HCM 6th Ctrl Delay		38.8	
HCM 6th LOS		D	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	33.1
Analysis Method:	HCM 7th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.622

Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.15			
Intersection Signal Delay: 69.9		Intersection LOS: E	
Intersection Capacity Utilization 64.6%		ICU Level of Service C	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

HCM 6th Ctrl Delay		53.7	
HCM 6th LOS		D	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report

Intersection Summary			
Area Type:	Other		
Cycle Length: 95			
Actuated Cycle Length: 95			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 105			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.72			
Intersection Signal Delay: 79.5		Intersection LOS: E	
Intersection Capacity Utilization 57.7%		ICU Level of Service B	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

HCM 6th Ctrl Delay		22.2	
HCM 6th LOS		C	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	35.9
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.570

Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.66			
Intersection Signal Delay: 153.8		Intersection LOS: F	
Intersection Capacity Utilization 75.2%		ICU Level of Service D	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

HCM 6th LOS		E	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Intersection Summary			
Area Type:	Other		
Cycle Length: 105			
Actuated Cycle Length: 105			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.43			
Intersection Signal Delay: 62.8		Intersection LOS: E	
Intersection Capacity Utilization 69.6%		ICU Level of Service C	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

Intersection Summary			
HCM 6th Ctrl Delay		25.6	
HCM 6th LOS		C	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	37.9
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.647

Intersection Summary			
Area Type:	Other		
Cycle Length: 115			
Actuated Cycle Length: 115			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.66			
Intersection Signal Delay: 182.3		Intersection LOS: F	
Intersection Capacity Utilization 78.0%		ICU Level of Service D	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.

Intersection Summary			
HCM 6th Ctrl Delay		99.6	
HCM 6th LOS		F	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	33.9
Analysis Method:	HCM 7th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.678

Intersection Summary			
Area Type:	Other		
Cycle Length: 105			
Actuated Cycle Length: 105			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.43			
Intersection Signal Delay: 61.4		Intersection LOS: E	
Intersection Capacity Utilization 71.3%		ICU Level of Service C	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

Intersection Summary			
HCM 6th Ctrl Delay		26.1	
HCM 6th LOS		C	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	39.5
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.656

Intersection Summary			
Area Type:	Other		
Cycle Length: 115			
Actuated Cycle Length: 115			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.84			
Intersection Signal Delay: 171.5		Intersection LOS: F	
Intersection Capacity Utilization 78.2%		ICU Level of Service D	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

HCM 6th Ctrl Delay		81.0	
HCM 6th LOS		F	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	37.0
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.740

Intersection Summary			
Area Type:	Other		
Cycle Length: 105			
Actuated Cycle Length: 105			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.50			
Intersection Signal Delay: 69.1		Intersection LOS: E	
Intersection Capacity Utilization 72.0%		ICU Level of Service C	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.

Intersection Summary			
HCM 6th Ctrl Delay		26.4	
HCM 6th LOS		C	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Intersection Summary			
Area Type:	Other		
Cycle Length: 115			
Actuated Cycle Length: 115			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.84			
Intersection Signal Delay: 198.7		Intersection LOS: F	
Intersection Capacity Utilization 81.0%		ICU Level of Service D	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.			

Splits and Phases: 10: Soquel Canyon Pkwy & Pomona Rincon Rd

HCM 6th Ctrl Delay		104.5	
HCM 6th LOS		F	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report
Intersection 11: Peyton Drive at Grand Avenue

Control Type:	Signalized	Delay (sec / veh):	38.3

Intersection Summary			
Area Type:	Other		
Cycle Length: 105			
Actuated Cycle Length: 105			
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green			
Natural Cycle: 115			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.50			
Intersection Signal Delay: 67.7		Intersection LOS: E	
Intersection Capacity Utilization 73.7%		ICU Level of Service D	
Analysis Period (min) 15			
~ Volume exceeds capacity, queue is theoretically infinite.			
Queue shown is maximum after two cycles.			
# 95th percentile volume exceeds capacity, queue may be longer.			
Queue shown is maximum after two cycles.

Intersection Summary			
HCM 6th Ctrl Delay		27.0	
HCM 6th LOS		C	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Level Of Service Report

From:	Richard Barretto, P.E., Principal Zawwar Saiyed, P.E., Associate Principal Yi Li, Transportation Engineer II Linscott, Law and Greenspan, Engineers	LLG Ref:	2.22.4452.1
Subject:	***Chino Hills General Plan Update Vehicle Miles Traveled (VMT) Analysis*** ***Chino Hills, California***		

As requested, Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit this Vehicle Miles Traveled (VMT) Analysis Technical Memorandum for the proposed Chino Hill General Plan Update project (herein after referred to as "Project") in the City of Chino Hills, San Bernardino County, California. This Technical Memorandum presents the VMT screening criteria, analysis methodology, significance thresholds and VMT analysis.

It should be noted that the approach and methodology outlined in this Technical Memorandum are consistent with the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy (adopted on 4/26/2022)*, which provides additional detail on the language and analysis procedures described in this Technical Memorandum.

The following sections of this Technical Memorandum present the Project Description, Terminology, Project Site Level Analysis, Land Use Plan Level Analysis, and Conclusion.

TERMINOLOGY

This section presents the terminology used in this Technical Memorandum:

- **RHNA**: Regional Housing Needs Assessment
- **CEQA**: The California Environmental Quality Act
- **ITE**: Institute of Transportation Engineers
- **CAPCOA**: California Air Pollution Control Officers Association
- **SCAG**: Southern California Association of Governments
- **RTP**: Regional Transportation Plan
- **SCS**: Sustainable Communities Strategy
- **TDM**: Travel Demand Management
- **VMT**: Vehicle Miles Traveled
- **GHG**: Greenhouse Gas
- **SBTAM**: San Bernardino County Transportation Analysis Model
- **TAZ**: Traffic Analysis Zone
- **SED**: Socio-Economic Data
- **Baseline**: SBTAM Existing Year 2016 Model Scenario
- **Baseline Condition**: Unmodified SBTAM Baseline (without Project Scenario)
- **Baseline Plus Project**: Modified SBTAM Baseline (with Project Scenario)
- **Cumulative**: SBTAM Future Year 2040 Model Scenario
- **Cumulative Condition**: Unmodified SBTAM Cumulative (Current General Plan)
- **Cumulative Plus Project**: Modified SBTAM Cumulative (Proposed General Plan)

PROJECT DESCRIPTION

The Project in an update of the City of Chino Hills 2015 General Plan to accommodate land use changes promulgated by the City of Chino Hills 6th Cycle Housing Element; to address other changes to the General Plan required by state law; and to incorporate contemporary General Plan information regarding existing conditions and applicable planning documents.

The Project also includes revisions to the City's Zoning Code and Zoning Map, The Shoppes at Chino Hills Specific Plan (SP04-01) (Shoppes Specific Plan), The Commons at Chino Hills Specific Plan (SP06-01 (Commons Specific Plan), along with updates to the Safety Element, Circulation Element, Parks, Recreation and Open Space Element, Land Use Element, Conservation Element, Noise Element, and Economic Development Element; and approval of the 2020 Parks Master Plan.

This VMT analysis provides a land use plan level review of each of the Project components, including:

- General Plan General Plan and Land Use Map (22GPA02)
- Zoning Map (22ZC02)
- Municipal Code Amendment to Chapter 16.02 (22MCAxx)
- Approval of the Parks and Recreation Master Plan.

