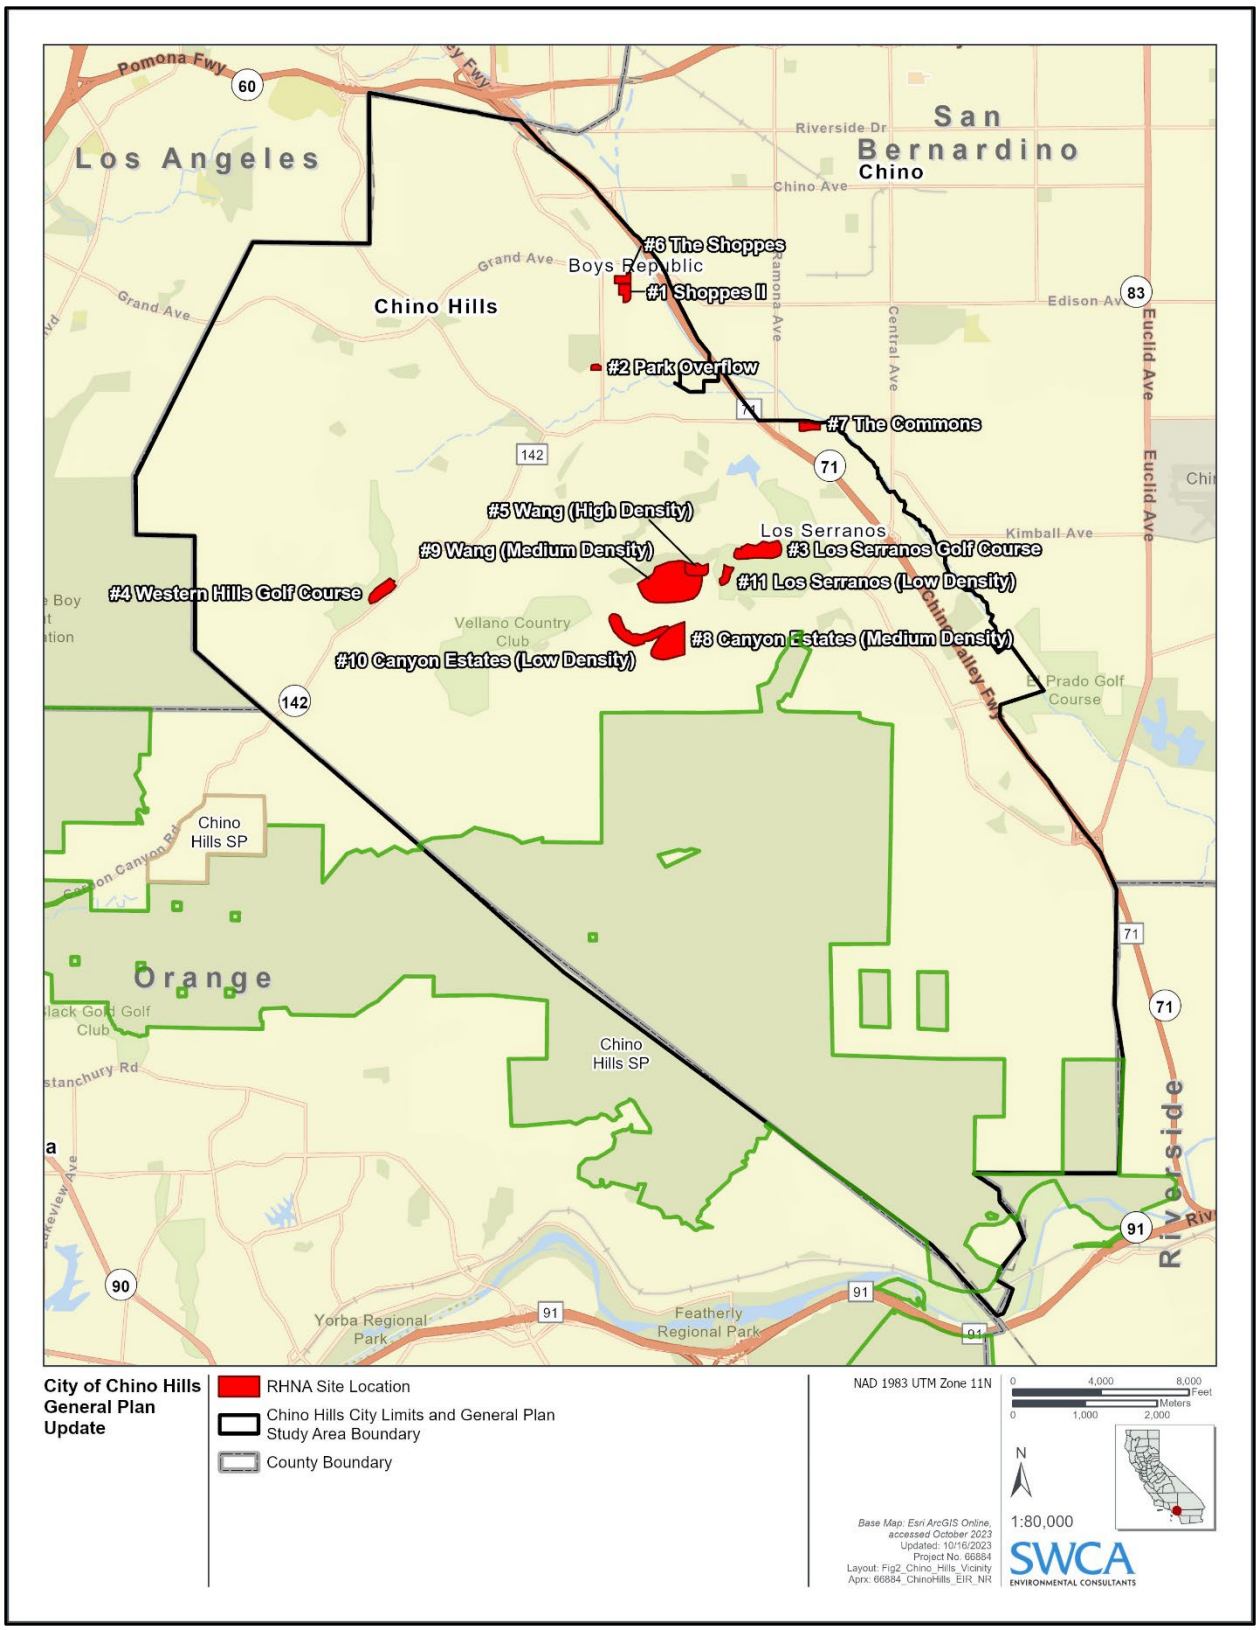

Figure 1. Project vicinity with the Chino Hills city limits and General Plan study area and the RHNA site locations within San Bernardino County.

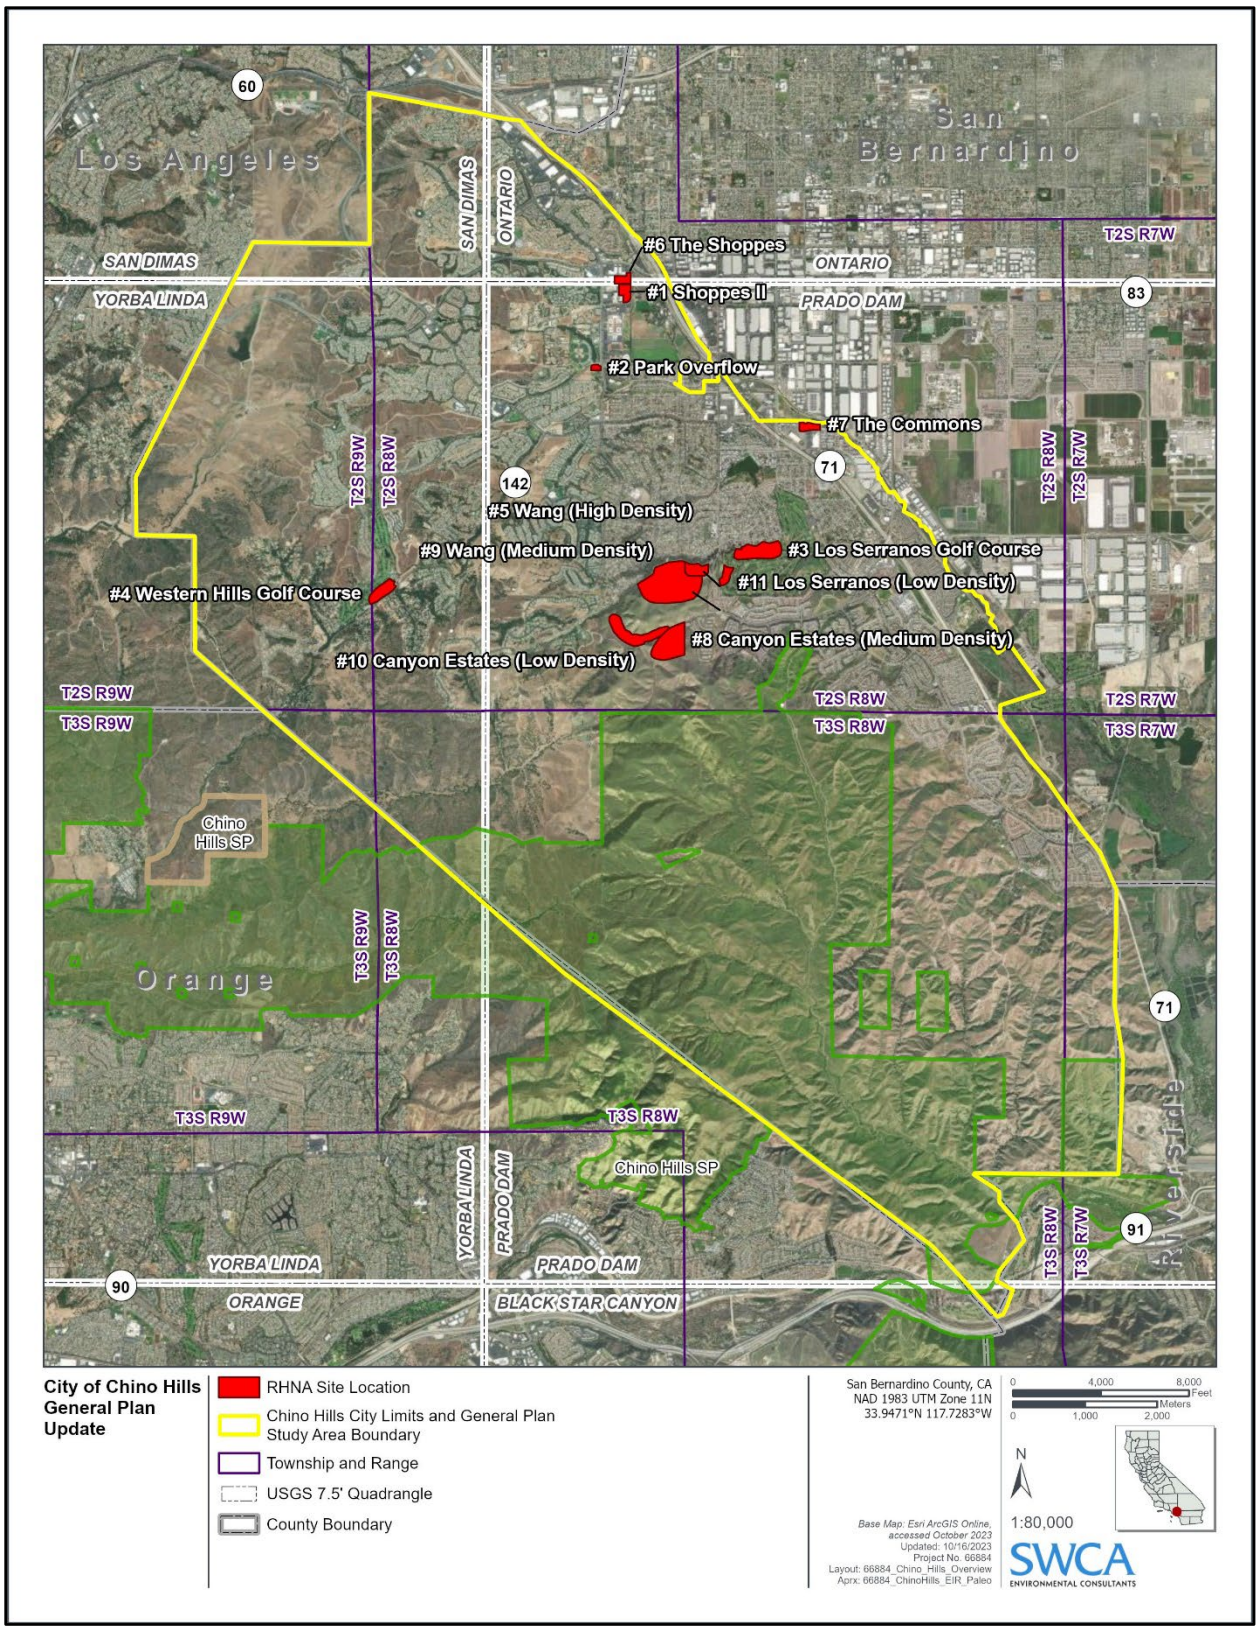

Figure 2. Project location with Chino Hills city limits and General Plan study area and RHNA site locations plotted on a 2021 aerial photograph.

In addition to the broader General Plan Update study area, this assessment provides additional analysis for eleven RHNA sites that will require General Plan Land Use Map amendments. Seven of the sites are suitable for very high density and/or lower income housing: The Shoppes II, Community Park Overflow, Los Serranos Golf Course, Western Hills Golf Course, Wang (High Density), The Shoppes, and The Commons. Two sites are suitable for medium density and/or moderate income housing: Canyon Estates (Medium Density), and Wang (Medium Density). The remaining two sites are suitable for low density residential: Canyon Estates (Low Density) and Los Serranos Golf Course (Low Density). These eleven sites are assessed in this technical analysis at a greater level of detail (as compared to the rest of the General Plan Update study area) to facilitate development of the sites to meet the City's share of regional housing needs. For the seven very high density/lower income sites, field level surveys are conducted to further facilitate and streamline their subsequent development review.

3 PROJECT DESCRIPTION

3.1 General Plan Update Overview

The project consists of updates to the City's 2015 General Plan, which incorporates the City of Chino Hills adopted 2021–2029 Housing Element, and updates the existing Land Use, Circulation, Safety, Conservation, Parks/Recreation/Open Space, Noise and Economic Development Elements. The project also includes rezoning of the Housing Element opportunity sites to meet the City's Regional Housing Needs Assessment (RHNA) allocations, and revisions to the City's Zoning Code and Zoning Map.

3.2 Housing Element, RHNA Sites, and Related Project Actions

The Housing Element is one of the seven mandated elements of the General Plan. State law requires that all Cities adopt a Housing Element and describes in detail the necessary contents of the Housing Element. This Housing Element responds to those requirements within the context of the physical and socioeconomic conditions unique to the city and covers the 8-year planning cycle from 2021–2029, identified by the State as the 6th Cycle Housing Element. A major component of the Housing Element is the identification of sites for future housing development and evaluation of the adequacy of these sites for fulfilling the City's fair share of regional housing needs, which is based on the Southern California Association of Governments' RHNA. The RHNA represents the minimum number of housing units for which each community is required to provide "adequate sites" through planning and zoning and is one of the primary threshold criteria necessary to achieve California Department of Housing and Community Development approval of the Housing Element. The City plans to fulfill its share of regional housing needs by using a combination of current project entitlements or applications for sites currently zoned for residential development, increasing density on property currently zoned for residential development, and rezoning of vacant and underutilized non-residential properties to allow for residential or mixed-use development.

The City's total RHNA for the 2021–2029 planning period is 3,729 units. Of these 3,729 RHNA units, 2,209 are designated for very high density residential, at a density that the State of California deems appropriate to accommodate housing affordable to "lower income households"; 789 of the RHNA units are designated medium density residential, at a density reasonably affordable to "moderate income" households; and 731 of the RHNA units are designated low density residential, at a density typically affordable to "above moderate" income households. The City has identified eleven RHNA sites within its

boundaries that could have the potential for new residential development within the eight-year timeframe of this planning period.

As part of the project, the Land Use Element of the General Plan would be updated to reflect new opportunity sites to meet the RHNA allocation as identified in the Housing Element. This would include three new land use categories: Medium Density Housing Overlay, Very High Density Housing Overlay, and Mixed Use Housing Overlay. These new residential categories would accommodate the RHNA allocation and would include rezoning seven sites to Very High Density Housing Overlay or Mixed Use Housing Overlay or equivalent to provide the necessary very high density sites to accommodate units affordable to lower-income households; and two properties to Medium Density Housing Overlay or equivalent to provide medium density sites to accommodate units affordable to moderate- income households.

Lower-income sites that require rezoning, new land use categories, and/or land use designation adjustments include:

> **Site 1 – The Shoppes II:** This site is City owned and zoned for high-density residential use. The current specific plan caps the site at 295 units; therefore, the site would need to be rezoned to increase the maximum housing density to 93 dwelling units per acre. The small southern portion of the Shoppes II site was included in previous RHNA cycles and remained vacant. The site is flat and situated between the existing Shoppes commercial center to the north, Chino Valley Fire District Station 62 to the south, City Hall and parking structure to the west, and Boys Republic to the east. The entire site will be rezoned to Mixed Use Housing Overlay.
>
> **Site 2 – Community Park Overflow:** The site is City owned and was intended to accommodate overflow parking for the Community Park; however, the site is vacant and underutilized. The City has focused this site on an affordable senior housing development for several years and committed to applying its Housing In-Lieu fee and available funds to help finance the development of this site. The site is located between Community Park to the north and west, and single-family residential development to the east and south. The site will be rezoned to Very High Density Housing Overlay.
>
> **Site 3 – Los Serranos Golf Course:** This site is privately owned and consists of a 9-hole area of an existing 36-hole golf course. The golf course is surrounded by single-family residential development which serves local and regional communities and includes a driving range and country club. The golf course has been underperforming in recent years, and the property owner has been actively pursuing converting the southernmost 9-hole area into housing. Although the property is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The high density portion of this property would be rezoned to Very High Density Housing Overlay to allow for owner-occupied and rental multifamily uses by-right..
>
> **Site 4 – Western Hills Golf Course:** This site is privately owned and consists of an 18-hole golf course established in the early 1960s to serve the local and regional communities and includes a country club. The golf course is located within Carbon Canyon and is surrounded by single-family residential development. In recent years, the golf course has underperformed, and the owner seeks to redevelop the south section of the golf course (which includes clubhouse, parking, and large open grass areas) to residential development and redesign the balance of the golf course for continued golf use. Although the golf course is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate

high density for lower income RHNA. The designated housing portion of the site will be rezoned to Very High Density Housing Overlay.

Site 5 – Wang (High Density): The site is privately owned and is a vacant, residentially zoned property surrounded by single-family residential to the north and west, vacant property to the south, and Los Serranos Golf Course to the east. Although the site contains areas of steep topography, the mild slope portions can accommodate development for high-density residential. Development of this site would realign Woodview Road to enhance public safety and traffic circulation. Although the property is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated very high density residential portion of the site will be rezoned to Very High Density Housing Overlay.

Site 6 – The Shoppes: The site is privately owned and consists of an existing 391,863-square foot commercial center surrounded by the Shoppes II site and City Hall to the south, Boys Republic to the east, commercial center and single-family residential to the west, and commercial center to the north. The property owner intends to redevelop the underutilized southeastern section of the commercial center to a mixed-use development that would retain retail space and include high-density residential. Although the commercial center is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated housing portion of the site will be rezoned to Mixed Use Housing Overlay.

Site 7 – The Commons: The site is privately owned and consists of an existing 443,272-square foot commercial center surrounded by a mobile home park to the east, single-family and multi-family residential to the west, an existing commercial center to the south, and vacant land to the north, across Chino Hills Parkway. The Chino Hills city limits is contiguous with Chino Hills Parkway directly north of the Commons site. The vacant parcel to the north of Chino Hills Parkway is within the city limits of Chino and is currently zoned for commercial office uses. The property owner intends to redevelop the underutilized portion of the commercial center by developing a mixed-use project to retain retail square footage and include high-density residential. Although the commercial center is larger than 10 acres, the project would include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower income RHNA. The designated housing portion of the site will be rezoned to Mixed Use Housing Overlay.

Moderate-income sites requiring rezoning, new land use categories, and/or land use designation adjustments include:

Site 8 – Canyon Estates (Medium Density): The site is privately owned and located at the terminus of Soquel Canyon Parkway and is surrounded by single-family residential and the vacant Wang site to the north, single-family residential to the west and east, and Chino Hills State Park to the south. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate medium density development. Development of the property would also include key infrastructure as part of the City's circulation element. The designated medium density housing portion of the site will be rezoned to Medium Density Housing Overlay.

Site 9 – Wang (Medium Density): The site is privately owned and consists of a vacant residentially zoned property surrounded by single-family residential to the north and

west, vacant property to the south, and Los Serranos Golf Course to the east. Although the site contains areas of steep topography, the mild slope portions can accommodate development for high density residential. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate high density development. Development of this site would re-align Woodview Road to enhance public safety and traffic circulation. The designated medium density housing portion of the site will be rezoned to Medium Density Housing Overlay.

Low density sites requiring rezoning, new land use categories, and/or land use designation adjustments include:

Site 10 – Canyon Estates (Low Density): The Canyon Estates property is located at the terminus of Soquel Canyon Parkway and is surrounded by single-family residential and the vacant Wang site to the north, single-family residential to the west and east, and Chino Hills State Park to the south. The site includes steep topography on the north and south sections of the property and centered with slopes less than ten percent where development can occur. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate medium density development. Development of the property would also include key infrastructure as part of the City's circulation element. An approximate 31-acre portion of the site would be designated for low density residential with an anticipated density of 6.0 dwelling units per acre.

Site 11 – Los Serranos Golf Course (Low Density): The Los Serranos Golf Course site is approximately 79.9 acres and part of a 9-hole area of an existing 36-hole golf course, zoned for commercial recreation, and owned by Greening Family LLC. The golf course is surrounded by single-family residential development which serves local and regional communities and includes a driving range and country club. The golf course has been underperforming in recent years and the property owner has been actively pursuing converting the southernmost 9-hole area into housing, which is located southeast of Country Club Drive and Pipeline Avenue. An approximate 6.9-acre portion of the site would be designated for low density residential with an anticipated density of 6.0 dwelling units per acre.

In addition to the broader General Plan Update study area, eleven RHNA sites are considered in this technical analysis at a greater level of detail as compared to the rest of the General Plan Update study area to facilitate development of the sites to meet the City's share of regional housing needs. As noted previously, for the seven very high density/lower income sites, field level surveys were conducted to further facilitate and streamline their subsequent development review.

The General Plan Update study area is found within San Dimas, Ontario, Yorba Linda, Prado Dam, and Black Star Canyon, California, U.S. Geological Survey 7.5-minute quadrangles.

4 PROFESSIONAL STANDARDS

The Society of Vertebrate Paleontology (SVP) has established standard guidelines that outline professional protocols and practices for conducting paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, and specimen preparation, identification, analysis, and curation (SVP 1995, 2010). Most practicing professional mitigation paleontologists in California adhere closely to the SVP's assessment, mitigation, and monitoring requirements as specifically provided in its standard guidelines. Most California state regulatory agencies

with paleontological laws, ordinances, regulations, and standards accept and use the professional standards set forth by the SVP.

As defined by the SVP (2010:11), significant paleontological resources are

> fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic[1], taxonomic[2], phylogenetic[3], paleoecologic[4], stratigraphic[5], and/or biochronologic[6] information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).

Numerous paleontological studies have developed criteria for the assessment of significance for fossil discoveries (e.g., Eisentraut and Cooper 2002; Murphey et al. 2019; Scott and Springer 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct;
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein;
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas;
4. The fossils demonstrate unusual or spectacular circumstances in the history of life; or
5. The fossils are in short supply and/or are in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.

Geologic units known to preserve significant fossils or fossil localities are likely to contain additional undiscovered and potentially significant fossils and are generally considered sensitive for paleontological resources throughout their areal and stratigraphic extent. The extent of sensitivity differs from that defined for archaeological resource sites as follows:

> It is extremely important to distinguish between archaeological and paleontological (fossil) resource sites when defining the sensitivity of rock units. The boundaries of archaeological sites define the areal extent of the resource. Paleontological sites, however, indicate that the containing sedimentary rock unit or formation is fossiliferous. The limits of the entire rock formation, both areal and stratigraphic, therefore define the scope of the paleontological potential in each case. (SVP 1995:23)

Many archaeological sites contain features visually detectable on the surface. In contrast, fossils may be present at the surface or at depth within sediments or bedrock. Subsurficial fossils would not be observable or detectable unless exposed by erosion or human activity. In the case of human activity,

[1] Taphonomy: The study of biological and geological processes that occur between the death of an organism and its final state in the rock.
[2] Taxonomy: The study of the morphology and relationships of organisms.
[3] Phylogeny: The pattern of evolution and relationships among organisms.
[4] Paleoecology: The study of single fossil organisms or communities of fossil organisms.
[5] Stratigraphy: The sequence of rocks and of events in geologic time.
[6] Biochronology: Also referred to as biostratigraphy; the dating of rocks by means of fossils.
Definitions from Benton and Harper (2009)

such as project-related ground disturbances within geologic units with a high probability to yield significant fossils, direct or indirect adverse impacts to significant fossils may occur.

In summary, paleontologists cannot know either the quality or quantity of fossils prior to natural erosion or human-caused exposure. As a result, even in the absence of fossils on the surface, it is necessary to assess the sensitivity of geologic units based on their known potential to produce significant fossils elsewhere within the same geologic unit (both within and outside the study area), a similar geologic unit, or whether the unit in question was deposited in a type of environment known to be favorable for fossil preservation. Monitoring by experienced paleontologists greatly increases the probability that fossils will be discovered during ground-disturbing activities and that, if such fossils are determined to be potentially significant, successful mitigation and salvage efforts may be undertaken to prevent adverse impacts to these resources.

5 REGULATORY SETTING

Paleontological resources are limited, nonrenewable resources of scientific, cultural, and educational value and are afforded protection under state and local laws and regulations.

5.1 State Regulations

5.1.1 *California Environmental Quality Act*

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified at Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on paleontological resources. Guidelines for the Implementation of CEQA, as amended December 28, 2018 (Title 14, Chapter 3, California Code of Regulations 15000 et seq.), define procedures, types of activities, persons, and public agencies required to comply with CEQA. Section VII(f) of the Environmental Checklist (Appendix G of the State CEQA Guidelines) asks whether a project would directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

5.1.2 *California Public Resources Code*

Requirements for paleontological resource management are included in California PRC Division 5, Chapter 1.7, Section 5097.5, which states:

> A person shall not knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.

These statutes prohibit the removal, without permission, of any paleontological site or feature from land under the jurisdiction of the state or any city, county, district, authority, or public corporation, or any agency thereof. Consequently, local agencies are required to comply with PRC 5097.5 for their own activities, including construction and maintenance, as well as for permit actions (e.g., encroachment permits) undertaken by others. PRC 5097.5 also establishes the removal of paleontological resources as a misdemeanor and requires reasonable mitigation of adverse impacts to paleontological resources from developments on public (i.e., state, county, city, and district) land.