In addition, the VMT analysis provides a project site level review for eleven (11) housing sites identified in the Housing Element to meet the City's designated share of Regional Housing Needs Assessment (RHNA) Extremely Low, Very Low, Low and Moderate Income housing, and will require a General Plan Land Use Map change. ***Table 1*** summarizes the information for the eleven (11) RHNA sites based on a review of the Project information provided by the City. ***Figure 1*** presents a Vicinity Map that illustrates the general location of the RHNA sites and surrounding street system.

Figure 2 illustrates the Current Chino Hills General Plan Land Use Map, inclusive of location of the eleven (11) RHNA sites and current land use designation. A summary of the description of the eleven (11) RHNA sites is provided below.

Site 1 – The Shoppes II

Approved under Specific Plan 04-01, the Shoppes II is a City-owned site zoned for high density residential and commercial. Although the site is zoned for high density residential, the approved specific plan caps the site at 295 units, therefore, the site will need to be rezoned to increase unit cap amount to meet lower RHNA. The small southern portion of Shoppes II site was included in previous RHNA cycles and remained vacant. The site is flat and situated between the existing

Shoppes commercial center to the north, Chino Valley Fire District Station 62 to the south, City Hall and parking structure to the west and Boys Republic to the east. The site contains no environmental constraints and includes proper infrastructure surrounding the site ready for residential development as shown below:

- Allocated Units – 744
- Density – 93.0 du/ac
- Size – 8.0 ac
- Current General Plan – High Density Residential
- Current Zoning – Specific Plan 04-01 Mixed Use
- Use – Vacant
- Constraints – None
- Proposed General Plan – Very High Density Overlay
- Proposed Zone – Specific Plan 04-01 (Very High Density Overlay)
- Minimum Density – 93 du/ac

Site 2 – Community Park Overflow

Approved under Specific Plan 04-01, the Community Park overflow is a City-owned site approved for the master planned Community Park and Civic Center. This site is currently used to accommodate overflow parking for the Community Park; however, the site, which is designated a public park, is vacant and underutilized. The City has focused on this site for an affordable senior housing development for several years and committed to applying its Housing In-Lieu fee and available funds to help finance the development of this site. The site is located between Community Park to the north and west, and single-family residential development to the east and south. The site is flat, presents no environmental constraints, and includes proper infrastructure surrounding the site ready for residential development as shown below:

- Allocated Units – 50
- Density – 27.8 du/ac
- Size – 1.8 ac
- Current General Plan – Public Park
- Current Zoning – Specific Plan 04-01 (Community Park)
- Use – Vacant
- Constraints – None
- Proposed General Plan – Very High Density Overlay
- Proposed Zoning – RM-3 or equivalent

- Minimum Density – 27.8 du/ac

Site 3 – Los Serranos Golf Course

This is a 9-hole area of an existing 36-hole golf course that is now designated as commercial recreation. The golf course is surrounded by single-family residential development which serves local and regional communities and includes a driving range and country club. The golf course has been underperforming in recent years, and the property owner has been actively pursuing converting the southernmost 9-hole area into housing. The property owner has submitted a preliminary concept site plan that includes two very high-density sites: Planning Area (PA) IV containing 315 units on 12.6 acres and PA V containing 217 units on 8.69 acres, for a total of 532 high density units.

The property owner has worked with a golf course designer to redevelop the 36-hole into an 18-hole golf course and a 9-hole course, leaving the remaining 9-hole site for housing development. The property owner's efforts to redesign the golf course, provide a preliminary concept plan for housing and keen interest demonstrates that the proposed number of high-density units is both achievable and likely to occur during this planning period.

The high-density portion of this property would be rezoned to Very High Density Overlay to allow for owner-occupied and rental multifamily units. A complete application for this Project and its subsequent development is expected during this 6th Cycle planning period as shown below:

- Allocated Units – 532
- Density – Parcel A - 25du/ac, Parcel B – 24.9 du/ac
- Size – Parcel A – 12.6 ac, Parcel B 8.6 ac, Total 21.3 ac
- Current General Plan – Commercial Recreation
- Current Zoning – Commercial Recreation (C- R)
- Use – Golf Course
- Constraints – Blue Line Stream
- Proposed General Plan – Very High Density Overlay
- Proposed Zoning – Very High Density Housing Overlay
- Minimum Density – 25 du/ac

Site 4 – Western Hills Golf Course

Western Hills Golf Course is an 18-hole course established in the early 1960's to serve the local and regional communities and includes a country club. The golf course is located within Carbon Canyon and is surrounded by single-family residential development. In recent years, the golf

course has underperformed, and the owner seeks to redevelop the south section of the golf course (which includes clubhouse, parking, and large open grass areas) to residential development and redesign the balance of the golf course for continued golf use. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate high density development. The property owner has submitted a preliminary conceptual plan to develop this site with high density residential. Although the golf course is larger than 10 acres, the Project will include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower RHNA. The site is flat, presents no environmental constraints, and includes proper infrastructure surrounding the site ready for residential development. The property owner has indicated intent to use the proceeds from the sale of the housing site to redesign and construct a new club house.

- Allocated Units – 187
- Density – 20.0 du/ac
- Size – 8.3 ac
- Current General Plan – Commercial Recreation
- Current Zoning – Commercial Recreation (C- R)
- Current General Plan – Commercial Recreation
- Use – Golf Course
- Constraints – None
- Proposed General Plan – Very High Density Overlay
- Proposed Zoning – Very High Density Housing Overlay
- Minimum Density – 20 du/ac

Site 5 – Wang (High Density)

The Wang property is a vacant residentially zoned (rural residential) property surrounded by single-family residential to the north and west, vacant property to the south, and Los Serranos Golf Course to the east. The site contains steep topography on the southern half of the property, while the northern half presents slopes less than ten percent directly along Woodview Road. The site also contains a blue line stream along the western portion of the property. Although the site contains areas of steep topography, the mild slope portions can accommodate development for high density residential. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate high density development. Development of this site will re-align Woodview Road to enhance public safety and traffic circulation. Although the property is larger than 10 acres, the Project will include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high

density for lower RHNA. The property includes proper infrastructure surrounding the site ready for residential development as shown below:

- Allocated Units – 148
- Density – 20.3 du/ac
- Size – 7.3 ac
- Current General Plan – Rural Residential
- Current Zoning – Rural Residential (R-R)
- Use – Vacant
- Constraints – Blue Line Stream, mild topography
- Proposed General Plan – Very High Density Overlay
- Proposed Zoning – Very High Density Housing Overlay
- Minimum Density – 20.3 du/ac

Site 6 – The Shoppes

The Shoppes is an existing 391,863-square foot commercial center surrounded by the Shoppes II site and City Hall to the south, Boys Republic to the east, commercial center and single-family residential to the west and commercial center to the north. Currently, the center is 86% occupied which includes approximately 5% of lease square footage based on annual renewals. Additionally, the center includes an anchor building underutilized and current tenant seeks to downsize to a more efficient tenant space for the use. The property owner intends to redevelop the underutilized southeastern section of the commercial center to a mixed-use development that will retain retail space and include high density residential. Although the commercial center is larger than 10 acres, the Project will include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower RHNA. The site is flat, presents no environmental constraints, and includes proper infrastructure surrounding the site ready for residential development as shown below:

- Allocated Units – 267
- Density – 46.8 du/ac
- Size – 5.7 ac
- Current General Plan – Commercial
- Current Zoning – Specific Plan 04-01 Retail
- Use – Commercial Center
- Constraints – None
- Proposed General Plan – Mixed Use Housing Overlay

- Proposed Zoning – Mixed Use Housing Overlay
- Minimum Density – 46.8 du/ac

Site 7 – The Commons

The Commons is an existing 443,272-square foot commercial center surrounded by a mobile home park to the east, single-family and multi-family residential to the west, an existing commercial center and commercial office zoned vacant land to the north within the City of Chino. Currently, the center is largely underutilized and experienced significant vacancies. One of the major tenant spaces (former Toys r Us), which encompasses 12% (63,339 sq. ft.) of the total square footage for the center, has remained vacant for several years. In addition, the undeveloped pad adjacent to the former Toys r Us space, is entitled for two additional buildings totaling 41,500 sq. ft., which encompasses 8 of total square feet, has failed to begin construction to lease at economical rents. The area to redevelop comprises of 20% of total building square footage for the center. The property owner intends to redevelop the underutilized portion of the commercial center by developing a mixed-use Project to retain retail square footage and include high density residential. The property owner has also supplied the City with a letter of intent to redevelop the underutilized portion of the center to include high density residential. Although the commercial center is larger than 10 acres, the Project will include a parcel map with entitlements to subdivide into a smaller parcel of adequate size to accommodate high density for lower RHNA. The site is flat, presents no environmental constraints, and includes proper infrastructure surrounding the site ready for residential development as shown below:

- Allocated Units – 300
- Density – 33.3 du/ac
- Size – 9.0 ac
- Current General Plan – Commercial
- Current Zoning – Specific Plan 06-01 Commercial
- Use – Commercial Center
- Constraints – None
- Proposed General Plan – Mixed Use Housing Overlay
- Proposed Zoning – Mixed Use Housing Overlay
- Minimum Density – 33.5 du/ac

Site 8 – Canyon Estates (Medium Density)

The Canyon Estates property is located at the terminus of Soquel Canyon Parkway and is surrounded by single-family residential and the vacant Wang site to the north, single-family residential to the west and east, and Chino Hills State Park to the south. The site includes steep

topography on the north and south sections of the property and centered with slopes less than ten percent where development can occur. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate medium density development. Development of the property will also include key infrastructure as part of the City's circulation element as shown below:

- Allocated Units – 163
- Density – 12 du/ac
- Size – 13.3 ac
- Current General Plan – Agriculture/Ranches
- Current Zoning – Planned Development 19-161
- Current General Plan – Agriculture/Ranches
- Use – Vacant
- Constraints – Topography
- Proposed General Plan – Medium Density Housing Overlay
- Proposed Zoning – Medium Density Housing Overlay
- Minimum Density – 12.0 du/ac

Site 9 – Wang (Medium Density)

The Wang property is a vacant residentially zoned property surrounded by single-family residential to the north and west, vacant property to the south, and Los Serranos Golf Course to the east. The site contains steep topography on the southern half of the property, while the northern half presents slopes less than ten percent directly along Woodview Road. The site also contains a blue line stream along the western portion of the property. Although the site contains areas of steep topography, the mild slope portions can accommodate development for high density residential. City staff worked closely with the property owner and developer to evaluate the site and determine a feasible location to accommodate high density development. Development of this site will re-align Woodview Road to enhance public safety and traffic circulation. The property includes proper infrastructure surrounding the site ready for residential development as shown below:

- Allocated Units – 272
- Density – 9.0 du/ac
- Size – 30.5 ac
- Current General Plan – Rural Residential
- Current Zoning – Rural Residential (R-R)

- Use – Vacant
- Constraints – Blue Line Stream, mild topography
- Proposed General Plan – Medium Density Housing Overlay
- Proposed Zoning – Medium Density Housing Overlay
  Minimum Density – 9.0 du/ac

Site 10 – Canyon Estates (Low Density)

The Canyon Estates property is located at the terminus of Soquel Canyon Parkway and is surrounded by single-family residential and the vacant Wang site to the north, single-family residential to the west and east, and Chino Hills State Park to the south. The site includes steep topography on the north and south sections of the property and centered with slopes less than ten percent where development can occur. For this development component of Canyon Estates property, up to 166 single family residential units are proposed, consistent with a low density development. Development of the property will also include key infrastructure as part of the City's circulation element.

- Allocated Units – 166
- Density – 6 du/ac
- Size – 31.0 ac
- Current General Plan – Rural Residential
- Current Zoning – Planned Development 19-161
- Use – Vacant
- Constraints – Topography
- Proposed General Plan – Low Density Housing Overlay
- Proposed Zoning – Low Density Housing Overlay
- Minimum Density – 6.0 du/ac

Site 11 – Los Serranos Golf Course (Low Density)

The 6.9-acre site of the Los Serranos Golf Course (PA II) is located along the east side of Pipeline Avenue south of Woodview Road intersection just west of the proposed Site 3. This is a 9-hole area of an existing 36-hole golf course that is now designated as commercial recreation. The golf course is surrounded by single-family residential development which serves local and regional communities and includes a driving range and country club. The golf course has been underperforming in recent years, and the property owner has been actively pursuing converting the southernmost 9-hole area into housing. The site is proposed to include 41 single family residential units: Planning Area (PA) II, consistent with a low density development.

- Allocated Units – 41

- Density – 6.0 du/ac
- Size – 6.9 ac
- Current General Plan – Rural Residential
- Current Zoning – Commercial Recreation (C- R)
- Use – Golf Course
- Proposed General Plan – Low Density Housing Overlay
- Proposed Zoning – Low Density Housing Overlay
- Minimum Density – 6.0 du/ac

Figure 3 illustrates the Proposed Chino Hills General Plan Land Use Map, inclusive of location of the eleven (11) RHNA sites and their proposed land use designation, which would either be Very High Density Overlay, Mixed-Use Overlay Housing, or Medium Density Overlay, as well as Low Density.

PROJECT SITE LEVEL ANALYSIS

This section presents a project site level review of each of the eleven (11) RHNA sites that will be re-designated and re-zoned pursuant to the Project.

Project Site Screening Criteria

Under the VMT methodology, screening is used to determine if a Project will be required to conduct a detailed VMT analysis. The following section discusses the various screening methods recommended by the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy,* and whether the project site will screen out, either in its entirety, or partially based on individual land uses, or in this case individual RHNA sites.

Figure 4 presents the Traffic Analysis Zones (TAZ) Map from the San Bernardino County Transportation Analysis Model (SBTAM) with the location of the eleven (11) project sites as listed below:

Table A. RHNA Sites and TAZ Mapping

Site	RHNA Site	TAZ
1.	The Shoppes II	53603201
2.	Community Park Overflow	53603301
3.	Los Serranos Golf Course	53614501
4.	Western Hills Golf Course	53598201
5.	Wang (High Density)	53609101
6.	The Shoppes	53603201
7.	The Commons	53614201
8.	Canyon Estates (Medium Density)	53609101
9.	Wang (Medium Density)	53609101
10	Canyon Estates (Low Density)	53609101
11.	Los Serranos Golf Course (Low Density)	53614501

Screening Criterion #1: Small Projects

The *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* states:

> *"Absent substantial evidence indicating that a project would generate a potentially significant level of VMT, or inconsistency with a Sustainable Communities Strategy (SCS) or the General Plan, project that generate or attract fewer than 110 trips per day may be assumed to cause a less-than-significant transportation impact."*

As presented in ***Table 2***, the eleven (11) RHNA sites will not screen out since they all generate more than 110 daily trips individually.