5.2 Local Guidance

5.2.1 *City of Chino Hills General Plan*

In the Conservation Element of the City of Chino Hills General Plan, the City recognizes paleontological resources in Section E: Conservation Element Issues, Section 9: Cultural and Paleontological Resources, which establishes the need for paleontological resource considerations during project development (City of Chino Hills 2015a). The General Plan contains one goal (Goal CN-2) aimed at the protection of historic, cultural, and paleontological resources, with the following policy and three actions pertinent to the protection of paleontological resources:

- **Policy CN-2.2:** Protect Chino Hills' paleontological resources.
  - **Action CN-2.2.1:** Require appropriate paleontological surveys as part of the environmental review process where paleontological resources may be present.
  - **Action CN-2.2.2:** Where paleontological resources are found during development activities, require on-site inspections by a qualified paleontologist during grading activities where paleontological resources may be present.
  - **Action CN-2.2.3:** Require identified paleontological materials to be preserved, restored, cataloged, and/or transmitted to the appropriate repository or as otherwise directed by a qualified professional paleontologist.

6 METHODS

The following sections present an overview of the methodology used to analyze the potential for paleontological resources within the study area (the city limits and the RHNA sites). This report conforms to industry standards as developed by the SVP (1995, 2010) and best practices in mitigation paleontology (Murphey et al. 2019). This paleontological resources assessment analyzes the city limits at a program level and the eleven RHNA sites at a project level. This study also incorporates the results of the previous paleontological resources assessment conducted by Cogstone Resource Management (Cogstone) (2011) for the City's 2015 General Plan. SWCA supplemented the project-level desktop review of the eleven RHNA sites with a field reconnaissance survey of seven of the eleven RHNA sites. The purpose of this assessment is to 1) determine if any previously recorded fossil localities are present within the study area; 2) if so, assess the potential for disturbance of these localities during construction; and 3) evaluate the paleontological potential of the geologic units within the study area. SWCA used these data to reassess the paleontological potential of the study area and to determine the potential for adverse impacts to paleontological resources due to implementation of the project.

6.1 Existing Data Analysis

SWCA conducted an analysis of available existing data pertinent to paleontological resources within the study area and its vicinity. This analysis included a review of the previous paleontological resources assessments prepared by Cogstone (2011), as well as an updated desktop review of geologic mapping, scientific literature, and museum records searches from the NHMLA and SBCM. Geologic mapping used in this analysis is by Morton and Miller (2006) at a scale of 1:100,000. SWCA requested museum records retained by the SBCM and the NHMLA, the results of which are summarized in Section 7.3 of this report. A full copy of the museum records search results from the SBCM and the NHMLA are included in confidential Appendix A and Appendix B, respectively.

6.2 Reconnaissance Survey

SWCA conducted a pedestrian- and windshield-level field reconnaissance survey of seven of the eleven RHNA sites to supplement the project-level analysis. Four of the eleven RHNA sites were not subject to a field survey, at the City's request. The survey was conducted on June 23, 2022, by SWCA Staff Paleontologist Kristina Akesson, B.S., under the supervision of SWCA Paleontology Team Lead Mathew Carson, M.S. The purpose of the reconnaissance survey was to 1) confirm the geologic mapping by Morton and Miller (2006); 2) assess the status of previously recorded paleontological localities noted in the museum records search results within the RHNA sites, if any; 3) inspect exposures of previously undisturbed sediments or bedrock outcrops within the RHNA sites, if any, to assess their potential to preserve paleontological resources; and 4) record newly identified or previously unrecorded paleontological localities that may be present within the RHNA sites, if any. The results of the reconnaissance survey are incorporated into Section 7 of this report.

6.3 Paleontological Potential Classification

The results of the geologic map review, scientific literature review, museum records search, and pedestrian reconnaissance survey were used to assign and/or confirm the paleontological potential of the geologic units within the city. Paleontological potential, or sensitivity, is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, history of the geologic unit in producing significant fossils, and fossil localities previously recorded from that unit. Paleontological sensitivity is derived from the known fossil data collected from the entire geologic unit, not just from a specific survey. In its Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources, the SVP (2010:1–2) defines four categories of paleontological sensitivity for rock units:

> **High Potential**. Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e.g., ash or tephra), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e.g., middle Holocene and older, fine-grained fluvial sandstone, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstone, fine-grained marine sandstone, etc.). Paleontological potential consists of both a) the potential for yielding abundant or significant vertebrate fossils or for yielding a few significant fossils, large or small, vertebrate, invertebrate, plant, or trace fossils and b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data. Rock units which contain potentially datable organic remains older than late Holocene, including deposits associated with animal nests or middens, and rock units which may contain new vertebrate deposits, traces, or trackways are also classified as having high potential.
>
> **Low Potential**. Paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the

rule, e.g., basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.

Undetermined Potential. Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units within the project area is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located existing excavations into subsurface stratigraphy.

No Potential. Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection or impact mitigation measures relative to paleontological resources. (SVP 2010:1–2)

7 EXISTING CONDITIONS

7.1 Regional Geology

California consists of 11 geomorphic provinces[7], each of which has its own characteristic geology, topography, and climate (California Geological Survey [CGS] 2002; Norris and Webb 1990). Of these geomorphic provinces, the Peninsular Ranges Geomorphic Province is located in Southern California and is bounded on the north by the Transverse Ranges; on the east by the Transverse Ranges, Mojave Desert, and Colorado Desert; and on the west by the continental shelf under the Pacific Ocean (CGS 2002; Norris and Webb 1990). Norris and Webb (1990) characterize the Peninsular Ranges as a series of northwest-trending, fault-bound blocks, each of which contains uplifted ranges or subsided valleys (CGS 2002; Norris and Webb 1990).

The study area is located in the northernmost portion of the Peninsular Ranges (sometimes classified as the southern extent of the Transverse Ranges) along the northeastern Los Angeles Basin and is situated within a block referred to by Yerkes and others (1965) as the northeastern block. The northeastern block is bounded on the north by the Sierra Madre and Cucamonga fault zones, on the southwest by the Whittier and Elsinore fault zones, and on the east by the Chino Fault (Morton and Miller 2006; Yerkes 1972; Yerkes et al. 1965). Tectonic forces associated with movement along local faults within the northeastern block resulted in the development of the Puente Hills. The Puente Hills consist of Miocene- to Pliocene-aged marine strata uplifted as low-lying hills that are bounded on the northwest by the San Gabriel Valley; on the northeast by the San Bernardino Valley; and on the southwest by the Santa Ana coastal plain, La Habra Valley, and Santa Ana River canyon (English 1926). The city of Chino Hills is located within the northeastern-most extension of the Puente Hills referred to as the Chino Hills. Within the combined Puente-Chino Hills region, geologists note up to approximately 24,000 feet of middle and late

[7] The major geomorphic provinces of California include (1) Great Valley of California, (2) Sierra Nevada, (3) Cascade Range, (4) Modoc Plateau, (5) Klamath Mountains, (6) Coast Ranges, (7) Transverse Ranges, (8) Peninsular Ranges (including Los Angeles Basin), (9) Colorado Desert, (10) Mojave Desert, and (11) Basin Range (CGS 2002). The project site is located within the Peninsular Ranges; therefore, the other geomorphic provinces relevant to Southern California are not described in detail within this report.

Miocene- to early Pliocene-aged marine clastic sedimentary rocks, with such geologic units representing the most prolific oil reservoirs throughout the Los Angeles Basin (Morton and Miller 2006; Norris and Webb 1990; Yerkes 1972; Yerkes et al. 1965).

As detailed in Norris and Webb (1990), the geologic history of the Puente-Chino Hills region is tied to the overall geologic history of the larger Los Angeles Basin. During the Late Cretaceous and early Cenozoic (Paleocene through early Miocene), basement rocks were eroded down to sea level and overlain by marine and nonmarine clastic strata[8]. Marine and nonmarine rocks from this time are visible in the Santa Ana and Santa Monica Mountains and presumably extend across the Los Angeles Basin at considerable depth. By the early Miocene, tectonic extension occurred throughout the region due to the shifting plate tectonic boundary, resulting in widespread volcanic activity, as well as faulting and rotating of crustal blocks. During the late Miocene, the sea advanced over the Los Angeles Basin from the south, with the sea reaching the base of the San Gabriel Mountains and connecting the Los Angeles and Ventura basins by the close of the Miocene. However, during the Pliocene, a marked reduction in the rate of subsidence of the central basin occurred and coincided with a marked uplift near basin margins, as well as the deposition of large volumes of sediment eroded and transported away from the rising highlands on the northeast. By the end of the Pliocene, more than 10,000 feet of marine sedimentary deposits had accumulated in the central basin, and terrestrial environments had formed near the modern-day Palos Verdes Hills, Santa Ana and Santa Monica Mountains, Puente-Chino Hills, and small islands along the Inglewood Fault Zone. During the early Pleistocene, the San Gabriel Mountains and the Puente-Chino Hills continued to rise, but by the middle Pleistocene sedimentary deposition outpaced tectonic subsidence within the Los Angele Basin, resulting in nearly 3,000 feet of Pleistocene terrestrial to near-shore deposits near the center of the Los Angeles Basin. As global sea levels lowered throughout the Pleistocene due to continental glaciation, sedimentation within the Los Angeles Basin continued, and erosion off the surrounding highlands during the late Pleistocene and Holocene resulted in thick sequences of alluvial and fluvial deposits situated across the basin. Alluvial and fluvial sedimentation continues today (Norris and Webb 1990).

7.2 Local Geology and Paleontology

The previous paleontological resources assessment prepared by Cogstone (2011) for the 2015 General Plan update was based on published geologic mapping by Dibblee (2001) at a scale of 1:24,000. Based on Dibblee's map, middle Miocene Topanga Sandstone, middle Miocene Monterey Formation, late Miocene Sycamore Canyon Formation, and Quaternary (Pleistocene and Holocene) alluvial and landslide deposits are present at the surface within the city (Cogstone 2011). Geologists have extensively researched the geology of the Puente-Chino Hills area due to its prolific oil reserves and complex tectonic history. The geologic units within this area have undergone several reclassifications since their original descriptions around a century ago. Today, practicing geologists in the region prefer the geologic classifications and mapping presented in Morton and Miller (2006) at a scale of 1:100,000, which compiles datasets from smaller-scale geologic maps, provides updated considerations of the relationships among the geologic units in the region, and updates the naming and groupings of geologic units presented by Dibblee (2001) with the most recently accepted classifications. For example, the three members of the middle Miocene Monterey Formation and the late Miocene Sycamore Canyon Formation classified by Dibblee (2001) are combined and reclassified as the four members of the Puente Formation (La Vida, Soquel, Yorba, and Sycamore Canyon members) in Morton and Miller (2006), which retains the original classification of Schoellhamer and others (1954). This preferred scheme is based on the distinct lithology of these units in the Puente-Chino Hills region in comparison to the lithology of the Monterey Formation

[8] Here, "clastic strata" refers to layers of sediments derived from the weathering of older rocks and the subsequent erosion, transportation, and deposition of these sediments that were compressed and cemented together (i.e., lithified) into sedimentary rock.

mapped along the San Joaquin Hills. Therefore, SWCA reviewed and applied the geologic mapping of Morton and Miller (2006) to this updated study.

Updated geologic mapping of the surface of the study area consists of the following geologic units (in geochronological order from youngest to oldest): late Holocene very young landslide deposits (Qls); late Holocene very young wash deposits (Qw); late Holocene young alluvial-fan deposits, Unit 5 (Qyf_5); middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3); Holocene and late Pleistocene young landslide deposits (Qyls); Holocene and late Pleistocene young wash deposits (Qyw); Holocene and late Pleistocene young axial-channel deposits (Qya); Holocene and late Pleistocene young alluvial-fan deposits (Qyf, undivided and may contain Qyf_5 and Qyf_3); late to middle Pleistocene old axial-channel deposits (Qoa); middle to early Pleistocene very old axial-channel deposits (Qvoa); middle to early Pleistocene very old alluvial-fan deposits (Qvof); early Pliocene and Miocene sandstone and conglomerate in southeast Chino Hills (Tch); early Pliocene and Miocene Puente Formation – Sycamore Canyon Member (Tpsc); Miocene Puente Formation – Yorba Member (Tpy); Miocene Puente Formation – Soquel Member (Tpsq); Miocene Puente Formation – La Vida Member (Tplv); middle Miocene Topanga Group, undifferentiated (Tt); and early Miocene, Oligocene, and late Eocene Vaqueros and Sespe Formations (Tvs) (Morton and Miller 2006). The geologic units are summarized below and depicted in the city-wide geologic map in Figure 3. Focused geologic mapping at each of eleven RHNA sites is presented in Appendix C.

7.2.1 *Alluvial and Surficial Deposits (Qvof, Qvoa, Qoa, Qyf, Qya, Qyw, Qyls, Qyf_3, Qyf_5, Qw, Qls)*

Geologic mapping by Morton and Miller (2006) indicates that the city is underlain by several Holocene and/or Pleistocene alluvial and surficial deposits (see Figure 3). These geologic units include late Holocene very young landslide deposits (Qls); late Holocene very young wash deposits (Qw); late Holocene young alluvial-fan deposits, Unit 5 (Qyf_5); middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3); Holocene and late Pleistocene young landslide deposits (Qyls); Holocene and late Pleistocene young wash deposits (Qyw); Holocene and late Pleistocene young axial-channel deposits (Qya); Holocene and late Pleistocene young alluvial-fan deposits (Qyf, undivided and may contain Qyf_5 and Qyf_3); late to middle Pleistocene old axial-channel deposits (Qoa); middle to early Pleistocene very old axial-channel deposits (Qvoa); and middle to early Pleistocene very old alluvial-fan deposits (Qvof). Morton and Miller (2006) provide descriptions of these geologic units below.

- Late Holocene very young landslide deposits (Qls) consist of chaotically mixed soil, rubble, and displaced bedrock that formed via debris slides or earth slumps.
- Late Holocene very young wash deposits (Qw) consist of unconsolidated sand and gravel deposits in active washes, ephemeral river channels axial-valley streams, and channels on active surfaces of alluvial fans, all of which may be reworked during winter precipitation or flash flood events. Sediments of these deposits form from the erosion and reworking of local, older alluvial deposits.
- Late Holocene young alluvial-fan deposits, Unit 5 (Qyf_5) consist of unconsolidated to slightly consolidated coarse-grained sand to boulder alluvial-fan deposits, having slightly dissected to essential undissected surfaces. The age of the young alluvial-fan deposits is based on relative position in terrace riser sequence, superposition, and overlapping relations of adjacent fans.
- Middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) consist of brown, slightly to moderately consolidated silt, sand, and coarse-grained sand to boulder alluvial-fan deposits, having slightly to moderately dissected surfaces. The surfaces of these deposits are gently rolling and may be incised by large washes incised to depths as great as 13 feet.

- Holocene and late Pleistocene young landslide deposits (Qyls) consist of chaotically mixed soil, rubble, and displaced bedrock that formed as a result of debris slides or earth slumps. These deposits are abundant in areas where the Puente Formation in the Chino Hills area has failed, resulting in debris flows deposits overlying older Puente Formation.
- Holocene and late Pleistocene young wash deposits (Qyw) consist of unconsolidated to slightly consolidated sand and gravel deposits in marginal parts of active and recently active washes and ephemeral river channels of axial-valley streams. This unit differs from younger wash deposits (described above) by an absence of flood scours, modified channel-and-bar morphology, and immature soil horizons.
- Holocene and late Pleistocene young axial-channel deposits (Qya) consist of slightly to moderately consolidated silt, sand, and gravel deposits.
- Holocene and late Pleistocene young alluvial-fan deposits (Qyf) consist of unconsolidated to moderately consolidated silt, sand, pebbly-cobbly sand, and boulder alluvial-fan deposits, which have slightly to moderately dissected surfaces. Close to the mountainous regions from which they originate, the young alluvial-fan deposits consist of cobble- to boulder-sized clasts, decreasing in size to mixed silt, medium-grained sand, and pebbly sand. This unit is undifferentiated but can be divided into seven subunits; Unit 5 (Qyf_5) and Unit 3 (Qyf_3) are described above and are mapped separately (see above).
- Late to middle Pleistocene old axial-channel deposits (Qoa) consist of moderately to well consolidated silt, sand, and gravel having moderate to well developed overlying soil. These deposits are mapped at the surface along the east sides of Aliso, Bane, Slaughter, and Aberhall canyons.
- Middle to early Pleistocene very old axial-channel deposits (Qvoa) consist of alluvial sands, with scattered gravel and pebbles layers, as well as silt and clay. Typically, these deposits are reddish brown and well consolidated to moderately to well-indurated.
- Middle to early Pleistocene very old alluvial-fan deposits (Qvof) consist of moderately to well consolidated silt, sand, gravel, and conglomerate. Throughout most of the region, these deposits are predominantly medium- to coarse-grained sand and silt deposits, which are orangish brown and well dissected at the surface.

Late Holocene sediments are typically regarded as too young (i.e., less than 5,000 years old) to contain fossils (SVP 2010); however, they may transition at depth to middle to early Holocene and/or Pleistocene deposits that have the potential to yield scientifically important fossils. Within their paleontological resources assessment for the 2015 General Plan update, Cogstone (2011) conducted a review of City-held reports for 19 development projects and requested museum records search results from the NHMLA and SBCM. Although Cogstone (2011) does not differentiate the fossil localities by geologic unit, Pleistocene-age fossil localities from within the city are tabulated. Based on the results of Cogstone's (2011) study, fossil localities from Pleistocene-age deposits have yielded bison, deer, horses, mammoths, ground sloths, and rodents. In general, Pleistocene terrestrial alluvial deposits have a rich fossil history in Southern California (Brattstrom 1961; Jefferson 1991a, 1991b; McDonald and Jefferson 2008; Miller 1971; Paleobiology Database 2022; Reynolds and Reynolds 1991; Springer et al. 2009; University of California Museum of Paleontology 2022). The most common Pleistocene terrestrial mammal fossils include the bones of mammoth, bison, deer, and small mammals, but other taxa, including horse, lion, cheetah, wolf, camel, antelope, peccary, mastodon, capybara, and giant ground sloth, have been reported (Graham and Lundelius 1994), as well as frogs, salamanders, and snakes (Hudson and Brattstrom 1977). In addition to illuminating the striking differences between Southern California in the Pleistocene and Southern California today, this abundant fossil record has been vital in studies of extinction (e.g., Barnosky et al. 2004; Sandom et al. 2014; Scott 2010), ecology (e.g., Connin et al. 1998), and climate change (e.g., Roy et al. 1996).

7.2.2 Puente Formation (Tplv, Tpsq, Tpy, Tpsc) and Sandstone and Conglomerate in Southeast Chino Hills (Tch)

Geologic mapping by Morton and Miller (2006) indicates that most of the city is underlain by the early Pliocene and Miocene Puente Formation, which includes four members: La Vida Member (Tplv), Soquel Member (Tpsq), Yorba Member (Tpy), and the Sycamore Canyon Member (Tpsc) (see Figure 3). Additionally, the southeastern portion of the city is underlain by an informal geologic unit referred to by Morton and Miller (2006) as the early Pliocene and Miocene sandstone and conglomerate in southeastern Chino Hills (Tch), which has similar lithology to the Sycamore Canyon Member of the Puente Formation and may be coeval in part (Durham and Yerkes 1964). Therefore, the Puente Formation (and its member) and the sandstone and conglomerate in southeast Chino Hills are discussed together here.

Local geologists have assessed the uplifted marine rocks throughout the Puente-Chino Hills region due to their oil reserves, resulting in numerous revisions of their subdivisions and ranking. The Puente Formation was originally named and described by Eldridge and Arnold (1907) and later subdivided by English (1926) into three units based on lithology. Later, Daviess and Woodford (1949) and Schoellhamer and others (1954) further subdivided the Puente Formation within the Puente-Chino Hills region into four members (from youngest to oldest): 1) Sycamore Canyon Member, 2) Yorba Member, 3) Soquel Member, and 4) La Vida Member, all of which have gradational contacts within the Puente-Chino Hills area and become uniform and indistinguishable westward in the Los Angeles Basin. Conversely, Dibblee (2001) reclassified the Yorba Member, Soquel Member, and La Vida Member as part of the Monterey Formation, with the Sycamore Canyon Member separated and upgraded to the Sycamore Canyon Formation; Cogstone (2011) followed this classification in their paleontological resources assessment. However, because the Monterey Formation is lithologically consistent from the Monterey area to the San Joaquin Hills and is distinct from the Puente Formation, Morton and Miller (2006) retain the classification of Schoellhamer et al. (1954). Within this paleontological resources assessment, SWCA has chosen to follow Morton and Miller's (2006) classification, which is common practice among local geologists.

The Sycamore Canyon Member (Tpsc) is the youngest member and extends from the Miocene to the early Pliocene. It consists of pale gray, thick-bedded to massive, medium- to coarse-grained, friable sandstone; pale gray, thinly bedded, siliceous siltstone; pale gray, poorly bedded siltstone; and brownish gray, massive conglomerate (Morton and Miller 2006). According to Yerkes (1972), the Sycamore Canyon Member contains a predominately conglomeratic rock of unknown extent, which is not mapped by Morton and Miller (2006) at the surface but may be present in the subsurface. Stratigraphically, the Sycamore Canyon overlies the Yorba Member but likely also includes, at least in part, the Miocene and early Pliocene sandstone and conglomerate in southeastern Chino Hills (Tch), which consists of poorly exposed marine and nonmarine sandstone and conglomerate in folded strata of the Chino Hills portion of the greater Puente Hills, as well as possibly along Wardlow Wash, Bedford Canyon, and Brown Canyon (Durham and Yerkes 1964; Morton and Miller 2006).

The Miocene Yorba Member (Tpy) overlies the Soquel Member and consists of white to gray, thinly bedded, micaceous and siliceous siltstone, containing beds of fine-grained sandstone and limy concretions, and sandy siltstone (Morton and Miller 2006). Geologists have interpreted the Yorba Member as a turbidity current deposit (Durham and Yerkes 1959). Like the Soquel Member, the Yorba Member also contains a local conglomerate; however, the extent of it is unknown (Morton and Miller 2006). The Yorba Member is mapped at the surface along the southern extent of the city, overlying the Soquel and La Vida Members along the south-facing slopes north of the Santa Ana River; along the center of the city between Soquel Canyon and Aliso Canyon; and along the northern extent of the city between Tonner Canyon and Chino Creek.

The Miocene Soquel Member (Tpsq) overlies the La Vida Member and consists of gray to yellowish gray, massive to well-bedded, medium- to coarse-grained, poorly sorted sandstone interbedded with matrix-support pebbly sandstone, and is commonly graded (Morton and Miller 2006). The Soquel Member also contains a local conglomerate (although this subunit is not mapped at the surface of the city) and the basal portions of the member contain ellipsoidal calcite-cemented concretions 1 foot to 4.5 feet in diameter (Morton and Miller 2006). The Soquel Member is exposed along the southern extent of the city on the south-facing slopes of the Puente-Chino Hills along the north bank of the Santa Ana River and exposed throughout the western portion of the city.

The Miocene La Vida Member (Tplv) is the oldest of the members of the Puente Formation; it consists of light gray to black (weathered to white or pale gray), massive to well-bedded, generally friable siltstone, with interbedded sandstone beds ranging from approximately 1 inch to 3 feet thick (Morton and Miller 2006). This unit contains widespread fish fossils and abundant foraminifers, and some beds contain phosphate nodules, sparse limy siltstone, and vitric tuff. Exposures of the La Vida Member are present along the southern extent of the city on the south-facing slopes of the Puente-Chino Hills along the north bank of the Santa Ana River.

Within their paleontological resources assessment for the 2015 General Plan update, Cogstone (2011) conducted a review of City-held reports for 19 development projects and requested museum records search results from the NHMLA and SBCM. Although Cogstone (2011) does not differentiate the fossil localities by geologic unit, Miocene-age fossil localities from within the city are tabulated. Therefore, for the purposes of this updated paleontological resources assessment, SWCA has assumed these Miocene fossil localities are from undifferentiated Puente Formation based on the mapping of the locality information presented in Cogstone's (2011) report. Based on the results of Cogstone's (2011) study, fossil localities from Miocene-age deposits (i.e., undifferentiated Puente Formation) have yielded whales, dolphins (including the extinct Chino Hills dolphin), seals, sea lions, birds, boney fishes, sharks, bivalves, gastropods, crabs, barnacles, brachiopods, algae, and terrestrial plants. The results of SWCA's paleontological assessment included in this report indicates that the Puente Formation (and all its members) has a history of preserving terrestrial fossil taxa, such as rhinoceros, mastodons, rabbits, rodents, and insects, and marine fossil taxa, such as pinnipeds, desmostylids, whales, sharks, bony fish, crustaceans, cephalopods, bivalves, sponges, and foraminifers (Barboza et al. 2017; Carnevale et al. 2008; David 1943; Feldmann 2003; Fritzsche 1980; Hilton and Grande 2006; Huddleston and Takeuchi 2006; Leatham and North 2017; Pajak 1992; Pierce 1945; Pimiento 2014; Rigby and Albi 1996; Santos et al. 2016; Saul and Stadum 2005; Scherzer 2017). Additionally, fossils have been recovered from the sandstone and conglomerate in southeastern Chino Hills informal geologic unit, including marine invertebrate and nonmarine vertebrate faunas and floras (Morton and Miller 2006).

7.2.3 *Topanga Group, Undifferentiated (Tt)*

Geologic mapping by Morton and Miller (2006) indicates that surface exposures of the middle Miocene Topanga Group, undifferentiated (Tt) are present along the southern boundary of the city along the Whittier Fault Zone near its convergence with the Elsinore Fault Zone on the north bank of the Santa Ana River (see Figure 3). Previously referred to as the Topanga Formation or the Topanga Canyon Formation, the Topanga Group consists of middle Miocene rocks overlying the middle Miocene Vaqueros Formation and underlying the late Miocene Modelo Formation, the latter of which is absent from the Puente-Chino Hills region (Morton and Miller 2006). The Topanga Formation was upgraded to "group" rank by Yerkes and Campbell (1979), based on type-strata located within the Santa Monica Mountains. Morton and Miller (2006) retain Yerkes and Campbell's (1979) group ranking but note that the subdivisions within the group notably present outside of the Puente-Chino Hills area are largely undifferentiated. Where subdivided along the north and west sides of the Santa Ana Mountains, San Jose Hills, and San Joaquin Hills, the upgraded members of the original Topanga Formation include the Buzzard Peak Conglomerate; Undivided Topanga Group, Santa Ana Mountains area; San Joaquin Hills, Laguna Beach area; Bommer

Formation; Los Trancos Formation; and Paulerino Formation (Blake 1991; Morton and Miller 2006). Because only undifferentiated strata of the Topanga Group (coeval to Undivided Topanga Group, Santa Ana Mountains area) are present within the city limits, the other subdivisions are not described here. According to Morton and Miller (2006), the Topanga Group, undifferentiated, consists of a basal, well-cemented conglomerate overlain by medium- to coarse-grained sandstone most notably present along the north and west flanks of the Santa Ana Mountains. Overall, the Topanga Group consists of pale tan to yellowish tan, coarse-grained, massive to thick-bedded sandstone and conglomerate, interbedded with fine-grained, thinly bedded sandstone, siltstone, and lesser diatomaceous shale, which is gray to grayish white, fissile, and partly silicified (Morton and Miller 2006). Where undifferentiated within the City, this group is approximately 2,260 feet thick but thins to approximately 10 feet thick east of El Modeno (Morton and Miller 2006).