Screening Criterion #2: Local-Serving Commercial and Public Facilities, and Affordable Housing

The *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* states:

> *"The City, in its discretion, will determine a development project's specific land use type. Projects that are considered "local-serving" and "affordable housing" for the purposes of this VMT screening criteria include, without limitation:*
>
> - *Local-serving retail uses of 50,000 square feet (SF) or less (i.e., corresponding to the most current ITE Trip Generation Manual's Land Use Code 800's for "Retail" and/or 900's for "Services")*
> - *Local-serving public facility (i.e., public schools, libraries, post offices, police and fire facilities, local government offices)*
> - *Deed-restricted housing project with 100% of the units corresponding to affordable to lower-income households*
> - *For a project to be local serving, its user (residents, customers, employees, visitors) must primarily be from the local area. If the project is not one or more of the identified land uses (or not considered to fit within any of the land use categories by City staff), the project cannot be screened under Criteria #2. Conversely, if the project is for one or more of the identified land uses, the project can be screened under Criteria #2 and no further analysis for VMT is needed."*

Based on the above, ten (10) of the eleven (11) RHNA sites will not screen-out since they are not local-serving commercial, public facilities or affordable housing.

The one (1) exception is RHNA Site 2 – Community Park Overflow, which has been identified for development of affordable senior housing residential units, and therefore will screen out.

Screening Criterion #3: Low VMT Areas, Mixed-Use Projects, Redevelopment Projects, Previously Entitled Projects, and Project Consistency with City Planning Framework

The *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* states:

> *"Figures 1 and 2 of Attachment A illustrate the Traffic Analysis Zones (TAZs) which are "Low VMT Areas" (i.e., TAZs with VMT per Capita or Employee that are 15% or less than the City Average) for the City under baseline (Year 2016) conditions. These Low VMT Areas were identified using the current version of SBTAM. Figure 1 compares the VMT per Capita for each TAZ against the City's Average VMT per Capita. Figure 2 is based on a comparison between the VMT per Employee for each TAZ and the City's Average per Employee.*
>
> *Development projects that located in low VMT Areas of the City and incorporate features similar to existing development (i.e., density, mix of uses, transit accessibility) will tend to exhibit similarly low VMT. Based on this, a project located in a Low VMT Area of the City depicted on Figure 1 and 2, and that incorporates features similar to existing development (i.e., density, mix of uses, transit accessibility) would meet the screening criteria and will be presumed to cause a less-than-significant transportation impact. Consequently, the project would not be required to complete a full VMT impact analysis.*
>
> *Mixed-use projects should analyze each land use individually, but must apply credits to account for internal capture (i.e., synergy between uses).*
>
> *For redevelopment projects where the project replaces VMT-generating land uses, the project would not be required to complete a full VMT impact analysis.*
>
> *With regards to a land use project that has an existing entitlement with an approved CEQA document, and requests a modification to the project, if the modified project leads to a net overall decrease in VMT, the project would meet the screening criteria and be presumed to cause a less-than-significant transportation impact.*
>
> *The City General Plan reflects Chino Hill's goals of promoting low VMT development and reducing GHG emissions, and the regional RTP/SCS incorporates the City's General Plan Land Use Map. The map-based screening approach (i.e., determining whether a land use project is located in one of the Low VMT TAZs presented on in Figure 1 and 2 and incorporates features similar to existing development) presumes that the proposed project is consistent with the City's General Plan, applicable specific plans, applicable land use ordinances and regulations, and the adopted Regional Transportation*

Plan/Sustainable Communities Strategy (RTP/SCS). If the project is in conflict with the City's planning framework, a full VMT impact analysis will be required.

Projects that meet the above Screening Criteria #3 are presumed to cause a less-than-significant impact on transportation."

Based on review of *Figure 1* from the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy*, *Attachment A*, as well as a review of the VMT per Capita for TAZs for the eleven (11) project sites under Baseline (Year 2016) Conditions, four (4) of the eleven (11) RHNA sites are located in a low VMT area of the City of Chino Hills as shown in ***Figure 5*** and presented below**.** Hence, these four (4) of the eleven (11) RHNA sites will screen out.

Table B. RHNA Sites Low VMT TAZ Screening

Site	RHNA Site	TAZ	Screened-Out?
1.	The Shoppes II	53603201	**Yes**
2.	Community Park Overflow	53603301	**Yes**
3.	Los Serranos Golf Course	53614501	No
4.	Western Hills Golf Course	53598201	No
5.	Wang (High Density)	53609101	No
6.	The Shoppes	53603201	**Yes**
7.	The Commons	53614201	**Yes**
8.	Canyon Estates (Medium Density)	53609101	No
9.	Wang (Medium Density)	53609101	No
10	Canyon Estates (Low Density)	53609101	No
11.	Los Serranos Golf Course (Low Density)	53614501	No

Vehicle Miles Traveled (VMT) Analysis Methodology

As required by the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy*, projects that do not screen-out through the steps above shall complete a full VMT analysis and forecasting utilizing SBTAM to determine the VMT for the project and for the City averages for VMT per Capita (for residential projects or components of a mixed-use development) and/or VMT per Employee (for non-residential projects or components of a mixed-use development). This VMT analysis includes VMT for the project and estimates under the two scenarios listed below:

- Baseline Condition (without Project)
- Baseline Plus Project

Based on the above, a full VMT analysis utilizing SBTAM has been used to determine the VMT for the project sites and for the City of Chino Hills and will provide the following:

- City Average VMT per Capita (Baseline Condition)
- Project VMT per Capita (Baseline Plus Project)

Vehicle Miles Traveled (VMT) Impact Thresholds

As outlined in the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* on the application of the VMT impact analysis methodology, a land use project would be considered to result in a significant VMT impact if the following is met:

> *"A land use project results in a significant VMT impact if the project-generated VMT per Capita or Employee exceeds a level of 3% below the City Average VMT per Capita or Employee under existing baseline conditions."*

Vehicle Miles Traveled (VMT) Analysis

Summarized in the section below are the Baseline VMT per Capita values utilizing SBTAM for the City of Chino Hills and the project sites. It should be noted that the Project development totals were converted into Socio-Economic Data (SED) and inputted into the appropriate TAZs for which the RHNA Sites are located within SBTAM for the "Plus Project" conditions. The four (4) RHNA Sites that have been screened out as described in the Project Screening Criteria section are listed below:

Table C. RHNA Sites Screened Out

Site	RHNA Site	TAZ	Screened-Out?
1.	The Shoppes II	53603201	**Yes**
6.	The Shoppes		
2.	Community Park Overflow	53603301	**Yes**
7.	The Commons	53614201	**Yes**

Seven (7) RHNA Sites located within three (3) TAZs cannot be screened out and will be analyzed for VMT impacts. The three (3) TAZs are:

Table D. RHNA Sites Not Screened Out

Site	RHNA Site	TAZ	Screened-Out?
3.	Los Serranos Golf Course	53614501	No
11.	Los Serranos Golf Course (Low Density)		No
4.	Western Hills Golf Course	53598201	No
5.	Wang (High Density)	53609101	No
8.	Canyon Estates (Medium Density)		No
9.	Wang (Medium Density)		No
10	Canyon Estates (Low Density)		No

Table E below presents the VMT values for the three (3) TAZs and the City:

Table E. Baseline (Year 2016) Project Site Level VMT per Capita

Baseline Project VMT per Capita		
Baseline City of Chino Hills VMT/Cap		20.64
3% Below the City of Chino Hills VMT/Cap (Threshold)		**20.02**
TAZ 53614501	Project TAZ VMT	127,571
	Project TAZ Population	6,138
	Project TAZ VMT/Cap	20.78
	Compared to the City of Chino Hills Threshold	**A 3.66% Reduction Needed**
TAZ 53598201	Project TAZ VMT	242,743
	Project TAZ Population	11,111
	Project TAZ VMT/Cap	21.85
	Compared to the City of Chino Hills Threshold	**A 8.38% Reduction Needed**
TAZ 53609101	Project TAZ VMT	313,832
	Project TAZ Population	10,558
	Project TAZ VMT/Cap	29.72
	Compared to the City of Chino Hills Threshold	**A 32.64% Reduction Needed**

As shown above, the Baseline Project VMT per Capita for the seven (7) RHNA Sites located within the three (3) TAZs will range from needing a 3.66% to 32.64% VMT reduction.

Vehicle Miles Traveled (VMT) Mitigation Measures

CEQA requires an environmental impact report to identify feasible alternatives and mitigation measures that could avoid or substantially reduce a project's significant environmental impact. If a significant transportation impact is identified for a project, it will be the Project applicant's responsibility to submit a mitigation measure plan to reduce impacts to less than significant. Options include the provision of on-site transportation infrastructure, on-site transportation demand management, off-site infrastructure improvements including roadway improvements for active transportation and multimodal infrastructure, or off-site multimodal improvements. The Community Development Director or designee will review, make necessary changes and approve the Travel Demand Management (TDM) plan.

Strategies that reduce single occupant automobile trips or reduce travel distance are called TDM strategies. There are several resources for determining the reduction in VMT due to TDM measures such as the California Air Pollution Control Officers Association (CAPCOA) Quantifying Greenhouse Gas Mitigation Measures.

As referenced in the *OPR Technical Advisory*, the California Air Pollution Control Officers Association's *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity, Designed for Local Government, Communities, and Project Developers* Report, Chapters 3 - Transportation, December 2021, (CAPCOA Report) quantifies the reduction in VMT associated with a particular mitigation measure. The CAPCOA VMT reduction strategies include built environment changes and TDM actions.

The TDM strategies are sub-categorized into the following:

1) Land Use
2) Trip Reduction Program
3) Parking or Road Pricing/Management
4) Neighborhood Design
5) Transit
6) Clean Vehicles and Fuels

It may be noted that there are rules and combined maximums for calculating the VMT reduction when applying multiple mitigation measures. To safeguard the accuracy and reliability of the methods while maintaining their case of use, the following rules should be followed when considering reductions achieved by transportation measures.

Combining Measures Across Scales

According to the CAPCOA, there are sixteen (16) quantified measures at the Project/Site scale that can be combined with each other and seventeen (17) quantified measures at the Plan/Community scale that can be combined with each other. *The GHG reductions of transportation measures from different scales of application should never be combined*.

Combining Measures Within a Subsector

Effectiveness levels for multiple measures within a subsector may be multiplied to determine a combined effectiveness level. The CAPCOA recommends that measures reductions within a subsector be multiplied. This will take the following form:

$$Reduction_{subsector} = 1 - [(1 - A) * (1 - B) * (1 - C)]$$

Where A, B, and C are the individual measures reduction percentages for the measures to be combined in each subsector. In addition, each subsector has a maximum allowable reduction.

Combining Measures Across Subsectors

The CAPCOA report adopts 70 percent as a maximum for the combined VMT impact from the following four subsectors: Land Use, Neighborhood Design, Parking or Road Pricing/Management, and Transit:

$$Reduction_{multi-subsector} = 1\text{-}\,[(1 - Land) * (1 - Design) * (1 - Parking) * (1 - Transit) \leq 70\%$$

Please note that this multi-subsector maximum purposefully excludes the Trip Reduction Program subsector.

General Recommended Mitigation Measures

As mentioned above, the seven (7) RHNA Sites located within the three (3) TAZs are expected to have a VMT impact and will need the applicable mitigation measures. By referring to the CACPOA Report, the following mitigation measures are recommended with the measure's maximum effectiveness in VMT reduction. One or a combination of these mitigation measures could be utilized to partially offset the impact:

- T-3. Provide Transit-Oriented Development (Up to 31.0% Maximum Reduction)
- T-4. Integrate Affordable and Below Market Rate Housing (Up to 28.6% Maximum Reduction)
- T-9. Implement Subsidized or Discounted Transit Program (Up to 5.5% Maximum Reduction)

- T-15. Limit Residential Parking Supply (Up to 13.7% Maximum Reduction)
- T-16. Unbundle Residential Parking Costs from Property Cost (Up to 15.7% Maximum Reduction)
- T-17. Improve Street Connectivity (Up to 30.0% Maximum Reduction)
- T-18. Provide Pedestrian Network Improvement (Up to 6.4% Maximum Reduction)
- T-19-A. Construct or Improve Bike Facility (Up to 0.8% Maximum Reduction)
- T-19-B. Construct or Improve bike Boulevard (Up to 0.2% Maximum Reduction)
- T-20. Expand Bikeway Network (Up to 0.5% Maximum Reduction)
- T-21-A. Implement Conventional Carshare Program (Up to 0.15% Maximum Reduction)
- T-21-B. Implement Electric Carshare Program (Up to 0.18% Maximum Reduction)
- T-22-A. Implement Pedal (Non-Electric) Bikeshare Program (Up to 0.02% Maximum Reduction)
- T-22-B. Implement Electric Bikeshare Program (Up to 0.06% Maximum Reduction)
- T-22-C. Implement Scootershare Program (Up to 0.07% Maximum Reduction)
- T-23. Provide Community-Based Travel Planning (Up to 2.3% Maximum Reduction)
- T-24. Implement Market Price Public Parking (On-Street) (Up to 30.0% Maximum Reduction)
- T-25. Extend Transit Network Coverage or Hours (Up to 4.6% Maximum Reduction)
- T-26. Increase Transit Service Frequency (Up to 11.3% Maximum Reduction)
- T-27. Implement Transit-Supportive Roadway Treatments (Up to 0.6% Maximum Reduction)
- T-28. Provide Bus Rapid Transit (Up to 13.8% Maximum Reduction)
- T-29. Reduce Transit Fare (Up to 1.2% Maximum Reduction)