Biostratigraphers have used marine invertebrate and microscopic fossils from the Topanga Group to aid in biostratigraphy and stratigraphic correlation across Southern California using the following marine invertebrate fossil fauna: gastropods, including *Turritella ocoyana*, *Turritella*. cf. *T. ocoyana topangensis*, and *T. temblorensis*; bivalves, including *Leptopecten andersoni*, *Chione temblorensis*, *Crassostrea* cf. *titan subtitan*, and *Vertipecten nevadanus*, and limited foraminifers (Morton and Miller 2006). Other fossil localities recovered from the Topanga Group include marine/aquatic fossils, such as pinnipeds, whales, dolphins, desmostylids (an extinct group of hippopotamus-like mammals), sirenians, sharks, rays, bivalves, gastropods, and stomatopods (Aranda-Manteca et al. 1994; Boessenecker and Churchill 2013; Domning 1978; Hof and Schram 1998; Howard and Barnes 1987; Powell and Geiger 2019; Stinson et al. 2005; VanderHoof 1937). The Topanga Group has also yielded terrestrial fossils, such as horses, artiodactyls (including camels), rabbits, rodents, and birds (Howard and Barnes 1987; Kelly and Lander 1988).

7.2.4 *Vaqueros and Sespe Formations, Undifferentiated (Tvs)*

Geologic mapping by Morton and Miller (2006) indicates that undifferentiated exposures of the Vaqueros and Sespe Formations (Tvs) are present along the southernmost extent of the city, with small exposures of these units along the Whittier Fault Zone near its convergence with the Elsinore Fault Zone on the north bank of the Santa Ana River (see Figure 3). Overall, exposures of these units at the surface are minimal within the city limits and mostly underlie the Topanga Group (discussed above) (Cogstone 2011; Yerkes 1972; Yerkes et al. 1965). However, they are observed at the surface near the city along the northeast side of the Whittier Fault Zone, where these undifferentiated formations are folded as a syncline, with maximum depths to these deposits varying between 3,000 and 4,000 feet below sea level (Dibblee 2001; Yerkes 1972). The undifferentiated Vaqueros and Sespe Formations range in age, spanning the late Eocene through early Miocene. Where undifferentiated, deposits of the formations consist of red (oxidized), interbedded mudstones, sandstones, and conglomerate, with marine fossil-bearing strata of the Vaqueros Formation interlayered bed-by-bed with the nonmarine Sespe Formation, making it impossible to differentiate the two formations in local geologic mapping (Morton and Miller 2006; Yerkes 1972). However, these units are differentiated at the surface within the San Joaquin Hills in Orange County to the south and in Ventura County to the north. Within the San Joaquin Hills, the Vaqueros Formation consists of brownish gray, massive to thick-bedded sandstone and sandy siltstone, with interbedded siltstone, shale, mudstone, and minor conglomerate and may be as much as 3,800 feet thick. The Sespe Formation in the San Joaquin Hills area is gray to red (i.e., oxidized) and massive to thick bedded, consisting of nonmarine conglomerate, conglomeratic sandstone, and clayey to silty sandstone. Stratigraphically, the Sespe Formation conformably underlies the Vaqueros Formation in Ventura County (Morton and Miller 2006) but is interbedded (and may partially overlie) with the Vaqueros Formation in the Puente-Chino Hills region (Dibblee 2001; Yerkes 1972).

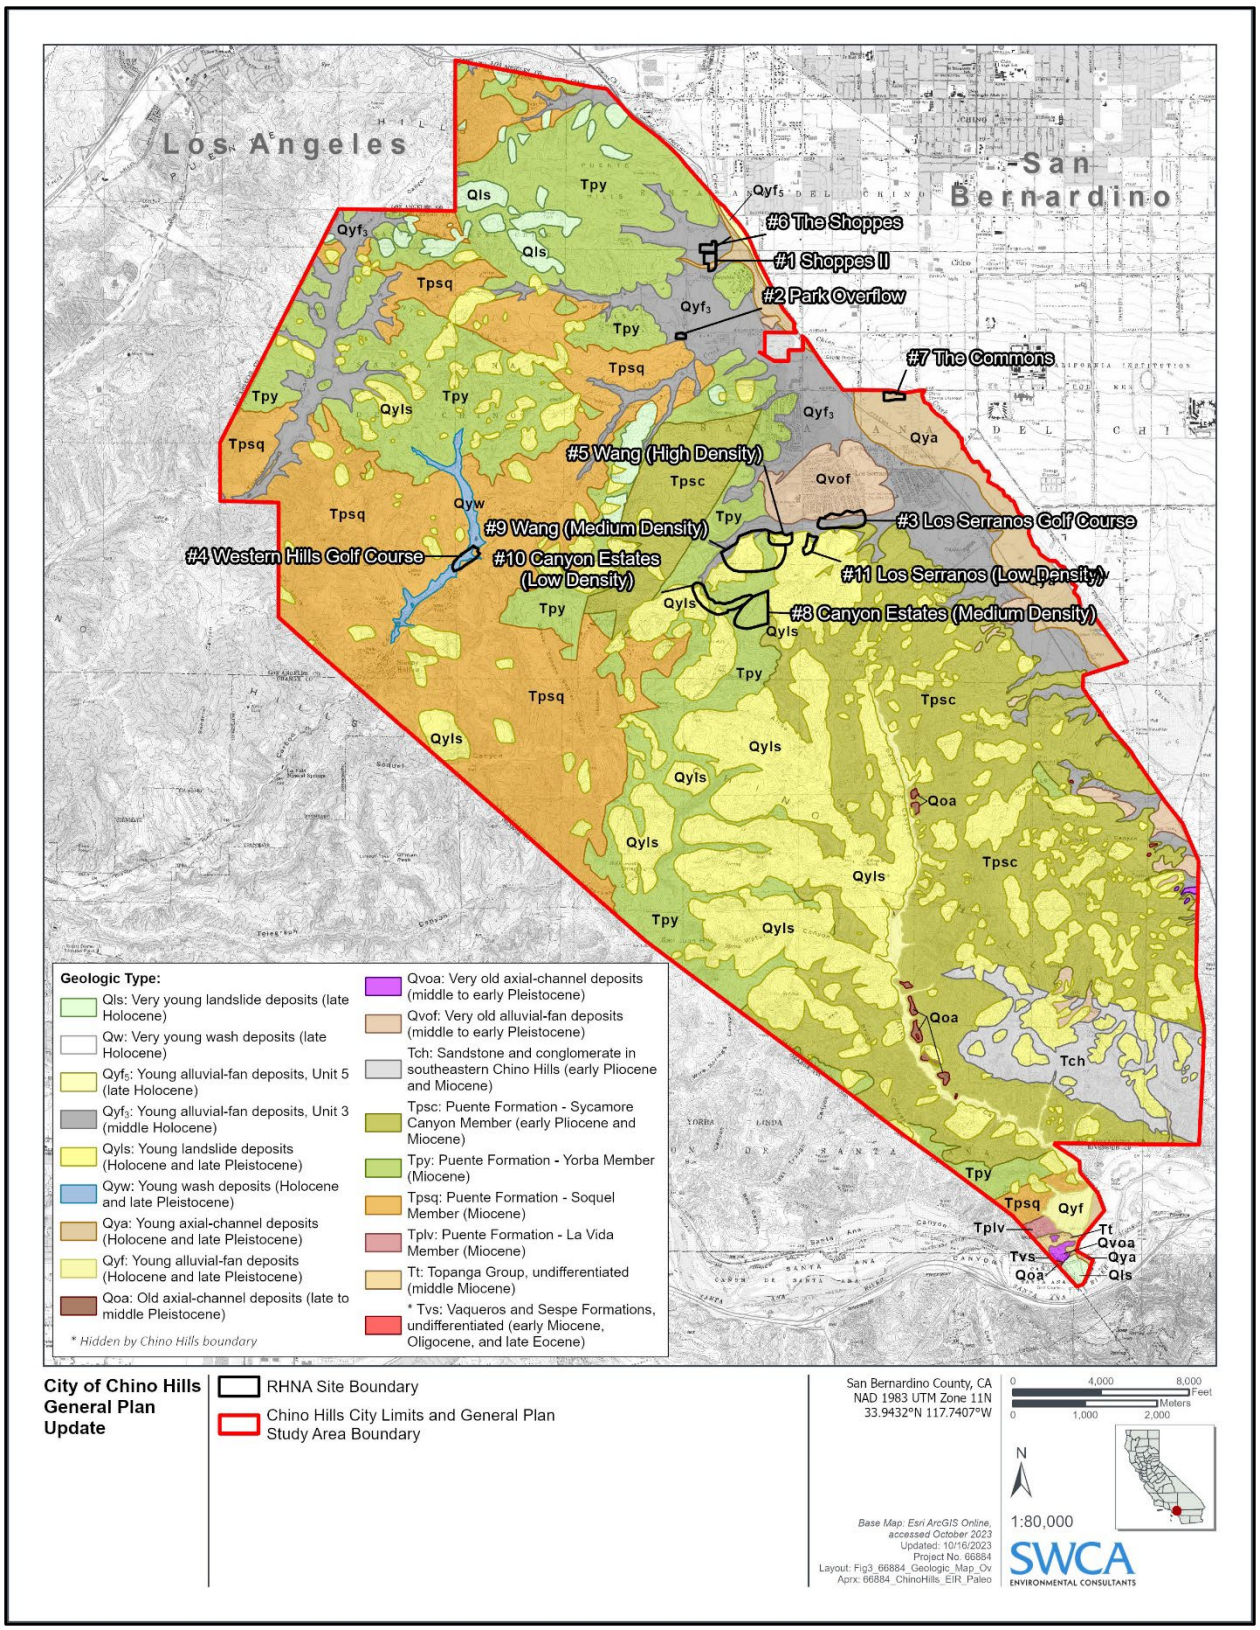

Figure 3. Geologic map of the Chino Hills city limits and General Plan study area and RHNA site locations.

Fossil sites from the Vaqueros and Sespe Formations have yielded numerous specimens allowing geologists and paleontologists to correlate different regional exposures across Southern California. For example, the correlation of rocks attributed to the Vaqueros Formation across Southern California is based upon the *Turritella inezana* fossil fauna. The Vaqueros Formation has yielded marine taxa, including whales, pinnipeds, sharks, foraminifers, bryozoans, bivalves, gastropods, echinoids, barnacles, and polychaetes (Calvano et al. 2008; Cushman and Leroy 1938; Dickinson and Lowe 1966; Loel and Corey 1932; Wiedey 1928), and terrestrial taxa, including metatherian mammals, canids, rhinoceroses, horses, camels, musk deer, oreodonts, pikas, rabbits, rodents, and hedgehogs (Whistler and Lander 2003), among others. The Sespe Formation has yielded numerous nonmarine to terrestrial vertebrate fossils, such as early primates, amphicyonids ("beardogs"), canids, bears, mustelids, rhinoceroses, titanotheres, artiodactyls, camelids, oreodonts, peccaries, pikas, rodents, birds, turtles, iguana, lizards, snakes, frogs, mollusks, and others throughout its mappable extent in Southern California, with such taxa ranging in age from the Eocene to early Miocene (Bailey and Jahns 1954; Golz and Lillegraven 1977; Hunt and Stepleton 2015; Kelly and Whistler 1994; Prothero and Vance 1996; Wang et al. 2009; Whistler and Lander 2003; Woodburne 1987).

7.2.5 *Geology of the RHNA Sites*

For this paleontological resources assessment, SWCA reviewed the geologic mapping of Morton and Miller (2006) at each RHNA site. Because Section 7.2 provides a detailed description of each geologic unit within the city limits and describes the paleontological setting of each unit, only a summary of the local geology at each RHNA site is provided here. Figures within Appendix C present the local geology (within a 0.5-mile buffer) around each RHNA site. This geologic review is summarized below.

Site 1 – The Shoppes II: This site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) and Holocene and late Pleistocene young axial-channel deposits (Qya). However, several surface exposures of the Miocene Puente Formation, Yorba Member (Tpy) are present within 0.5 mile of this location. The Puente Formation, Yorba Member is likely present at very shallow depth based on its surface exposures in proximity to the site.

Site 2 – Community Park Overflow: This site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3). However, surface exposures of the Miocene Puente Formation, Yorba Member (Tpy) and the Puente Formation, Soquel Member (Tpsq) are immediately adjacent to the site to the west and south, respectively, and are extensively exposed at the surface along the neighboring slopes to the southwest. Although not present at the surface of the site, the Yorba Member and Soquel Member of the Puente Formation are likely present at very shallow depth based on their surface exposures in proximity to the site.

Site 3 – Los Serranos Golf Course: This site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3), middle to early Pleistocene very old alluvial-fan deposits (Qvof), and early Pliocene and Miocene Puente Formation, Sycamore Canyon Member (Tpsc). Additionally, Holocene and late Pleistocene young landslide deposits (Qyls) are mapped at the surface immediately adjacent to the southern boundary of the site and overlie both the Sycamore Canyon (Tpsc) and Yorba (Tpy) members of the Puente Formation within a 0.5-mile radius of the site. Although close to the southern site boundary, young landslide deposits are unlikely to be present within the site since construction of the golf course likely removed any landslide debris or rubble that could have been present. Subsurface deposits of the Sycamore Canyon and Yorba Members are likely present at shallow depth, however, underlying the alluvial-fan deposits mapped at the surface.

Site 4 – Western Hills Golf Course: This site is mapped at the surface as Holocene and late Pleistocene young wash deposits (Qyw) and Miocene Puente Formation, Soquel Member (Tpsq). Holocene and late Pleistocene young landslide deposits (Qyls) are also located near the site on the northwestern slopes; however, based on the topography of the site, they are unlikely to be present within the site as unmapped deposits. Additionally, Miocene Puente Formation, Yorba Member (Tpy) is present approximately 0.5 mile to the southeast near the top of the hills; this deposit is unlikely to be in the site based on the stratigraphy of the members of the Puente Formation and the local topography.

Site 5 – Wang (High Density): The site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3), Holocene and late Pleistocene young landslide deposits (Qyls), and Miocene Puente Formation, Yorba Member (Tpy). Within portions of the site mapped as young alluvial-fan deposits and young landslide deposits, the Puente Formation, Yorba Member is likely present at very shallow depth. Additionally, middle to early Pleistocene very old alluvial-fan deposits (Qvof) is situated near the site along the north side of Country Club Drive and the east side of Rolling Ridge Drive; very old alluvial-fan deposits may be present as a thin unit in the subsurface of the site, underlying young alluvial-fan deposits and young landslide deposits and overlying the Puente Formation, Yorba Member.

Site 6 – The Shoppes: The site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3), with alluvial fans radiating away from the Puente-Chino Hills located north, west, and south of the site. Immediately adjacent to and surrounding the site are exposures of the Holocene and late Pleistocene young axial-channel deposits (Qya) associated with Chino Creek, and on the northwest side of Chino Creek, exposures of late Holocene young alluvial-fan deposits, Unit 5 (Qyf_5) are mapped at the surface across the basin. Based on their proximity to the site and the flattened topography, young alluvial-fan deposits, Unit 5 and young axial-channel deposits may be present, but unmapped, at the surface within the site. Underlying these alluvial deposits, the Miocene Puente Formation, Yorba Member (Tpy) may be present at shallow depth based on the proximity of exposures adjacent to the site.

Site 7 – The Commons: The site is mapped at the surface as Holocene and late Pleistocene young axial-channel deposits (Qya). Based on their proximity to the site, middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) and late Holocene young alluvial-fan deposits, Unit 5 (Qyf_5), which are present on the north and south banks of Chino Creek, may be present but unmapped at the surface of the site. Additionally, surficial young axial-channel deposits associated with Chino Creek may be underlain by middle to early Pleistocene very old alluvial-fan deposits (Qvof) at shallow depth within the site.

Site 8 – Canyon Estates (Medium Density): The site is mapped at the surface as Miocene Puente Formation, Yorba Member (Tpy). This site is also bordered by surface exposures of Holocene and late Pleistocene young landslide deposits (Qyls), which may be present at the surface along the fringes of the site. The Miocene Puente Formation, Soquel Member (Tpsq) may also be present but unmapped at the surface or present within the subsurface at the site based on the proximity of its exposures, stratigraphic relations, and the local topography of the site. Note that the early Pliocene and Miocene Puente Formation, Sycamore Canyon Member (Tpsc) is mapped at the surface immediately adjacent to and upslope of the site; however, based on the stratigraphy of the Puente Formation and the local topography, the Sycamore Canyon Member is unlikely to be present within the site.

Site 9 – Wang (Medium Density): The site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3), Holocene and late Pleistocene young landslide deposits (Qyls), and Miocene Puente Formation, Yorba Member (Tpy). Most of the surface of the site is covered by young alluvial-fan deposits, Unit 3 and young landslide deposits; however, the exposures of the Puente Formation, Yorba Member that are mapped at the surface within the eastern portion of the site likely extend at shallow depth to the west, underlying the young alluvial-fan deposits, Unit 3 and young landslide deposits. The early Pliocene and Miocene Puente Formation, Sycamore Canyon Member (Tpsc) is also mapped at the surface within 0.5 mile of the site but is unlikely to be present within the site based on stratigraphy of the Puente Formation and the local topography.

Site 10 – Canyon Estates (Low Density): The site is mapped at the surface as Holocene and late Pleistocene young landslide deposits (Qyls) and Miocene Puente Formation, Yorba Member (Tpy). Although not mapped at the surface within the bounds of the site, middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) are mapped at the surface immediately adjacent to the site on its north boundary and could extend into the site as unmapped deposits.

Site 11 – Los Serranos (Low Density): The site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) and Holocene and late Pleistocene young landslide deposits (Qyls). Additionally, the early Pliocene and Miocene Puente Formation, Sycamore Canyon Member (Tpsc) or the Miocene Puente Formation, Yorba Member (Tpy) are mapped near the site and could be present in the shallow subsurface underlying the sediments of middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) and/or Holocene and late Pleistocene young landslide deposits (Qyls).

7.3 Museum Records Search

SWCA requested updated museum records search results from the SBCM (Confidential Appendix A) and NHMLA (Confidential Appendix B). Based on the results of the museum records search, the SBCM and NHMLA contain numerous records of paleontological resources from within the city and its vicinity; however, no fossil localities were identified from within the bounds of the eleven RHNA sites. The results of the museum records searches are summarized in Table 1.

Table 1. SBCM and NHMLA Fossil Localities within or near the City of Chino Hills

Locality Number	General Location	Formation	Taxa	Depth
SBCM 1.116.319	Within the city limits, approximately 0.21 mile away from Site 1 The Shoppes II and Site 6 The Shoppes	Unnamed Pleistocene deposits	Indeterminant vertebrate, rabbits, rodents, lizards, snakes, gastropods	Unknown
SBCM 1.116.318	Within the city limits, approximately 0.25 miles away from Site 1 The Shoppes II and Site 6 The Shoppes	Unnamed Pleistocene deposits	Indeterminant vertebrate, indeterminant mammal, rodents, gastropods	Unknown
SBCM 1.116.304–1.116.317 and 1.116.320–1.116.330	Within the city limits, approximately 0.35 to 0.65 mile away from Site 6 The Shoppes	Puente Formation, Yorba Member	Whales, seals, bony fish, sharks, sea stars, indeterminant mollusks, bivalves, gastropods, plants, algae	Unknown
SBCM 1.116.265–1.116.268	Within the city limits, approximately 0.35 to 0.60 mile away from Site 6 The Shoppes	Puente Formation, Soquel Member or Yorba Member	Bony fish, sharks, echinoderms, indeterminant	Unknown

Locality Number	General Location	Formation	Taxa	Depth
	and 0.60 to 0.90 mile away from Site 2 Community Park Overflow		mollusks, plants, trace fossils	
SBCM 1.116.262–1.116.264	Within the city limits, approximately 0.80 mile away from Site 6 The Shoppes	Puente Formation, Yorba Member	Indeterminant vertebrates, plants	Unknown
SBCM 1.116.301–1.116.303	Within the city limits, approximately 1.0 mile away from Site 6 The Shoppes	Unnamed Pleistocene deposits	Indeterminant mammals, rodents	Unknown
		Puente Formation, Yorba Member	Seals, rodents, bony fish, shark, plants, brown algae	
SBCM 1.116.80, 1.116.85–1.116.109, 1.116.122–1.116.179, 1.116.215–1.116.233, 1.116.235–1.116.240, 1.116.246–1.116.253, 1.116.255–1.116.261 (128 fossil localities)	Within the city limits, extending from 0.25 to 2.0 miles away from Site 2 Community Park Overflow	Unnamed Pleistocene deposits	Indeterminant vertebrates, bison, horses, trace fossils	Unknown
		Puente Formation, Yorba Member	Indeterminant mammals, whales, bony fish, sharks, crustaceans, indeterminant mollusks, bivalves, gastropods, sponges, plants, trace fossils	
		Puente Formation, Soquel Member	Whales, bony fish, sponges, plants	
SBCM 1.116.290	Within the city limits, approximately 0.15 mile away from Site 7 The Commons	Unnamed Pleistocene deposits	Indeterminant vertebrates, indeterminant mammals, rodents, gastropods	Unknown
SBCM 1.116.338–1.116.350	Within the city limits, approximately 1.0 mile away from Site 7 The Commons	Unnamed Pleistocene deposits overlying Puente Formation (member unspecified)	Indeterminant vertebrates, indeterminant mammals, bison, rabbits, rodents, moles, bird, snake, lizard, frog, sharks, bivalves, gastropods	Unknown
SBCM 1.116.246	Within the city limits, approximately 0.65 mile away from Site 4 Western Hills Golf Course	Puente Formation, Soquel Member	Bony fish, petrified wood	Unknown
SBCM 1.116.111 (see SBCM 1.116.112–1.116.117 below, which were part of the same project)	Within the city limits, approximately 0.05 mile away from Site 5 Wang (High Density) and 0.20 mile away from Site 3 Los Serranos Golf Course	Puente Formation, Yorba Member	Unknown – fossil specimens unlisted in archive and fossils could not be located	Unknown
SBCM 1.116.24	Within the city limits, approximately 0.70 mile away from Site 5 Wang (High Density)	Puente Formation, Sycamore Canyon Member	More than 3,500 specimens, including bony fish, crustaceans, bivalves, foraminifers, plants, algae	Various (from shale beds)
SBCM 1.116.112–1.116.117	Within the city limits, approximately 0.60 to 0.70 mile away from Site 3 Los Serranos Golf Course	Puente Formation, Yorba Member Puente Formation, Sycamore Canyon Member	Toothed whales, dolphins, baleen whales, bony fish, indeterminant mollusks, bivalves, gastropods, foraminifers, plants	
SBCM 1.116.269	Within the southeastern portion of the city (east slope of the Puente-Chino Hills)	Puente Formation, Yorba Member	Whales	Unknown
SBCM 1.116.270	Within the southeastern portion of the city (east slope of the Puente-Chino Hills in Chino Hills State Park)	Puente Formation, Yorba Member	Whales	Unknown
SBCM 1.116.11, 1.116.12–1.116.114	Within the southeastern portion of the city (immediately east of Chino Hills State Park)	Puente Formation, Sycamore Canyon Member	Bony fish, bivalves, plants	Unknown

Locality Number	General Location	Formation	Taxa	Depth
SBCM 1.116.241–1.116.244	Within the southeastern portion of the city (immediately east of Chino Hills State Park)	Puente Formation, Sycamore Canyon Member	Bony fish, bivalves, plants	Unknown
SBCM 1.116.271–1.116.274	Within the southeastern portion of the city (immediately east of Chino Hills State Park near Owl Rock Quarry)	Puente Formation, Sycamore Canyon Member	Bony fish, bivalves, plants	Unknown
SBCM 1.116.16–1.116.23, 1.116.180–1.116.206 (35 fossil localities)	Within the southeastern portion of the city (within Owl Rock Quarry)	Puente Formation, Sycamore Canyon Member	Indeterminant chordates, sharks, bivalves, plants	Unknown
SBCM 5.5.48–5.5.58, 1.116.275–1.116.288	5.0 miles northeast of and outside of the city limits	Unnamed Pleistocene deposits	Mastodons, mammoths, saber-toothed cats, camels, bison, horses, ground sloths, rabbits, rodents, shrews	Unknown
LACM VP 1728	Within the city limits, approximately 0.25 mile away from Site 1 The Shoppes II	Unnamed Pleistocene deposits	Horses, camels	15–20 feet bgs
LACM VP 7508	Within the city limits	Unnamed Pleistocene deposits	Ground sloths, elephants, horses	Unknown
LACM VP 7268, 7271	Within the city limits, approximately 0.5 mile away from Site 3 Los Serranos Golf Course	Unnamed Pleistocene deposits	Horses	Unknown
LACM IP 17597-17600	1.7 miles west of and outside of the city limits	Puente Formation	Undifferentiated invertebrates, shelled cephalopods	Unknown
LACM VP 6166, 6167, 6172, 6173, 7471	4.7 miles northwest of and outside of the city limits	Puente Formation	Bony fish and sharks	Surface
LACM IP 17925–17928, 17932	7.1 miles northwest of and outside of the city limits	Puente Formation, Sycamore Canyon Member	Bivalves, gastropods, plants	6–6.5 feet bgs

Sources: SBCM (2022) and NHMLA (2022)

Note: bgs = below ground surface

7.4 Reconnaissance Survey of the RHNA Sites

To supplement the project-level analysis of the RHNA sites, SWCA's Staff Paleontologist Kristina Akesson, B.S., conducted a pedestrian- and windshield-level field reconnaissance survey of seven of the eleven RHNA sites. As discussed previously, four of the eleven RHNA sites were not surveyed and were only subject to a desktop-level review. The results of the field reconnaissance survey are summarized below.

Site 1 – The Shoppes II: This site was subject to a pedestrian survey. The site is partially disturbed at the surface, based on the presence of an asphalt-covered parking lot in the northeastern portion and imported gravel in the western portion; however, the southern portion is mostly undisturbed, covered in soil and grasses, and contains small hills across a west-facing slope (Figure 4). Geologic mapping by Morton and Miller (2006), which indicates the RHNA site is mapped at the surface as middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3) and Holocene and late Pleistocene young axial-channel deposits (Qya), could not be confirmed due to ground cover. Soil observed at the surface consisted of light brown to tan, very fine- to coarse-

grained sand, which was poorly sorted and angular to subangular, and silt. No paleontological resources were observed.