Recommended Mitigation Measures For Site 4 - Western Hills Golf Course

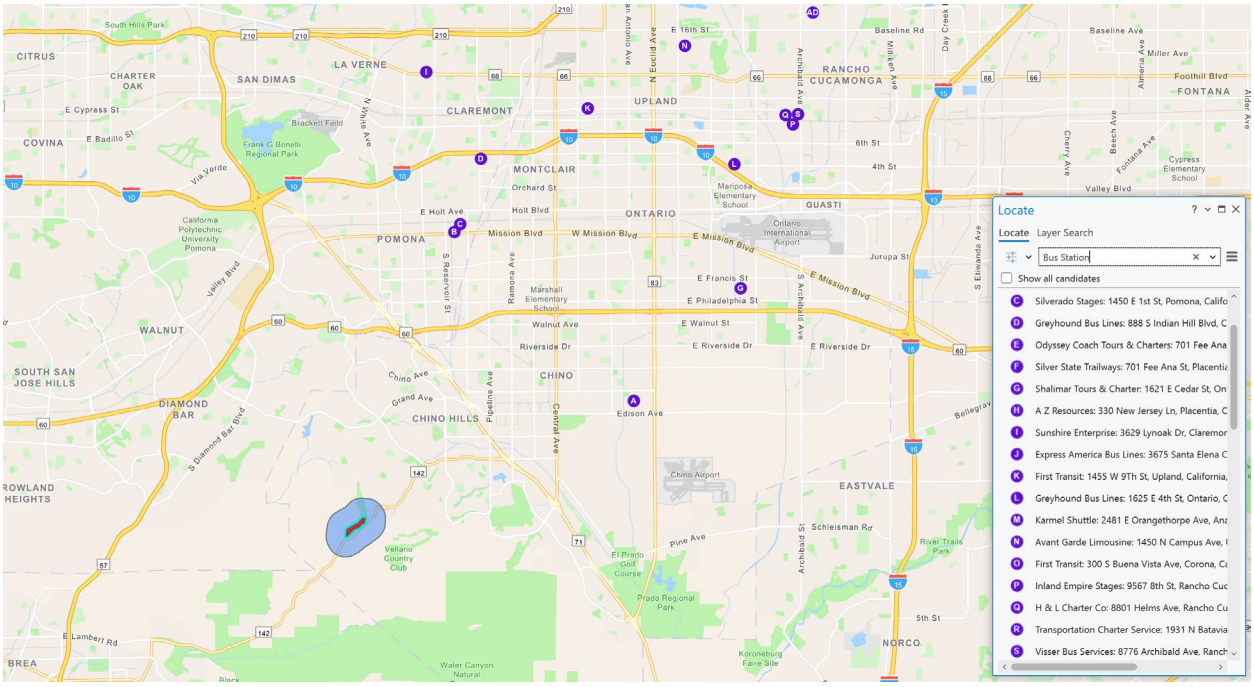
Site 4 - Western Hills Golf Course is an ongoing application project within the City. The Western Hills Golf Course Project is located in the northwest of Carbon Canyon RD, northeast of Cannon LN, and southwest of fairway DR. The Western Hills Golf Course has 8.79 Acres, and will consist of 187 units as follows:

- 9 Units Studio

- 58 Units 1 Bedroom
- 56 Units 2 Bedroom
- 64 Units 3 Bedroom

405 parking spaces will be provided for the proposed project. Since this is a residential project, there are five (5) potential mitigation measures be applicable for the Site 4 at the Project/Site Scale:

- T-3. Provide Transit-Oriented Development
- T-4. Integrate Affordable and Below Market Rate Housing
- T-9. Implement Subsidized or Discounted Transit Program
- T-15. Limit Residential Parking Supply
- T-16. Unbundle Residential Parking Costs from Property Cost



The following section will further discuss each mitigation measure and its applicability in detail.

T-3. Provide Transit-Oriented Development

This measure would reduce project VMT in the study area relative to the same project site in a non-transit-oriented development (TOD) location. TOD refers to projects built in compact, walkable areas that have easy access to public transit, ideally in a location with a mix of uses, including housing, retail offices, and community facilities. Project site residents, employees, and visitors would have easy access to high-quality public transit, thereby encouraging transit ridership and reducing the number of single-occupancy vehicle trips and associated GHG emissions.

To qualify as a TOD, the development must be a residential or office project that is within a 10-minute walk (0.5 mile) of a high frequency transit station (either rail, or bus rapid transit with headways less than 15 minutes).

Screenshot #1 below shows Site 4 – Western Hills Golf Course location and a 0.5 miles buffer (blue area). As shown in *Screenshot #1*, there are no transit stations within 0.5 miles from Site 4 – Western Hills Golf Course, thus Site 4 does not qualify as TOD hence this mitigation measure is not applicable.

Screenshot #1. Transit Stations within 0.5 Miles of Site 4 – Western Hills Golf Course

T-4. Integrate Affordable and Below Market Rate Housing

This measure requires below market rate (BMR) housing. BMR housing provides greater opportunity for lower income families to live closer to job centers and achieve a jobs/housing match near transit. It is also an important strategy to address the limited availability of affordable housing that might force residents to live far away from jobs or school, requiring longer commutes. The quantification method for this measure accounts for VMT reductions achieved for multifamily residential projects that are deed restricted or otherwise permanently dedicated as affordable housing.

Per the CAPCOA implementation requirements, multifamily residential units must be permanently dedicated as affordable for lower income families. The California Department of Housing and Community Development (2021) defines lower-income as 80 percent of area median income or below, and affordable housing as costing 30 percent of gross household income or less.

Since Site 4 – Western Hills Golf Course does not include affordable housing, this mitigation measure is not applicable.

T-9. Implement Subsidized or Discounted Transit

This measure will provide subsidized or discounted, or free transit passes for employees and/or residents. Reducing the out-of-pocket cost for choosing transit improves the competitiveness of transit against driving, increasing the total number of transit trips and decreasing vehicle trips. This decrease in vehicle trips results in reduced VMT and thus a reduction in GHG emissions.

Per the CAPCOA implementation requirements, the project should be accessible either within 1 mile of high-quality transit service (rail or bus with headways of less than 15 minutes), 0.5 mile of local or less frequent transit service, or along a designated shuttle route providing last-mile connections to rail service.

As shown in *Screenshot #1*, there are no transit stations within 0.5 miles from Site 4 – Western Hills Golf Course, CAPCOA.

T-15. Limit Residential Parking

This measure will reduce the total parking supply available at a residential project or site. Limiting the amount of parking available creates scarcity and adds additional time and inconvenience to trips made by private auto, thus disincentivizing driving as a mode of travel. Reducing the convenience of driving results in a shift to other modes and decreased VMT and thus a reduction in GHG emissions. Evidence of the effects of reduced parking supply is strongest for residential developments.

Per the CAPCOA implementation requirements, this measure is ineffective in locations where unrestricted street parking or other offsite parking is available nearby and has adequate capacity to accommodate project-related vehicle parking demand.

Unrestricted street parking within the vicinity of Site 4 – Western Hills Golf Course is available, hence this mitigation measure is not applicable.

T-16. Unbundle Residential Parking Costs from Property Cost

This measure will unbundle, or separate, a residential project's parking costs from property costs, requiring those who wish to purchase parking spaces to do so at an additional cost. On the assumption that parking costs are passed through to the vehicle owners/drivers utilizing the parking spaces, this measure results in decreased vehicle ownership and, therefore, a reduction in VMT and GHG emissions. Unbundling may not be available to all residential developments, depending on funding sources.

Since the parking garages are available for the residents and guest spaces are available for the guests, there are no additional parking costs for the residents, hence this mitigation measure is not applicable.

Project Site Level Analysis Conclusion

Consistent with the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* and based on the VMT methodology, criteria, guidelines, analysis, thresholds and results outlined in this Technical Memorandum, the proposed Project will have significant VMT impacts.

Further, based on the mitigation analysis for Site 4 – Western Hills Golf Course, there are no applicable mitigation measures. Thus this project site will have an unmitigable transportation impact.