Site 2 – Community Park Overflow: This site was subject to a pedestrian survey. The surface of the site has been disturbed by vehicles (i.e., parking and traffic) and the construction of underground utilities based on the presence of a manhole cover within the site; otherwise, it is an empty, flat lot capped with a veneer of gravel that may have originated as previously disturbed sediments from the site (Figure 5). These reworked sediments may have been from the middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3), which are composed of eroded and transported clasts of the Miocene Puente Formation, Yorba and Soquel Members (Tpy and Tpsq), which are also mapped within the site. These reworked sediments consist of tan, poorly sorted silt and angular to subangular, very fine- to coarse-grained sand, gravel, conglomerate.
No paleontological resources were observed.

Site 3 – Los Serranos Golf Course: This site was subject to a pedestrian survey. Areas mapped as the Puente Formation, Sycamore Canyon Member (Tpsc) are covered by vegetation, areas mapped as young alluvial-fan deposits, Unit 3 (Qyf_3) have limited exposures along a channel wash crossing the site, and areas mapped as very old alluvial-fan deposits (Qvof) have limited exposures along the same channel (Figure 6). Very young alluvial-fan deposits, Unit 3 consist of light medium brown silt and very fine-grained sand with gravel, poorly sorted and subangular to subrounded in shape. Very old alluvial-fan deposits consist of light brown to tan, fine- to medium-grained sand and gravel, which are poorly sorted and angular to subangular in shape. During the survey, SWCA's paleontologist recorded one nonsignificant fossil locality (F20220623-66884-KA01) along the channel's bank in an area mapped as very old alluvial-fan deposits; this fossil locality yielded poorly preserved fossil fish scales observed in clasts eroded from older geologic units (presumably the Puente Formation) that washed into the channel (Figure 7). Fossils from this locality were not collected, and no further mitigation or treatment is required. Although determined to be nonsignificant in the field and ultimately not collected, the presence of fossil material indicates the fossil preservation potential of the Puente Formation and the overlying alluvial or surface deposits.

Site 4 – Western Hills Golf Course: This site was subject to a pedestrian survey. Geologic mapping by Morton and Miller (2006) was mostly obscured by vegetation, soil, and disturbed sediments across most of the site (Figure 8). Limited exposures of the Puente Formation, Soquel Member (Tpsq) are present along the stream channel where erosion has removed surficial alluvial sediments and exposed sandstones within the stream channel, suggesting that the Puente Formation, Soquel Member is likely present at shallow depth beneath surficial sediments. Topographically, the site contains small, rolling hills and a stream channel at the base of a valley, which is partially or fully disturbed, based on the presence of pipes along the banks and crossing the stream channels. No paleontological resources were observed.

Site 5 – Wang (High Density): The site was subject to a windshield survey (visually viewed from outside the site boundary) because the site is completely vegetated with grasses for a cattle pasture and was inaccessible at the date of the paleontological field reconnaissance survey (Figure 9). Geologic mapping by Morton and Miller (2006) could not be confirmed due to vegetative ground cover. Topography at the site consisted of rolling hills with no discernable creeks or channels. No paleontological resources were observed.

Site 6 – The Shoppes: The site was subject to a windshield (drive-by) survey because the site is completely disturbed with a parking lot and commercial buildings (Figure 10). Geologic mapping by Morton and Miller (2006) could not be confirmed due to prior site development. Topography

at the site was flat, with no swales or channels. Based on the presence of buildings and underground utilities (re: manholes within the parking lot), the site has likely been disturbed to moderate depths. No paleontological resources were observed.

Site 7 – The Commons: The site was subject to a windshield (drive-by) survey because the site is completely disturbed with a parking lot and commercial buildings (Figure 11). Geologic mapping by Morton and Miller (2006) could not be confirmed due to prior site development. Topography at the site was flat, with no swales or channels. Based on the presence of buildings and underground utilities (re: manholes within the parking lot), the site has likely been disturbed to moderate depths. No paleontological resources were observed.

Site 8 – Canyon Estates (Medium Density): At the request of the City, a paleontological field reconnaissance survey was not conducted for this site.

Site 9 – Wang (Medium Density): At the request of the City, a paleontological field reconnaissance survey was not conducted for this site.

Site 10 – Canyon Estates (Low Density): At the request of the City, a paleontological field reconnaissance survey was not conducted for this site.

Site 11 – Los Serranos (Low Density): At the request of the City, a paleontological field reconnaissance survey was not conducted for this site.

Figure 4. Overview of RHNA Site 1 The Shoppes II, showing land topography, disturbed surface, and ground cover; facing north. Geologic mapping could not be confirmed due to ground cover.

Figure 5. Overview of RHNA Site 2 Community Park Overflow, showing land topography and disturbed surface of reworked sediments, possibly from middle Holocene young alluvial-fan deposits, Unit 3 or Miocene Puente Formation, Yorba and Soquel Members; facing west.

Figure 6. Overview of RHNA Site 3 Los Serranos Golf Course, showing land topography within the golf course; facing east. Area mapped as middle to early Pleistocene very old alluvial-fan deposits within the channel crossing the site yielded nonsignificant fossil fish scales (F20220623-66884-KA01), preserved within an eroded clast originating from the Miocene Puente Formation.

Figure 7. Fossil locality (F20220623-66884-KA01) from middle to early Pleistocene very old alluvial-fan deposits recovered from RHNA Site 3 Los Serranos Golf Course. Fossil material consists of poorly preserved fish scales, which are nonsignificant and therefore not collected.

Figure 8. Overview of RHNA Site 4 Western Hills Golf Course, showing land topography within the golf course and level of disturbance of vegetation surficial sediments; facing north. Geologic mapping was partially confirmed by limited exposures of the Puente Formation, Soquel Member (Tpsq) present along the stream channel.

Figure 9. Overview of RHNA Site 5 Wang (High Density), showing land topography and vegetated cattle pasture; facing south. Geologic mapping could not be confirmed due to ground cover.

Figure 10. Overview of RHNA Site 6 The Shoppes, showing previous site development with a parking lot, commercial buildings, and underground utilities; facing north. Geologic mapping could not be confirmed due to ground cover.

Figure 11. Overview of RHNA Site 7 The Commons, showing previous site development with a parking lot, commercial buildings, and underground utilities; facing east. Geologic mapping could not be confirmed due to ground cover.

7.5 Paleontological Potential of the Study Area

Based on the results of this updated paleontological resources assessment, which included a broad (i.e., program-level) review of the city limits (Figure 12), as well as a focused (i.e., project-level) review of the eleven RHNA sites within the city limits, SWCA determined the paleontological potential of the geologic units within the study area (Appendix D). Based on these data, the geologic units within the study area were binned in three paleontological sensitivity classes, based off the SVP (2010) paleontological potential classification system described in Section 6.3 above: low, low to high (increasing with depth), and high.

Geologic units within the study area with low paleontological sensitivity include: late Holocene very young landslide deposits (Qls), late Holocene very young wash deposits (Qw), late Holocene young alluvial-fan deposits, Unit 5 (Qyf_5), and Holocene and late Pleistocene young landslide deposits (Qyls). These geologic units are regarded as too young (i.e., less than 5,000 years old) to yield significant paleontological resources. Additionally, landslide deposits form as a result of high-energy debris flows, which are nonconducive to fossil preservation (i.e., the forces associated with landslides typically result in destruction of mineralized hard parts that would otherwise be preserved in lower-energy depositional environments). Therefore, these units have a low paleontological sensitivity but may be underlain at variable depth by older geologic units capable of yielding significant fossils.

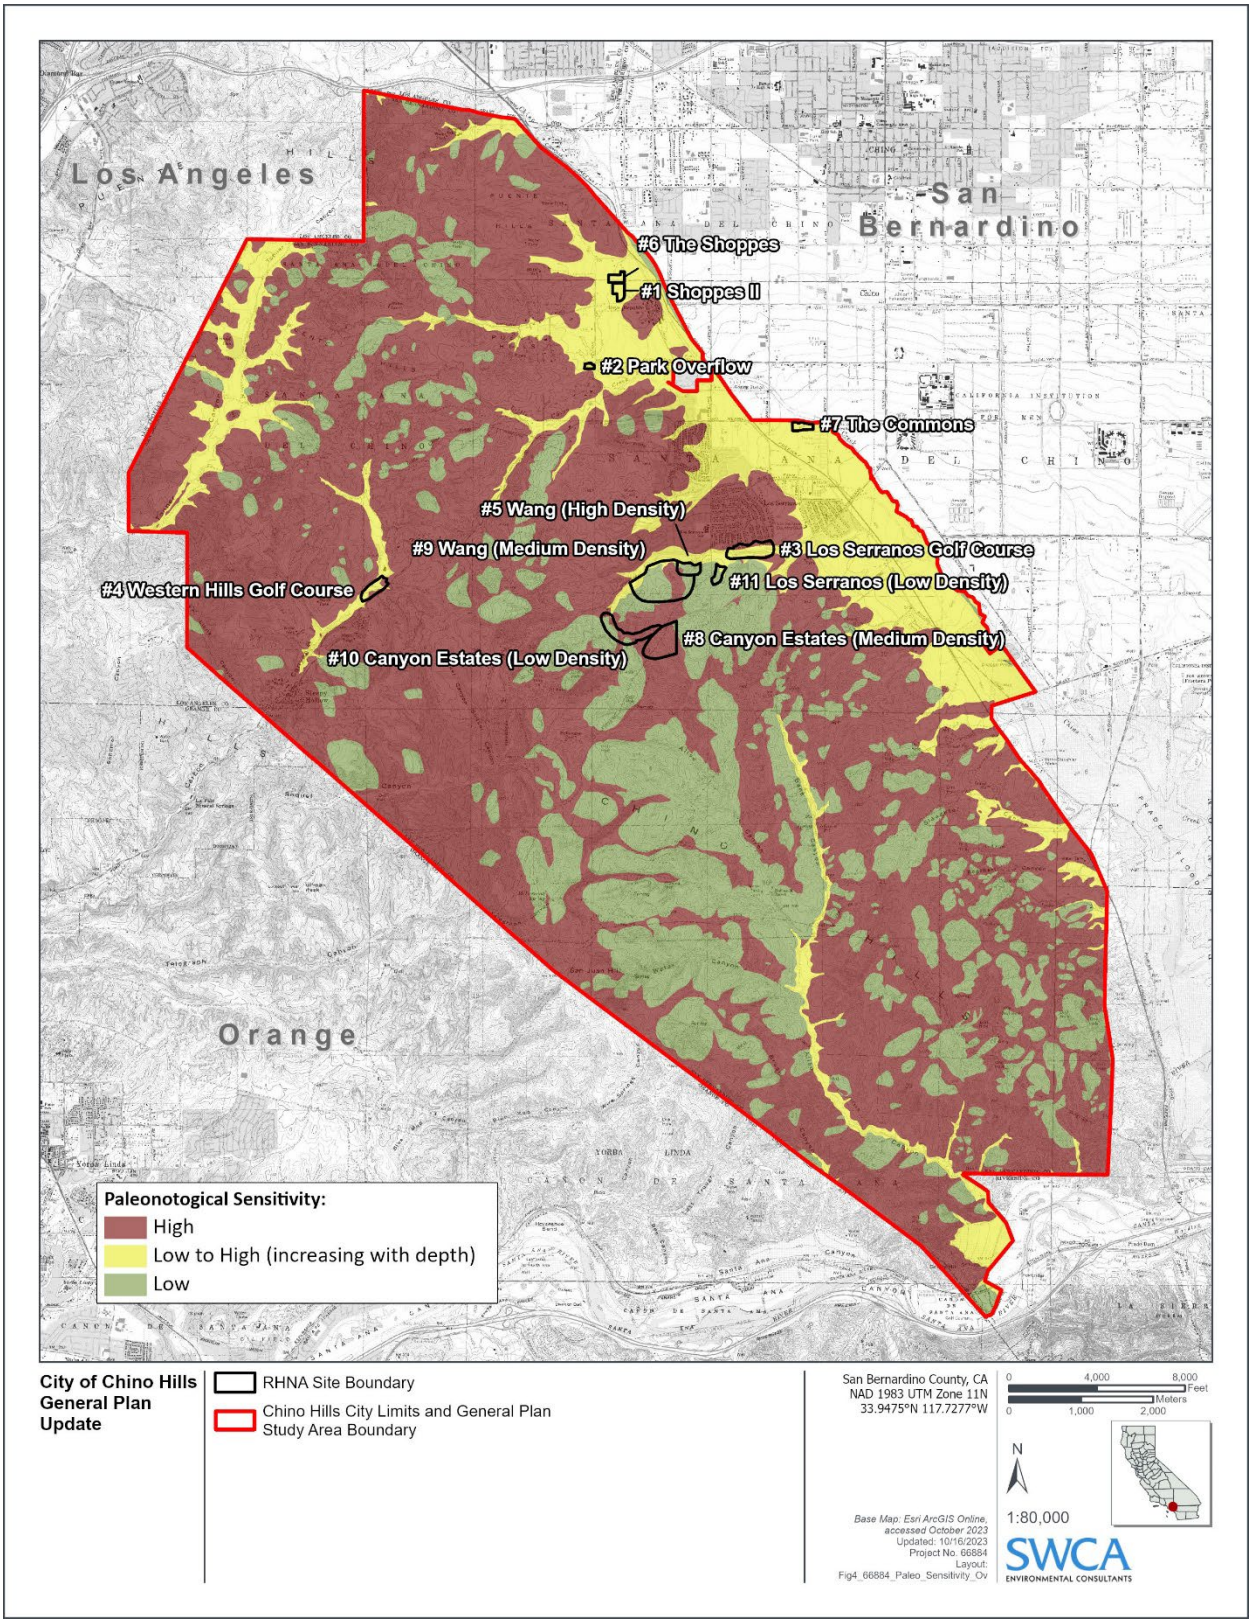

Figure 12. Paleontological sensitivity of the Chino Hills city limits and General Plan study area and RHNA site locations.

Geologic units within the study area with low to high (increasing with depth) paleontological sensitivity include: middle Holocene young alluvial-fan deposits, Unit 3 (Qyf_3); Holocene and late Pleistocene young wash deposits (Qyw); Holocene and late Pleistocene young axial-channel deposits (Qya); and Holocene and late Pleistocene young alluvial-fan deposits (Qyf, undivided and may contain Qyf_5 and Qyf_3). The uppermost sediments within these geologic units are likely too young to contain significant fossils but may transition with depth to older sediments capable of preserving fossils. The depth to this transition within these geologic units is unknown and variable, but likely shallow (e.g., 10 feet below ground surface [bgs], based on depths of known fossil localities from Pleistocene deposits within the city limits [NHMLA 2022]). Therefore, these geologic units have a low to high (increasing with depth) paleontological sensitivity.

Geologic units within the study area with high paleontological sensitivity include: late to middle Pleistocene old axial-channel deposits (Qoa); middle to early Pleistocene very old axial-channel deposits (Qvoa); middle to early Pleistocene very old alluvial-fan deposits (Qvof); early Pliocene and Miocene sandstone and conglomerate in southeast Chino Hills (Tch); early Pliocene and Miocene Puente Formation – Sycamore Canyon Member (Tpsc); Miocene Puente Formation – Yorba Member (Tpy); Miocene Puente Formation – Soquel Member (Tpsq); Miocene Puente Formation – La Vida Member (Tplv); middle Miocene Topanga Group, undifferentiated (Tt); and early Miocene, Oligocene, and late Eocene Vaqueros and Sespe formations (Tvs). These geologic units have yielded a plethora of significant paleontological resources throughout their mappable extent in Southern California, particularly in Puente-Chino Hills regions where these older geologic units have been uplifted and exposed at the surface. Furthermore, exposure of unweathered material during construction has a high possibility of yielding fossils not preserved or noticeable at the surface. Therefore, they have a high paleontological sensitivity.

The paleontological sensitivities of the eleven RHNA sites are based on the assessment described above. Figures within Appendix D present the local paleontological sensitivity (within a 0.5-mile buffer) around each RHNA site. Based on the geologic units mapped at the surface, the RHNA sites have the following paleontological sensitivity classifications:

Site 1 The Shoppes II: This site has a low to high (increasing with depth) paleontological sensitivity.

Site 2 Community Park Overflow: This site has a low to high (increasing with depth) paleontological sensitivity.

Site 3 Los Serranos Golf Course: This site has low to high (increasing with depth) and high paleontological sensitivity.

Site 4 Western Hills Golf Course: This site has low to high (increasing with depth) and high paleontological sensitivity.

Site 5 Wang (High Density): This site has low, low to high (increasing with depth), and high paleontological sensitivity.

Site 6 The Shoppes: This site has a low to high (increasing with depth) paleontological sensitivity.

Site 7 The Commons: This site has a low to high (increasing with depth) paleontological sensitivity.

Site 8 Canyon Estates (Medium Density): This site has a high paleontological sensitivity.

Site 9 Wang (Medium Density): This site has low, low to high (increasing with depth), and high paleontological sensitivity.

Site 10 Canyon Estates (Low Density): This site has low and high paleontological sensitivity. Note that a geologic unit (middle Holocene young alluvial-fan deposits, Unit 3 [Qyf_3]), which has low to high (increasing with depth) paleontological sensitivity, is present immediately outside of the site along its northern boundary; if present as unmapped deposits, then the site also has low to high (increasing with depth) paleontological sensitivity.

Site 11 Los Serranos (Low Density): This site has low and low to high (increasing with depth) paleontological sensitivity.

8 IMPACT ASSESSMENT

This updated paleontological resources assessment was conducted to analyze any potential impacts this project may have on paleontological resources located broadly within the city limits and locally within the eleven RHNA sites. Based on the results of this study, the project may result in impacts to geologic units with low to high (increasing with depth), and/or high paleontological sensitivities. Broadly, ground-disturbing activities impacting geologic units of low paleontological sensitivity are unlikely to result in impacts to significant fossils; however, these geologic units are directly underlain by older geologic units with relatively higher paleontological sensitivity at variable depths across the city. Ground-disturbing activities that have the potential to impact geologic unit with low to high (increasing with depth) or high paleontological sensitivities, whether present at the surface or at depth, may result in impacts to significant fossils if such disturbances would impact previously undisturbed sediments. Locally, the paleontological sensitivities of the eleven RHNA sites vary among low, low to high (increasing with depth), and high paleontological sensitivities, depending on the geologic units mapped at the surface, the geologic units that may be present in the subsurface, and the level of previous ground disturbance at each site that may have resulted in the presence of unmapped disturbed sediments or artificial fill from the surface to unknown depths. Geotechnical investigations and grading/engineering plans would inform a refinement of this impact assessment and allow a qualified paleontologist to develop mitigation requirements specific and appropriate to each RHNA site.

Cogstone's (2011) paleontological resources assessment does not provide specific recommendations for the mitigation of paleontological resources. However, the City's EIR for the 2015 General Plan Update (City of Chino Hills 2015b) requires that site-specific paleontological resources investigations be conducted for discretionary land development projects to determine the potential for impacts to significant paleontological resources; if the potential to encounter paleontological resources is identified, then paleontological monitoring or grading in targeted areas by a qualified professional paleontologist would be required. Potentially significant fossil material should also be preserved, restored, catalogued, and/or transmitted to an appropriate repository. Implementation of these procedures would result in less-than-significant impacts, pursuant to CEQA.

In relation to the current project, which proposes updates to the Chino Hills 2015 General Plan study area and proposes inclusion of eleven RHNA sites, ground-disturbing activities could impact previously undisturbed geologic units with the potential to yield significant paleontological resources, either at the surface or at depth. Should fossils be encountered during discretionary land development projects within the Chino Hills 2015 General Plan study area, they would be at risk of damage or destruction, constituting a significant impact under CEQA. However, implementation of the City's existing General Plan Policy CN-2.2 and Actions CN-2.2.1 through CN-2.2.3 would reduce any potential impacts to less-than-significant levels. In accordance with the City's policy and actions, SWCA reviewed the eleven RHNA sites and concluded that impacts to paleontological resources may occur, and mitigation recommendations should be developed and implemented for the RHNA sites to reduce potential impacts to less-than-significant levels, pursuant to CEQA.

9 RECOMMENDED IMPACT AVOIDANCE AND MITIGATION MEASURES

This section provides general measures geared to avoid, reduce, or mitigate potential impacts resulting from build out under the City's General Plan.

9.1 Measures Applying to Development Projects in General Plan Study Area

Based on the results of the program-level assessment, the paleontological potential of the geologic units mapped at the surface or present at depth are low, low to high (increasing with depth), and high paleontological sensitivities. Implementation of the City's existing General Plan Policy CN-2.2 and Actions CN-2.2.1 through CN-2.2.3 would reduce any potential impacts to less-than-significant levels, pursuant to CEQA. Therefore, the requirements established in the 2015 Chino Hills General Plan would still be applicable to the current General Plan Update SEIR.

The existing General Plan (City of Chino Hills 2015a) policy and actions are listed below for reference.

- **Policy CN-2.2:** Protect Chino Hills' paleontological resources.
  - **Action CN-2.2.1:** Require appropriate paleontological surveys as part of the environmental review process where paleontological resources may be present.
  - **Action CN-2.2.2:** Where paleontological resources are found during development activities, require on-site inspections by a qualified paleontologist during grading activities where paleontological resources may be present.
  - **Action CN-2.2.3:** Require identified paleontological materials to be preserved, restored, cataloged, and/or transmitted to the appropriate repository or as otherwise directed by a qualified professional paleontologist.

9.2 Mitigation Measures for RHNA Sites

The results of the project-level assessment of the RHNA sites indicate that the geologic mapping is similar among the eleven RHNA sites. Thus, the surficial geologic units of the eleven RHNA sites have similar paleontological sensitivities, ranging among low, low to high (increasing with depth), and/or high paleontological sensitivities. Moreover, surficial geologic units noted as having low paleontological sensitivity are immediately underlain at variable depths by older geologic units that have relatively higher paleontological sensitivity (i.e., either low to high [increasing with depth] and/or high paleontological sensitivity), resulting in each RHNA site having high paleontological sensitivity at some depth. Depending on the extent and depth of ground-disturbing activities for a development project(s) within each of the RHNA sites, geologic units of high paleontological sensitivity could be encountered, and significant fossils (if present) within those geologic units would be at risk for damage or destruction. Therefore, impacts to paleontological resources may occur. Accordingly, the following avoidance or minimization recommendations applicable to all eleven RHNA sites.

Mitigation Measure RHNA-PR-1. Requirements to Avoid Impacts to Paleontological Resources. The following measures apply to all eleven RHNA sites. These recommendations have been developed in accordance with and incorporate the performance standards of the SVP (1995, 2010), state and local regulations, and best practices in mitigation paleontology (Murphey et al. 2019).

a. **Retain a Qualified Professional Paleontologist:** Prior to the issuance of any permits allowing ground-disturbing activities, a qualified paleontologist meeting the SVP (2010) standards (Qualified Paleontologist) should be retained by the project proponent. The Qualified Paleontologist should provide technical and compliance oversight of all work as it relates to paleontological resources, should be responsible for ensuring the employee training provisions are implemented during implementation of the project, and should report to the project site in the event potential paleontological resources are encountered.

b. **Prepare a Paleontological Resources Management Plan:** A Paleontological Resources Management Plan (PRMP) should be prepared by the Qualified Paleontologist that incorporates all available geologic data for the project to determine the necessary level of effort for monitoring based on the planned rate of excavation and grading activities, the geologic sediments/materials being excavated, and the depth of excavation. The PRMP would establish the ground rules for the entire paleontological resource mitigation program. The Qualified Paleontologist should implement the PRMP as the project paleontologist, program supervisor, and principal investigator. The PRMP should incorporate the results of all additional paleontological resources assessment(s), geotechnical investigation, and the final engineering/grading plans for the project, including pertinent geological and paleontological literature, geologic maps, and known fossil locality information. The PRMP should include processes and procedures for paleontological monitoring, fossil salvaging (if needed), reporting, and curation (if needed). The PRMP should also require the Qualified Paleontologist to prepare a report of the findings of the monitoring efforts after construction is completed. The PRMP should also require the Qualified Paleontologist to obtain a curatorial arrangement with a qualified repository prior to construction if significant paleontological resources are discovered and require curation.

c. **Conduct Worker Training:** The Qualified Paleontologist should develop a Worker Environmental Awareness Program to train the project personnel on the legal requirements for preserving fossil resources, as well as the procedures to follow in the event of a fossil discovery. This training should be given to on-site workers before ground-disturbing work commences.

d. **Monitor for Paleontological Resources:** Areas where the mapped geologic units have low paleontological sensitivity should be initially spot checked when ground disturbances impact sediments greater than or equal to 10 feet bgs to check for the presence of the underlying older geologic units of relatively higher paleontological sensitivity. If geologic units of relatively higher paleontological sensitivity would not be observed during initial spot-checking, then the level of spot-checking should be reduced or ceased at the discretion of the Qualified Paleontologist. Areas where the mapped geologic units have low to high (increasing with depth) paleontological sensitivity should be monitored full time when ground disturbances impact sediments greater than or equal to 10 feet bgs; ground disturbances in these areas that are less than 10 feet bgs should be spot checked. Areas where the mapped geologic units have high paleontological sensitivity should be monitored full time, regardless of depth. Paleontological monitoring would not be required when ground-disturbing activities impact only geologic units of low paleontological sensitivity at depths less than 10 feet bgs. Additionally, monitoring would not be required in previously disturbed sediments or artificial fill, regardless of depth. Monitoring should be conducted by a paleontological monitor who meets the standards of the SVP (2010). Monitoring should be conducted in accordance with the protocols outlined in the PRMP and under the supervision of the Qualified Paleontologist. The Qualified Paleontologist may periodically inspect construction activities to adjust the level of monitoring in response to subsurface conditions. Monitoring efforts can be increased, reduced, or ceased entirely if determined adequate by the Qualified Paleontologist. Paleontological monitoring should include inspection of exposed sedimentary units during active excavations within sensitive geologic

sediments. The Qualified Paleontologist should have authority to temporarily divert activity away from exposed fossils to evaluate the significance of the find and, should the fossils be determined significant, professionally and efficiently recover the fossil specimens and collect associated data. Paleontological monitors should record pertinent geologic data and collect appropriate sediment samples from any fossil localities. Recovered fossils should be prepared to the point of curation, identified by qualified experts, listed in a database to facilitate analysis, and deposited in a designated paleontological repository

e. **Prepare a Paleontological Resources Monitoring Report:** Upon conclusion of ground-disturbing activities, the Qualified Paleontologist overseeing paleontological monitoring should prepare a final Paleontological Resources Monitoring Report that documents the paleontological monitoring efforts for the project and describes any paleontological resource discoveries observed and/or recorded during the life of the project. If paleontological resources are curated, the Paleontological Resources Monitoring Report and any associated data pertinent to the curated specimen(s) should be submitted to the designated repository. A copy of the final Paleontological Resources Monitoring Report should be filed with the City.

With the implementation of the measures outlined in Mitigation Measure RHNA-PR-1, impacts to paleontological resources at the RHNA sites would be reduced to less than significant levels.

PALEONTOLOGY RECORDS REVIEW for City of Chino Hills Jurisdictional Area paleontological technical study, San Bernardino County, California

Dear Mr. Carson,

The Division of Earth Science of the San Bernardino County Museum (SBCM) has completed a records search for the above-named study in San Bernardino, California. The proposed study site is the entire jurisdictional area of the city of Chino Hills, California as shown on the United States Geological Survey (USGS) 7.5 minute San Dimas, Ontario, Prado Dam, Yorba Linda, and Black Star Canyon, California quadrangles.