Details for the other RHNA sites are currently unavailable. It is recommended that once this information becomes available, the City implements appropriate mitigation measures to offset or partially reduce the VMT impacts for the six (6) RHNA sites that were not screened out.

LAND USE PLAN LEVEL ANALYSIS

This section provides a land use plan level review of the proposed Project, evaluating it as a whole, with the eleven (11) RHNA sites considered collectively as a single Project.

The proposed Project is a Citywide land use plan consisting of residential development, as detailed in *Table 1*. Based on the *ITE Trip Generation 11th Edition*, the proposed Project will generate 14,042 trips per day, as shown in *Table 2*. Thus, a Cumulative (Year 2040) land use plan level analysis has been conducted to assess the Project's impact Citywide.

Vehicle Miles Traveled (VMT) Analysis Methodology

A full VMT analysis and forecasting through SBTAM has been conducted to determine the Cumulative VMT for the Project and the City average. The proposed Project in its entirety has been evaluated in the following section. This VMT analysis includes VMT for the project and estimates under the two scenarios listed below:

- Cumulative Condition (Current General Plan)
- Cumulative Plus Project (Proposed General Plan)

As stated in *Section 7.5* of the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy:*

> *"The VMT impact study approach for evaluating specific land use types other than general land use categories, accounting for unique characteristics related to mixed-use development, amendments to the General Plan and Specific Plan projects that are not screened out, and determining whether an alternative VMT metric (i.e., VMT per Service Population) is considered more appropriate for application, will be evaluated on a case-by-case basis and determined by the Community Development Director."*

Service Population (SP) is defined as the sum of the total population and employment within the study area's zone or zones. VMT per Service Population is a metric used to estimate vehicle miles traveled (VMT) by dividing the total VMT generated by a project by the combined population and employment within the area. This metric assesses transportation impacts by considering not only residents but also employees, and potentially other groups such as students and visitors. It is particularly useful in larger-scale transportation analyses, such as at the city or regional level, as it accounts for various trip-generating activities. In this case, as outlined in the Project Description section, "the proposed Project is an update to the City of Chino Hills 2015 General Plan to accommodate land use changes required by the City of Chino Hills 6th Cycle Housing Element, address other state-mandated General Plan revisions, and incorporate updated information regarding existing conditions and applicable planning documents." Therefore, VMT

per Service Population is deemed the most appropriate metric for the VMT analysis in this instance.

Based on the above, a full VMT analysis utilizing SBTAM has been used to determine the VMT for the Project and for the City of Chino Hills and will provide the following:

- Cumulative Condition (Current General Plan) City Average VMT per Service Population
- Cumulative Plus Project (Proposed General Plan) City Average VMT per Service Population

Vehicle Miles Traveled (VMT) Impact Thresholds

As outlined in the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* on the application of the VMT impact analysis methodology, a land use project would be considered to result in a significant VMT impact if the following is met:

> *"A land use project results in a significant VMT impact if the project-generated VMT per Capita or Employee exceeds a level of 3% below the City Average VMT per Capita or Employee under existing baseline conditions."*

Since VMT per Service Population has been used for the proposed land use plan level analysis and no specific threshold for cumulative analysis is identified for this metric in the Guidelines, a threshold of "3% below the City average" has been established for the analysis to ensure consistency with the Guidelines:

- Cumulative Land Use Plan Level VMT per Service Population Threshold

  The proposed Project results in a significant VMT impact if the project-generated VMT per Service Population exceeds a level of 3% below the City Average VMT per Service Population under cumulative conditions.

Vehicle Miles Traveled (VMT) Analysis

Summarized in the section below are the Cumulative VMT per Service Population values utilizing SBTAM for the City of Chino Hills and the Project. It should be noted that the Project development totals were converted into SED and inputted into the appropriate TAZs for which the eleven (11) RHNA sites are located within SBTAM for the "Plus Project" conditions. SED inputs are needed to run the model.

As shown in ***Table F*** below, the Cumulative Plus Project City Average VMT per Service Population is ***3.18%*** less than the Cumulative Condition City Average VMT per Service Population threshold:

Table F. Cumulative (Year 2040) Land Use Plan Level VMT per Service Population

Cumulative Land Use Plan Level VMT per Service Population	
Cumulative Condition City of Chino Hills VMT/SP	33.07
3% Below the City of Chino Hills VMT/SP (Threshold)	**32.08**
Cumulative Plus Project City of Chino Total VMT	3,610,751
Cumulative Plus Project City of Chino Service Population	116,260
Cumulative Plus Project City of Chino VMT/SP	31.06
Compared to the City of Chino Hills Threshold	**3.18% Lower**

Based on the criteria outlined in this report, the Cumulative Land Use Plan Level VMT per Service Population will not exceed the City of Chino Hills threshold. Thus, the proposed Project is presumed to have no significant CEQA-related transportation impact.

Land Use Plan Level Analysis Conclusion

Consistent with the *City of Chino Hills Administrative Policies and Procedures Manual, Vehicle Miles Traveled (VMT) Guidelines Implementation Policy* and based on the VMT methodology, criteria, guidelines, analysis, thresholds and results outlined in this Technical Memorandum, the proposed Project will not have any significant VMT impact. Therefore, the proposed Project is presumed to have a less than significant CEQA related transportation impact.

CONCLUSION

As outlined above in the Baseline Project Site level analysis, when evaluating the proposed Project's eleven (11) RHNA sites individually, four (4) of them can be screened out and are presumed to have no CEQA-related transportation impacts. However, the remaining seven (7) RHNA sites are expected to result in significant impacts. Since the project specifics (excluding Site 4 – Western Hills Golf Course) are not yet available, it is recommended that once this information becomes available, the City implements appropriate mitigation measures to offset or partially reduce the VMT impacts for the six (6) RHNA sites that were not screened out.

Furthermore, at the Cumulative Land Use Plan level, where the eleven (11) RHNA sites are considered as one, the proposed Project is not expected to have any significant VMT impact. As a result, the proposed Project is presumed to have a less-than-significant transportation impact under CEQA.

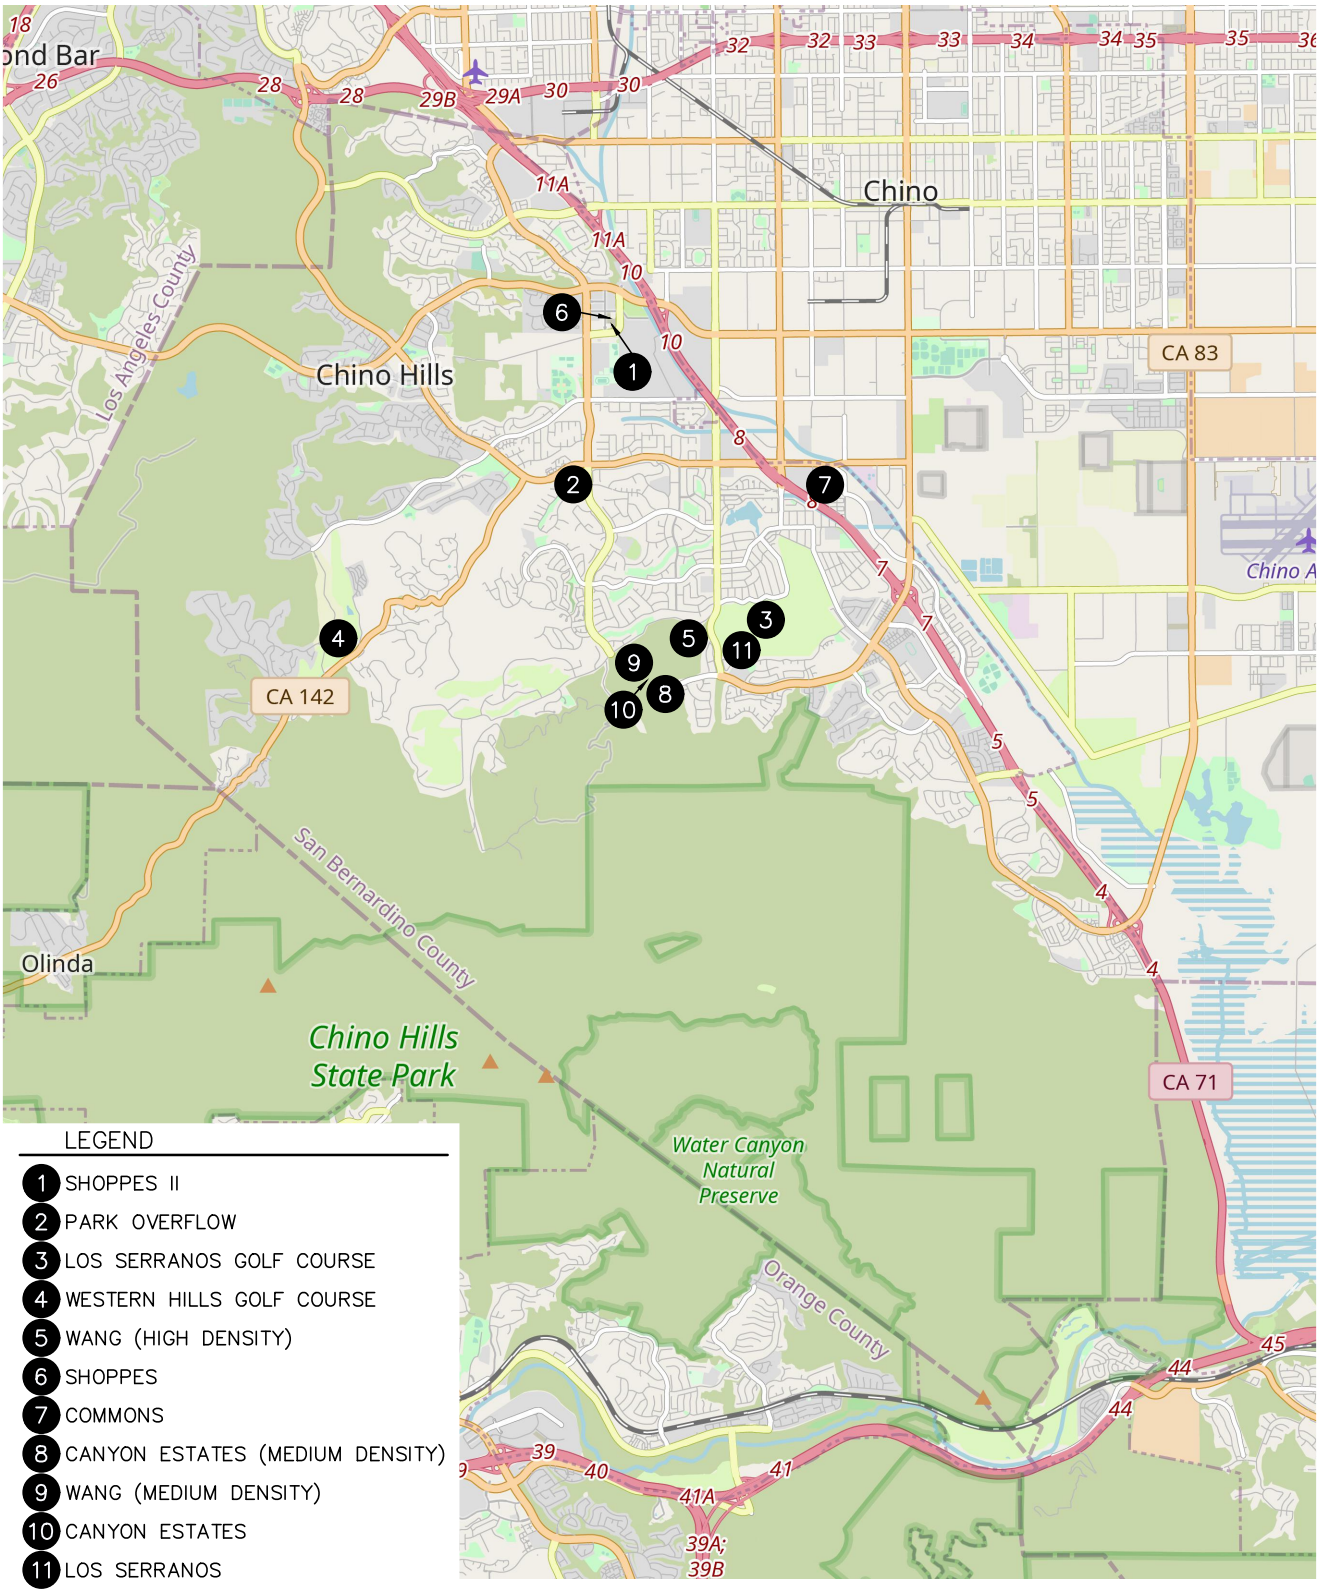
Subtotal Above Moderate Income Sites Requiring Rezoning								**207**
Total Units Requiring Rezoning								**2,870**

Notes:

a. Shoppes Specific Plan currently permits a maximum of 295 high density units.
b. Very High Density Housing -Urban designation provides urban high density adjacent to commercial and civic uses.
c. Shoppes Specific Plan Amendment to Very High Density Housing -1 that allows a minimum density of 30/du units and a maximum of 93 du/ac.
d. Very High-Plus Density Housing is the designation provided to very high density residential sites.
e. Shoppes Specific Plan Amendment to Very High Density Housing -2 that allows a minimum density of 20/du units and a maximum of 30 du/ac affordable senior housing units.
f. Very High-Plus Density Housing Overlay to allow a minimum density of 20/du units and a maximum of 30 du/ac.
g. Rural Residential zoning district allows a maximum of 2 du/ac
h. Shoppes Specific Plan Amendment and The Commons Specific Plan Amendment to Mixed Use Housing - Urban that allows a minimum density of 30/du units and a maximum of 44 du/ac. Medium-Plus Density Housing to allow a minimum density of 9/du units and a maximum of 13 du/ac.
i. Agriculture/Ranches zoning district allows a maximum of 0.5 du/ac
j. Medium-Plus Density Housing allows for a density of 9-13 du/ac.
k. Low Density Residential zoning district allows for a maximum density of 6 du/ac.

Total site area of the Canyon Estates property is approximately 378.65 acres, which under the Agriculture/Ranches designation allows 1



RR = Rural Residential; up to 2 du/ac
CR = Commercial Recreation
SP = Specific Plan
PD = Planned Development
RS = Low Density Residential; up to 6.0 du/ac
RM 2 = High Density Residential; Up to 25 du/ac
RM-3 = Very High Density Residential; Up to 35 du/ac; Default Density allows min. 20 du/ac
MU = Mixed Use; Up to 35 du/ac when associated with a mixed use project featuring a minimum of 100,000 sf of commercial uses