Geologic mapping of the area by Morton and Miller (2006), Dibblee and Minch (2002), Dibblee and Ehrenspeck (2001), Schoellhamer et al. (1981), and Durham and Yerkes (1964) indicates that the majority of Chino Hills is situated atop a thick uplifted zone of Cenozoic sedimentary rock. This uplifted zone, the Puente Hills, is formed out of a series of anticlines and synclines with the majority of the units exposed at the surface being of Miocene age and marine origin. In rough order from oldest to youngest, these units are: the Sespe Formation (Tsp); the Topanga Sandstone (Ttp); and the Puente Formation, which includes the La Vida Shale Member (Tplv), Soquel Sandstone Member (Tpsq), Yorba Shale Member (Tpy), and Sycamore Canyon Member (Tpsc) (Morton and Miller 2006). The Puente Formation accounts for the largest majority of both surface exposure and subsurface thickness in the jurisdictional area of Chino Hills (Dibblee and Ehrenspeck 2001). Other older and younger lithified units are exposed at the surface just outside of Chino Hills, most notably in the south. The Pliocene Fernando Formation

(Tf) and early Pleistocene Lab Habra Formation (Qlh) are exposed in Yorba Linda at the foothills of the Puente Hills across the Whittier Fault (Dibblee and Ehrenspeck 2001). The Oligocene Vaqueros Formation (Tv), Eocene Santiago Formation (Tsa), Paleocene Silverado Formation (Tsl), and late Cretaceous Ladd Formation (Ka, Kcg, Kcgr) have surface exposures just south of the Santa Ana River, along the north face of the Santa Ana Mountains (Dibblee and Ehrenspeck 2001; also in Morton and Miller 2006 with different abbreviations). Igneous units occur just outside of Chino Hills to the north and south (Santa Ana Mountains and some exposures in San Dimas), but there seem to be no known occurrences within Chino Hills itself (Morton and Miller 2006; Dibblee and Minch 2002; Dibblee and Ehrenspeck 2001). Some of the units not found at the surface within Chino Hills may be found at depth, see cross section B-B' from Dibblee and Ehrenspeck (2001) for an example (Figure 1).

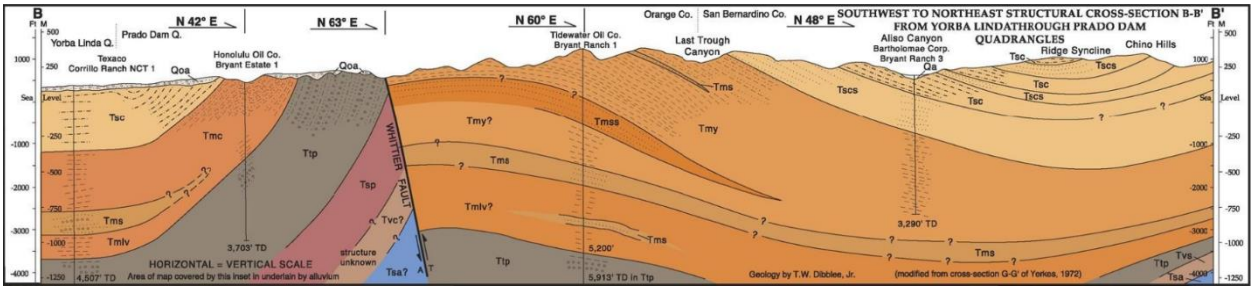

Figure 1: Cross section of the southeastern Puente Hills from Dibblee and Ehrenspeck (2001). The right half of the cross section is exemplary of the general stratigraphy of the Puente Hills, though faulting and folding can drastically alter local geology.

Pleistocene (Qoa) and Holocene (Qa) age alluvium fills in discrete areas such as valleys and canyons created by runoff and fluvial systems. The latter range in size from small creeks to the bed of the Santa Ana River in the region between the Puente Hills and the Santa Ana Mountains. Much thicker alluvial deposits border the Puente Hills, especially in the east (Reynolds 1989; Morton and Miller 2006). Alluvium is variable in its composition, often resembling a poorly indurated mixture of the units from which its sediment was sourced. Qa is unlikely to be fossiliferous, but Qoa is highly fossiliferous throughout Los Angeles, Riverside, and San Bernardino counties, yielding the remains of mastodons, mammoths, *Smilodon*, camels, horses, bison, and ground sloths, as well as microfossils including rodents (Reynolds and Reynolds 1991). In the city of Chino Hills, this alluvium directly and unconformably overlies the Puente Formation; outside the city's jurisdiction, the Pliocene age Fernando Formation (Dibblee and Ehrenspeck, 2001) or an unnamed Pleistocene age sandstone (Reynolds 1989) sometimes underlies Quaternary alluvium instead.

The Miocene age Puente Formation is equivalent in age to the Monterey Formation found elsewhere in southern California, and shares its combination of siliceous, diatomaceous, and organic siltstones and shales. However, the Puente Formation is distinguished from the Monterey

Formation via its thick and widespread clastic units, especially those containing coarse grained sediments (Scott 1998). The Puente Formation has multiple fossiliferous members, producing fossils of marine vertebrates and invertebrates. Bivalves, gastropods, and microinvertebrates like diatoms and foraminifera are common, fish are uncommon though abundant in select localities, and cetaceans are rare. A new species of dolphin has been found in the formation (Valleri Patel, personal comm. 2022). Terrestrial plant fossils are also common in several units of the Puente Formation.

The Sycamore Canyon Member is the youngest unit of the Puente Formation. Late Miocene in age (specifically Upper Mohnian and Lower Delmontian), the Sycamore Canyon member is comprised of three moderately indurated clastic marine facies: a micaceous, vaguely to moderately bedded grey silt, which has localized nodular zones and lenses of fine-grained grey-brown sandstone (Tpsc); a coarse to fine-grained and arkosic sandstone that ranges in color from brown to light grey and even white near Prado Dam (Tpscs), with localized conglomerate; and a light grey, bedded, and partially nonmarine conglomerate comprised of cobble to pebble sized clasts, mostly granitic though diorite, gneiss, and quartzite are also present (Tpscc). The Sycamore Canyon Member displays a depth gradient, which generally shallows upwards from the base of the member. The basal 900 feet of the unit represent sparsely fossiliferous deep water strata (> 2000 ft.) containing mostly foraminifera, while the uppermost units to the east (especially near Prado Dam) were deposited nearer to shore and are richly and diversely fossiliferous (Reynolds 1989). Upper Tpsc is the most fossiliferous facies of the Sycamore Canyon member and contains some splendidly preserved fish, sharks, whales, a sea turtle, diverse invertebrates, and terrestrial plant remains. Tpscc is the least fossiliferous facies, with isolated shell fragments.

Underlying the Sycamore Canyon Member is the Middle Miocene Yorba Shale member (Tpy), which is a moderately-lithified, thin-bedded, light grey to yellow to white, siliceous to silty shale (Dibblee and Ehrenspeck 2001). The Yorba Shale is the most productive member of the Puente Formation, especially in the north and east of the Puente Hills. Tpy also has localized occurrences of yellowish dolomite, thin layers of fine-grained sandstone, and white siliceous shales that are heavily diatomaceous (Durham and Yerkes 1964; Schoellhamer et al. 1981). The well-laminated sandstone units were probably deposited by turbidity currents from shallower depths (Reynolds 1989). Diatoms, foraminifera, fish scales, and fish skeletons comprise the bulk of the fossil record in Tpy, which combined with the lithology suggests a deep water paleoenvironment of depth exceeding 1800 feet (Reynolds 1989).

Underlying Tpy is the Middle Miocene Soquel Sandstone (Tpsq), which is prominently exposed in Soquel Canyon. This unit is bedded, light grey to tan when weathered, medium-grained, and arkosic, with local patches of coarser grains and pebbles, biotite, and silty grey shale

units (Reynolds 1989; Dibblee and Ehrenspeck 2001). Fossils found within Tpsq include mollusks, foraminifera, cetacean bone, shark teeth, and coral (Reynolds 1989). The fossils often display a fragmented or even crushed taphonomy, though some Tpsq localities have taphonomy and fossil assemblages similar to Tpy instead. Underlying Tpsq is the Middle Miocene La Vida Shale Member (Tplv), which is thin-bedded, cream-white, platy, and siliceous to semi-siliceous. Like Tpy, Tplv also includes yellow-grey dolomite and thin sandstone strata. Diatoms are the most common fossils in Tplv, with foraminfera also present and more common in the Santa Ana Mountains (Durham and Yerkes 1964; Reynolds 1989). No macrofossils have been found in Tplv of the Puente Hills. Finally, Dibblee and Ehrenspeck (2001) record several additional unnamed units in the southern Chino Hills of comparative age to the above three members. Diatoms are a common microfossil in Tpy and Tplv, and partially account for the siliceous nature of the stone (Durham and Yerkes 1964).

Underlying all of Tp is the Middle Miocene Topanga Formation (Ttp). Ttp is a marine, clastic, moderately lithified, light grey to tan, bedded, fine to medium grained, and arkosic sandstone with localized pebbly inclusions (Dibblee and Ehrenspeck, 2001). Thin interbeds of micaceous siltstone also occur. Fossil mollusks are the most common fossils in Ttp, with fish scales and foraminifera also present. The foraminifera and mollusks present indicate a shallow water to near shore paleoenvironment (Schoellhamer et al. 1981; Reynolds 1989). This unit is rarely exposed within the City of Chino Hills, occurring south of the Scully Hill Fault near Green River Golf Club where the unit is folded upwards toward the surface. Elsewhere in the City of Chino Hills, Ttp is buried deeply below Tp (Figure 1). Deep well bores and excavation conducted near the southern faults may penetrate Ttp, however. The formation is more commonly exposed in eastern Yorba Linda.

Underlying Ttp is the Early Miocene Sespe Formation (Tsp), which is terrestrial in origin. Though Tsp elsewhere ranges from Late Eocene to Early Miocene in age (Schoellhamer et al. 1981; Reynolds 1989), Dibblee and Ehrenspeck (2001) list the local exposures as Early Miocene exclusively. Tsp is split into two major facies, red beds of red-pink sandstone or silty claystone and cobble conglomerate. The former accounts for the only surface exposure in the City of Chino Hills, which like Ttp occurs at the southern edge of the Green River Golf Club bordering the Santa Ana River. No fossils have been found from Tsp within the City of Chino Hills, but nearby exposures in the Santa Ana Mountains have produced fossil vertebrates (Durham and Yerkes 1964). Units older than Tsp are buried so deeply under the City of Chino Hills as be outside the scope of this report.

For this review, I conducted a search of the Regional Paleontological Locality Inventory (RPLI) at the SBCM. The results of this search indicate that 351 localities have been discovered

within the programmatic project area, with over 100 additional specimens from the same strata located within 5 miles of the perimeter. No paleontological resources have been found within the 9 specific project areas of special interest, but several project areas have known localities near their borders and all have at least one locality from alike sediments within a mile. The following will discuss each specific project site and all paleontological localities found within a mile of their perimeters, followed up by an overview of localities in the broader jurisdictional area, and finishing with a summary of other fossiliferous regions nearby.

Project areas the Shoppes and the Shoppes II are situated atop Qa. There are no known localities within the project areas, but 38 SBCM localities occur within a mile of the site in multiple units. SBCM 1.116.319 is the closest locality, found in Qoa underlying surficial Qa between the canal and highway 71 0.21 miles northeast of The Shoppes northeasternmost corner. The sediment is a green clayey silt with caliche; there is no mention of how far it was located beneath the surface. Taxa found at the site include: Gastropoda indet.; Limacidae indet.; *Succinea* sp.; *Physa* sp.; *Anniella* sp.; *Aspidoscelis* sp.; *Cnemidophorus* sp.; *Trimorphodon* sp.; Leporidae indet.; *Thomomys* sp.; Heteromyidae indet.; *Microtus* sp.; and Vertebrata indet (Scott 1998). Fossils are fragmental to incomplete, disarticulated, disassociated, and unaltered to lightly permineralized. Taphonomy and sedimentology of the gastropods are consistent with a freshwater fluvial or flood plain system. Though the site was dated as late Pleistocene, many of the lizards are modern inhabitants of the region and their remains may be of recent origins. Nearby SBCM 1.116.318 is found only slightly further north in the same unit of Qoa. *Physa* sp., *Perognathus* sp., *Thomomys* sp., *Ammospermophilus* sp., and indeterminate vertebrate and mammal fossils are found there.

From 0.35 to 0.65 miles to the north of the Shoppes, SBCM localities 1.116.304 – 1.116.317 and 1.116.320 – 1.116.330 lie between residential housing on Royal Ridge road and highway 71. These localities are within Tpy, represented by a yellow to orange shale interbedded with sandstone, thinly covered by topsoil, and are highly fossiliferous. Permineralized fish bones and scales make up the bulk of the fossil assemblage here, often found as articulated partial to complete skeletons (Scott 1998). Some of the fish specimens also preserve muscle or flesh via carbonization or impression. Plant impressions, both terrestrial and marine, are the second most common constituent and recrystallized bivalves or impressions thereof are tertiary. Taxa found at these localities include: Mollusca indet.; Bivalvia indet.; *Pernopecten* sp.; *Ensis* sp.; Gastropoda indet.; *Olivia* sp.; cf. *Polinices* sp.; Asteroidea indet.; Chondrichthyes indet.; *Triakis* sp.; *Isurus* sp.; Osteichthyes indet.; Clupeidae indet.; †*Ganolytes* sp., †*G. cameo*; †*Xyne grex*; Bathylagidae indet.; †*Chauliodus eximius*; Myctophidae indet.; Moridae indet.; Atherinidae indet.; Belonidae indet.; *Syngnathus* sp.; Scorpaenidae indet.; *Sebastes* sp.; †*Lompoquia* sp.; Scombridae indet.; *Scomber* sp.; cf. †*Thrysocles* sp.; Pleuronectiformes indet.; Cetacea indet.; Pinnipedia indet.; Plantae indet.; *Magnolia* sp.; *Laurus* sp.; *Persea* sp.; *Umbellularia* sp.; cf. *Rhus* sp.; *Platanus* sp.;

cf. *Alnus* sp.; *Quercus* sp.; *Populus* sp.; *Salix* sp.; cf. *Washingtonia* sp.; and †*Paleohalidrys* sp (Scott 1998). Based on the fossil assemblage, quality of preservation, and the sedimentology of the localities, the depositional environment is hypothesized to be calm and deep water with transported remains of nearshore and terrestrial taxa, as is typical for the Puente Formation (Scott 1998).

SBCM 1.116.265 – 1.116.268 are located 0.35 – 0.6 miles west of the Shoppes and 0.6 – 0.9 miles north-northwest of Park Overflow. Locality records claim these sites belong to Tpsq, but the description of the thickness and yellow-brown color of the shale strata suggest Tpy instead. Dibblee and Ehrenspeck (2001) and Dibblee and Minch (2002) indicate the surface rock is Tpy, and the rock at these localities is buried shallowly under a thin layer of soil. Taxa found at the sites include: Echinodermata indet.; Molluca indet.; Chondrichthyes indet.; Osteichthyes indet.; Clupeidae indet.; Plantae indet.; coprolites; and worm burrows. Body fossils from these sites are all small, fragmental, and of limited diagnostic value. The burrow traces are much better preserved, and suggest a level of bioturbation in the paleoenvironment that may partially explain the taphonomic condition of the other fossils. This bioturbation suggests an active and oxygenated seafloor, which contrasts with many Tpy sites in the region that exhibit high quality preservation due to deposition in calm and anoxic environs.

SBCM 1.116.262 – 1.116.264 are located approximately 0.8 miles north-northwest of the Shoppes, along a portion of Chino Avenue. Assorted unidentifiable chordate and plant fossil fragments were found within a yellowish shale with bedding and sedimentary features matching Tpy. The fossiliferous unit was shallowly buried under the soil. Slightly further away, 1 mile north-northwest of the Shoppes, SBCM 1.116.301 – 1.116.303 are located within what is now a Lowe's Hardware. Unaltered Heteromyidae teeth and mammalian bones were found in a light green silty sand similar to a coarser version of the sediment found at 1.116.319 (Scott 1998). Underlying that sand, however, was a progression of increasingly clayey units grading in color from green, to orange, and finally to grey and diatomic off-white shales belonging to Tpy. The intervening layers contain mixed fossils of Pleistocene terrestrial and Miocene marine origin, the former as isolated or fragmentary elements, while the shales mostly contain well preserved fish fossils including complete skeletons. It is likely that the mixed units represent reworking of Miocene sediment during the Pleistocene. Taxa found at the sites include: *Isurus* sp.; *Triakis* sp.; Actinopterygii indet.; Teleostei indet.; Scombridae indet.; Clupeidae indet.; †*Ganolytes cameo*; Bathylagiae indet.; Belonidae indet.; *Syngnathus* sp.; cf. Pennipedia indet.; Heteromyidae indet.; †*Paleohalidrys californica*; Phaeophyta indet.; Thallophyta indet.; and *Platanus* sp. Bones are mildly permineralized for Pleistocene age specimens, not responding to a burn test, and permineralized for Miocene age ones. Note that this was the first record of *Triakis* from the Puente Formation.

Project area Park Overflow is situated atop Qa directly overlying Qoa and then Tpy in turn. There are no known localities within the project area, but Gordon Ranch and Coral Ridge immediately to the southwest are densely populated by numerous richly fossiliferous localities. Approximately 128 fossil localities are situated within 2 miles of Park Overflow, forming a rough NE – SW line, with the closest locality (1.116.85) occurring 0.25 miles southwest of Park Overflow. Localities include: SBCM 1.116.80 – 1.116.109; 1.116.122 – 1.116.179; SBCM 1.116.215 – 1.116.233; SBCM 1.116.235 – 1.116.240; SBCM 1.116.246 – 1.116.253; and SBCM 1.116.255 – 1.116.261. These localities are located within the same units at or underlying Park Overflow, including Qoa, Tpy, and Tpsq, suggesting the likelihood for fossils to occur at Park Overflow is very high. Quarternary taxa found at the sites near Park Overflow include: *Bison* sp.; *Equus* sp.; indeterminate bone fragements; and herbivore coprolites. These fossils are lightly permineralized, indicating a Pleistocene age.

Taxa found near Park Overflow from the Yorba Member include: Porifera indet. spicules; Mollusca indet.; *Delectopecten* sp.; Gastropoda indet.; *Allocentrotus fragilis* (= *Strongylocentrotus fragilis*); Decapodiformes indet.; *Isurus* sp.; *Squatina* sp.; Osteichthyes indet.; †*Etringus* sp.; Clupeidae indet.; †*Ganolytes* sp., †*G. cameo*; †*Xyne grex*; Argentinidae indet.; Bathylagidae indet.; †*Bathylagus* cf. *quasita* var. *angelensis*; cf. †*Chauliodus eximus*; *Cyclothone* sp.; *Lampanyctus* sp.; cf. Hemiramphidae indet.; Myctophidae indet.; †*Eclipes* sp.; †*Pseudoseriola gillilandi*; Carangidae indet.; Scorpaenidae indet.; Syngnathidae indet.; *Syngnathus* sp., †*S.* cf. *avus*, †*S. emeritus*; *Seriola* sp.; †*Lompoquia* cf. *retropes*; Scombridae indet.; cf. *Sarda* sp.; †*Thyrsocles kreigeri*; †Euzaphlegidae indet.; Pleuronectiformes indet.; Mammalia indet.; Cetacea indet.; coprolites; †*Chondrites ramulosa*; Plantae indet.; *Sequoia* sp.; *Alnus* sp.; *Quercus* sp.; *Magnolia* sp., *M. grandiflora*; *Persea* sp.; *Sassafrass* sp.; *Umbellularia* sp.; *Platanus racemosa*; *Phragmites* sp.; †*Julescraneia grandicornis*; †*Paleohalidrys* sp., †*P. linearis*, †*P. linguliformis*, †*P. occidentalis*; †*Paleocystophora lacerodentata*; †*Chondrides flexilis*; Foraminifera indet.; †*Praebulimina obtusa*; *Eubuliminella subfusiformis*; *Kleinpella californiensis*; cf. *Virgulina vaughni*; †*Bolivina barbarana, B. brevior,* †*B. costata,* †*B. girardensis,* †*B. marginata*; †*Uvigerina subperegrina*; *Epistominella subperuviana*; *Globigerina* sp.; Spumellaria indet. Lithology is mostly alternating thin beds of light-grey shale, sandstone, and siltstone; there are also distinct and intermittent yellow-brown sandstone units. Mesopelagic fish fossils are common in local Tpy, but are not as well preserved as those found at SBCM 1.116.12 – 1.116.17 (see section on Los Serranos Golf Course, below), frequently occurring as incomplete skeletons or isolated elements. Because mesopelagic fish remains do not frequently survive significant transport, their presence here suggests a relatively deep water depositional environment (Reynolds et al. 1985; Reynolds 1989). However, the presence of nearshore fish taxa and moderately preserved terrestrial plants also suggest the environment must have been adjacent to a nearshore source. Deep water continental shelf, with a seafloor around the

oxygen minimum zone and supplied with sediment by a low gradient freshwater source, would match with the vertebrate and plant fossil assemblage present. This depositional environment is further supported by the assemblage's benthic Foraminifera, with *Bolivina* frequently being found in deep and oxygen depleted water on the outer continental shelf. An alternative to the singular depositional environment proposed by Reynolds (1989), for similar sites in the Puente Hills, would be time averaging of a depth gradient over sequences of transgressions and regressions. Additional research on the local stratigraphy and the precise stratigraphic positions of mesopelagic versus epipelagic and neritic taxa is needed to test these hypotheses.

Taxa found near Park Overflow from the Soquel Member include: Porifera indet. spicules; Osteichthyes indet.; Clupeidae indet.; †*Ganolytes cameo*; †*Xyne grex*; †*Bathylagus* cf. *quasita* var. *angelensis*; †*Chauliodus eximus*; *Lampanyctus* sp.; †*Eclipes* sp.; †*Syngnathus* cf. *avus*; †*Pseudoseriola gillilandi*; †*Lompoquia* cf. *retropes*; Thunnini indet., †*Thyrsocles kreigeri*; Cetacea indet.; coprolites; †*Chondrites ramulosa*; Plantae indet.; *Juniperus* sp., †*Populus* cf. *alexanderi*; *Salix* sp.; *Acer* sp.; *Quercus* sp.; *Magnolia grandiflora*; *Persea* sp.; *Sassafras* sp.; *Umbellularia* sp.; *Platanus racemosa*; *Amelanchier pallida*; *Sabal* sp.; *Phragmites* sp.; †*Paleohalidrys californica*, †*P. dendritica*, †*P. linearis*, †*P. linguliformis*, †*P. lompocensis*, †*P. occidentalis*, †*P. superba*; †*Cystoseirites ornatus*; †*Paleocystophora acuminata*, †*P. lacerodentata*; †*Chondrides recurva*, †*C. flexilis*; †*Delesserites acuminata*. The Soquel Canyon Member here is represented by alternating thin beds of light grey and green silty shales between thicker units of massive, brown, and medium-grained sandstone. Mesopelagic fish are rare to absent in the sandstone units, while terrestrial plants and marine algae are more common. The paleoenvironment of the Tpsq shale units at Coral Ridge and Gordon Ridge appears to have been similar to that of the Yorba Member, with a mixture of shallow and deep open water fish taxa, mixed with some near-shore taxa and terrestrial plant fossils, within a fine grained lithology suggestive of a relatively calm depositional environment. The medium-grained sandstone units, on the other hand, may have been deposited at shallower depth given the lesser abundance of mesopelagic taxa.

Project area The Commons is situated atop recent alluvium deposited by Chino Creek. There are no known localities within the project area, but the site is likely underlain by Qoa at unknown depth. Furthermore, SBCM 1.116.290 is located less than 0.15 miles southeast from The Commons, at 33°58'50''N 117°41'52''W. This locality is located in an undescribed unit of Qoa underlying as little as five feet of Qa. Fossils are fragmental and unaltered to lightly permineralized, with taxa including: Gastropoda indet.; Chordata indet.; Mammalia indet.; and Rodentia indet. The other localities within a mile of The Commons are SBCM 1.116.338 – 1.116.350, which are in an east-to-west line along Little Chino Creek west of Ramona Avenue. The Qoa here consists of stratigraphically layered, poorly-sorted, olive green units of wet clay, silt, and sand interspersed with a dark-yellowish brown mud and a brown sand, which underlies

the surface Qa by as little as three feet and extends down to nine feet. At nine feet, further cuts revealed green-black featureless clay that produced no fossils; the underlying Puente Formation was not revealed during the excavation of these localities (Scott 1999). A diverse Quaternary fauna was recovered from these localities, including: Bivalvia indet.; Gastropoda indet.; Chordata indet.; Galeomorpha indet.; Anura indet.; *Bufo* sp.; Squamata indet.; *Phrynosoma* sp; cf *Uta stansburiana*; Colubridae indet.; *Masticophis* sp.; Aves indet.; Mammalia indet.; Soricidae indet.; *Scapanus* sp.; *Sylvilagus* sp.; Rodentia indet.; Cricetidae indet.; *Microtus* sp.; *Peromyscus* sp.; cf. *Reithrodontomys* sp.; Heteromyidae indet.; *Chaetodipus* sp.; *Diplodomys* sp.; *Perognathus* sp.; Sciuridae cf. *Ammospermophilus* sp.; *Thomomys* cf. *bottae*; and *Bison* sp. Fossils occur as lightly permineralized and isolated, sometimes fragmentary, elements – a flame test produced no noticeable odor (Scott 1999). The presence of abundant *Thomomys* and *Scapanus* suggests a mesic environment with cool and moist soils. The isolated shark tooth is reworked from the underlying Puente Formation. Scott (1999) contains much more detailed information about these sites, beyond the parameters of this report.

Project area Western Hills Golf Course is situated atop Tpsq, with a band of Qa stemming from Sleepy Hollow infilling low points in the topography. There are no known localities within the project area, but Coral Ridge Park is within a mile to the north. Thus, Western Hills Golf Course occurs in the same sediments as several nearby Soquel Sandstone localities accounted for in the preceding section on Park Overflow. The closest locality to Western Hills Golf Course is SBCM 1.116.246, 0.65 miles to the north, which produced an isolated Clupeidae scale and some unidentified petrified wood from within grey colored Tpy.

Project areas Wang (High-Density), Canyon Estates, and Wang (Medium-Density) have no localities present within their bounds. However, these sites are located atop Qa, Qoa, Tmy, Tsc, and Tscs, of which the latter three are fossiliferous throughout the Puente Hills. More specifically, both Wang project areas have surface exposures of Qa and Tmy, while Canyon Estates is located atop Qa, Qoa, Tsc, and Tscs. Note that Qoa often underlies Qa and Tsmy will underlie Tsc. Of these, Qoa and Tsc are of particular interest given the potential for macrovertebrate fossils. The closest locality to all three of these sites is SBCM 1.116.111, which is just outside the perimeter of Wang (High Density)'s northeast corner at 33°57'54''N 117°42'57''W. This locality occurs within a grey shale corresponding to Tpy. A list of taxa for this site cannot be provided, as only field numbers of specimens were listed on the locality card and the specimens could not be located in time to complete this report. SBCM 1.116.111 was part of the same project as SBCM 1.116.112 – 1.116.117, discussed below regarding Los Serranos Golf Course, and the fossil assemblage described for those localities can be considered representative of SBCM 1.116.111. As a result, this locality and its immediate vicinity are highly likely to produce many well-preserved fossils from a Miocene marine deep water environment (Reynolds 1989).

The next closest locality to Wang and Canyon Estates is SBCM 1.116.24, Robert O. Townsend High School, at a distance of about 0.7 miles north of Wang (Reynolds et al. 1985). Sediments at the site correspond to Upper Tpsc, locally represented by alternating beds of dark grey-green fine-grained shale and iron-stained sand (Reynolds et al. 1985). The beds vary in thickness from 0.3 – 15.2 cm (1/8th – 6 inches) and part easily at bedding planes. Isolated instances of other bed-scale units also occur, such as a basal grey clay resembling bentonite and several thin beds of highly indurated and resistant sandstone between shale sequences. However, the alternating shale beds contain most of the fossils found at this locality (Reynolds et al. 1985). More than 3500 specimens were collected from SBCM 1.116.24. Taxa found include: *Delectopecten* sp.; Crustacea indet.; *Cetorhinus* sp.; Osteichthyes indet.; Clupeidae indet.; †*Ganolytes cameo*; †*Xyne grex*; *Engraulis* sp.; *Bathylagus* sp.; †*Chauliodus eximius*; Myctophidae indet.; *Eclipes* sp.; Scorpaenidae indet.; †*Protanthias fossilis*; Percichthyidae indet.; cf. *Anoploploma* indet.; †*Pseudoseriola gillilandi*; *Seriola* sp.; †*Lompoquia* sp., †*L. retropes*; cf. *Sphyraena* sp.; †*Araeosteus rothi*; Scombridae indet.; †*Zaphleges* sp., †*Z. longurio*; Perciformes indet.; Pleuronectiformes indet.; †*Psephophorus* sp.; *Puffinus* sp.; Balaenopteridae indet.; †*Chondrites ramulosa*; Plantae indet.; cf. *Sabal* sp.; *Smilacina* sp.; *Phragmites* sp.; *Platanus* sp.; *Populus* sp.; *Salix* sp.; *Alnus* sp.; *Betula* sp.; *Sassafras* sp.; *Umbellularia* sp.; *Persea* sp.; *Quercus* sp., †*Q. convexa*; *Magnolia* sp.; *Malva* sp.; *Amelanchier* sp.; Thallophyta indet.; †*Julescraneia grandicornis*; †*Paleohalidrys* sp., †*P. liguliformis*, †*P. occidentalis*, †*P. accuminata*; *Chondrides* sp., †*C. recurva*; Foraminifera indet.; †*Robulus cf. miocenicus*; *Buliminella* sp. (3 species); *Bolivina* sp. (4 species); Uvigerina sp. (2 species); *Siphogenerina* sp.; *Siphogenerina* sp.; *Valvulineria* sp.; and cf. *Cibicides* sp. (2 species). Sedimentology and the fossil assemblage include both near-shore forms and mesopelagic fishes, with taphonomy suggesting little to no transport for these specimens. The presence of well-preserved mesopelagic fishes suggests deep water, but the relative abundance of near-shore specimens corresponds better to nearshore sites 120 – 300 ft. deep. Specimens are often found articulated, with minimal damage, and even terrestrial leaves display only moderate wear. However, the presence of worm burrows suggests the depositional environment was not anoxic. Reynolds et al. (1985) suggests a depositional environment just above or at the oxygen minimum zone, which would limit decay while not being fully anoxic. A low gradient fresh water source would be needed nearby to raft the terrestrial leaves. It is also possible that facies changes within the locality reflect a fluctuating depth gradient, with the effect of time averaging species from different depths across the locality, but further research is needed to test this hypothesis. Reynolds et al. (1985) contains a more fully detailed account of this site and associated mitigation work, beyond the parameters of this report.

Project Area Los Serranos Golf Course is situated atop several units. Beginning in the north, there is a thin strip of surficial exposed Qoa along County Club Drive, but moving further

south this unit is covered by Qa. The southern portion of the project area is quite complex at the surface, transitioning from Tpy in the west, to localized mixtures of Qa, Qoa, and Tpsc. Just east of the project site border is a fault, which uplifts Tpsq to the surface on the far side. SBCM 1.116.111, discussed previously, is the closest locality at 0.2 miles to the west. The next closest localities are SBCM 1.116.12 – 1.116.17, which run along Soquel Canyon Parkway 0.6 – 0.7 miles to the southeast of Los Serranos Golf Course. These localities were located upon Lower Tpsc and Upper Tpy. More than 5,298 specimens were collected from these localities, which represent a deep water subtropical paleoenvironment close to shore with low relief (Reynolds 1989). Tpsc was represented by a coarsed grained light-grey arkosic sandstone and Tpy by light grey shale; the majority of the fossils were found in Tpy, but Tpsc accounted for a significant number as well. Taxa found at SBCM 1.116.12 – 1.116.17 include: Mollusca indet.; *Delectopecten* sp.; †*Lyropecten* sp.; Gastropoda indet.; Osteicthyes indet.; Clupeidae indet.; †*Ganolytes cameo*; †*Xyne grex*; *Argentina* sp.; Bathylagidae sp.; Stomiiformes indet.; *Cyclothone* sp.; *Argyropelecus* sp.; †*Chauliodus eximius*; cf. *Stomias* sp.; Myctophidae indet.; *Eclipes* sp.; cf. †*Lampris zatima*; Percichthyidae indet.; *Pseudoseriola* sp.; *Decapterus* sp.; *Seriola* sp.; *Rhythimias* sp.; *Lompoquia* sp.; Embiotocidae indet.; Scombridae indet.; cf. †*Thrysocles kriegeri*; Pleuronectiformes indet.; Cetacea indet.; Mysticeti indet.; *Delphinus* sp.; †*Chondrites ramulosa*; Plantae indet.; *Pinus* sp., cf. *P. coulteri*; *Sabal* sp.; *Smilacina* sp.; *Phragmites* sp.; *Bumelia* sp.; *Ribes* sp.; *Platanus* sp.; *Ficus* sp.; *Acer* sp.; *Populus* sp.; *Salix* sp.; *Alnus* sp.; *Cercis* sp.; *Robinia* sp.; *Sassafras* sp.; *Umbellularia* sp.; *Persea* sp.; *Quercus* sp., †*Q. convexa*; *Magnolia* sp.; Thallophyta indet.; †*Caulerpites denticulata*; †*Julescraneia grandicornis*; †*Paleohalidrys* sp., †*P. liguliformis*, †*P. linearis*, †*P. dendritica*, †*P. californica*, †*P. lompocensis*; †*Cystoseirites ornatus*; †*Paleocystophora* sp., †*P. acuminata*, †*P. plumosa*, †*P. lacerodentata*; †*Chondrides* sp., †*C. recurva*, †*C. flexis*; and Foraminifera indet. The preservation of articulated and relatively complete skeletons belonging to deep water mesopelagic fish indicates a calm, deep water environment with minimal outgoing transport. The presence of nearshore faunas and terrestrial flora is explained by incoming transport from shallower water, which is reflected in the slightly more damaged average condition of these specimens as opposed to the mesopelagic fishes (Reynolds 1989). A mass mortality layer of *Xyne grex* occurs over several localities, likely the result of a catastrophic oxygen depletion event according to Reynolds (1989). This mass mortality layer, the general high quality of preservation, and the presence of terrestrial plant fossil leaves suggests an anoxic seabed, which prevented scavenging and decomposition. Reynolds (1989) contains a more fully detailed account of these sites and associated mitigation work, beyond the parameters of this report.

The records discussed above cover nearly all of the fossil localities found within the northern half of the City of Chino Hills. An exception is localities SBCM 1.116.337 and 1.116.338, found in Grand Avenue Park within Yorba Linda Quadrangle. Fossils were found in two units of

light-olive grey shale pertaining to Tpy, one dry and the other wet. The dry shale produced disarticulated and isolated elements of teleost fish, while the wet shale produced unidentifiable dicot impressions. However, southeastern sections of the City of Chino Hills, including the area around Chino Hills State Park, Prado Dam, the Butterfield Ranch and Hunter's Hill subdivisions, and numerous canyons along the east face of the Puente Hills are notably fossiliferous. Two isolated localities occur in Chino Hills State Park. SBCM 1.116.269 is located west of Bane Canyon Road and north of Rolling M Ranch Campground, between Upper Aliso Trail and Upper Bane Ridge Trail Lookout. Cetacean fossils were recovered here from Tpy. Another whale was discovered at SBCM 1.116.270, Mcdermont Spring. Several localities occur along Slaughter Canyon and Abacherli Canyon east of the park's borders. SBCM 1.116.11 is near the head of Slaughter Canyon Trail, while 1.116.12 – 1.116.14 lie closer to the Butterfield Ranch subdivision. These localities belong to Tpsc and taxa found therein include: Bivalvia indet.; Osteichthyes indet.; Plantae indet.; and Pinopsida indet.

Not far from the Slaughter Canyon localities, multiple SBCM localities were identified during the construction of the Butterfield Ranch and Hunter's Hill subdivisions located between Highway 71 and Chino Hills State Park. SBCM 1.116.241 – 244 were identified at Butterfield Ranch, within sediments corresponding to Tpsc found on a ridge between Abacherli Canyon and Slaughter Canyon. Taxa found at these localities include: Bivalvia indet; *Donax* sp.; *Macoma* sp.; *Cyclocardia* sp.; *Thracia* sp.; †*Clementia compsoyax*; *Nassarius* sp.; Myctophidae inde.; Plantae indet.; *Plantanus* sp.; *Salix* sp.; †*Persea coalingensis*; and *Quercus* sp. These sites differ from many other Puente Hills Formation localities by the relative lack of mesopelagic fishes, or many fish fossils at all. SBCM 1.116.244 produced several myctophid fossils, but the other localities contain mostly bivalves, including taxa that tend to prefer shallower waters. Of particular note is *Donax*, which dwells infaunally on beaches and sometimes the intertidal zone. It is possible that that the shallow water bivalves were all transported to deep water typical of the Puente Formation, given the presence of Myctophidae, but it is also possible that some of these localities reflect a shallower depositional environment. Note that these localities are closer to Owl Rock Quarry (see below) than most other localities from the Puente Hills, which is widely regarded to be a near-shore deposit in Tpsc. SBCM 1.116.271 – 274 were found during surveying of road cuts preceding the construction of Hunter's Hill, in light to buff clayey silts corresponding to Tpsc. These localities produced fossils of significantly poorer condition than Butterfield Ranch, with most specimens unable to be identified beyond coarse taxonomy. Indeterminate Bivalvia, Osteichthyes, and Plantae were recovered from these localities.

Owl Rock Quarry, situated northwest of the intersection between Highway 71 and Highway 91, contains 35 fossil localities: SBCM 1.116.16 – 1.116.23 and SBCM 1.116.180 – 1.116.206. These localities are found throughout both the active quarry and the hills surrounding

it. Sediments here correlate to Upper Tpsc, ranging from gray to yellow-green silty micaceous and carbonaceous sandstone to a stark white sandstone sometimes containing localized conglomerate. Fossils were much more commonly found in the greenish finer grained strata. Taxa found at these localities include: Bivalvia indet.; *Ostrea* sp.; *Thyasira* sp.; Chordata indet.; Chondrichthyes indet.; *Carcharhinus* sp.; Plantae indet; and Fagales indet. The paleoenvironment is hypothesized to be near-shore in relatively shallow water (neritic zone), as compared to the deep water depositional environments common in the Puente Formation further north and west (Durham and Yerkes 1964; Reynolds 1984, 1989; Dibblee and Ehrenspeck 2001). A calm and low gradient freshwater source likely provided the diverse fossil flora of Owl Rock Quarry, which includes tree leaves, wood, and reeds, though aeolian transport is also possible (Reynolds 1984).

The City of Chino Hills exists within a broader geological and paleontological context that includes the adjacent modern San Bernardino Valley, Santa Ana Mountains, and Los Angeles Basin. To the east, Qoa rapidly thickens to several hundred feet of depth in the San Bernardino Valley, with occasional hilly outcrops of Mesozoic igneous basement rock and a possible eastern extension of the Pliocene age Fernando Formation in Norco. The Qoa in this region is richly fossiliferous with Irvingtonian and Rancholabrean mega- and microfauna, yielding the remains of mastodons, mammoths, *Smilodon*, camels, horses, bison, ground sloths, lagomorphs, rodents, and eulipotyphlans (Reynolds and Reynolds 1991). Examples of such Pleistocene age sites within 5 miles of the City of Chino Hills include SBCM 5.5.48 – 5.5.58 and 1.116.275 – 1.116.288. Taxa found at these localities can be considered potentially representative of similarly aged Qoa found within the City of Chino Hills.

The Santa Ana Mountains to the south contain multiple SBCM localities within 5 miles of the jurisdictional area of the City of Chino Hills. SBCM 5.5.4 – 5.5.6 occur within marine shales interrupted by coal and terrestrial clay deposits, all belonging to the late Cretaceous Ladd Formation. Terrestrial units yield plant fossils including leaves, needles, and water reeds. Taxa from the marine strata include: Bivalvia indet.; cf. *Propeamussium* sp.; cf. *Ostrea* sp.; †*Inoceramus* sp.; †*Scaphites* sp.; Plantae indet.; Araucaria sp.; and indeterminate algae. SBCM 5.5.7 – 5.5.11 occur within the Paleocene Silverado Formation, which is of deep marine origin with transported terrestrial plant fossils. Taxa found in these localities include: Bivalvia indet.; †*Cucullaea* cf. *matthewsonii*; Crassatella sp.; †*Glycymeris* cf. *veatchii* var. *major*; Gastropoda indet.; cf. †*Brachysphingus* sp.; †*Ficopsis* sp.; †*Turritella* cf. pachecoensis; Plantae indet.; Cycadeoidae indet.; Gymnospermae indet.; Angiospermae indet.; and indeterminate reeds fossils. A full account of the paleontology of the northern Santa Ana Mountains is beyond the scope of this report. Schoellhamer et al. (1981) provides a general overview of the region. Overall, the Santa Ana Mountains contain a mixture of the same units found in the Puente Hills, but also expose older units underlying those present at and near the surface of the Puente Hills.

Three SBCM localities are present at Diamond Bar, located roughly 2.5 miles west of SBCM 1.116.337 and 1.116.338. Localities SBCM 1.116.5, 1.116.9, and 1.116.10 are situated in unidentified members of the Puente Formation. SBCM 1.116.5 preserves cetacean bone fragments within a conglomeritic sandstone. SBCM 1.116.9 preserves articulated and nearly complete fish skeletons in light grey shale, indicating it comes from the deep water paleoenvironment typical of fossiliferous Puente Formation units. Finally, SBCM 1.116.10 produced a cetacean vertebra from an undescribed sandstone.

This records search covers only the paleontological records of the San Bernardino County Museum. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Please do not hesitate to contact us with any further questions that you may have.

Sincerely,

Scott Kottkamp

re: Paleontological resources for the City of Chino Hills Plan Update Project #00066884

Dear Georgia:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the City of Chino Hills Plan Update project area as outlined on the portion of the e San Dimas, Ontario, Prado Dam, Yorba Linda, Black Star Canyon USGS topographic quadrangle map that you sent to me via e-mail on June 1, 2022. We have numerous fossil localities that lie directly within the proposed project area, particularly invertebrate sites in the southwestern project area.

The following table shows the known localities in the collection of the Natural History Museum of Los Angeles County (NHMLA) from the project area shapefiles provided on June 13, 2022.

Locality Number	Location	Formation	Taxa	Depth
LACM VP 1728	W of intersection of English Rd & Peyton Dr, Chino	Unknown (light brown shale with interbeds of very coarse brown sand; Pleistocene)	Horse (*Equus*), camel (*Camelops*)	15-20 feet bgs
LACM VP 7508	Near intersection of Vellano Club Dr. and Palmero Dr., Oakcrest Development; N of Serrano Canyon, Chino Hills	Unknown formation (Pleistocene)	Ground sloth (*Nothrotheriops*); elephant family (Proboscidea); horse (*Equus*)	Unknown
LACM VP 7268, 7271	Sundance Condominiums, S of Los Serranos Golf Course	Unknown (Pleistocene)	Horse (*Equus*)	Unknown

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

Additional localities from the vicinity are as follows:

Locality	Location	Formation	Taxa	Depth

Number				
LACM IP 17597-17600	Olinda landfill	Puente Formation	Invertebrates, including the shelled octopod (Mizuhobaris lepta)	Unknown
LACM IP 17925-17928, 17932	West end of the San Jose Hills, around intersection of N Azusa Ave and E Amar Rd.	Sycamore Canyon Formation (Sandstone and conglomerate facies)	Bivalves (Tellinidae, Delectopecten), Gastropods (Fasciolaridae); Land plants (Taxodium dubium, Typha lesquereuxi, Phragmites)	6-6.5 feet bgs
LACM VP 7930-7932	Five Knolls development, Golden Valley Rd., Santa Clarita	Monterey Formation (Yorba Shale; sandstone & diatomaceous shale)	Bony fish (Osteichthyes), including ray-finned fishes (Clupeidae)	6.5 - 7 feet bgs
LACM VP 6166, 6167, 6172, 6173, 7471	Puddingstone Reservoir, San Jose Hills	Puente Formation	Sturgeonfish (*Prionurus*), Mako shark (*Isurus planus),* Extinct bony fish (*Etringus*), Mola (Molidae), other Fish (Osteichthyes)	Surface

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the NHMLA. It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

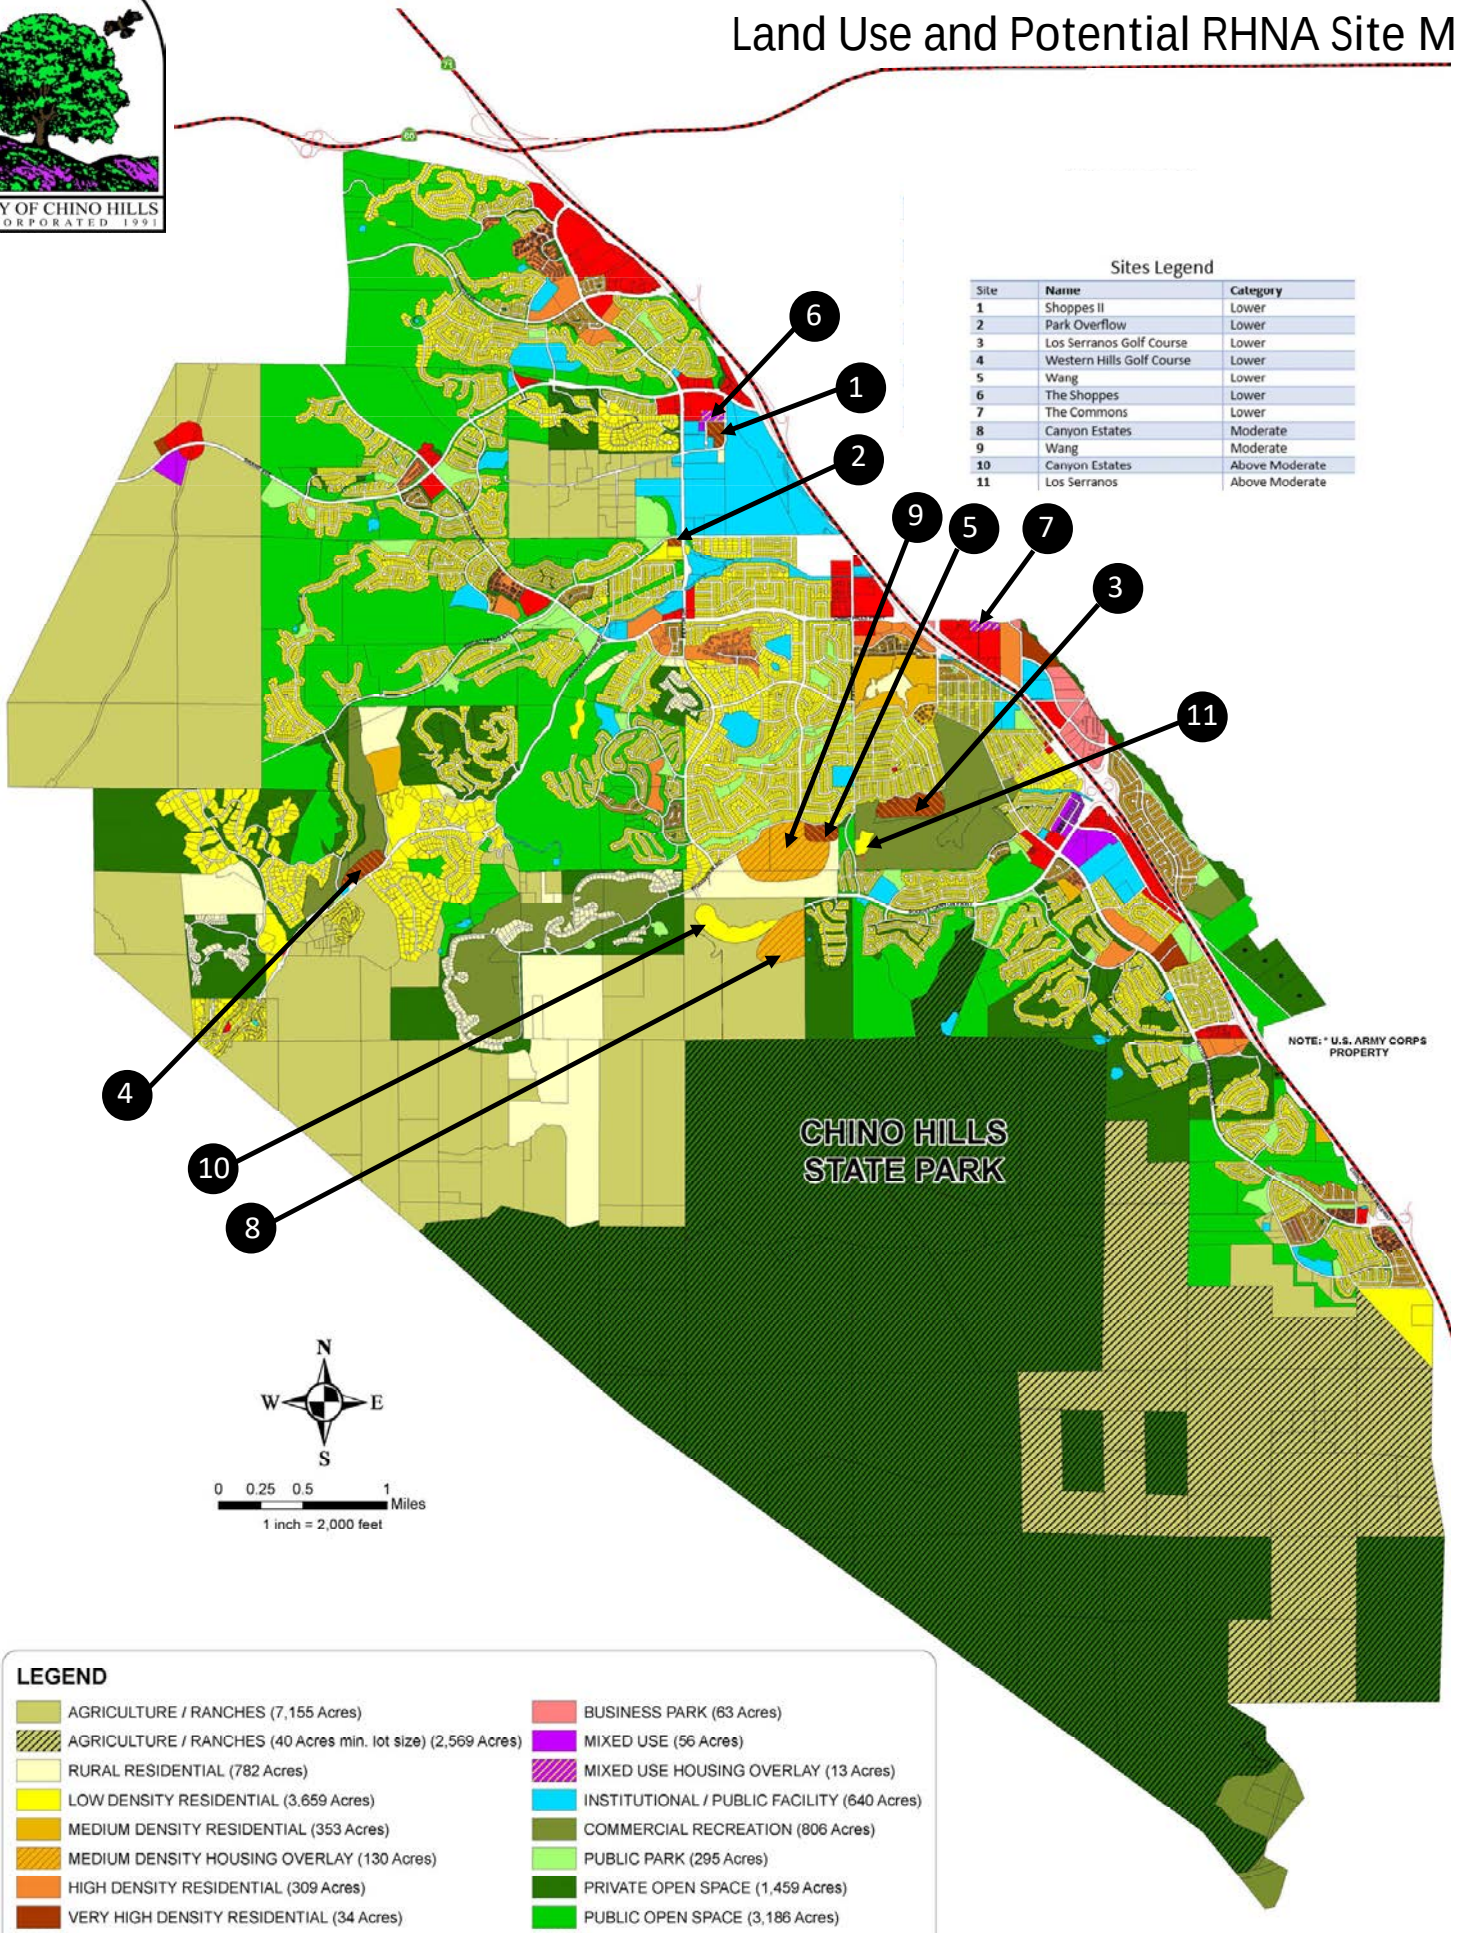
This noise assessment was prepared to evaluate the potential noise impacts for the project study area and to recommend noise mitigation measures, if necessary, to minimize the potential noise impacts. The assessment was conducted and compared to the noise standards set forth by the Federal, State, and Local agencies. Consistent with the City's Noise Guidelines, the project must demonstrate compliance to the applicable noise criterion as outlined within the City's Noise Element and Municipal Code.

The following is provided in this report:

- A description of the study area and the proposed project
- Information regarding the fundamentals of noise and vibration
- A description of the local noise and vibration guidelines and standards
- An analysis of traffic noise impacts to and from the project site
- An analysis of stationary noise impacts to and from the project site
- An analysis of construction noise impacts
- An analysis of ground-borne vibration impacts to and from the project site
- Suggested mitigation measures to reduce impacts

1.2 Existing Land Uses

Chino Hills is dominated by single-family housing. Other residential uses, including mobile home communities and multi-family housing developments, exist in Chino Hills but are less prevalent than single-family developments within the City. Additionally, there are several pockets of retail and light industrial land uses and parks spread throughout the city. There is also a significant amount of vacant land within the City boundaries and across its sphere of influence.



1.3 Proposed Project Description

The City of Chino Hills is preparing a comprehensive update to its existing General Plan. The updated Chino Hills General Plan is expected to be adopted in 2023 and will guide the City's development and conservation through land use objectives and policy guidance. The General Plan Update is intended to be an expression of the community's vision for the City and Study Area and constitutes the policy and regulatory framework by which future development projects will be reviewed, and public improvements will be implemented. The City will implement the General Plan Update by requiring development, infrastructure improvements, and other projects to be consistent with its policies and by implementing the actions included in the General Plan Update.

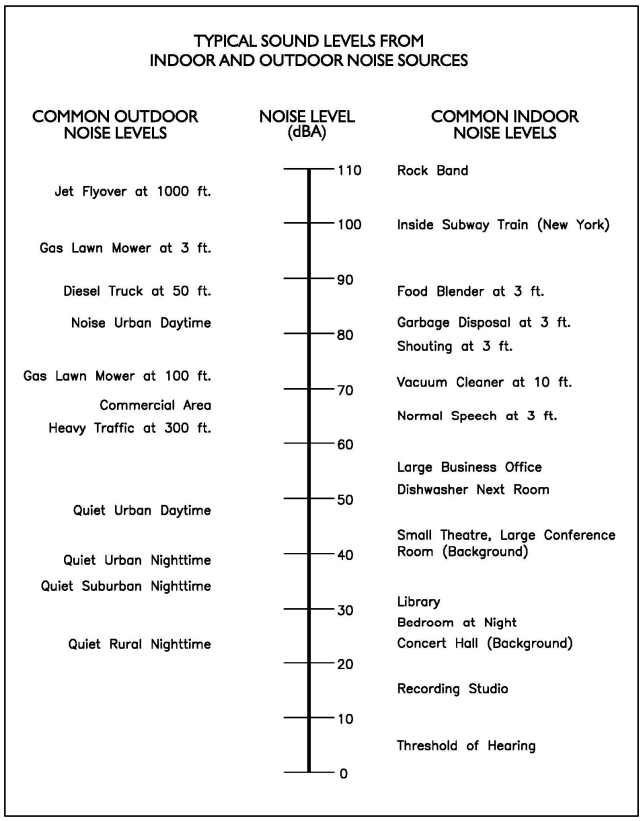
The City's General Plan was last comprehensively updated in 2015, and the Housing Element was adopted in 2022. The City's Existing General Plan Land Use Plan (Exhibit A) represents the current plan for land use development within the Study Area which includes the City and its Sphere of Influence. It includes labels indicating potential lower income RHNA sites. The purpose of this noise and vibration impact analysis is to evaluate the potential for the potential lower income RHNA sites and any changes

to the Roadway Circulation Plan to result in impacts to the community and to recommend mitigation measures when applicable.

Exhibit A
Land Use and Potential RHNA Site Map

2.0 Fundamentals of Noise

This section of the report provides basic information about noise and presents some of the terms used within the report.



2.1 Sound, Noise and Acoustics

Sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. Sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic, or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

2.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting out at 20 Hz all the way to the high pitch of 20,000 Hz.

Exhibit B: Typical A-Weighted Noise Levels

2.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines it loudness. The loudness of sound increases or decreases as the amplitude increases or decreases. Sound pressure amplitude is measure in units of micro-Newton per square inch meter (N/m2), also called micro-Pascal (µPa). One µPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels abbreviated dB. Exhibit B illustrates references sound levels for different noise sources.

2.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two sounds or equal SPL are combined, they will produce an SPL 3 dB greater than the original single SPL. In other words, sound energy must be doubled to produce a 3 dB increase. If two sounds differ by approximately 10 dB, the higher sound level is the predominant sound.

2.5 Human Response to Changes in Noise Levels

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, (A-weighted scale) and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, the A-scale weighting is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g. doubling the volume of traffic on a highway) would result in a barely perceptible change in sound level.

Table 1: Loudness Perception Levels

Changes in Intensity Level, dBA	Changes in Apparent Loudness
1	Not perceptible
3	Just perceptible
5	Clearly noticeable
10	Twice (or half) as loud

2.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels.

A-Weighted Sound Level: The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24-hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Decibel (dB): A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dB(A): A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ): The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level. The energy average noise level during the sample period.

Habitable Room: Any room meeting the requirements of the Uniform Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms and similar spaces.

L(n): The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly, L50, L90 and L99, etc.

Noise: *A*ny unwanted sound or sound which is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Outdoor Living Area: Outdoor spaces that are associated with residential land uses typically used for passive recreational activities or other noise-sensitive uses. Such spaces include patio areas, barbecue areas, jacuzzi areas, etc. associated with residential uses; outdoor patient recovery or resting areas associated with hospitals, convalescent hospitals, or rest homes; outdoor areas associated with places of worship which have a significant role in services or other noise-sensitive activities; and outdoor school facilities routinely used for educational purposes which may be adversely impacted by noise. Outdoor areas usually not included in this definition are: front yard areas, driveways, greenbelts, maintenance areas and storage areas associated with residential land uses; exterior areas at hospitals that are not used for patient activities; outdoor areas associated with places of worship and principally used for short-term social gatherings; and, outdoor areas associated with school facilities that are not typically associated with educational uses prone to adverse noise impacts (for example, school play yard areas).

Percent Noise Levels: See L(n).

Sound Level (Noise Level): The weighted sound pressure level obtained by use of a sound level meter having a standard frequency-filter for attenuating part of the sound spectrum.

Sound Level Meter: An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL): The dB(A) level which, if it lasted for one second, would produce the same A-weighted sound energy as the actual event.

2.7 Traffic Noise Prediction

Noise levels associated with traffic depends on a variety of factors: (1) volume of traffic, (2) speed of traffic, (3) auto, medium truck (2–3 axle) and heavy truck percentage (4 axle and greater), and sound propagation. The greater the volume of traffic, higher speeds and truck percentages equate to a louder

volume in noise. A doubling of the Average Daily Traffic (ADT) along a roadway will increase noise levels by approximately 3 dB; reasons for this are discussed in the sections above.

2.8 Sound Propagation

As sound propagates from a source it spreads geometrically. Sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt or landscaping attenuate noise at a rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall noise attenuation of 4.5 dB per doubling of distance for a line source and 7.5 dB per doubling of distance for a point source.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet from a noise source. Wind, temperature, air humidity and turbulence can further impact have far sound can travel.

3.0 Ground-Bourne Vibration Fundamentals

3.1 Vibration Descriptors

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

Several different methods are used to quantify vibration amplitude.

PPV – Known as the peak particle velocity (PPV) which is the maximum instantaneous peak in vibration velocity, typically given in inches per second.
RMS – Known as root mean squared (RMS) can be used to denote vibration amplitude
VdB – A commonly used abbreviation to describe the vibration level (VdB) for a vibration source.

3.2 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Outdoor sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration. To counter the effects of ground-borne vibration, the Federal Transit Administration (FTA) has published guidance relative to vibration impacts. According to the FTA, fragile buildings can be exposed to ground-borne vibration levels of 0.3 inches per second without experiencing structural damage.

There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation.

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

4.0 Regulatory Setting

The proposed project is located in the City of Chino Hills and noise regulations are addressed through the efforts of various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

4.1 Federal Regulations

4.1.1 Noise Control Act of 1972

The Federal Office of Noise Abatement and Control (ONAC) originally was tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows:

- The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies.
- The Federal Aviation Agency (FAA) is responsible to regulate noise from aircraft and airports.
- The Federal Highway Administration (FHWA) is responsible to regulate noise from the interstate highway system.
- The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The federal government advocates that local jurisdiction use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being constructed adjacent to a highway or that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement Codes and land use planning.
The intent of a General Plan Noise Element is to set goals to limit and reduce the effects of noise intrusion and to set acceptable noise levels for varying types of land uses. To this end, the City has the authority to set land use noise standards and place restrictions on private activities that generate excessive or intrusive noise. However, it should be recognized that the City does not have the authority to regulate all sources of noise within the City and various other agencies may supersede City authority. The following is a summary of some federal agency requirements that apply to noise within the Study Area.

4.1.2 Federal Highway Administration

Federal Highway Administration State routes and freeways that run through the City are subject to Federal funding and, as such, are under the purview of the Federal Highway Administration (FHWA). The FHWA has developed noise standards that are typically used for Federally funded roadway projects or projects that require either Federal or Caltrans review. These noise standards are based on Leq and L10 values and are included in Table 2, FHWA Design Noise Levels.

Table 2: FHWA Design Noise Levels

Activity Category	Description of Category	Design Noise Levels[1]	
		Leq (dBA)	L10 (dBA)
A	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose. Examples include natural parks or wildlife habitats.	57 (exterior)	60 (exterior)
B	Picnic areas, recreation areas, playgrounds, active sports areas, parks, residences, motels, hotels, schools, churches, libraries, and hospitals.	67 (exterior)	70 (exterior)
C	Developed lands, properties, or activities not included in Categories A or B, above.	72 (exterior)	75 (exterior)
D	Undeveloped lands.		
E	Residences, motels, hotels, public meeting rooms, schools, churches, libraries, hospitals, and auditoriums.	52 (interior)	55 (interior)

Source: FHWA Noise Standard. 23 Code of Federal Regulations 772.
Notes: Either Leq or L10 (but not both) design noise levels may be used on a project.

U.S. Department of Housing and Urban Development

The Department of Housing and Urban Development (HUD) issues formal requirements related specifically to standards for exterior noise levels along with policies for approving HUD-supported or assisted housing projects in high noise areas. In general, these requirements established three zones. These include:

- 65 dBA Ldn or less - an acceptable zone where all projects could be approved,
- Exceeding 65 dBA Ldn but not exceeding 75 dBA Ldn - a normally unacceptable zone where mitigation measures would be required, and each project would have to be individually evaluated for approval or denial. These measures must provide 5 dBA of attenuation above the attenuation provided by standard construction required in a 65 to 70 dBA Ldn area and 10 dBA of attenuation in a 70 to 75 dBA Ldn area, and
- Exceeding 75 dBA Ldn - an unacceptable zone in which projects would not, as a rule, be approved.

4.1.3 The Federal Interagency Committee on Noise

The Federal Interagency Committee on Noise (FICON) developed guidance for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies of the percentage of persons highly annoyed by aircraft noise. These recommendations are often used for different types of environmental noise such as traffic noise. A readily perceptible 5 dBA or greater project-related noise level increase is considered a significant impact

when the noise criteria for a given land use is exceeded. In areas where the existing noise levels range from 60 to 65 dBA Ldn, a 3 dBA barely perceptible noise level increase is considered significant. When the existing noise levels already exceed 65 dBA Ldn, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact since it likely contributes to an existing noise exposure exceedance.

4.2 State Regulations

4.2.1 California Department of Health Services

The California Department of Health Services (DHS) Office of Noise Control studied the correlation of noise levels and their effects on various land uses. As a result, the DHS established four categories for judging the severity of noise intrusion on specified land uses. These categories are presented in the State Land Use Compatibility for Community Noise Exposure table. As part of the 2040 General Plan update the City has adopted a slightly modified version of this table to use as a planning tool. This table discussed further and presented in Section 4.3.1.

4.2.2 Title 24 of the California Building Code

Section 1206.4 of the California Building Code (2019), Title 24, Part 2, Chapter 12 (Interior Environment), establishes an interior noise criterion of 45 dBA CNEL for “dwelling units”. Per California Building Code, Title 24, Part 2, Chapter 2 (Definitions), a residential dwelling unit is intended to be used as a residence that is primarily long-term in nature. Residential dwelling units do not include transient lodging, inpatient medical care, licensed long-term care, and detention or correctional facilities.

California Building Code (2019), Title 24, Part 2, Chapter 5 (Nonresidential Mandatory Measures), applies to all proposed buildings that people may occupy but are not residential dwelling units, with the exception of factories, stadiums, storage, enclosed parking structures, and utility buildings. Section 5.507.4.1 requires wall and roof-ceiling assemblies exposed to the noise source making up the building, or addition envelope or altered envelope, shall meet a composite Sound Transmission Class (STC) rating of at least 50 or a composite Outdoor to Indoor Transmission Class (OITC) rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30.

4.2.3 Governor’s Office of Planning and Research

The Governor’s Office of Planning and Research (OPR) outlines that a noise element Is required in each city’s and county’s general plan. The plan must include guidelines for noise-compatible land uses. The guidelines typically rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable as illustrated in Exhibit C. Those charts identify “normally acceptable,” “conditionally acceptable,” “normally unacceptable,” and “clearly unacceptable” exterior noise levels for various land uses. A “conditionally acceptable” designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a “normally acceptable” designation indicates that standard construction can occur with no special noise reduction requirements. The OPR suggestions also include

suggested adjustments for certain conditions such as seasonal corrections, corrections for outdoor residual noise levels, corrections for previous exposure and community attitudes, and corrections for pure tone or impulse noises.

Exhibit C: OPR Land Use Compatibility Guidelines

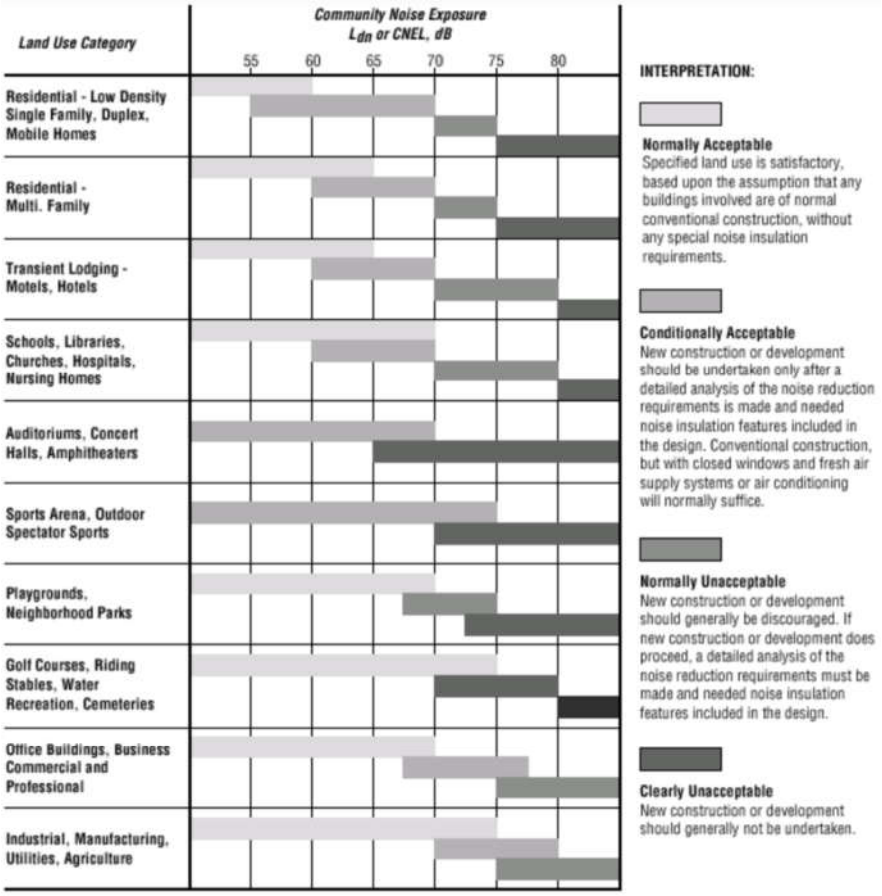

Table 1

Type of Correction	Description	Amount of Correction to be Added to Measured CNEL in dB
Seasonal Correction	Summer (or year-round operation)	0
	Winter only (or windows always closed)	- 5
Correction for Outdoor Residual Noise Level	Quiet suburban or rural community (remote from large cities and from industrial activity and trucking).	+ 10
	Quiet suburban or rural community (not located near industrial activity).	+ 5
	Urban residential community (not immediately adjacent to heavily traveled roads and industrial areas).	0
	Noisy urban residential community (near relatively busy roads or industrial areas.	- 5
	Very noisy urban residential community.	- 10
Correction for Previous Exposure and Community Attitudes	No prior experience with the intruding noise.	+ 5
	Community has had some previous exposure to intruding but little effort is being made to control the noise. This correction may also be applied in a situation where the community has not been exposed to the noise previously, but the people are aware that bona fide efforts are being made to control the noise.	0
	Community has had considerable previous exposure to the intruding noise and the noise maker's relations with the community are good.	- 5
	Community aware that operation causing noise is very necessary and it will not continue indefinitely. This correction can be applied for an operation of limited duration and under emergency circumstances.	- 10
Pure Tone or Impulse	No pure tone or impulsive character.	0
	Pure Tone or impulsive character present.	+ 5

4.3 City of Chino Hills

Existing planning policies and noise regulations applicable to noise within the City of Chino Hills are presented in the Noise Element of the City of Chino Hills General Plan and within the City of Chino Hills Municipal Code. Applicable goals, policies, and regulations are presented below.

4.3.1 City of Chino Hills 2015 General Plan

Noise/Land Use Compatibility

Exhibit D, Land Use/Noise Compatibility presents the existing land use compatibility chart for Chino Hills. Typically these charts are derived from the table presented in Exhibit C. The 2015 Chino Hills General Plan instead presents a single interior and exterior CNEL limit for each land use category as applicable.

Exhibit D: Chino Hills Land Use/Noise Compatibility Matrix

Table 7-1 – Land Use/Noise Compatibility Matrix

Land Use Categories		CNEL	
Categories	**Compatible Uses**	**Interior[1]**	**Exterior[2]**
Residential	Single-Family, Duplex, Multiple-Family	45[3]	65[5]
	Mobile Homes	--	65[4]
Commercial	Hotel, Motel, Transient Lodging	45[3]	65
	Commercial, Retail, Bank, Restaurant, Health Clubs	55	--
	Office Buildings, Research and Development, Professional Offices	50	--
	Amphitheater, Concert Hall, Auditorium, Meeting Hall, Movie Theater	45	--
	Gymnasium (multi-purpose)	50	--
	Manufacturing, Warehousing, Wholesale, Utilities	65	--
Open Space	Parks	--	65
Institutional/ Public Facility	Hospital, Schools, Classrooms	45[3]	65
	Churches, Libraries	45[3]	--

Interpretation:

1. Interior environment excludes bathrooms, toilets, closets, and corridors.
2. Outdoor environment limited to private yard of single-family or multifamily residential private patio that is accessed by a means of exit from inside the unit; mobile home park; hospital patio; park picnic area; school playground; and hotel and motel recreation area.
3. Noise level requirement with closed windows. Mechanical ventilating system or other means of natural ventilation shall be provided pursuant to UBC requirements.
4. Exterior noise level shall be such that interior noise level will not exceed 45 dB CNEL.
5. Multifamily developments with balconies that do not meet the 65 dB CNEL standard are required to provide occupancy disclosure notices to all future tenants regarding potential noise impacts.

MD recommends implementing a Land Use Compatibility Matrix similar to Exhibit C to allow for flexible planning.

General Plan Goals, Policies and Actions
The 2015 General Plan Noise Element includes the following goals, policies and actions that are intended to avoid or reduce noise impacts related to transportation, stationary, and construction related noise sources.

Goal N-1: Manage Existing Noise Sources.

Policy N-1.1: Protect public health and welfare by eliminating or minimizing the effects of existing noise problems.

> **Action N-1.1.1:** Control noise conditions in Chino Hills through the active, ongoing efforts of the City in coordination with other government agencies.
>
> **Action N-1.1.2:** Increase public input on environmental noise issues, and establish a program for the monitoring and abatement of local noise sources.
>
> **Action N-1.1.3:** Prohibit large commercial truck traffic in noise-sensitive areas, such as school sites, located in Chino Hills.
>
> **Action N-1.1.4:** Restrict truck traffic to roadways that are located away from sensitive land uses.
>
> **Action N-1.1.5:** Minimize through vehicular traffic in the City's residential areas.
>
> **Action N-1.1.6:** Enforce state motor vehicle noise standards for cars, trucks, and motorcycles.
>
> **Action N-1.1.7:** Incorporate sound attenuation measures in residential developments to achieve the City's standards. Such sound attenuation measures may include noise barriers, replacing existing windows and doors with sound-rated assemblies, insulating exterior walls and attics, and/or installing forced air ventilation.
>
> **Action N-1.1.8:** Incorporate sound attenuation measures in commercial and industrial developments to ensure that mechanical equipment does not generate excessive noise levels.

Policy N-1.2: Where complaints are received by residents with regard to non-transportation noise sources (e.g., commercial/retail equipment or activities, fans, air conditioners), the City will protect the public health and welfare by implementing the following Action statement as necessary to ensure that the non-transportation noise source does not exceed the noise standards identified in Titles 6, 8 and 16 of the City of Chino Hills Municipal Code.

Action N-1.2.1: Ensure that equipment, machinery, fan, and air conditioning noise does not exceed specified levels, established in the City's Noise Ordinance.

Goal N-2: Limit New Noise Conflicts.

Policy N-2.1: Minimize increases in noise levels due to new land use and transportation facility decisions.

Action N-2.1.1: Action N-2.1.1: Enforce the standards of Table 7-1 – Land Use/Noise Compatibility Matrix (Exhibit D in this report), which specify acceptable exterior and interior noise limits for various land uses throughout the City.

Action N-2.1.2: Continue to assess projects through the subdivision, site plan, conditional use permit, and other development review processes and incorporate conditions of approval and mitigation measures that ensure noise compatibility where appropriate.

Action N-2.1.3: Require a noise study to be performed and appropriate noise attenuation to be incorporated to reduce interior noise levels to 45 dB CNEL or less prior to approving any multifamily or mixed-use residential development in an area with a CNEL of 65 dB or greater.

Action N-2.1.4: Incorporate ambient noise level considerations into land use decisions involving schools, hospitals, and similar noise sensitive uses.

Action N-2.1.5: Ensure all new developments provide adequate sound insulation or other protection from existing and projected noise sources.

Action N-2.1.6: Design new transportation facilities to minimize noise impacts on nearby sensitive sources.

Action N-2.1.7: Ensure that all new hotels, motels, multifamily and single-family dwellings to be developed within an area where the outdoor CNEL exceeds 60 dB are designed to achieve an indoor CNEL of 45 dB or less.

4.3.3 City of Chino Hills Municipal Code

The City Noise Ordinance is designed to protect people from non-transportation noise sources such as construction activity; commercial, industrial, and agricultural operations; machinery and pumps; and air conditioners. Enforcement of the ordinance ensures that adjacent properties are not exposed to excessive noise from stationary sources. Enforcing the ordinance includes requiring proposed development projects to show compliance with the ordinance, including operating in accordance with noise levels and hours of operations limits placed on the project site. The City also requires construction activity to comply with established work schedule limits. The ordinance is reviewed periodically for adequacy and amended as needed to address community needs and development patterns. The following City codes are related to noise.

6.04.040 - Noisy or at-large animals—Public nuisance.

A. Any animal, animals, or fowl which molest passersby or passing vehicles, attack other animals, trespass on school grounds, is repeatedly at large, damages and/or trespasses on private or public property, barks, whines, howls, honks, squeals, screeches, or otherwise makes or creates excessive, continuous, or untimely noise shall be considered and deemed a nuisance.

B. Every person who maintains, permits, or allows a public nuisance to exist upon his or her property or premises, and every person occupying or leasing the property or premises of another and who maintains, permits, or allows a public nuisance as described above to exist on such property, after reasonable notice in writing from the City or agents of the City has been served upon such person to cease such nuisance, is guilty of a misdemeanor and subject to punishment in accordance with state law and Section 1.36.010 et seq. of this Code. The existence of such nuisance for each and every day after the service of such notice shall be deemed a separate and distinct offense.

8.08.020 - Regulation of construction and property maintenance noise.

A. Except when necessary for the immediate preservation of life, health, or property, no person shall construct, repair, remodel, demolish, or grade any real property or structures thereon at any time other than between the hours of 7:00 a.m. and 7:00 p.m. on weekdays, and between 8:00 a.m. and 6:00 p.m. on Saturdays, excluding federal holidays. Notwithstanding the foregoing, an individual residential property owner or tenant in addition to the above permissible hours of construction may also construct, repair, or remodel his or her real property or any structure on such property during the hours of 7:00 p.m. and 10:00 p.m. on weekdays and between 6:00 p.m. and 10:00 p.m. on Saturdays, and between the hours of 8:00 a.m. and 10:00 p.m. on Sundays and federal holidays provided that the noise or sounds associated with such activities cannot be heard by a reasonable person beyond the boundary lines of the property.

B. No property owner, tenant, or contractor thereof shall operate or allow the operation of mobile, outdoor mechanical or electrical equipment (e.g., lawn mowers, leaf blowers, hedge trimmers, etc.) that generates noise or sounds that can be heard by a reasonable person beyond the boundary lines of the property at any time other than between the hours of 7:00 a.m. and 8:00 p.m. on weekdays, and between 8:00 a.m. and 7:00 p.m. on Saturdays, Sundays, and federal holidays. This provision shall not apply to the operation of a fixed noise source (e.g., air conditioning units, pool equipment, etc.) that conforms to the noise standards pursuant to Section 16.48.020.

C. Any person violating this section, shall be guilty of an infraction and subject to punishment in accordance with Section 1.36.030 of this Code.

D. Any violation of this section is deemed and declared to be a public nuisance and subject to punishment and abatement as provided in this Code and state law.

13.20.170 - Trucks—Noise.

To protect the public health, safety, and quiet enjoyment of the residents of the City, the noise level for the collection vehicles during the stationary compaction process shall not exceed seventy-five (75) decibels at a distance of twenty-five (25) feet from the collection vehicle and at an elevation of five (5) feet from the horizontal base place of such vehicles.

16.09.100 - Commercial outdoor patio guidelines.

A. The hours of operation for the outdoor patio shall be between 7:00 a.m. and 10:00 p.m. everyday or as modified by the Planning Commission based on compatibility of the neighboring residential uses and the results of the acoustical analysis findings.
B. The noise levels of the outdoor patio shall be in compliance with the City's noise standards.
C. If the outdoor patio is located adjacent to a residential use, an acoustical analysis shall be required to demonstrate the proposed outdoor patio will comply with the City's noise standards (CHMC 16.48.020).

16.12.070 - Entertainment establishments providing dancing, music, and similar activities.
A. Noise levels shall not exceed the standards set forth in Chapter 16.48 of this Development Code, when measured at the nearest residential property line.
C. Dancing, music, and similar entertainment uses shall not be permitted between the hours of 2:00 a.m. and 10:00 a.m.
D. The City may apply additional requirements or limitations to ensure compatibility with surrounding land uses where the use in question relies upon a Conditional Use Permit, Temporary Use Permit, or other discretionary permit.

16.48.020 – Noise
Part A outlines definitions for this section.
Part B outlines exemptions to the chapter including occasional outdoor gatherings, public school-sponsored activities, typical park or playground activities, temporary emergency noise, necessary warning devices, construction noise in accordance with 8.08.020, preempted activities, and animal noise in accordance with 6.04.040.
Part C defines the requirements for noise level measurements.
Part D outlines that vibration may not be perceptible (0.05 in/sec) on any affected property adjoining the property of the vibration source.
Part E presents the city's exterior sound level limits as outlined in Table 3 below.

Table 3: Chino Hills Exterior Noise Standards for Receiving Land Uses

Zone	Land Use of Receiving Property	Maximum Permitted Exterior Sound Pressure Level, Leq (dBA)	
		7:00 a.m. to 10:00 p.m.	10:00 p.m. to 7:00 a.m.
I	Single-Family Residential	60	45
II	Multi-Family Residential, Mobile Home Parks	65	45
III	Commercial Property and Institutional Property	70	60
IV	Residential Portion of Mixed Use	65	45
V	Manufacturing and Industrial, Other Uses	75	70

Source: City of Chino Hills Municipal Code 16.48.020
Notes:
1. The city's noise element includes a noise compatibility matrix with community noise equivalent level (CNEL) and is intended to apply to long term ambient noise levels that are produced by sources such as traffic and evaluated over twenty-four (24) hours. Table 1 includes noise standards levels in terms of Leq. These levels are applicable to sounds that have shorter durations than twenty-four (24) hours.
2. If the ambient noise level exceeds the maximum permitted sound level indicated in the table, the applicable maximum permitted sound level pressure shall be three (3) dB above the ambient noise level.
3. Measurements for compliance are made on the affected property pursuant to the details in section C. noise level measurements, 2. exterior noise level measurements.

These levels are adjusted if less than 30 minutes in an hour or for impulse noises, tonal noises, and noises consisting of speech of music.

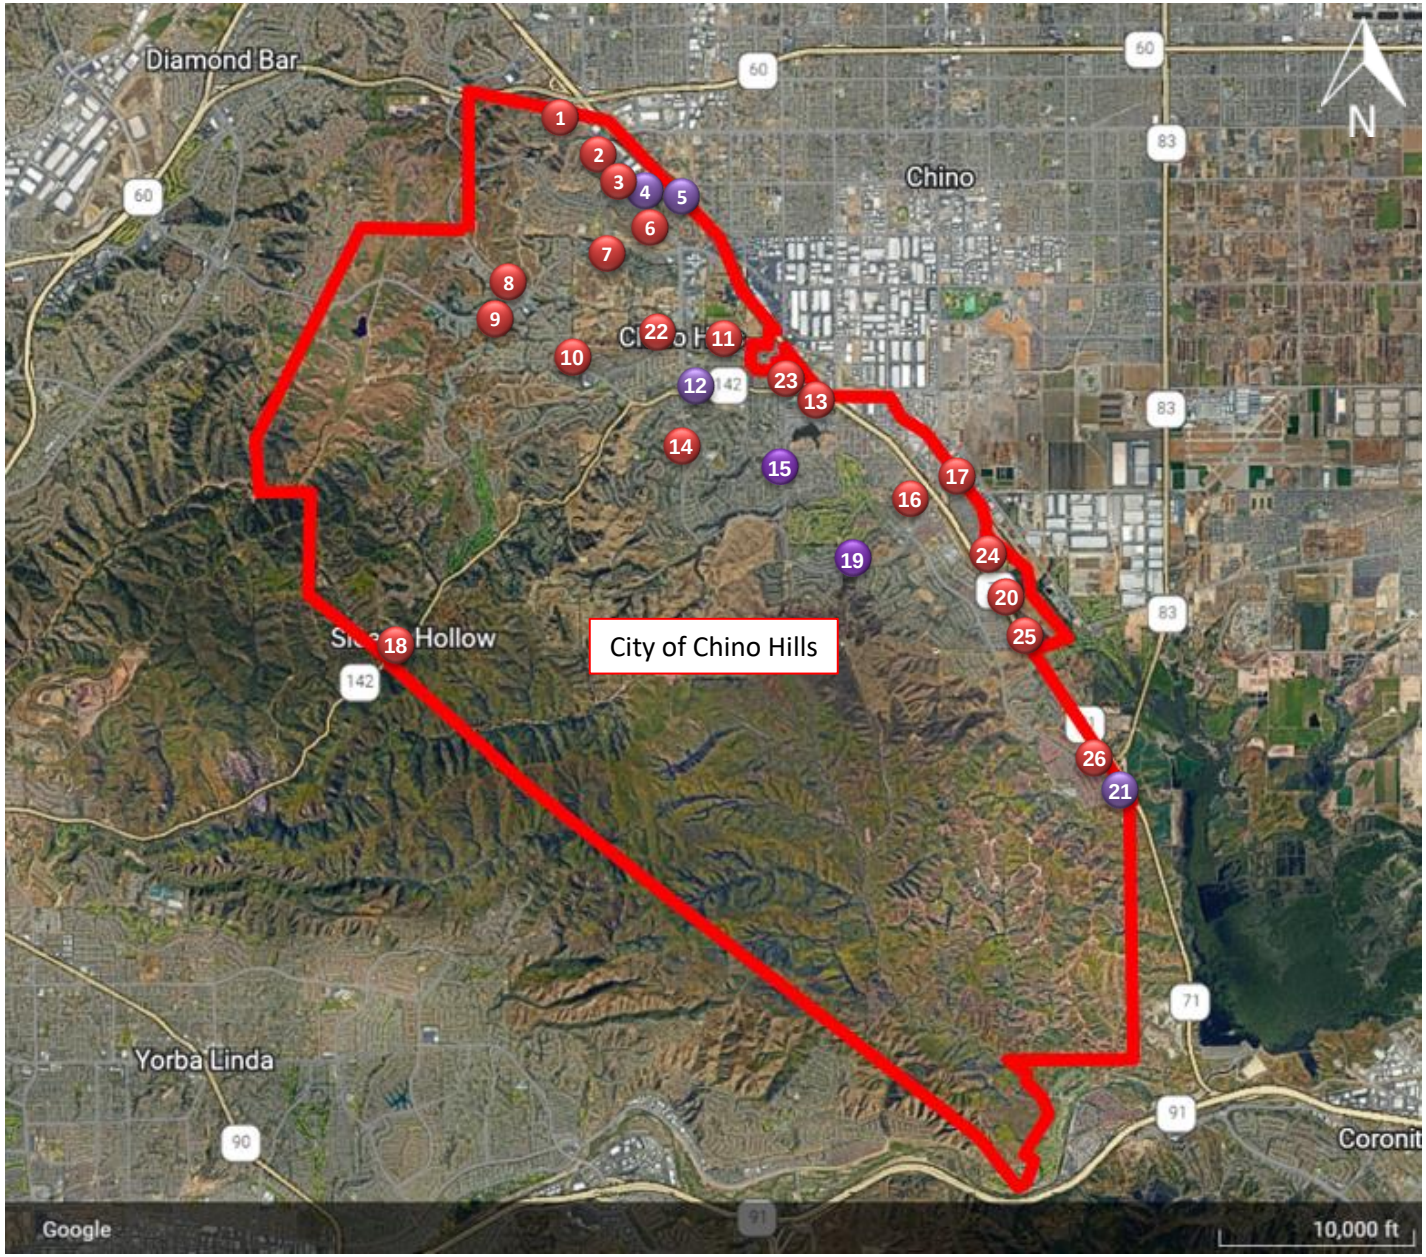
Part F presents the residential interior limits of 45 dBA from 10 PM to 7 AM and 55 dBA from 7 AM to 10PM. Adjacent multifamily units may not produce noise that results in a perceptible increase in sound level above the ambient in another unit between 10 PM and 7 AM.
Part G outlines prima facie violations in residential areas of audible noise producing machines at night and sound amplifiers at any time.

5.0 Study Method and Procedure

The following section describes the noise modeling procedures and assumptions used for this assessment.

5.1 Noise Measurement Procedure and Criteria

MD took noise measurements for the proposed General Plan update at 26 locations. Six (6) 24-Hour long-term noise measurement and 20 (twenty) 20-minute short-term noise measurements were taken throughout the City. Appendix A includes the measured noise data. Exhibit E illustrates the location of the measurements.



5.2 FHWA Traffic Noise Prediction Model

Existing, Future, and Future plus Plan traffic noise from vehicular traffic was projected using a computer program that replicates the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108). The FHWA model arrives at the predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL).

Traffic information from the general plan traffic data was utilized for modeling purposes. Inputs for the FHWA model, including road classification, speed, land distance, and vehicle mix, were taken from the noise modeling for the 2015 General Plan Draft EIR appendix. Data input is provided in Appendix B.

The Traffic Study analyzed future conditions in the Year 2029 and Year 2040, with 2023 as the base year. The Study included known development projects (cumulative projects) in the vicinity, including the City of Chino Hills and the City of Chino, which research revealed 20 cumulative projects in Chino Hills and 19 cumulative projects in the City of Chino. Further, the Study applied a 2 percent ambient growth factor to capture development in projects outside of the study area (City of Chino) in other jurisdictions. The known cumulative projects with the ambient growth factor are accounted for in the near-term horizon Year 2029 and long-term horizon Year 2040. The General Plan Update (the Project) trip generation was added to the cumulative Year 2029 and cumulative Year 2040 analysis. The noise analysis is based on the existing and future cumulative traffic growth.

Exhibit E
Noise Measurement Location Map

x = Short-Term measurement (20-MInute)

x = Long-Term measurement (24-Hour)

6.0 Existing Noise Environment

20 short-term (20-minute) and six (6) long-term (24 to 72-hour) ambient noise measurements were conducted around the City for the 2040 General Plan Update on 5/4/2022. The measurements measured the Leq, Lmin, Lmax and other statistical data (e.g. L2, L8). The noise measurements were taken to determine the existing baseline noise conditions.

6.1 Short-Term Noise Measurement Results

The results of the short-term noise data are presented in Table 4.

Table 4: Short-Term Noise Measurement Data (dBA)[1]

Noise Monitoring Location	Time	Leq	Lmin	Lmax
1 - 2427 Scenic Ridge Dr	7:31-7:52 AM	60.3	54.4	75.9
2 - 13104 Glen Ct	8:05-8:26 AM	52.8	43.5	76.0
3 - Rolling Village Dr	8:42-9:03 AM	62.6	45.8	78.8
6 - Ridgefield Dr	9:39-10:00 AM	48.2	39.0	66.2
7 - 2936 Sunny Brook Ln	10:12-10:33 AM	54.0	40.4	79.7
8 - 14100 Heathervale Dr	10:45-11:06 AM	62.1	36.9	80.6
9 - Willow Wood Ln	11:20-11:41 AM	69.3	40.6	80.3
10 - Moon Rise Ln	1:47-2:08 PM	68.7	47.6	82.5
11 - 14514 Foxglove Dr	2:20-2:41 PM	63.4	48.0	75.3
13 - 4488 Village Dr	2:54-3:15 PM	59.5	48.5	75.8
14 - 3384 Gabriel Dr	3:32-3:53 PM	64.9	39.9	89.6
16 - 5022 Pomona Rincon Rd	4:35-4:56 PM	55.2	49.7	72.0
17 - 15461 Timberidge Ln	11:06-11:27 AM	70.3	55.8	83.9
18 - 16860 Oak Way Ln	10:16-10:37 AM	70.2	44.3	89.1
20 - Rosebud Ct	8:53-9:14 AM	61.9	54.2	67.7
22 - 3280 Eucalyptus Ave	4:04-4:25 PM	64.2	47.4	79.5
23 - Chino Hills Parkway	3:07-3:28 PM	66.3	55.9	84.3
24 - 16333 Fairfield Ranch Rd	5:46-6:07 PM	73.7	66.3	86.3
25 - Pine Ave	2:18-2:39 PM	65.4	54.6	89.3
26 - Butterfield Ranch Rd	1:48-2:09 PM	62.1	49.7	83.5

Notes:
1. Measurements were taken over a twenty-minute interval. Measurement locations are indicated in Exhibit E.

Short-term noise data indicates the ambient noise levels ranged between 48.2 to 73.7 dBA Leq. The measured noise levels and field notes indicate that traffic noise is the main source of noise impacting the project site.

Locations 1-21, 25, and 26 are residential areas. Location 22 is a park. Location 23 is commercial. Location 24 is a sports complex. Locations 3, 8, 9, 10, 11, 14, 17, 18, and 20 exceed the maximum permitted exterior sound pressure levels given in Table 16.48-1 of the municipal code.

6.2 Long-Term Noise Measurement Results

The results of the long-term noise data are presented in Table 5. These measurements were taken from 5/4/22 to 5/6/22. Long-term noise data indicates the ambient noise levels ranged between 65.9 to 74.8 dBA CNEL. The measured noise levels and field notes indicate that traffic noise is the main source of noise impacting the project site.

Table 5: Long-Term Noise Measurement Data (dBA)[1]

Noise Monitoring Location	CNEL	Highest 1-hour Leq	Hour	Lowest 1-hour Leq	Hour
4 - 3059 Galaxy Pl	69.8	67.9	7:28-8:28 AM	57.1	1:28-2:28 AM
5 - 3238 Skyview Ridge	80.5	76.7	6:06-7:06 AM	69.2	1:06-2:06 AM
12 - 3456 Whirlaway Ln	74.8	76.4	2:55-3:55 PM	56.7	1:55-2:55 AM
15 - 15567 Sandlewood Ln	68.0	68.3	1:29-2:29 PM	52.2	2:29-3:29 AM
19 - 4597 St Andrews Dr	67.2	70.3	5:00-6:00 PM	46.7	2:00-3:00 AM
21 - 17957 Lariat Dr	86.0	82.6	6:00-7:00 AM	71.0	3:00-4:00 PM

Notes:
1. Measurements were taken over a 24-hour interval. Measurement locations are indicated in Exhibit E.

Locations 4, 5, 12, 15, 19, and 21 exceed the single-family residential limit of 60 dBA Leq from the municipal code and the 65 dBA CNEL exterior noise compatibility limit for residential uses.

6.3 Airport/Aircraft Noise

There are no airports located within the Study Area. The closest airport to the Study Area is the Chino Airport located approximately 2 miles east of the Study Area. The city limits are outside of the 2028 55 dBA CNEL contours of the Chino Airport per the Chino Airport Master Plan (Feb 2006).

7.0 Future Noise Environment Impacts and Mitigation

This assessment analyzes future noise impacts to the project and compares the results to the City's Noise Standards. The analysis details the estimated exterior noise levels associated with traffic from adjacent roadway sources.

7.1 Off-Site Traffic Noise Impacts

The potential off-site noise impacts caused by the increase in vehicular traffic as a result of the project were calculated at a distance of 50 feet. Roadways wider than 100 ft., SR-71 and Pomona Freeway, were calculated at a distance of 100 feet. The distance to the 55, 60, 65, and 70 dBA CNEL noise contours are also provided for reference. The noise level at 50 feet is representative of approximate distances to existing land uses along the subject roadway. The noise contours were calculated for the following scenarios and conditions:

- Year 2023 Condition: This scenario refers to the existing 2023 traffic noise condition.
- Year 2040 Condition: This scenario refers to the 2040 traffic noise condition without the General Plan buildout.
- Year 2040 Plus Project Condition: This scenario refers to the 2040 plus General Plan buildout traffic noise condition.

Without Project Scenario

Year 2023 and Year 2040 and the resulting increase without the project are shown in Table 6. Table 6 shows that traffic noise increases without the project from 2023 to 2040 would be up to 2.5 dBA CNEL. There are no segments that would increase greater than 3 dB, which is a perceptible change in noise level. The impact is, therefore, less than significant.

<Table 6, Next Page>

Table 6: Traffic Noise Increases – 2040 without Project (dBA CNEL)

ROADWAY	SEGMENT LIMITS	Year 2023 Level at 50 ft.	Year 2040 Level at 50 ft.	Increase without Project	Potentially Significant?

With Project Scenario

Year 2023 and Year 2040 plus Project and the resulting increase with the project are shown in Table 7. Table ~~6~~ shows that traffic noise increases with~~out~~ the project from 2023 to 2040 with the project would be up to 2.7 dBA CNEL. There are no segments that would increase greater than 3 dB, which is a perceptible change in noise level. The impact is therefore less than significant.

Table 7: Traffic Noise Increases – 2040 with Project (dBA CNEL)

ROADWAY	SEGMENT LIMITS	Year 2023 Level at 50 ft.	Year 2040 Level at 50 ft.	Increase with Project	Potentially Significant?

7.2 On-Site Traffic Noise Impacts

Year 2040 with Project traffic noise contours are presented in Table 8. These contours can be utilized to evaluate the Project's compatibility with the future noise environment.

Potential Lower Income RHNA sites 1, 2, 4, and 11 all have the potential to fall outside of the recommended 65 dBA CNEL without mitigation. Care should be taken to ensure that exterior levels are

mitigated to 65 dBA CNEL the extent feasible, and all interior levels in inhabited areas must be 45 dBA CNEL or less.

Table 8: Future Traffic Noise Contours (dBA, CNEL)

ROADWAY	SEGMENT	DAILY TRAFFIC VOLUMES	NOISE LEVEL AT 50 FT. (dBA CNEL)	DISTANCE TO NOISE CONTOUR (FT.)			
				70 dBA CNEL	65 dBA CNEL	60 dBA CNEL	55 dBA CNEL
Grand Avenue	Peyton Dr. to SR-71	36,752	76.4	133	287	618	1331

Exhibit H

2040 Plus Plan Roadway Noise Level Contours (CNEL)

8.0 Construction Noise and Vibration Impacts

The degree of construction noise may vary for different areas of the project site and vary depending on the construction activities. This section summarizes discusses noise and ground-borne vibration modeling efforts, impact analysis, and mitigation, if necessary.

8.1 Construction Noise

Construction noise is exempt from the City's noise limits between the hours of 7 AM and 7 PM Monday through Friday and 8 AM to 6 PM on Saturdays. Construction noise is not exempt on Sundays or federal holidays. and holidays.

Typical construction equipment noise levels are presented in Table 9.

Table 9: Typical Construction Equipment Noise Levels

Equipment	Typical Noise Level (dBA at 50 feet)	Equipment	Typical Noise Level (dBA at 50 feet)
Air Compressor	80	Paver	85
Backhoe	80	Pile-driver (Impact)	101
Ballast Equalizer	82	Piler-driver (Sonic)	95
Ballast Tamper	83	Pneumatic Tool	85
Compactor	82	Pump	77
Concrete Mixer	85	Rail Saw	90
Concrete Pump	82	Rock Drill	95
Concrete Vibrator	76	Roller	85
Crane, Derrick	88	Saw	76
Crane, Mobile	83	Scarifier	83
Dozer	85	Scraper	85
Generator	82	Shovel	82
Grader	85	Spike Driver	77
Impact Wrench	85	Tie Cutter	84
Jack Hammer	88	Tie Inserter	85
Loader	80	Truck	84
Source: Transit Noise and Vibration Impact Assessment, Federal Transit Administration, 2018.			

The loudest expected piece of equipment for the Plan is 85 dBA at 50 feet (concrete mixer, dozer, grader, paver, etc.). Given a usage factor of 50% per the Federal Highway Road Noise Construction Model, the maximum Leq level for one piece of equipment is 82 dBA at 50 feet. In the likely scenario that two pieces of equipment are operating simultaneously 50 feet from the same point on the property line, the overall level would be 85 dBA, Leq.

To minimize construction noise at adjacent land uses, the following noise reduction policies should be taken when construction occurs within 500 feet of sensitive receptors:

1. Require that construction vehicles and equipment (fixed or mobile) be equipped with properly operating and maintained mufflers.

2. Restrict haul routes and construction-related traffic.

3. Place stock piling and/or vehicle-staging areas as far as practical from residential uses.

4. Reduce nonessential idling of construction equipment.

5. Consider the installation of temporary sound barriers for construction activities that are adjacent to occupied noise-sensitive structures, depending on length of construction, type of equipment used, and proximity to noise-sensitive uses.

6. Secure loads to reduce rattling and banging.

Noise reduction measure 5 should be considered when construction activity with multiple pieces of equipment occurs within 50 feet of a sensitive property line. Barriers should block the line-of-site to noise-sensitive structures.

With the noise reduction measures, the impact is less than significant.

8.2 Construction Vibration

Construction activities can produce vibration that may be felt by adjacent land uses. The construction of the proposed project would not require the use of equipment such as pile drivers, which are known to generate substantial construction vibration levels. The primary vibration source during construction may be from a bulldozer. A large bulldozer has a vibration impact of 0.089 inches per second peak particle velocity (PPV) at 25 feet which is perceptible but below any risk to architectural damage.

The fundamental equation used to calculate vibration propagation through average soil conditions and distance is as follows:

$$PPV_{equipment} = PPV_{ref} (25/D_{rec})^n$$

Where: PPV_{ref} = reference PPV at 25 ft.
D_{rec} = distance from equipment to receiver in ft.
n = 1.5 (the value related to the attenuation rate through ground)

The thresholds from the Caltrans Transportation and Construction Induced Vibration Guidance Manual in Table 10 (below) provides general thresholds and guidelines as to the vibration damage potential from vibratory impacts.

Table 10: Guideline Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Source: Table 19, Transportation and Construction Vibration Guidance Manual, Caltrans, Sept. 2013.
Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Table 11 gives approximate vibration levels for particular construction activities. This data provides a reasonable estimate for a wide range of soil conditions.

Table 11: Vibration Source Levels for Construction Equipment

Equipment	Peak Particle Velocity (inches/second) at 25 feet	Approximate Vibration Level LV (dVB) at 25 feet
Pile driver (impact)	1.518 (upper range)	112
	0.644 (typical)	104
Pile driver (sonic)	0.734 upper range	105
	0.170 typical	93
Clam shovel drop (slurry wall)	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory Roller	0.21	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

RMS velocity in decibels, VdB re 1 micro-in/sec
Source: Transit Noise and Vibration Impact Assessment, Federal Transit Administration, 2018.

To avoid structural damage, bulldozers should not come within 15 feet of fragile buildings or within 8 feet of older residential structures and historic buildings. Daytime residential annoyance, defined by the FTA as 78 VdB, would occur at 50 feet from a bulldozer.

Construction activity is not anticipated to be vibration-intensive including the use of blasting, pile driving, and vibratory rollers within 200 feet of sensitive receptors. Construction activity is not expected to fall within the limits of structural damage and therefore the impact is less than significant.

9.0 CEQA Analysis

The California Environmental Quality Act Guidelines (Appendix G) establishes thresholds for noise impact analysis as presented below:

(a) Would the project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise Code, or applicable standards of other agencies?

Transportation Noise Impacts

The significance criteria for Transportation Noise Standards are based on audibly perceived differences in the traffic noise level. Compared to the existing traffic noise levels, if the future (2040) plus project levels are expected to increase by more than 3 dB AND exceed the 65 dBA CNEL exterior noise compatibility level for residences, lodging, parks, hospitals, and schools.

Compared to existing traffic noise levels, future (2040) traffic volumes are expected to be up to 2.7 dBA CNEL louder than existing ambient noise levels at existing land uses (see Table 6). No roadways are expected to be more than a 3 dB increase AND exceed the 65 dBA CNEL exterior noise compatibility level for sensitive outdoor uses. The impact is therefore less than significant.

Future residential uses are anticipated to be built within the 65 dBA CNEL contours. These projects will require a detailed noise analysis to mitigate the outdoor levels to 65 dBA CNEL to the extent feasible. The interior noise levels must be mitigated to 45 dBA CNEL in habitable rooms.

Stationary Noise Sources

Stationary noise impacts would be considered significant if they result in exceedances of Chapter 16.48 of the municipal code.

Implementation of the proposed General Plan Update may result in stationary noise impacts related to HVAC Systems, Generators, Fans, Air Compressors, and Transformers. This list is not intended to be exclusive. Implementation of good land use planning and policies and actions will minimize noise impacts related to these sources by avoiding the placement of noise generating equipment near noise-sensitive land uses and where unavoidable, include design measures to the degree practicable to avoid violating Chapter 16.48 of the municipal code. Individual projects are required to follow these regulations. Stationary noise impacts will therefore be less than significant with mitigation.

Construction Noise and Vibration

Construction noise will be significant if construction activities occur outside of the permitted construction hours specified in Section 8.08.020 of the Chino Hills.

Implementation of the construction noise reduction policies would result in short-term noise impacts associated with construction activities. Two types of short-term noise impacts could occur during construction activities, on-site and off-site.

Construction crew commute, and the transport of construction equipment and materials to the site for the proposed project would incrementally increase noise levels on access roads leading to the site. Truck traffic associated with project construction should be limited to within the permitted construction hours, as listed in the City's Municipal Code. Although there would be a relatively high single-event noise exposure potential at a maximum of 87 dBA Lmax at 50 ft from passing trucks, causing possible short-term intermittent annoyances, the effect on ambient noise levels would be less than 1 dBA when averaged over one hour or 24 hours. In other words, the changes in noise levels over 1 hour or 24 hours attributable to passing trucks would not be perceptible to the normal human ear. Therefore, short-term construction-related impacts associated with worker commute and equipment transport on local streets leading to the project site would result in a less than significant impact on noise-sensitive receptors along the access routes. No mitigation is required.

The site preparation phase of on-site construction activities, which includes grading and paving, tends to generate the highest noise levels since the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backhoes, bulldozers, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings. Site-specific construction activities associated with future development is expected to require the use of scrapers, bulldozers, motor graders, and water and pickup trucks. The loudest expected piece of equipment for the Plan is 85 dBA at 50 feet (concrete mixer, dozer, grader, paver, etc.). Given a usage factor of 50% per the Federal Highway Road Noise Construction Model, the maximum Leq level for one piece of equipment is 82 dBA at 50 feet. In the likely scenario that two pieces of equipment are operating simultaneously 50 feet from the same point on the property line, the overall level would be 85 dBA, Leq.

b) Generate excessive ground-borne vibration or ground-borne noise levels?
Construction vibration will be significant if vibration exceeds levels that would result in structural damage to existing buildings. Implementation of the proposed General Update would result in short-term vibration impacts associated with construction activities. The Transportation and Construction Vibration Guidance Manual (Caltrans 2020) has recommended vibration thresholds for various types of receivers.

To avoid structural damage, bulldozers should not come within 15 feet of fragile buildings or within 8 feet of older residential structures and historic buildings. Daytime residential annoyance, defined by the FTA as 78 VdB, would occur at 50 feet from a bulldozer.

Construction activity is not anticipated to be vibration-intensive including the use of blasting, pile driving, and vibratory rollers within 200 feet of sensitive receptors. Construction activity is not expected to fall within the limits of structural damage and therefore the impact is less than significant ~~with mitigation~~.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no airports located within the Study Area. The closest airport to the Study Area is the Chino Airport located approximately 2 miles east of the Study Area. The city limits are outside of the 2028 55 dBA CNEL contours of the Chino Airport per the Chino Airport Master Plan (Feb 2006). The impact is therefore less than significant.
